In some companies, text editing no longer consists of 10 engineers standing in line to use a 029 keypunch.

The Real Programmer in this situation has to do his work with a "text editor" program. Most systems supply several text editors to select from, and the Real Programmer must be careful to pick one that reflects his personal style.

Many people believe that the best text editors in the world were written at Xerox Palo Alto Research Center for use on their Alto and Dorado computers. Unfortunately, no Real Programmer would ever use a computer whose operating system is called SmallTalk, and would certainly not talk to the computer with a mouse.

Some of the concepts have been incorporated into editors running on more reasonably named operating systems. The problem with these editors is Real Programmers consider "what you see is what you get" to be just as bad a concept in Text Editors as it is in women. No, the Real Programmer wants a "you asked for it, you got it" text editor — complicated, cryptic, powerful, unforgiving, dangerous. TECO, to be precise.

It has been observed that a TECO command sequence more closely resembles transmission line noise than readable text. One of the more entertaining games to play with TECO is to type your name in as a command line and try to guess what it does. Just about any possible typing error while talking with TECO will probably destroy your program, or even worse — introduce subtle and mysterious bugs in a once working subroutine.

For this reason, Real Programmers are reluctant to actually edit a program that is close to working. They find it much easier to just patch the binary object code directly, using a wonderful program called SUPERZAP (or its equivalent on non-IBM machines).

This works so well that many working programs on IBM systems bear no relation to the original Fortran code. In many cases, the original source code is no longer available. When it comes time to fix a program like this, no manager would even think of sending anything less than a Real Programmer to do the job — no Quiche-eating structured programmer would even know where to start. This is called "job security."

Programming Tools Not Used by Real Programmers:

* FORTRAN preprocessors like MORTRAN and RATFOR. The Cuisinarts of programming — great for making Quiche. See comments above on structured programming.

* Source language debuggers. Real Programmers can read core dumps.

* Compilers with array bounds checking. They stifle creativity, destroy most of the interesting uses for *equivalence*, and make it impossible to modify the operating system code with negative subscripts.

* Source code maintenance systems. A Real Programmer keeps his code locked up in a card file, because it implies that its owner cannot leave his important programs unguarded.

XENOPHOBE
FROM MICRO-STYLE

> That's it! It's game over, man. Game over! — Pvt. Hudson "Aliens"

Xe'-no-phob (n): 1) One who has a deathly fear of anything alien.

Xenophobe is a translation of the Bally-Midway coin op arcade game. As in most arcade games, the objectives are pretty clear-cut: survive as long as possible....

> I need to know only one thing — where they are... — Vasquez

Dramatis Personae

Upon booting, you are brought into the player selection mode, where you choose your on-screen counterpart. There are nine highly-detailed characters to select from: normal looking men and women to the more strange, such as the duck-headed Dr. Kwak.

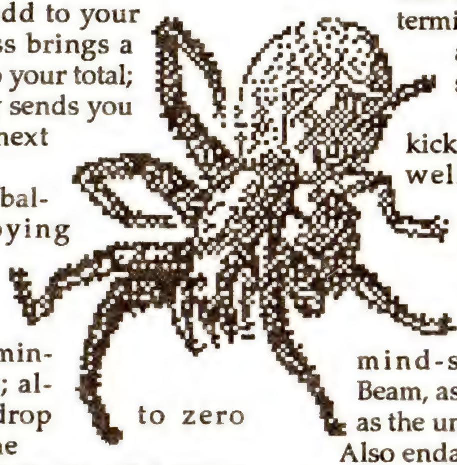
Opposing the human player is a formidable gaggle of extraterrestrial beasts. Sprouting forth from green pods are such things as armadillo-like Rollerbabies and leg-gnawing, parasitic Critters. Poking out of crevices, acid-dripping Tentacles emerge to menace the players. Slime-spitting Snotterpillars bound about recklessly, and lurking behind doorways is the fearsome Festor.

> This installation has a substantial dollar value attached to it — Burke

Game Objectives

Your onscreen alter-ego is part of a mercenary team (The Excterminators) hired to disinfect several human space outposts, ships, and the like of an invading alien presence. To earn your pay you must dispatch the unwelcome creepies before the outpost self-destructs.

During your mission you can also pick up belongings left behind: better weapons, items that increase your health, useful gadgets and miscellaneous objects that add to your score. Success brings a hefty bonus to your total; failure simply sends you along to the next encounter.



You must balance destroying aliens and grabbing objects against your ever-diminishing health; allowing it to drop to zero ends your game

Often it is better to self-destruct the base and forego the bonus if you find yourself in an untenable situation or want to skip ahead to the more challenging scenarios.

> I like to keep this handy — for close encounters.... — Hicks

Utensils of Mayhem

You start with the ubiquitous, low-powered phasor. Encountered in your travels are more powerful devices, such as the longer range laser pistol, short range but devastating lightning rifle, and the unstoppable smoke gun. Indispensable to the bounty-hunter are hand-lobbed bombs, the only weapon devastating enough to eliminate Rollerbabies when they curl up into a ball.

The Xenos are not without their tricks, however. Each alien has at least one distinct method of attack, causing your Health to drop if it hits you. Critters favor creeping up and latching onto loose appendages, gnawing away Health until they are shaken off or shot.

Rollerbabies transform intoa nearly-invunerable "bowling ball" that crashes into your Exterminator. Tentacles grab at you and must be shot or avoided.

Snotterpillars can kick your player over, as well as spit corrosive green slime. Festor is the most fearsome opponent. It can spring out and traps your player with a mind-scrambling Brain Beam, as well as hurling pods as the unwary.

Also endangering your player are various non-living hazards such as automated sentries, force fields and open shafts and pits. Some of these can be deactivated or avoided, but of course the Xenos won't provide much leisure time to decide....

> I got a bad feeling about this drop — Frost

Gameplay

If you have played the coin-op version of Xenophobe, you have noticed many similarities in my description so far. The reason is simple — the home version is almost identical to the arcade game.

The graphics (especially the animation of the monsters and your character) are very close to coin-op quality, and the sounds are just as annoyingly raucous as the real thing. The levels that you must explore are identical in both layout and rendering as far as I have gotten into the game (nearly the end). Two-player support is excellent, providing two separate displays on a split screen for each player's location (again, just like the arcade).

Joystick control is responsive and usable, only marred by the need to use the keyboard to throw bombs. You will need two joysticks to support two-player mode. There is no support for three players, as most home computers don't have three joystick ports (or three of anything, for that matter), but this is a minor quibble.

Shortcomings to Xenophobe

This similarity also happens to be the game's shortcoming. The locations of rooms and items are identical to the arcade incarnation, and never change from play session to play session, lessening the challenge of discovery and exploration after repeated play. The game pace is a bit too fast for my liking, even at beginner level — the monsters just keep coming, in droves, making it hard to use your items or explore very thoroughly, earning this game five "sore thumbs" for extreme firebutton abuse.

Xenophobe was new and different when it was first released, but almost three years later it is showing some signs of age. Had this title been released a year or two ago it would be a classic, but now it is more mundane.

It also seems somewhat lacking of "depth" — proficient joystick jockeys might exhaust the program's possibilities in a short time; less skilled players might find a longer lasting challenge.

Whether you buy this one is based upon your personal preference. It is an arcade style game with an adventure/problem-solving twist, so don't look here for any brain-busting puzzles. If you have poured quarters into the arcade machine don't expect anything new here either.

But, if you like arcade quality graphics and gameplay and don't frequent arcades, or just can't get enough of the game, Xenophobe is as faithful a conversion as one could hope for (minus the quarter slot).

If this sounds like your cup of green slime, I heartily recommend Xenophobe and a pair of industrial-strength joysticks.

SOME LIKE IT... HOT!

The CodeHeads announce:

HOT WIRE + MAXI FILE

- "When the START editorial staff first saw HotWire, our collective reaction was 'Wow!'"
- By far the **fastest, easiest way to run programs** on the Atari ST...from a floppy disk or from a hard drive!
- Build menus for all your most commonly-used programs. Load new menus with a single keypress or mouse click!
- New **Ledger** function records time spent in programs of your choice.
- **Passwords** may be used to restrict unauthorized access to certain programs.
- New **on-screen clock**, appears in the programs that you choose
- Unlike other shells, HotWire works correctly with all programs, just like the GEM desktop.
- A **seamless interface** offers direct access to MultiDesk and MaxiFile.

- Full-featured file-handling utility lets you **move/copy/delete/rename/touch/lock/hide** any combination of files and/or folders.
- Runs as a desk accessory **or** as a program in any resolution.
- Incorporates **every** file/disk feature of the GEM desktop plus much more.
- **Intelligent disk copying** routines.
- **Rename folders** - Print directory listings.
- Store **comments** about any file/folder.
- Unique and intuitive user interface designed for easy, speedy operation.
- **Customizable** for your style of use.
- **Keyboard equivalents** for all operations.
- Quickly select from up to 20 of your most-used paths.
- Even runs programs and loads documents.

Here's what our users are saying about HotWire and MaxiFile:
"The HotWire/MaxiFile combo has **changed the way I use my ST.**"
"I haven't used the standard GEM desktop in **weeks.**"
"Without HotWire and MaxiFile I'd be totally lost on the ST."
"...a tribute to **assembly excellence.**" - "MaxiFile is **a wonder!**"
"HotWire and MaxiFile really 'beat up on the competition'!!"
"...you'll need to package it in asbestos because it is too hot."
"**AWESOME!**" - "Super!" - "a veritable software gem!"

HotWire Plus (includes MaxiFile)........ **$49.95**
MaxiFile........ **$24.95**
HotWire........ **$39.95**
G+Plus - a replacement for Atari GDOS........ **$34.95**
MultiDesk - load unlimited desk accessories........ **$29.95**
CodeHead Utilities - a collection of useful programs........ **$29.95**
MIDIMax - a powerful MIDI tool for performers........ **$49.95**

LOST DUTCHMAN MINE

FROM MAGNETIC IMAGES

by Tim Holt (El Paso)

When I was a young 'un, my father and I drove from El Paso to Orange Cove, California to see my Uncle Claude. I don't remember the trip too well, except for the night that we drove back.

It was getting dark, and it seemed we had been driving for 200 hours. My father looked over to me and then pointed to a group of mountains outside of Pheonix, Arizona. "See those mountains over there? Those are the Superstition Mountains. They say the Lost Dutchman Mine is in that mountain. Supposed to be the richest vein of gold in the world there."

"Where is it?" I asked innocently.

"Well, no one knows. Seems the old Dutchman died, and didn't tell anyone about where it was. Lots of folks have looked for it, but noone has ever found it."

I looked off into the distance, and saw the Superstition Mountains. I always wanted to go back and look for the mine, but never did it. That was until Magnetic Images came out with "Lost Dutchman Mine."

Lost Dutchman Mine (LDM) takes the ST user to the mythical town of Goldfield near the Superstition Mountains in 1896. Your only troubles are you don't have a lot of money, you don't have too many possessions and you don't have the foggiest idea of where the mine is. So, you must not only come up with money, you have to explore more than 100 caves and old mine shafts, one of which holds the treasure.

How you get your money and supplies is up to you. You can buy a pan and go pannin' for gold in a nearby stream, or you can try your luck with Dapper Dan, the local card shark. The game is poker, and Dan is pretty easy to beat if you stick with it. Don't go into a game with less than $200 though, or you will lose.

Dan's digitized voice always asks you if you want to play a game. I thought that this was a nice touch. When you win, Dan frowns; when he wins, Dan grins at you. Bust him and you get something that may be even more valuable than money...

The town of Goldfield consists of all the stereotypical old west places: a doctor's office if you get shot or hit by an arrow, the mercantile for buying supplies (you have to visit this place), a stable where you can pick up a mule or two to carry supplies (essential), the local newspaper, an assay office for cashing in any gold you may find, a bank and a jail. Each place has a specific purpose and must be visited during the course of the game.

LDM is played with a combination joystick, mouse and keyboard. The mouse buttons all have different purposes, the right one gives the player an aerial view of the entire playing field and back to the normal screen when clicked again. The left mouse button is used to direct specific actions, like buying a rope or telling Dapper Dan what cards you want replaced. Joystick is used for the action, like gunfights, or moving the old prospector across the playing field.

When you finally get to a cave or old mine shaft, you have to take the correct tools in with you. A pick is nice, as well as a lantern. Watch out for rock slides and earthquakes though, as you can be killed at any time. I found it advantagous to always save the game *before* I went into the mines.

You have to watch out for running out of water, running out of food, dying in the heat and getting shot either by the local band of terrorist Indians or the local band of bad dudes. (Capture the bad dude from the gang and get a reward back at the jail!) You might want to save the game before you get killed in these too.

The graphics are really nice in LDM, and if you have a MIDI keyboard, the sound is excellent in the opening screens. The graphics aren't terribly mind boggling, but attention has been paid in several areas, most notably the mines, and the town of Golfield. I did not like the little fishing sequence, as it was terribly simple compared to the rest of the game.

Playing the game was enjoyable, although at times my joystick did not respond as well as I expected. I was killed several times before I learned to save the game.

If you get the game and actually find the mine before October 31,1990, you can stake your claim with Magnetic Images for a $100 gold nugget.

LDM is not copy protected, although you must have the instructions or the game will lock up. A really nice effort from Magnetic Images. I look forward to their next game.

Lost Dutchman Mine $39.95

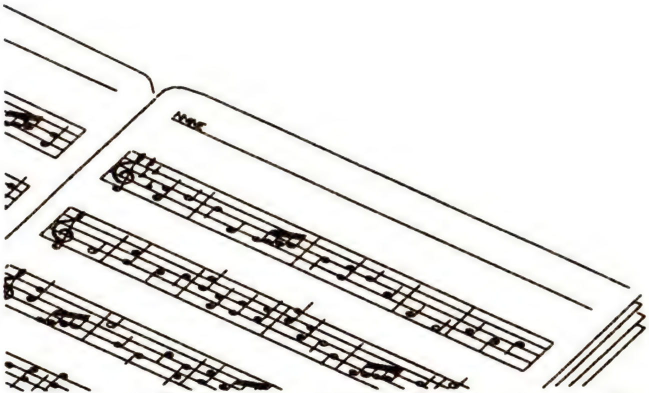
Mini MIDI Lessons #2



by Morris Miller (El Paso)

What is a Sequencer?

The sequencer really is the very heart of a MIDI system. It is the sequencer in which you can record, edit, arrange performances and play back your music to the synthesizers.

In this context the sequencer includes all the accessory programs which work together to make the total MIDI package. Some program vendors have everything rolled into one program while others provide a number of separate programs which work together.

It is the number of refined features and various added functions that makes one sequencer different from another. You will like the display and the way things are done with one and not in another. I probably prefer mine just the other way around.

This is why you should see a few total packages working before you invest. A public domain program will keep you going until it is time to commit and make the plunge.

When you do commit, make sure it is a package that offers support for the synthesizers you will be using.

Here are the major things MIDI control programs do:

1. Record a song played on the keyboard. Enter real time (as played) or step (one note at a time).
2. Provide a minimum of 8 song tracks. Some have up to 60 or more tracks. Each track holds a separate song or part of a song.
3. Editing notes, duration, attack, release, portamento, etc. Edit notes into tracks.
4. Copy and move song sections into other positions. Loop song sections (repeats).
5. Set synthesizer patch selections into song. Change patch, tempo and other parameters in song performance.
6. Convert a song into a score sheet and print. Print MIDI parameters of song performance.
7. Perform multiple song files in named sequence, like songs of an album.
8. Create and edit new voices for the synthesizers. Dump the synthesizer voice parameters and store on disk. Restore again on demand.

Talk to the people who use synthesizers and try as many of them as possible. Make your selection carefully and plan to acquire as many of the function modules as you can afford. You do not have to have them all at once.

What are the Differences in Keyboards?

Keyboards for MIDI have two main functions — to play music and to control the instruments making the sounds.

Not all keyboards have the same number of playing keys. Nor keys of the same size. My fat fingers will not play a reduced size keyboard. A song may be entered with a keyboard of 3 octaves and then edited (and played) over a full 8 octaves. It just takes more editing. I prefer a 5-octave keyboard, but it is mainly a personal preference and dollar investment.

The MIDI keyboard is more than just keys to play on. With MIDI a number of sound instruments (synthesizers, samplers, drum and rhythm machines, and program sequencers) may be controlled by an operator console.

The keyboard is often that console, especially in a live performance. The console controls may be recorded as they are performed. When re-played by the sequencer, it replaces the original performer, sending all the original, or edited, performance controls.

The main difference between keyboards, then, is in how many of the MIDI control signals it sends to the sequencer in performance. How many of these controls you need depends on how much of a performer you are — and how much of the control you do not mind entering by the editor.

Take the action of pressing a note key, for example. Full touch sensitivity means that MIDI information is sent saying (a) which note was pressed and when it was pressed; (b) how quickly the key was pressed (attack velocity — often used for loudness control); (c) how hard the key is pressed after it is down (after touch pressure — sometimes used for vibrato control); (d) which note is released and when it is released; (e) how quickly the key was released (release velocity — sometimes used for portamento or glissando).

All keyboards having MIDI will send the basic note on/off information of (a) and (d). Some will send (b) and maybe (c) information. Few, except the most expensive, will send it all.

Not all synthesizers (in a keyboard or otherwise) are stereo. Many are mono only. Not all keyboards include the accessory controls of pitch bend (note glide), foot switches (on/off functions), foot pedals (variable control for soft-loud, etc.), or pan (stereo balance).

As a side effect, if a keyboard does not generate a MIDI function, then very likely the embedded synthesizer will not respond to that control either. Without touch velocity the loudness is not controlled. Try the instrument to see what it will or will not do.

What is a Synthesizer?

A sine wave tone at any frequency is the most pure and undistorted sound we can make; it is much like a bird whistle, when given notes to play. Most instruments have some pure note characteristics. Only some. There is no musical instrument pleasing to the ear which produces sound in the purity of a sine wave. It is the characteristic distortions of an instrument that makes it sound like that instrument and none other.

The trick, then, is to electronically produce sound with the proper distortion and harmonic characteristics in order to sound like some instrument we know and love. Or, once we learn to create the sounds of instruments found naturally, and understand the natural laws which govern those sounds, we can create by those rules of nature new sounds of instruments not yet devised by craftsmen. Ain't that exciting?

The English prefixes "syn" and "sym" mean, simply, "together." The word "synthesis" is from the old Greek, meaning "to put together." One way to create distortion in sounds, otherwise pure, is to put two or more of them together with varying amplitudes and phase relationships — and you have the beginnings of a violin, guitar or piano sound. Add to that control over the amplitude envelopes and it can be quite good.

To give even greater flexibility to the sound synthesis, each tone to be combined (operators) can be given a distortion. The easiest way to do this is to generate the tone in various wave forms (shapes). The most common such wave forms are sine wave (no distortion), square wave (rich in odd numbered harmonics), triangle or peaked wave (weak low-order odd harmonics), sawtooth (rich in both odd and even harmonics), and pulse shapes (harmonic content variable). By mixing the selected operators to various degree, many different sounds can be produced.

To take this process further, allow a low frequency operator (LFO), to determine the amplitude or frequency modulation of another (the carrier) at the desired note frequency. Add feedback so that the modulator can modulate itself to some degree. Now combine mixes of these signals in various combinations and you have the synthesizers available today.

To make a new voice, select the manner in which you want the modulators, carriers and feedback loops to be interconnected (the algorithm). Set the desired range of control for each of the operator parameters, and which of the control functions to vary the operator effects, if any. Set output envelope shape parameters and which of the control functions will vary the envelope effects, if any. Then play....

Turbo-816 Info #7

Dual Memory Usage in Applications

Chuck Steinman (DataQue)

This article will present one way to set up a program to run under the Turbo-OS, yet still be compatible with the Atari XL/XE operating system. It is assumed that the reader has some knowledge of programming at the assembly language level and is familiar with the previous article #6 (see the December '89 issue of AIM). This installment will concentrate on memory use decisions.

Last month the program fragment presented determined the type and amount of available RAM. There were two significant variables which were set by that program to make later RAM accesses easier in applications where both standard and expanded RAM may be used.

The first, was the three byte pointer, BASEBYTE. This pointer is used to indicate where the base of user RAM resides. Since we want to make our application work in both the stock 6502 units and the Turbo-816, we must be very careful of what instructions are used. It is very easy to accidentally slip in a 65816 instruction, which would cause a real problem for the 6502.

The second variable was a flag called EXPANDED. This flag is set to zero to indicate there is no expanded RAM and some negative number if expanded memory does exist. We will modify last month's program just after the label NO_ERROR, to store $FF into EXPANDED. This will allow us to use the bit instruction to test what memory to use in our program. Note that $FF is already loaded into the accumulator, so all we have to add is the one line 'STA EXPANDED'.

First we may want to initialize the RAM with the information expected as the defaults. In our little mini-application, let's say we have several tables which need to be initialized. To fall back to Turbo-Calc as a reference, we will need a 128-byte table for the cell width, and a 384-byte table for the row pointers. Another table will be initialized, to contain the cell data. To simplify later coding, we will keep pointers to the beginning of each of these tables. Well...let's begin.

Source code follows on next page.

The ToadFile 44

The first LOW PRICED Removable Cartridge Hard Disk Drive!

We at Toad Computers wonder why good technology always has to mean high prices and long waits. We have the Toadfile 44 **now**, available in varying configurations with fixed drives up to 129 megabytes, while other companies are still telling you to wait. We also have **the lowest price** available. We use the same drive Atari™ will be using in their drive, and compatible cartridges will be available at your Atari™ dealer, or through us. Finally, the capacity of a hard disk with the convenience of a floppy. Only from the leaders! Toad Computers.

ToadFile 44 - ONLY $899!

Basic unit includes drive, one 44 megabyte cartridge, case, power supply, fan, ICD™ host adapter, clock, formatting and partitioning software, and a 3' DMA cable. Please specify an under-the-monitor case or a shoebox style case. Both may hold two 5.25" or 3.5" drives. Extra 44 MB cartridges are $99 when purchased with drive, or $109 later.

ToadFile 44 *Variations*

ToadFile 94 *(44 MB Cartridge + 50 MB Drive 40ms time)*............$1279
ToadFile 109 *(44 MB Cartridge + 65 MB Drive 40ms time)*...........$1309
ToadFile 129X *(44 MB Cartridge + 85 MB Drive 28 ms time)*.......$1399
ToadFile 88X *(2 44 MB Cartridge Drives & Carts, 25 ms time)*.....$1549
ToadFile 44S *(44 MB Cartridge Drive, Case, Power & SCSI In)*.....$799
ToadFile 44D *(44 MB Cartridge Drive Only, No Power or Case)*....$699

Toad *Hard Disk Drives*

Toad 30 *Drive 40 ms Access Time 3.5" Mechanism*........................$539
Toad 50 *Drive 40 ms Access Time 3.5" Mechanism*........................$599
Toad 85 *Drive 28 ms Access Time 5.25" Mechanism*......................$709
Toad 100 *Drive 40 ms Access Time 2 3.5" Mechanisms*............$899
Toad 170 *Drive 28 ms Access Time 2 5.25" Mechanisms*............$1399

AtariWriter+ Plus VI

For Those Who Don't Want to Read the Book

by Jimmy Boyce (CACE)

Well folks, I got my AW+ book back and...no notes. So I will start with the following premise: we have completed our discussion on the dictionary and we have written, edited and corrected the spelling of our great literary masterpiece (oh yes, and saved it to disk).

Printing our Masterpiece

This leaves us with printing it for the eyes of the privileged and chosen (but not for the sneaks that boot up AW+ and get into our private file disks and already know what we are about to print) <pg15>.

Once again, this segment is menu driven and is really quite simple. However, there are some fun things we will get into later on, such as printer drivers. I will be devoting an entire segment to this nasty little subject and hopefully will clear up some of the fog in the book.

Don't Forget to Turn On Your Printer!

One of the first steps to successful printing is turning on the printer. Don't laugh, I wish I had a nickle for every time I forgot that little item. I notice in the book that it mentions that some printer-interfaces have to be switched on, so if you have that to do — do it! Smash the [ESC] key (I own stock in Atari) and — voila — there on your CRT (fancy for monitor screen) is the main menu.

Indulge yourself and strike the [P] key for PRINT FILE. Down at the bottom of your screen is the burning question: PRINT TO PRINTER Y/N? Go ahead, be brave and strike [Y].

Using Atari Printers

Now the screen has a whole list of Atari printers listed, from the 825 to the XDM121. If you have any of the Atari printers listed on the screen, push the appropriate letter listed to the left of the equal sign and a program resident printer driver will be loaded for you.

This for Atari printer owners only — if your Atari printer is not listed try the letter [A]. If the printer isn't listed under the letter [A], you must reboot AW+ and try the letter [F], usually one or the other will work for you.

Let's assume one of the two letters worked or that you have a listed Atari printer. The next question at the bottom of the screen will be PRINT WHOLE DOCUMENT, Y/N? Type in the letter [Y].

You are asked how many time you want this thing to be printed; it is your option, up to and including 99 copies of a single document. Usually, I ask for one and take it to a copier and get copies made. This saves a fair amount of wear-and-tear on the printer. At this point your printer will start printing — usually.

And if You Have Another Printer?

I will explain the pitfalls and problems later. Right now, I am going to continue on with a discussion of the letter [H] option on the printer menu.

Yes, that all inclusive letter [H] which stands for OTHER. Almost intimidating isn't it? It simply means that you are some sort of a low life that does not own an Atari printer (like me).

Epson Printers

Gently depress the [H] key and three printers are listed, the first being an Epson — "Oh, happy days," you say! "Mine is an Epson compatible." Try the letter [E] if this is the case, but don't be surprised if you do not get full use of your printer's capability, at least I could not.

What about the next one? I don't know, because I know nothing of the printer, the same applies to the last printer listed. And that leave us with the final choice — that all inclusive other. Go ahead... be chancy and see what happens, I dare you! All that happens is that another request appears at the bottom of the screen. It asks you to enter your printer driver disk filename.

My Printer's Not Listed!

Well, you do not have a printer driver, so what are you going to do? This is what you are going to do — you are going to wait until next month when we go through in detail setting up a custom printer driver for your indiviual printer.

This gives you a month to find that moldy old printer book that came with your printer or a chance to borrow one from someone else, because without it you just simply cannot enter the commands necessary for your printer.

Happy hunting. Bye now.

The 8Bit Atari to IBM PC Interface

by Jim Cox (P3ACE)

With the help of my Happy modified Atari 1050 disk drive, I've resolved the Atari 8-bit to IBM PC interface challenge! My setup allows me to carry word processor files produced on my favorite computer and edit them on those funny, far less user friendly MS-DOS machines industry insists on buying. Hard, you say? Not at all!

The latest Happy modification, which includes version 7.1 software, provides the essentials, assuming you also have access to an MS-DOS machine. If you have an older Happy modified 1050 drive, all you need is the software from Happy Computing and you're in business.

Unfortunately, there are a couple of potential pitfalls. For one, 810 Happy drives won't do the job. Another problem is the Happy software will not allow IBM formatting on your Atari 1050. Finally, you are restricted by the software to single-sided IBM disk formatting, halving your potential storage, though this is only on the transfer disk. You may recopy the files and store them on a double-sided disk or use any other storage medium. But let's get on with it!

Getting Started

The most important step to avoid frustration is to start by formatting several 5-1/4 inch floppies on the MS-DOS machine using IBM DOS 2.0 or later and the "FORMAT/1" command. It is critical that you use the "/1" as it forces the system to format the disk as a single-sided disk with 40 tracks, 9 sectors per track, a step essential to the success of the file transfer operation. Insure you verify the formatted disk has 179,712 bytes available, no more!

Produce a data file on your Atari 8-bit machine using a word processor like AtariWriter. I recommend you use straight text, avoiding the Tab key by using the space bar and Return. Then save the file as ASCII by using "CTRL S" rather than "S" on the AtariWriter menu.

Boot your Happy drive using the flip side of the Happy disk. Choose the menu option "I" which loads the conversion program, producing a numerical menu. Put your AtariWriter data disk in the drive and press "4". Follow the prompts to identify the file by name (you can call the Atari directory with "3") and provide the file name you desire on the IBM disk. A Return gives you the Atari file name as the default. Another Return loads the file into CPU memory and you are prompted to replace the AtariWriter disk with your IBM single-sided data disk.

After the disk swap, all that is required is another Return and the cursor jumps laterally and the file loads as IBM. To check your success in conversion, hit Return again to return to the menu and then "1" for the IBM directory.

Now comes the hard part! You must wait until you return to work (or wherever the MS-DOS machine is located) before you can assure that you were successful. If your file conversion to IBM carried some formatting problems, you might try again using the "translation" option also available from the Happy drive software number menu.

I found that on my particular (and somewhat older) IBM version of WordStar, I had to copy two files to the data disk to permit full hard drive operation and prevent errors which prevented file loading. I copied "WSOVL1.OVR" and "WSMSGS.OVR" much as one copies DOS and DUP to an Atari disk to assure it will boot independently.

Going the Other Way

To reverse the process, again use the single-side formatted IBM disk and save the file produced on the MS-DOS PC in ASCII format. Check the word processor documentation for instructions on an ASCII save. Once again, avoiding control characters and special keys in your word processing will shorten the editing you may have to do following the file transfer. Focus on raw typing with returns only if you can, then add the control characters after the transfer.

The process for reversing the transfer on the Happy drive is identical to that outlined above except for the menu numbers selected.

I bought my Happy board for about $100.00 from B&C ComputerVision. Having the MS-DOS compatibility extends the useful value of my Atari 8-bit machines and seems well worth the cost. Adding the advantage of being able to back-up much of my copy protected 8-bit software adds a significant fringe benefit.

Happy Computers Inc. P.O. Box 1268 Morgan Hill, CA 95037

The Basics of BASIC

by Rick Burton (RACE)

Time to begin a detailed examination of colors as BASICS steps further into a look at "graphic illustrations." Some understanding of the SETCOLOR command will start us on the path to painting on the screen.

Graphics modes have 3 main components: text, background and border. The SETCOLOR command is followed by 3 numbers, separated by commas, the first of which selects the main component to be manipulated.

SETCOLOR 1 selects text or any lines drawn on the screen, SETCOLOR 2 selects background, and SETCOLOR 4 selects border. The second number controls color and the third number controls brightness. Brightness increases from 0 to 14 by even numbers only. The following table lists numbers used for colors:

0 - gray
1 - light orange
2 - orange
3 - red orange
4 - pink
5 - violet
6 - blue violet
7 - blue
8 - blue
9 - light blue
10 - blue green
11 - green blue
12 - green
13 - yellow green
14 - orange green
15 - light orange

Let's go to a mode with resolution finer than GRAPHICS 7 from last month...GRAPHICS 8 (with a 320 x 192 grid!) and type:

```
10 GRAPHICS 8+16
20 COLOR 1:SETCOLOR 1,0,14
30 PLOT 0,0
40 DRAWTO 319,191
50 PLOT 319,0
60 DRAWTO 0,191
70 GOTO 70
```

Run this and you have a high-resolution "X" on a blue background with a black border. What about that COLOR 1 statement in program line 20? Next month we will look at an explanation, but for now simply include it. Now let's use the trusty FOR-NEXT loop to change line brightness. Type these modifications:

```
15 FOR X=1 TO 14
20 COLOR 1:SETCOLOR 1,0,X
65 NEXT X
70 GOTO 15
```

A "graphic illustration" of brightness changing in the lines that have been drawn. Now change program line 20 again:

```
20 COLOR 1:SETCOLOR 1,0,14:SET
COLOR 2,7,X
```

The brightness of the background changes before your very eyes. One more change:

```
20 COLOR 1:SETCOLOR 1,0,14:SET-
COLOR 2,7,6:SETCOLOR 4,3,X
```

Last but not least, a glowing red orange border! Some final notes:

If you have a monochrome monitor, don't despair. The effects of the demo can be fairly well seen.

Color of lines or text is automatically determined by background color as a rule of thumb, but stay tuned to future BASICS for exceptions to the rule.

So generally, the second number in a SETCOLOR 1 command won't determine color of text and lines, the background color will.

Notice the STEP 2 portion of line 15 and remember that brightness increases by even numbers. (5 is the same as 4 etc.) Join me again next month for yet another "graphic illustration" of the characteristics of color...

You Think Atari Owners Have Problems?

by Rich Deen (SPACE)

The following quotes are taken from InCider magazine, a publication for Apple computer owners. These quotes are taken from the column called Stattus Report, written by Paul Statt. His article "High-Rent District" appeared in the December '89 issue of InCider.

Discussing the burning question of "Why do Apple computers cost so much?" Mr. Statt makes the following statements:

"Apple could truly build a computer for the rest of us, and could make lots of money selling lots of computer, but that kind of logic is too simple for today's business." Sounds like Atari's ST laptop. If it was out and coupled with a Spectre GCR, they could sell a MAC laptop at a third of what Apple intends to charge. Geez where is it?

"Apple sells computers at the highest price the market will bear. Wall Street loves it. You pay for it." (Apple users com- plaining?)

"Apple started with a vision — personal computing — that looks more like a hallucination today."

Just a few thoughts to ponder on.

AIM Disk of the Month

Welcome to the first Atari Interface Magazine ST/Mega Disk of the Month.

All files on this disk are self-extracting LZH archives. The AIM Disk of the Month is always a double-sided disk packed with some of the best public domain and Shareware software that has come available in the previous month.

Here's a short description of the files found on this disk:

ARC521C.TOS—This file contains TWO TTP files, both of which are the new versions of the ARC utilities. The first is ARC521C.TTP, the complete archive program. The second is ARCX521C.TTP, which only handles unarcing of files.

BLASTER.TOS—PD version of the classic "Defender" from the UK. This game requires a color monitor.

BLITZ.TOS—Contains text and a drawing detailing how to build your own "Blitz" disk copier. Backup your copy-protected software and normal disks FAST. Also in this archive is a program and desk accessory allowing you to use the hardware.

BLITZ2.TOS—More software for the Blitz disk copier (see BLITZ.TOS). This file contains Turbo Blitz, a program that gives you a bit more power and flexibility.

BLTZINTR.TOS—Introductory program and text file to the world of the Blitz disk copier. This file is helpful to anyone new to using Blitz. Created by Plexus Systems Ltd.

BREAKER1.TOS—Another great game from Germany, this file contains a monochrome only Breakout game similar to Arkanoid. This file has been called "public domain at its best!" Excellent graphics and game play.

CARDFILE.TOS—A slick and easy-to-use address and phone book database. Allows you to address envelopes, print phone lists, autodial phone numbers and pass info directly to your word processor. Powerful "filtering" capability. Contains both a .PRG and .ACC version. Shareware.

CPOKER.TOS—Casino Poker for monochrome or color STs. Shareware program that simulates the popular casino poker machines found in many gambling houses.

CSBPORTS.TOS—Portraits of characters for FTL's Chaos Strikes Back. The following characters are included: Bloom County characters Oliver Jones, Opus (in 2 renditions), Rosebud, Cutter John, Calvin and Hobbes, Spaceman Spiff, Susie Derkins, Milo, Steve Dallas and Bill de Cat and four characters from The Lord of the Rings: Gandalf, Aragorn, Arwen Evenstar and Elron.

DESFX.TOS—A small program and C source code that removes the self extraction program from self-extracting LZH archives, basically turning them into normal LZH files that can be unLZHed using LHARC.

DIARY16.TOS—Shareware desk accessory from Craig Harvey, president of the Washtenaw Atari Users Group. Diary is a text editor desk accessory featuring search and replace, block operations and more.

GRAPHITI.TOS—A PD desk accessory from Chet Walters that allows you to spray paint your ST desktop. Great fun if you've just spent a few frustrating hours at your computer.

JAMES.TOS—A PD desk accessory, James the ST Butler is a color palette and a whole lot more—including virus checker, screen snapshot utility and more.

KEYBOARD.TOS—A Shareware typing tutor program. Runs on a color or mono system. This program can help you learn to touch type on your ST. Various lessons hone your typing skills and show you statistics such as Words per Minute and # of errors.

LHARC051.TOS—This program creates and unarcs .LZH files (LZHs?) and can save piles of disk space and download time. Although not as quick as ARC.TTP, LHARC blows away all competition when it comes to maximum file compression.

MACPAN.TOS—Monochrome-only version of PacMan from Germany. If you're a Pac-Man fanatic, you'll love this game.

MCHESS.TOS—Very excellent chess game. Features save/load/print games, One or two player, with ST vs. ST option. Uses GEM and mouse, 2D graphics. For medium resolution color monitor only.

MOUNTAIN.TOS—Probably the best fractal mountain generator yet to come to the ST. Generates color fractal mountains and valleys, with options for sun positioning, horizon angle, moon/planet lighting and night/day. Fast Rendition feature for the impatient! Save your creations in D.E.G.A.S. format.

OPUSNR1.TOS—Vector graphics "flight simulation arcade shoot-em-up" from Germany. Features smooth scrolling vector graphics. Works on Monochrome monitor only.

SDRIVER2.TOS—SIO-Driver, a unique little program that allows you to use 8-bit Atari disk drives directly from the ST desktop. Version 2.0 supports single and enhanced density drives. Requires a cable as used by Darek Mihocka's 8-bit emulator.

SFX_LZH.TOS—Create self-extracting LZH files from LZH archives created by LHARC. This little baby is *great* for user group disks. Turns LZH archives into programs that, when double clicked, will automatically unarc themselves on the disk. This program was used to create all the self-extracting files on the AIM disk.

STMIRROR.TOS—ST MIRROR II makes a data file out of the Boot, FAT and Directory sectors of your hard drive that can be used to restore the drive in case of a crash. It will also protect your drive from a virus or allow you to recover a lost or deleted file. Shareware from Catspaw Software.

Readers can purchase this disk by sending $6/disk to Unicorn Publications, 3487 Braeburn Circle, Ann Arbor, MI 48108, by subscribing to the AIM Disk of the Month, or by contacting one of the AIM participating clubs.

For 520ST, 1040ST, 520STfm and MEGA

MEMORY:

Expand your St's memory to ONE Megabyte, TWO and ONE-HALF Megabytes or even FOUR Megabytes with tech-specialities plug-in memory modules. All memory boards fit under the R/F shield. The CPU is completely available for any future enhancements (blitter, coprocessors, PC-emulators, speedup kits etc.). No soldering is required.

520ST modules use 256K DRAMs for upgrades to 1 MB and 1 Megabit DIPs for 2-1/2 and 4 MB upgrades. All boards are fully socketed and the expandable boards can be configured for either 256K or 1 Mb chips. This means that you can start by upgrading your 520 to one Megabyte and later move up to either 2.5 or even 4 Megabytes--the maximum for any ST, even the Mega! Installation is completely solder-free. Comes with detailed illustrated instructions and a one (1) year limited warranty.

expandable boards:

520A	Socketed, no RAM	$129.
520B	1 MB, socketed	$179.
520C	2.5 MB, socketed	$297.
520D	4MB	$495.

Blitter Upgrade:

520STfm/1040, new motherboard, Installed	$ 99.
Combined with TOS 1.4, Installed	$199.

Upgrade your 1040ST or 520STfm just as easily!

Send us your 520STfm and we will upgrade it to ONE Megabyte by installing a second bank of memory, easily removable in case you want to upgrade again. Complete with installation for only $149 plus shipping.

Or install one of our 1040 (fits 520STfm too) memory boards and upgrade your ST to 2-1/2 or even 4 Megabytes. There are nowadays four (4) different versions of the 1040/520 motherboards around. If you bought your ST less than 2 years ago, you need to check your machine, detailed info in our catalog.

Version "0" fits all 'old style" 1040/520 with 6 ROM chips under the power supply. Limited space above the 1040 mother board prohibits the use of conventional sockets in one bank. Optional "ZERO Height" sockets allow you to have this bank socketed too, so you can plug in or exchange 1 Mbit chips. The "ZERO-Height" socket kit is also available separately so you can install it at any time!

1040A	1 Bank sockets, no RAM	$110.
1040B	Fully socketed, no RAM	$149.
1040C	2.5 MB + 1 bank sockets	$317.
1040D	4 MB, 32 1 Mb DRAM installed	$495.

Version "1" fits all 1040/520 with the memory chips under the power supply. Available room prohibited the use of "DIP" packaged chips. The main board is only 6.4" x 2.9" and needs "ZIP" packaged 1 Mb x 1 DRAM. It fits in the area under the power supply with the shield installed and stays 0.5" away from the CPU to allow attachment of other upgrades. More details in our catalog!

1040B1A	1 bank socketed, no RAM	$149.
1040B1	Completely socketed, no RAM	$189.
1040C1	2.5MB, no sockets	$297.
1040C1A	2MB installed, 2nd bank socketed	$317.
1040D1	4 MB installed	$495.

Upgrades for Version "2" & "3" of the 1040/520 motherboard also available! See prices for Version "1".

All upgrades can be equipped with a Clock Option on the Memory Board, comes with software, only $30.
Stand-alone CLOCK, please specify 520/1040 and your version of the motherboard $38.

EXPANDABLE Hard Drive Kits

come complete with software and all parts needed to get the system operational, 1 year ltd. warranty. There are right now three different case styles available:

1. Tower Type, 10" wide x 6.8" high x 15" deep, if sitting on your desk with monitor on top , with full SCSI interface and 'DMA-through'

-150 W PC power supply w/fan

-room for up to 5 half height hard drives or combination full/half height

-mounts on floor, under desk or on desktop

-can power up 520ST and external floppy drives.

-optional delay circuit for CPU allows fully automatic power-up!

T0S	No Drive, install your own emb. SCSI drive	$265.
T0	No Drive, MFM controller	$299.
T0R	No Drive, RLL controller	$475.

Complete with drive mechanism:

10 MB	$485.	20 MB	$565.	30 MB	$695.
40 MB	$745	64 MB	$795	85 MB	$895.

2. Monitor Style, 13.25" wide (same as MEGA) x 15" deep x 3.8" high with single port host adapter

-ready for up to three 1/2 ht or 1 each full/half ht. hard/tape/floppy drives

-55 W power supply with 115V fan

-can be placed under monitor or at side of your desk

M0S	No Drive, install your own emb. SCSI drive	$179.
M0	No Drive, MFM controller	$295.
M0R	No Drive, RLL controller	$365.

Complete with drive mechanism:

10 MB	$395.	20 MB	$395.	30 MB	$545.
40 MB	$685.	49 MB	*$625.	64 MB	$795.
85 MB	*$795.				

3. Desktop Style, 4.5" wide x 6" high x 13" deep with single port host adapter

-ready for 2 1/2 height or 1 full height drive

-55 W power supply

-optional fan available (add $18)

D0S	No Drive, install your own emb. SCSI drive	$149.
D0	No Drive, MFM controller	$279.
D0R	No Drive, RLL controller	$349.

10 MB	$355.	20 MB	$369.	30 MB	$525.
40 MB	$695	49 MB	*$595.	64 MB	$725.
85 MB	*$745.				

ATARI MEGAFILE:

Replace the 20 MB drive in your MEGAFILE 20 with a 42 MB 40 ms autoparking drive. Comes with a 1 year warranty on the drive mechanism. Exchange price including installation with your drive in good condition: $260., $369. outright.

Gain 65 MB of high speed (22ms av., 5 ms track to track) storage. Exchange with installation: $360., outright $449.

SUPRA 20/30 and ASTRA 20 MB:

Upgrade to 49 MB high speed storage with auto parking, 500 K/s transfer rate. With installation and transfer of your existing files: $379.

Host adapter cards are separately available and come with software and DMA cable or additionally with case and 6' round shielded SCSI cable with embedded power supply lines. Prices after the "/" are for version with case and cable. 1 port $79/119 full SCSI $119/159

CPU CASES:

Upgrade 520/1040 to the MEGA standard.

- Separate CPU and keyboard, gain space for three each 3.5"/5.25" floppy, hard or tape drives in two separate drive bays. Full height drives will also fit.
- A 150 W power supply with fan provides power for all possible combinations and keeps everything cool
- Reset button on keyboard
- A delay circuit allows fully automatic HD power-up.
- Monitor can be switched on/off with CPU, using an optional cable.
- Our kit uses a steel case 18" wide x 12" deep x 8" high, easily strong enough to support a high resolution monitor.
- The original keyboard gets a low profile enclosure, 18.7" wide x 7" deep x 2" high, consisting of a metal bottom part and the modified plastic top of the original case, supplied as exchange or you do the modification your self. The kit comes preassembled and installs without soldering. All mounting kits, wire harnesses and connectors to modify a standard machine are included.

Complete kit, please specify your machine type $295

OPTIONS:

Hard Drive kits for the CPU case consist of host adapter/controller with support bracket if necessary, DC harness and control cabling and might also be used with customer supplied case/power supplies. Kits with controller cards come with connections to two 5.25" drives. Kits for embedded SCSI drives come with one SCSI connector. Additional connectors $8. installed.

C0S	No Drive, install your own emb. SCSI drive	$99.
C0	No Drive, MFM controller	
C0R	No Drive, RLL controller	$299.

20 MB	$295.	30 MB	$465.	40 MB	$595.
49 MB	*$525.	64 MB	$725.	85 MB	*$685.

Cable sets to connect additional 3.5"/5.25" floppies also available, please see catalog.

KEYBOARD KITS:

We noticed quite a lot of interest for our keyboard parts used in the CPU CASE. Keyboard kits consisting of metal bottom case, connecting cable with reset and modified plastic tops on an exchange basis are available separately for $69., please specify your machine type.

Space limitations don't allow a more detailed descriptions. For complete 24 page catalog contact:

ATARI COMPUTER CLUBS OF DENVER

Forward Into the Past! The Grizzly Times and Lives of the Atari Computer Club of Denver's December Meeting

Gee, aren't you sorry if you're a member of the ACC.D and didn't attend the December meeting? Or—worse!—you hadn't paid your dues! Because the door prize at the December meeting, a complete XEGS (Yes, including the lusted-after Flight Simulator 2 cartridge!), went to Steve Question Mark's daughter. Said daughter immediately turned to aforementioned father and said "Now I need a color TV." Lots of luck with those after-Christmas payments for the TV, Steve!

Demonstrations? You bet we had demonstrations. (Uh—what were those demonstrations?) Oh yeah, DISKIO (marked down from $35 to $10) showed its stuff, and the Generic SKT Study Guide went up on the large projection screen TV—only to crash because stupid ol' Chet forgot to bring the protection dongle. (What do you call those little plug-into-joystick-port plugs which serve as copy protection?) Enough was shown to demonstrate how the program could be used to create self-tests...but this isn't a review column (See "In Your Drive"). This is a club minutes. Or minute. Whatever.

Press releases were passed around for approval, corrections, and mockery. Local Denver papers (As opposed to non-local Denver papers?) should be receiving copies of these various releases, which indicate the existence of the club, our purposes, and our renewed dedication to implanted subliminal Atariconscious messages in the civilian community.

Further publicity suggestions were entertained, such as further donations of Ataris. Lowry Air Force Base's training units are a prime target (because of the amount of gossip the airmen can generate amongst themselves), as was Children's Hospital. (The silly hospital advertised for Apple computers and Nintendo videogame machines. We're trying to show them how to have both purposes in one machine.) Rick from Horizon Computers is giving ol' Chet a hand on that latter one.

Everyone complained that the newsletter hadn't arrived. Since the newsletter has *never* arrived by the time of the meeting, Editor Mike turned around and made faces at everyone else. Treasurer Guy said that for the slickness of AIM and the monetary savings, he'd be willing to wait an extra two weeks for delivery. (Treasurers always get the last word.) Ed Fason said nothing, since he didn't come to the meeting.

New (?) projects include a History of the Club, to be compiled from interviews with past presidents. This will occur just as soon as someone invents the 34 hour day or 10 day week for me.

And my throat is too sore to talk anymore. (I'm leaving before somebody thinks about that one!)

STIGs and STones —the November STIG meeting and STuff like that there by good ol' Chet (It's darned well time to get another scribe!)

Ol' Chet was late again (and will be, until Cherie's semester ends), so he missed out on the first dozen ST games which Joe Ronda demonstrated. Fortunately (?), Joe still had hundreds more to show. They included {insert names of every single game ever written for the ST} and {insert some more}. Joe, who is obviously made out of money, was then mugged and stripped of every disk he ever owned.

Ed Fason (Hallowed be his name), our dauntless First Speaker, kept trying to interrupt with foolish things like STIG business. He promises more MIDI demonstrations in the future, possibly to try to forestall the incredibly-wealthy Joe Ronda.

The Monitor Master was shown. There isn't really much more you can do with it than show how simply it works... it is SO-O simple that any idiot can use it. Ol' Chet proved this by using it himself! As a matter of fact, he plans to perform a Big Expensive Demonstration by showing it in conjunction between color and monochrome usage while using PageStream — which often requires color *and* monochrome work on the same document. Look for this, along with the 5-1/4 40/80 track disk drive at this, or next (or who knows?) meeting.

And, as a personal thank you, I'd really like to thank Pattie and Bill Rayl for their design and inclusion of a logo for the Atari Computer Clubs of Denver, which the ST Interest Group (STIG) is one of. No, we haven't gotten rid of our old tree logo, but we couldn't send it to the Rayls of AIM. Y'see, Ed supplied a DeGas copy of our famous ACC tree on disk — but put it on a *double-sided* 3-1/2 disk, which Chet's ancient single sided 3 1/2 drive couldn't read. This time for sure! ("Hey Rocky! Watch me pull a rabbit out of my hat!")

And Editor Mike is ready to kill me dead if I don't finish this Right Now and send it to him. G'bye! I'm outta here! Jeep!

Starfleet Meeting Minutes December 8, 1989

Officers present: Bender, Oughton, Robique

The meeting convened at 7:05, eight members were present.

The election of officers resulted in the present officers keeping their current positions for the next year.

C.J., who is turning a little weird on us, demonstrated the Numerologist program from the December/January Antic. This Disk bonus program uses a name and birthdate to determine a person's personality.

Several members then played Naval Battle from the same issue of Antic. This game is a very good version of Battleship. You have 1 each of an aircraft carrier, a battleship, a destroyer, a submarine, and a PT boat. The game can be played either one or two person, and a demo mode is included to watch the computer play itself. All play is done with one or two joysticks.

The following demo was Voice Master Jr. It was used to digitize sounds from the room, record words and recognize words. Just to give an idea of how smart this device is, it wouldn't work for our president C.J. Included in the package is a Black Jack game where all input is done by saying words. This worked most of the time, but missed sometimes. We would say "zero" and get an eight. A clock is included, where when the spacebar is hit, the time is said in your voice. A music composer is also included, where when a note is sung into the microphone, the note is displayed on the screen, it will then play back the notes inputted. At $39.95 this can be really useful for input and output to the Atari computer.

I demonstrated a public domain Wheel of Fortune. This game, now included in our library, has 900 puzzles on the front of the disk, and another 900 on the back. Documentation is included as a file on the back.

Draper Pascal is now shareware, and included in our library. A short demo of the built-in editor and compiler was given. Norm Draper is asking $15 if you use his Pascal. For this you will get support, the most current version (if you didn't get the most current as shareware), and complete documentation. This is a very good deal for a program that sold for over $40 just a little while ago.

The meeting broke up at about 9:15.

Thomas Oughton

For Sale

SM124 Monochrome Monitor $90.

Atari SF314 D/S Disk Drive $150.

Practical Solutions Monitor Master $30.

Atari SH204 20 Meg Hard Drive $250.

Prices will be lower if one or more components are purchased with the computer. Components will only be sold with or after computer. Call Jim at 313-791-2015 weekends or from 6-10 p.m. Mo-Fr.

ACCT

Atari Computer Club of Toledo is an independent user group founded in 1980. A.C.C.T. is the only Atari user group in the NW Ohio/SE Michigan area that provides help and support for and from both 8-bit and 16-bit computer users.

Club members receive, as part of their dues, Atari Interface Magazine and access to the 8-bit and ST public domain software libraries. Disks are $2/8-bit and $3/ST, non-members may purchase disks at a slightly higher cost.

A.C.C.T. meets on the second Monday of the month from 7-9 pm at Bassett's Health Foods, 3301 West Central Avenue (Westgate Shopping Center), Toledo, Ohio. 8-BIT SIG (yes, I said 8-bit) held monthly at the home of Jim Herzberg. Dates and times announced at meeting. ST SIG held monthly at the home of David & Brenda Micka. Dates and times announced at meeting.

A.C.C.T. may be contacted at 6107 Greenwycke Lane, Monroe, MI 48161, by calling Dave Micka at 313-241-1157 or Michael Justice at 419-242-7797 or via Fantasy Island BBS.

President:	David Micka	313-241-1157
VP & 8-Bit Librarian:	Michael Justice	419-242-7797
Secretary:	Sharon Hill	419-423-2135
Treasurer:	Rose Taylor	
ST Librarian:	Brenda Micka	313-241-1157
Fantasy Island BBS (3/12/2400)		419-691-6459

From the Prez.

Our Christmas party was poorly attended but given the less than extensive planning that went into it, it's no wonder. We did get an opportunity to try out Populous and Falcon, ST to ST!

I hope everyone had safe and happy holidays and would like to welcome an old new member to ACCT, Alan Wilford. Alan started out as most as an 8-bit user and when the ST happened he naturally upgraded but a curious thing occurred. Disappointed with the lack of support for the ST in the area he sold it and purchased an A____ (Arrrgh!). Alan knows his computers and after using the ST and the A,A,Am,Am,Ammm, well, you know, he realized that identical processors do not identical computers make. He is now back and we welcome him.

Speaking of the BBS, seems like Alan is the only one using it sometimes! What's the deal? I realize I haven't been Joe Regular on it, but my last month's long distance bill was outrageous! Most of you don't have that problem and our BBS has everything that the pay services have, except the price! So come on and get on. ST,XL,XE it doesn't matter,if you want it to do more, *you* have to do more on it.

The publishers of this magazine have asked us to do a feature article on ACCT for publication in early '90. Anyone with history on the club is invited to contribute your little (or big) tidbit to Sharon by February's meeting for inclusion in the profile.

Getting your issue of AIM late? We asked why and here is the answer. The articles must be in no later than the 17th of the month prior to publication, then it is put together by the staff at AIM and sent to the printers, then it is returned in about two weeks and the AIM staff labels and sorts them for bulk mailing, then they are delivered to the Ann Arbor post office were they are sorted for shipment to zone sorting centers (ours is Detroit), from there they are sorted for shipment to regional sorting centers (ours is Cincinnati), then they are sorted for shipment to local sorting centers (at last Toledo), then they are sorted for local delivery or for distribution to outlaying post offices, that's why! So the good people at AIM have offered us a couple of alternatives to this madness.

1st--The magazines can be mailed first class to each member adding about $1.05 to the cost of each issue.

2nd--The magazines can be bulk shipped to a designated person in Toledo and that person can then post them in Toledo and they would arrive in 2-3 days adding about $0.25 to the cost of each issue.

3rd--We can continue to get them whenever they get here.

The board will act on this at January's meeting which by the way, will be held at: Bassett's in Westgate on 1/8/90, 7-9pm.

Cascades Atari Computer Enthusiasts

CACE

Cascades Atari Computer Enthusiasts is the Atari Club in and around the Jackson County area. The Main purpose of the club is to help inform new users and to promote the use of the Atari Computer in the community.

President	Brent Fisher	(517) 764-4599
Vice-President	Tim Hotchkiss	522-8912
Secretary	Joe Cripps	782-0199
Treasurer	Craig Schaff	787-3970

The CACE BBS is run by the club and is open to anyone with a modem. The number to call is (517) 787-4011. The current membership dues are $14.80 per year, and are payable at any of the CACE monthly meetings, or by mail to the PO Box. Club membership includes access to the entire club software and publication libraries, along with a monthly published newsletter.

Any written communication with CACE should be sent to PO Box 6161, Jackson, MI 49204. Our meetings are held on the second Sunday of the month from 1 pm to approx. 4 pm.

Central Connecticut Computer Club

The Central Connecticut Computer Club is the oldest, still operational Atari club in the state. Conceived in December of 1980, and operational in January, 1981, the CCCC continues to serve the Atari community. New blood is welcomed, and of course, old hands are always welcomed back.

Meetings of the CCCC are on the third Wednesday of each month. The meets kick off at 7:30 and usually include presentation or demos of various hardware or software items. The meetings are held at Eastern Computer Video, 1207 Meriden-Waterbury Turnpike, Milldale, CT 06467.

Prospective members may call Rich Scheidel (203) 589-9035 or 589-3738. Failing that, call Tim Brandt, (203) 283-0500 or writeC-CCC, 127 Pinnacle, Bristol, CT 06010.

Dues are $25 per year, $30 for family plan. Includes Voting membership, newsletter, access to Club library (8bit and ST), access to club magazine library, discounts on computer and video supplies at Eastern Computer-Video, and access to the CLub message base at Ultra Project BBS.

Wow...We made it. Just think....another new year, not to mention decade. Time for all those New Years Resolutions (are you listening Atari??) and hoping that we can keep them. Things look SO bright for Atari this year....if they decide to move off their butts and *advertise*. And I don't mean in just Atari-specific magazines. WE don't need the hype. We already have bought machines. I haven't heard of one advertisement on the east coast (New York-Boston area). Maybe you have, but if the sofa-spuds in *this* club haven't seen an ad on TV, I'm inclined to believe them. There just isn't much that they miss. Tell me if I'm wrong, but I haven't found any ads in Computer Shopper, Personal Computing, or any of those messy Dos type magazines. Now I wear glasses, but hey, they are in great shape and I see pretty durn good.

Well, Bob Brodie sez....this is the year. I hope so. Sig said....that was the year. I want to believe someone. Four years ago we had, in our area, seven dealers that carried Atari. Want to know how many we have now? Do you really?? Three. I'm not going to go into the manufacturer-dealer relationship war that we have all heard about. I'm going to scream about the fact that no *new users* are coming in. No one knows *we exist*.

This is the East Coast. Corporate Connecticut. Conservative three piece business suits, Jaguars, BMW's, Mercedes and quarter to half million dollar houses abound. Everybody reads all the national magazines, and of course most of the New York newspapers. *All we see are eye-bee-yem and Amiga ads!!*

With all the Insurance, and most of the corporate headquarters on the EAST coast, you think maybe, just maybe someone might think that we could use some advertisements over here? It's like the East coast doesn't count. At least it seems that way. Maybe I'm wrong...and all this "disposable income" we are blowing is relatively nothing compared to income in the Peoples Republic of California, but why limit yourself to one, small geographical area?

Hell, I want to see ads! I want to see the dealers that have put up with so much for so long with little support to grow, to prosper, to push *our* computers. I would like to see *Atari* succeed , despite the fact they can't stand prosperity. All it would take is advertising. Take the money normally blown on wild ventures (Federated) and advertise. They say they have the attention of the messy Dos users now with Portfolio. They will use these machines on the job. Maybe they would like to know what else Atari makes?? It's not inconceivable....

People....renewals and election nominations are scheduled for January's club meeting. There will be a machine on site for demonstrations and we do have quite a few to show. There will be offers from various companies that will be shown (user group discounts!)

Another sad note...by the time this comes out, Ultra Project BBS will probably be history. Scott can no longer afford to run this fine board and has hinted it will soon be shut down. We are really going to miss that F-net message base. Many thanks to Scott Mozden for running Ultra for so long. Look at the time.....I gotta go. See you at the meeting!

COAC

Central Oregon Atari Club

- Dedicated to Central Oregon Atari Users and Enthusiasts Since 1986 -

President:	Norman Moore	(503) 447-3598
ST-VP:	Bob Kanski	(503) 548-8201
8-bit VP:	Marc Hitson	(503) 648-0513
Treasurer/Ed	Glenn Dulin	(503) 382-3956
Secretary:	Nancy Kanski	(503) 548-8201

Address: Central Oregon Atari Club, P.O. Box 6824, Bend, OR 97708. Membership dues are $1.00/month and $1.00/year for each addition family member. We meet every second Saturday of the month at 5:00pm at the Ann Rita Conference Center, which lies just in front of St. Charles Hospital on Neff Road in Bend.

December Minutes —December's newly elected club officers (above) are not all so new. As you can see, we have a return engagement for several. We did, however, create and fill two new positions, hereafter and forever known for eternity (or until we change them) as the 8-BIT Vice President and the ST-Vice President. Ol' Bob Kanski was one of the main founders of the club and himself once the club's VP. Now he's back as our new ST-VP. Mr. Marc Hitson, probably because he wasn't at the meeting to defend himself, has been elected our new 8-BIT VP. Congratulations to you all.

Our December meeting was a fruitful and busy meeting. Other than election of officers, we had some door prizes and discussed our arrangement with Practical Solutions to show and review their products as we receive them. We have, at this point, received the Video-Key and this should be shown at our January meeting. We will probably raffle this item off, so come to the meeting or you'll miss your chance. We also discussed the purchasing of PD disks through AIM as a participating club. The subscription for 12 months will cost the club $12.00. Great deal, since we don't have anyone regularly logging on to bulletin boards.

From the President —Great and Interesting

Do yo know what makes a meeting great and interesting? Maybe great speakers, planned demonstrations? Well, perhaps. What really makes a meeting great and interesting is *you! Your participation.* Do you have something new for your computer: hardware, software, ideas? Then bring them to the meeting and share them. Do you have a question or problem with a program or your computer? More than likely, you can find someone at the meeting who can help.

Also, please bring a computer with you, especially if you have come to copy some PD files from the Library or friends. Please, don't leave it up to someone else. Always bring one. I recall a recent meeting when there was only one computer at the meeting. And, although the group was small, needless to say the meeting did not last very long. Just remember, it is *you that makes a great and interesting meeting and a great and interesting club.*

Norman Moore

FACCS

First Atari Computer Club of Spokane

F.A.C.C.S. is an independent, non-profit computer club formed in 1981 by local Atari computer users. We currently meet on the 2nd Thursday of each month at 7 PM. All visitors are welcome to come to any meeting. Membership is $15 per family and includes our club newsletter, access to our public domain libraries and to the club levels on the Atari Zone BBS (3/12/2400 baud, 24 hrs/day, call 509-326-5741).

GKAUG ATARI

GREATER KALAMAZOO ATARI USERS GROUP

GKAUG meets once a month by invitation only as time permits. Membership is through the M.A.C.E organization for those who want the AIM magazine and other benefits.

President:	Frank Fellheimer	(616) 657-6106
Archiver:	Dave Oldenburg	
Librarian:	Bill Berner	
2nd System/GKAUG BBS		(616) 385-2448

All other posts are vacant. We run a 130XE with 320K/7DD Drives using BBS EXPRESS! PRO Node #197

President's Report —Our last scheduled meeting was at Star World in Kalamazoo and we had six memebers present, our regulars, and we looked at "Easy Scan II" by Innovative Concepts. We found it to be a decent system, but could use some improvement. Selecting the proper settings to read a picture was somewhat frustrating and keeping the fiber optic cable on the print head was even more confusing. I thought Innovative Concepts could have come up with something to cover a number of standard type printers to hold the fiber optic in place. I am experimenting with velcro fastners myself.

Surprisingly, we spent about 4 hours at this meeting going over several programs. We also decided to send in our dues to the M.A.C.E. organization to keep abreast of 8-bit technology and keep receiving AIM magazine. Our meetings will be at my home in Paw Paw, whenever it is convenient for all of us to get together. In past times, it has been normally on a Saturday or Sunday afternoon. This way we will have more time to spend on our projects, and won't have to lug all the equipment around. If you wish to be a part of this operation, you will have to contact me: Frank Fellheimer (616) 657-6106 to get on my list of "Active" Members.

The GKAUG BBS will continue to operate as long as there are people to use it. We are supporting it ourselves. If the club is to survive, there must be active participation in it. I have been involved with this club since its beginning in 1982 and have enjoyed it greatly. If there are others in this area that want an active club, contact me, I would be happy to help set up.

Frank Fellheimer

Marvin Waid	Membership	(616)897-0194
Gary Heitz	Director	(616)676-0112
G Borysiak	Director	(616)896-9358
Charlene Bird	Director	(616)795-3593

Happy New Year everyone. I hope one and all had a Merry Christmas. Did you get all the Christmas presents you had on your list? I'll be looking forward to hearing about all the good things you got, and seeing some of them demoed at the meetings.

I have a word of caution to all XF551 owners. Some of these drives came with weak hollow rivets holding the I/O ports to the drive board. With repeated twisting these rivits can loosen up, letting the port rock on the board. This can cause the little bus bars soldered to the board to break free, or worse yet, ripe the circuit traces from the board. If you move your 551 a lot, use the I/O cable you have that goes in the easiest, and use care when plugging it in and removing it. By next month I should be able to tell you how much it will cost to repair this.

Also next month, there should be a new officer's list. The elections take place at the January meeting. Good luck to all the new officers, and here's to a good year ahead.

One last item. At the December meeting, a motion was made to give blank disks to anyone who brings in some public domain software for the library. If you bring in a disk that is not already there, you will receive 2 blank disks. Bring in 2 and get 4 blank disks. I would ask that you make them single density, and use both sides of the disks please. I know many of you get PD stuff mailorder or from BBS's, so why not let this software get you some free disks? It won't require much of your time, and will help us get a library we can be proud of.

There have been several new additions to the library the last couple months, like several new Print Shop icon disks, some graphics programs and a German version of Dos 2.5. Each month we'll try to list any new titles we get. Remember, PD and shareware only.

Take care all, Tim

Layton ACE of Utah

The L.A.C.E. Club Meets in the basement of the Clearfield Library every secondWednesday of the month at 7:00 p.m. Mark your calendars for the next two meetings: January 9, 1990 and February 13, 1990.

Irwin Brooks	President/ST Librarian	(801)731-1516
Richard Clark	Vice President	(801)825-5823
Ken Karchner	Secretary/Treasurer	(801)776-8015
Lonnie Allen	8-Bit Librarian	(801)392-4450

LACE President's Column

Atari Swap Meets Bring 'em Out

The other day I heard about an Atari Swap Meet in Salt Lake City that was sponsored by the A.C.E. Club. No big promotion, just a little ad in the newspaper. No business retailers or representatives were there. Not even signs at the Granger High School before or during the swap meet.

In fact, you wouldn't know that you were in the right place until you walked in and saw all the familiar hardware and software. This Atari Swap Meet seemed to have very little planning and effort done. All the makings of a good idea gone sour...but it wasn't. People showed up from all over. I came from Ogden myself, 40 miles. People that weren't members of A.C.E. or any other club for that matter were there. Just loyal closet Atari users and lots of them. It was by everyone's explanation ***a great success.***

There were Atari 8-bit computers, 800s, XLs and XEs. STs were there humming along. New, used and public domain software abounded. There were 3-1/2" and 5-1/4" disks as well as cartridges. New and used hardware was for sale. It was buzzing with excitement for all Atari users.

For me, it lifted my spirits and gave me hope. I'm constantly surrounded by users of "that other" computer both at work and play. I've begun to think that I must be alone in relaying the virtues of the computers that do not play "follow the leader." But, thankfully, there are others who use and love these computers that the mainstream world seems to be trying so hard to ignore. To my great surprise, there are others who aren't swayed by the pressures of the unknowing masses. No, no, we aren't out-of-touch, obsolete or any other label one might dream up. We just know what it is we like and have the courage to stick with it.

It will take more users in this quiet rebellion. More recruiting and disciplining is necessary. It will take more steadfastness and perseverance on our part as users. I urge you to keep your head held high and press on. And by all means, urge friends, neighbors, relatives and all others to:Join the Revolution...Buy an ATARI!

M.A.C.E. MACE MICHIGAN-ATARI-COMPUTER-ENTHUSIASTS

Michigan Atari Computer Enthusiasts receive, as part of their dues, Atari Interface Magazine. Members are also entitled to purchase disks from the 8bit and ST public domain software libraries. 8bit disks are $3 and ST disks are $4 each, and if you buy three disks from either library, you can choose a 4th disk absolutely FREE! Non-Members may purchase disks at a slightly higher rate. Mail order is also available.

For a catalog of current disks in our libraries, send $2 for either an ST or 8bit catalog to MACE, PO Box 2785, Southfield, MI 48037. MACE can also be contacted throught Ed Hanson, (313) 675-0044 or Bob Retelle (313) 483-7358. MACE meets on the Third Tuesday of each month at 7:30 at the Southfield Civic Center at 10-1/2 Mile and Evergreen Roads in Southfield, MI.

November meeting minutes: The November meeting was called to order at 7:30 PM. Bob Retelle got things going by giving the members the latest Atari news. Afterwards, Bob Retelle and Ed Hanson demo'ed several programs including the games Xenon II, Bloodmoney, and bolo, and also showed off the A-Lite sound and graphics demo and a German demo titled The Snowman.

Following the demos, Anton Malje held a discussion about the CSS Black Box for the 8-bit machines. Team Computers was up next showing Atari's new Portfolio computer and then held a quick discussion on Atari's Stacy computer. After a short break, Innovative Concepts demo'ed and sold (official) copies of TOS 1.4 and also the Best Mouse which, according to the people at I.C. were superior to Atari's mouse. Ed Hanson then informed the members that MACE West was back on-line at 582-0657, and mentioned that his company Hurricane Systems had donated the use of a 30 meg hard drive to run the BBS. It was then announced that Michtron had donated a copy of Utilities Plus with which to catalog the disks in the ST library. Finally, to close out the meeting, Ed Hanson gave demos of the games Bloodwych and Populus.

Next month is December, and that means we will be having our annual Christmas Party. There will be prizes and lots of goodies on hand. This meeting is open to MACE members and their families ONLY. however, those wishing to attend may purchase memberships for $20.00 at the door.

MID-OHIO ATARI USER GROUP

Mid-Ohio Atari Users Group Post Office Box 134, Ontario, OH 44862 The Mid-Ohio Atari User Group supports all models of Atari computers. We meet at A&B Computers, located in the West Park Shopping Center on Park Avenue West in Mansfield. The meetings are the third Saturday of each month, from 7pm until 9pm. Demonstrations are welcomed,and pirating is expressly forbidden.

MAUG is a participating club in the Atari Interface Magazine group. As such members receive an issue of AIM every month for no extra charge. Club dues are $7.50 per year for all members. The club maintains a disk library for both the 8-bit and ST line of computers. There is also a special MAUG section for members on the DataQue Support BBS, for email and file downloads. The number of the board is (419) 529-5197.

Well the December meeting of the group was generally only of intrest to the ST members, since no one brought any demos or news for the 8-bit. There were various items for the ST being displayed and demoed. Also it was decided to move the club meeting to the third week of each month to allow more time for the A.I.M. magazine to arrive to the members.

On display was the Michtron PC Speed enhancement. This small board inserts into an Atari ST with only minor modifications. Included in the kit is a boot disk, and a 64-pin socket which is soldered on top of the 68000 in the ST in a piggy-back fashion. The board should be installed and ready for demonstration for the January meeting. If you have any PC software you would like to see run on the upgrade be sure to bring it along to the meeting.

Also a demo version of the new game XENON-2 was shown. This is a real nice shoot-em-up game for the ST. The graphics are superb, and the action is non-stop. Even though it is a demo version, it still is fully functional as a game, although limited to only level-1. This demo was included on the monthly ST club diskette.

A nice tennis game was also demoed which had very good graphics and playing action. Control of the player and ball seemed to be good, and various courts are selectable. View is third person perspective, and players are fully defined. The digitized sound adds to the realism of play.

The new versions of the C.F. Johnson ARCShell program, as well as the newest versions of ARC, and LHARC were made available to users at the meeting. A copy of the runtime library of GFA BASIC-3 was also included on this months diskette. If you would like to get a copy, send a blank 3.5" disk and mailer to the club address or stop into A&B computers.

At the January meeting we expect to see the operational PC Speed, and also the Atari XEP-80 80 column adapter for the Atari 8-bit computers. We should also have received the first monthly diskette from A.I.M. which should contain some great stuff for the ST.

Remember! Your membership dues will have to be in *before* the 13th of January 1990 to assure the receipt of the February 1990 issue of AIM! Don't forget it! Just send a check to the club address made out to Chuck Steinman for $7.50.

The Middle GA Atari Users Group is the sole Atari Club in the Middle Georgia area. We are composed of 60 members of which approx. half are ST users. Club president Pete Miller can be reached by phone at 912-922-5666. The MGAUG address is 115 Feagin Mill Rd., Warner Robins, GA 31088.

MGAUG meets the second Sunday of each month at 2 PM at the Warner Robins Library. Annual dues are $5 with the newsletter optional. Use of the club library is free to all paid members.

Dec. Meeting — December's meeting had a good turnout with about 17 members showing up. Charles Kight brought his 520ST with Mono Monitor and DeskJet II printer. Charles gave us a demo of Pagestream 1.8 and printed out some papers on the DeskJet. At slightly over $650 the DeskJet seems to be the printer of choice for the low end desktop publishing user. Also the power of Pagestream is coming through and has become the Desktop Program of choice among most members of the club. Charles also showed us the power of Logo with some programming demos. I was slightly surprised at the interest that the Logo programming generated in many members.

Also discussed at the meeting was the loss of Atari Magazines in the U.S. We now have lost ST-Log and Computer Shopper will cut coverage on the 8-Bit computers as of 1 Jan. Also what may be some disturbing news from Antic, that they have lost some of their top personnel. The word from Bob Brodie is that the reason that ST-Log was dropped by Flint Pub. was not that it wasn't generating a profit but that it wasn't generating the amount of profit that Flint thought that it would. Well I imagine that this should help ST Informer, ST World, Current Notes and others increase their readership.

Speaking of Bob Brodie, I talked to him for a while on 11 Dec. and we touched on several topics. First the STE will be out soon as it still is awaiting FCC approval, apparently their is a slight problem with RF shielding but the problem has been rectified. The Stacy is still on track for a February debut we hope. I think that a lot of Mac people would like to get their hands on one. The LYNX is SHIPPING and is available at Sears ONLY through mailorder and in limited quantities. Bob has been busy trying to reorganize the Atari Club membership and said that he hopes to be able to restart the newsletter. Even as we talked he was selecting pictures to have in the newsletter so we should have one at the club soon for you to read.

Virus Alert —It seems that one of the members of the club recently bought Tecno-Cop by U.S. Gold and found a virus. The virus was found when he made a backup disk of the program so that he would not have to use the original. He noticed that he was having disk crashes and some of his disks would not boot. The reason he found the virus was that he was using a new desktop ACC file called JAMES, which you can configure to look for a virus with each disk swap or at boot. Running a public domain program VKILLER and checking his Tecno-Cop disk reared up the ole Devil's Head. Checking with information VKILLER stated that this was a virus by the retailer to stop piracy!! The member intends to give U.S. Gold a call and tell them what he thinks of this policy. The bottom line is that everyone should be able to make a copy of a disk for his OWN USE without worrying about the retailer sabotaging his computer system.

Duplitwix Blitz —I purchased this product to speed up disk copys of public domain files at the club. This has turned into a lengthy project at each meeting as many members want a copy of the latest Public Domain software. It would have been great in that it will copy a disk in around 20 seconds. Alas I have no such luck again and Duplitwix Blitz will have to go back. It seems that Blitz requires 2 disk drives (no problem), the cable is hooked to the output of disk A (problem - I have MFD dual drives, no disk A output port) so back it goes. I also had problems with the software not booting and I am the second club member to have this problem.

VideoKey — We have received a free VideoKey from Practical Solutions. I will be looking for someone interested to take a look at this product and doing a review for the newsletter. I have had an opportunity to hook it to my color TV and the improvement in picture qualityshows a very definite improvement in quality. VideoKey has both RF and Composite outputs and is optimized for low rez viewing. I hope to have a demo of this product at the Jan. meeting.

Jan Meeting — The January meeting will be at 2PM at the Warner Robins Library on January 14. Mike Carter will be bringing his ST with color monitor and hard drive. I hope to see you there.

Membership to PACE is $30.00 per year or $9.00 per quarter. General meetings are held at 6:30pm on the third Sunday of every month. In the event of a holiday, a new date will be chosen and will be posted within the pages of this newsletter and on local Bulletin Boards. Membership includes a monthly newsletter, monthly meeting, FREE Disk-of-the-Month, access to our BBS, FREE printer ribbon re-inking, and FREE copying priveleges to our VAST collection of 8/16 bit Public Domain programs. Ports A.C.E. is an alliance of families with a mutual interest in the Atari Computer and is an independent, non-profit organization. PACE hardware assets: 130XE, 1050 Drive, MacInker and a Supra 300 baud modem. Any written correspondence should be addressed directly to Ports A.C.E., Tracy Hendershot, 4835 Crosley Avenue, Duluth, MN 55804.

From the President...I hope everyone got what they wanted for Christmas. I didn't...Santa Claus just doesn't make those kind of deliveries! Instead he gave me an Alesis QuadraVerb (digital effects), the perfect compliment to my MIDI recording studio.

I'd like to thank everyone who brought snacks and refreshments to our 5th annual PACE Christmas party last month. The food was great and everyone was well satisfied. Our raffle of PageStream brought in a tidy sum for the club's treasury. Along with that, we had numerous door prizes given away during the social hour. I encouraged members prior to this meeting to bring in software and hardware they no longer use, price it and hopefully sell or trade those items to the needy. There were some great deals available and I encourage people to continue doing this at every meeting. Other clubs have been doing this for years and it's about time we followed suit.

The kids were relatively well-behaved during the business part of the meeting. Much of the discussion was focused on Atari's inability to offer much to users in the Twin Ports area. It was agreed Atari damaged itself in a large part by eliminating distribution of STs through mail order houses. 100% of PACE members purchased their machines through mail order, because our nearest dealer is 150 miles away. Christmas came and went, again without Atari on anybody's mind. It seems Atari isn't on the minds of two publishers this month. There is a rumor that ST-Xpress and Analog/ST Log have ceased publication. Debt problems with the former, lack of subscriptions for the latter. Unfortunately for us, we just spent $75.00 for a subscription to ST-Xpress! Gary commented we would be lucky to ever see our money again.

Micro Simulations has left town...and moved across the bridge into Superior, WI. The new numbers are: Node 1 (715) 394-3360 and Node 2 (715) 394-3369. Personal reasons were the cause of this relocation, yet Micro Simulations BBS offers more bang for the buck and is light years ahead of anything in this region. 35 megs of Atari downloads, 200 megs of IBM downloads for you PC Ditto fans, Mac downloads for the Spectre people, 104 conferences, 50 online games, 'nuf said.

On to cheerier things. The Portfolio is receiving favorable reviews in the "PC" magazines during the month of December. I personally think it will be a big seller, however, it won't be long before the Japanese will come out with a similar unit and improve upon Portfolio's shortcomings. I certainly hope that R&D is continuing and a Portfolio 2 will make its debut next Christmas.

Atari made an excellent presentation at the November 17th Las Vegas COMDEX, *finally!* Present were the Portfolio, TT, STacy & STE! The STacy equipped with 4 megabytes of RAM, 40 Meg HD, and Spectre GCR costs only a third of what a "real" portable Mac costs. This had everyone's attention including dealers and distributors. The TT's (5 of them) were up and running ST software at "light-speed." The STE is housed in the 1040 case and was demonstrating its new sound capabilities. There was even a hint that "new machines at both ends of the lineup are yet to be announced!" (I won't hold my breath)

Next PACE meeting will be January 21st, 6:30pm. Remember to spread the word, "Atari has a computer for everyone!"

PHAST - Phoenix Area ST

Richard Covert	President
Lance Summers	Vice-President
Jim Keho	Recording Secretary
John Steiner	Treasurer
Mike Zachary	Membership Secretary/Sergeant at Arms

From the PHAST officers....

PHAST members, welcome to the AIM family!!! I know that some of our members are wondering just why they're getting this copy of the AIM magazine (that'll teach you to miss one of our meetings!). At the December meeting, the membership voted unanimously to drop our participation in Nibbles and Bytes and to join AIM. It was felt that N&B's wasn't meeting the needs of our membership and was always arriving late...if at all. The members thought that AIM would give us a more dependable and informative platform than we currently had, it would provide our membership with the news, previews and reviews needed to keep us up to date in the ST world, it would provide us a glimpse of what other Atari clubs across the country are doing and it would provide us with an inexpensive and dependable monthly newsletter.

For you PHAST Times enthusiasts, don't despair!! The members didn't want to put "all of their eggs into one basket" and didn't want to risk loosing their clubs' individuality, so they decided to continue with PHAST Times also. So along with AIM, you will continue to get PHAST Times, just like normal (every other month - it's next issue will be in February). There will be some changes in PHAST Times this year though and the major one will be a new editor...Jim Keho. Mark Kiel and Lloyd Pulley (the current co-editors) have too many personal and business obligations to continue as full-time editors, so Jim was kind enough to take over the job. Each editor has his own ideas on how a magazine should be produced, so I expect to see some new and exciting changes to PHAST Times in the near future.

We've seen many changes in PHAST this last year (most of them to the good...I hope) and there are several people that deserve a lot of thanks for their time and ideas. Dave Thorson (for being the stabilizing influence that the maverick officers needed), Marc Kiel (for stepping into the Presidency when our old President had to resign...and for helping establish PHAST Times), Doreen Webbert (for taking on the Recording Secretary position even though she didn't have the time), Aric Friesen (for taking on the Treasurer's position when our old Treasurer had to resign due to changes in his job), Mike Zachary (for being the only officer brave enough to run for office again) and Charles Cullinan III (for being the only one with enough patience to do the disk library). These are not the only ones that deserve thanks, there are many other "unsung heroes" that helped to make PHAST successful. People who donated their time for demos, people who donated their time writing articles, people who donated their time for the many various odds-and-ends that are needed to make a successful club. We thank all of these people!! Also, let's not forget Henry of Computer Works, he's donated a lot of equipment and software to the club over the last year. And finally, all of the out-going officers thank *you,* the members, for all of your support!!!

In closing, Marc and I want to thank each and every one of you for making this a successful year for us and we wish all of you nothing but the best for the new year! —Lloyd Pulley

P3Atari Computer Enthusiasts (P3ACE)

Serving the Colorado Springs, Colorado ATARI community since 1982.

President:	Rick Reaser,	380-8082
VP ST:	Dave Koster,	550-1410
VPXE:	John Sandgren,	559-5933
Treasurer:	Jerry Sundee,	574-0005
STLibrarian:	Rick Mount,	596-8631
XELibrarian:	Dave Koster,	550-1410
Editor:	Ed Fletcher,	596-1130

P. O. Box 17779 Colorado Springs, CO 80935

WELL...! It's hard to believe we've come to the start of 1990 already. I hope this last year went well for everyone and you're starting a new decade with a fresh outlook, a positive attitude and a new toaster/oven.

The gala P3ACE Christmas Party was much fun! Thanks for the cookies, everyone, and to Phil Michaelson of Horizon Computers, who brought loads of software sugarplums. We gave away disks-o'the-month and library listings, then followed up by auctioning some *nice* things. A Percom XL/XE disk drive went for $25!, give-me-a-break.

Rick Reaser, XL/XE guru extraordinaire, is the new P3ACE President. His capable staff is listed above, give them a call. If you have the time and the tools, get with Rick and pitch in to help with meetings or functions. P3ACE needs you!

The great AIM experiment is on! If you have an opinion about receiving AIM instead of our regular newsletter, call Rick! We'll be making desicions without you, would you like that? If you have an idea about an article, call Ed! Expose yourself to a *national* audience!

Lastly, my personal thanks to everyone who contributed their time to help the group last year, in which we managed to stay afloat and had good fun despite the (still!) slow growth of Atari computers in the US. (Oh, Jack, Sam, rescue your true believers and long-suffering supporters from the Valley of Dearth). Special mention to the outgoing (or transitioning) officers: Ed Fletcher, Bob Vixie, John Sandgren, Jerry Sundee, Howard Adams, Chris Smith, Will Bates, and Dave Ritchie. Round of applause, everyone!

dkos

ROCKFORD ATARI COMPUTER CLUB

Serving the Greater Blackhawk Area of Northern Illinois

Rockford Atari Computer Club serves the North Central and Northwest area of Illinois. We invite anyone in the area to attend our meetings. We meet at Rock Valley College, Rockford, IL: usually on the third Saturday of each month. Meetings start at 10 AM and feature demos on both the Atari 8-bit and ST. Our address is RACC c/o Andy Learner, 3902 15th Avenue 1, Rockford, IL 61108. Call the Camille 2000 BBS at 815-397-5327.

Andy Learner	President	(815) 397-5316
Mark Kunkle	ST VP	(815) 874-5546
Jake Olbrich	8Bit VP	(815) 332-5303
Roger Creedy	Secretary	(815) 877-3769
Thom Lofthouse	Treasurer	(815) 654-1863
Dave Zolmierski	8Bit Librarian	(815) 654-0247
Mike Boughneit	ST Librarian	(815) 282-2530

President's Report

Here it is December, and I'm writing about the new year to come. WOW! 1990..to think just yesterday it was nineteen eighty, it seems. Guess time flies when we're having fun! Most of the eighties have been pretty good for me. My kids are growing, learning, and they want an ST for themselves. Funny how technology effects us. I never saw a color TV set until I was a teen-ager. Now my kids want the latest in computers, AND a new color monitor of course!

Our Christmas party was a great success I thought, as well as reported by some of the other members to me. It was my first official, full meeting as the new RACC president. I really enjoyed the party. We had three ST's set up as a MIDI-MAZE, one set up for other games. Also Roger brought his 130XE and had it running Christmas music on two MIDI keyboards. Jake brought the club's 130XE for other games and 8-Bit demos.

One thing I will recommend to the board, when we convene is that I think elections should be as far away from this time of year as possible. Assuming the responsibility for the club, right in time for a major event like the party, is very taxing. Believe me, I had my hands full, with the newsletter to get out and all sorts of things to plan. Now I thought since we had an early December party, I'd have a little breathing room, until the next meeting January 20.

NO such luck chubby! I am at the last minute writing my report for AIM..Oh! how unusual. Well I hope this new year finds all our AIM participants healthy and happily playing with all the new TOYS we bought ourselves for 1990!

ON THE BBS: I have noticed that a few of the newer clubs, TACE in particular, share the BBS network we do. I think it is great we have this speedy way to communicate with each other. I look forward to things I read on the NETS, and really get a kick out of how helpful people are. Folks get on the message base and give helpful suggestions to other Atarians. I really am tickled when I can share something I've learned with others.

ON SIGS: Mark Kunkle is busy planning some beginning C programming SIGS for the ST, and Jake Olbrich is planning SIGS for 8 Bit. Since we have to all start new records for 1990, his first SIG will be on our modified MICROCHECK, and how to set it up and use it with the budget program.

Till later! G'Data...Andy

Rushmore Atari Computer Enthusiasts (RACE)

3512 Lawrence Dr. Rapid City, SD 57701 (605) 348-6331

The Rushmore Atari Computer Enthusiasts is a nonprofit organization of Atari computer owners not affiliated with Atari Corp. Meetings are held on the third Saturday of each month, 2pm, at the Westminster Presbyterian Church. Annual dues are $12 for basic membership and $15 for membership and newsletter. RACE offers the Black Hills Atari owner hardware and software support and the largest library of public domain Atari software in the state of South Dakota.NOTE: No piracy will be tolerated at any RACE function!

President:	Rick Burton	(605)-642-5353
V. President:	Gregg Anderson	(605)-348-6331
Secretary:	Mike Douglass	
Treasurer:	Mike Randall

XE Librarian:	Ken Kayle	(605)-343-7289

8-Bit Library Corner by Ken Kayl, Rushmore ACE 8-Bit Librarian

Welcome to Rushmore Atari Computer Enthusiasts (RACE) 8-bit library. So what's our special this month? Let's first review RACE's Disk #51, which has both game and arcade style programs.

HANGMAN is a one player game that we all probably played as a kid. The computer draws a scaffold and puts in the required blank spaces, you then guess the letters. Eight wrong guesses and the man gets hung and a dirge is played. Win and the man goes free.

OILGAME is a multiple player game (one or two on the XL/XE and up to four on the 400/800). You try to guess where to drill for oil. You can then keep the well or sell. The player with the most money at the end wins. MINIATURE GOLF is a 9 hole course for 1 to 8 players. ALIEN ASYLUMS is a one person game. You pick up 4 to 6 keys while not hitting aliens moving across the screen. VALIANT is a one person game. You must find a key to the locked door. You then move into a castle where you find another key and locked door, but there are monsters to fight in the castle. If successful you again advance.

CASTLE QUEST is a one player game where you pick up two keys and a hidden door appears. Sounds easy? Well the walls are deadly and so are moving dots.BICYCLE is a one player game. You must guide a kid on a bicycle between two rows of trucks and oil slicks. For maximium points you must touch two other kids. The trucks move towards the center and you move forward and can't stop. This is a difficult game. MIDNIGHT STRIP is a one player, arcade style. You guide a car down the winding highway. Fail to stay on the road and the game is over. You control the speed using the joystick firebutton. STAR VENTURE is a one player game. Your mission should you decide to accept it is to take your craft into a star field and get all of the small planets. If you touch a star or wall you lose. Once you have all the planets a gate opens and you go to the next field. As always should you or your men get caught or killed the secretary will disavow all knowledge.

TRIVIA is a one player game. You choose a category and bet points. To advance a level you must bet ALL the points and answer 5 questions in a row. These are fairly tough questions and it is not easy to advance.WARRIOR 3000 is a two player game. You try to shoot the opponent, but you are limited to 20 shots. BUNNY HOP is a one player game. You hop a bunny picking up carrots. Get all the carrots and you get a new screen. FORTUNE is a Wheel of Fortune type game for two players. DGEN is a data generator for FORTUNE so you can add your own places, phrases, people, or things. ISLAND JUMPER is a one player game where you attempt to jump out of an airplane and land on an island. SPEED RACERS is a one player game where you guide a car on a road avoiding the other cars. Speed is controlled by how many cars you have avoided.

Let's also review RACE disk 64. RACE 64 has the games Jeopardy and Wheel of Fortune. These are played very much like the TV shows of the same names. Jeopardy is for two players and no joystick is needed. Wheel of Fortune is for 2 or 3 players and no joystick is needed.

These and the entire 8-bit library will be at the January meeting. If you're interested in any of our software library contents they are available at the very low price of only $2.00 per disk for members and $3.00 for nonmembers. If you have suggestions for types of software you want in the library or reviewed here let me [Ken Kayl, (605) 343-7289] know. Or write to me in care of RACE, 902 Virgina Lane, Rapid City SD 57701

Happenings at the November RACE Meeting

Old Business: First of all it was put forward and agreed to that we would put on permanent hold any computer show at Haggerty's Music Works due to an apparent lack of interest on their part. Gregg Anderson was selected to approach Westmore Music (in the Rushmore Mall) on doing a MIDI demonstration with their equipment. No December Newsletter will be mailed out since we missed the deadline for December's AIM. A short 'reminder' note will be mailed to the membership as a 'memory jogger' though.A motion was made by Ken Kayle & seconded to allow for a lump sum payment to AIM to cover the newsletter costs. This was agreed to and will be done in the near future.

New Business: It was brought up and a motion was made that RACE join the FACE Disk Exchange Program. This was agreed to and our Librarians will be sending in disks this month as FACE requires.

Odds & Ends: Gregg Anderson brought in a fairly complete report on the new hardware Atari was showing at ComDex this fall together with the usual assortment of Atari related magazines. A sad note was his announcement that Analog and STLog magazines had been closed by their owner, LFP. Status of subscribers still owed issues is currently unknown, though Analog informed Gregg that they would be taken care of. Happenings at the December RACE Meeting

Old Business: It turns out that Wesmore Music is VERY interested in letting us do a MIDI demonstration at their Mall store. They're even willing to write letters to some of the various MIDI software houses to help us get more demonstration software. Companies currently under consideration are ST Express, Hybrid Arts and Dr T's. The 8-bit FACE disk was mailed out last month and the 16-bit disk will go out this week.

New Business: A telecomputing demonstration is being arranged for a future meeting to provide some 'hands on' training on the ever popular sport of modeming. We will have to set this meeting up well in advance as it must be held somewhere other than the church due to the church's multiple line phone system (though a few members think they may know a way around that problem). The JANUARY meeting theme will be 8 and 16 Bit WORD PROCESSING applications and some of the finer points of the more popular software packages out for the two systems. Demos will be by Ken Kayle and Rick Burton on the 8-Bit and Gregg Anderson and Mark Wolf on the 16-bit. PageStream 1.8 is currently enroute to the club to be included as part of our next raffle. Many thanks are due the talented and generous folks at Soft-Logik for their donation. Planned as a special for the 8-bit library is an unusual program called 'Christmas Shopping'. Rather unusual in concept and execution. I'll let somone else present a formal review of it later.

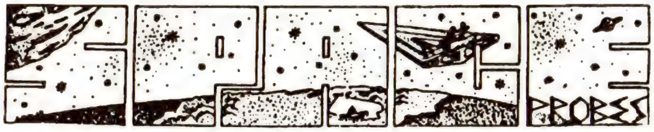
Special info: It seems that we're loosing two of our long time members. Both Gregg Anderson and Mark Wolf are receiving new assignments (both are active duty Air Force) and will be leaving the area soon. Open in late February will be the position of Vice President and a new ST librarian will be needed by July of '90. Remember, our constitution requires that the new Vice President must be an ST owner. So step forward and take an active role in our club, after all it's your club too.

President's Particulars — I believe it would be in order to repeat some comments made in the last Particulars before RACE Tracks merged with A.I.M. Two concepts which, in my opinion, are vitally important to all of us: mutual support and networking.

Mutual support begins at the local user's group. Members support each other with ideas, answers to questions, new inspirations, and comradeship not to mention just having fun. People from many different areas of life meet on common ground -- computing with the Atari!

Networking of groups takes place through exchange of newsletters and public domain software and also takes place through BBS communication. Programs such as A.I.M. and F.A.C.E. (a PD disk exchange) have arisen because of a recognized advantage in networking.

Mutual support then filters through the network. There's even some international co-operation. Let's all dig in and make Atari computing more rewarding for each other. Bring your ideas and your expertise to the meetings. Do a demo, help someone with a problem, lead a discussion, teach a class, write an article, *contribute, volunteer!* It's enjoyable and rewarding. Upcoming meetings will be zeroing in on some practical application techniques (put that software to work). January's meeting will be Sat. the 20th at the usual location. Looking forward to seeing all you R.A.C.E. drivers at the meeting!...Rick Burton



Meeting NoticesCombined Club Meetings: January 15, 1990 (7:30 to 9:00 PM) at the Camp Hill Shopping Mall Community Room. This date is different from that listed in the December newsletter.

Future Meetings: February 19, 1990 (7:30 - 9:00 PM) March 19, 1990 (7:30 - 9:00 PM) April 16, 1990 (7:30 - 9:00 PM) May 21, 1990 (7:30 - 9:00 PM) June 18, 1990 (7:30 - 9:00 PM) July 16, 1990 (7:30 - 9:00 PM)

All meetings will be held at the Camp Hill Shopping Mall Community Room until further notice. Currently all dates are set for the 3rd Monday of the month.

December Meeting—Elections were held with the following elected officers for 1990:

President - Rich Deen
Administrative Vice President - John Hileman
Program Vice President - John Slade
Treasurer - Don Zeiders
Secretary - Mike Moyer

Rich Deen discussed "The Revolution" while FREE disks were passed out to members containing the Revolution. More discussion will take place next month. The $50 Attendance Prize was not won, so next month's prize will be $55. Practical Solutions, Mouse Master was raffled off by silent bid. Many bids were received with the lucky winner being Dennis Engle. The club received $21.55 Club fund raising will be discussed at our January meeting.

Don Zeiders gave a tremendous demonstration using Tweety Board. Don showed the strengths and weaknesses of the Tweety Board. The Stereo sound was amazing (especially Airball), while digitized sounds were very 'scratchy' as the documentation stated. Don said that Tweety was worth every penny he paid for it and highly recommended it to all. This demo was very well received and as a result it looks like a few more members will be buying the Tweety Board.

View from the Bridge by Rich Deen STARDATE: 12789

Well, as promised, here is your first issue of Atari Interface Magazine (or AIM for short). At the December Board meeting, the newsletter topic was kicked around. We thought trying AIM on a trial basis, but after much discussion we decided to become a 'Participating Club' with AIM. With this new format we will be able to provide meeting notices every month. That in itself should be a big plus. We had five individuals show up for our November meeting (we had no November newsletter). For December we had 20-30 people show up. It makes a big difference when we put out a newsletter. Also the number of pages will jump from 8-10 to 30-36. From reading past issues of AIM, I can see that coverage for you 8 Bitters out there is much greater than what we could provide. The Board hopes members will continue to write articles for the newsletter. Anyone wishing to submit articles should send their material to Rich Deen. It should be in ASCII, Word Perfect, ST Writer, or First Word format. Please stay away from any fancy formatting in the file.

One of the main goals I would like the club to accomplish over the next year is to re-establish the SPACE BBS. We have had numerous problems in the past and with some effort on our part, I hope we can overcome these problems.

I also hope that we can continue upgrading our club's machines. In particular, I would like to see us finally get the 520ST in one piece and get that disk drive fully operational. It would be nice if we could pick up a hard drive for the club too. That might be something that would come in handy with a BBS.

January will be the beginning of fund raising. The Board will be looking into various options. This will be discussed at the next Board meeting. While currently in the black, we must continue to direct our efforts to make sure that we stay that way.

One last area we discussed lightly at the Board meeting was about the possibility of having some type of statewide get together (circa mid 1990). Recently I read where the Pittsburgh Atari Computer Enthusiasts were considering having another Atarifest sometime in 1990. The Board will have to consider this when discussing what kind of get together we might be willing to get involved in. Well, that's all for this month. ENGAGE . . . .

STANCE

President	Claudette Tishcler	226-5644
Vice-Pres	Gary	521-2855
Treasurer	Kathi Koenig	892-0881
Newsletter Ed	Joseph Adato	449-6881

The ST Atari North Coast Enthusiasts (STANCE) is an independent, not for profit Atari computer user group and is not affiliated with Atari Corporation, or any of its affiliates, in any way.

$12.00 per Year with a one time sign up fee of $13.00.

STANCE club meetings are held every third Monday of each and every month at B & G Electronics, (located at 15729 Madison Ave., Lakewood, Ohio 44107) starting at 7:15PM

ST CLUB EL PASO

The ST Club of El Paso is the only Atari ST and Mega user group in the El Paso area. The ST Club has proven to be a benefit not only to new users, but also to the "old hacks" of computing.

We now meet twice a month at the Richard Burges Library, 9300 Diana. The first meeting of the month is always the second Saturday of the month, at 12:30pm. The second meeting of the month is held on the last Thursday of each month at 7:00pm. Meetings feature demoes of the latest ST software, as well as help for the those that might be having problems with their computers.

Membership in the ST Club of El Paso includes a year subscription to the magazine you are holding in your hands, discounts on software at Jenkins' Computer Store, and access to one of the largest public domain libraries in the nation. We also offer technical help, and we sometimes have a party or two when we run out of computer things to talk about. Voting membership is $20 a year, Sponsored and Newsletter only memberships are $15 a year.

To become a member of the ST Club of El Paso, call 915-821-2048, or write the ST Club of El Paso at 10953 Yogi Berra, El Paso, Texas 79934.

President:	Tim Holt	915-821-2048
Vice Pres:	Morris Miller	594-1906
Sec't/Tres.:	Joann Anderson	751-2710
Editor:	Paul Stampfli	821-4861
Librarian:	Norm Bates	593-6234
ST El Paso BBS		751-7837

From The Prez...

What a meeting! The December meeting was a real humdinger! We originally planned to show PC Ditto II, but since it hadn't come in we switched gears and demonstrated the Tweety Board by Practical Solutions. (The club joined the ACE club sponsored by Practical Solutions last month, and the Tweety Board was the first item they sent us.) So, Paul brought the tools, I brought the patient, and Morris brought the amp and speakers. I wanted to show how easy it was to install, and you know what? It was! We had that puppy inside the computer in about 15 minutes. This was the first time there had ever been an open heart surgery during a club meeting, and I am proud to report the patient is doing well. We hooked the speaker wires up to the amp, turned on Star Wars by Broderbund, and by goodness, everyone there was impressed with the stereo sound produced by the Tweety Board. We tried some digitized examples, but the Tweety Board does not work as well with the digitized sound. But the sound that popped out of the amp that was not digitized was 1,000,000 times better than what comes out of the little speaker on the monitor. Thanks to Practical Solutions, Paul, Morris and everyone else that helped with the demo. I think we also learned that we can do simple hardware install demos at the meeting as well.

The auction started a few minutes later, and the deals were incredible. Norm hit the nail on the head when he said if you were there to make a lot of money for your programs you were in the wrong place! Software was being sold at prices that surprised even me! Norm's Timeworks Desktop Publishing sold for, get this, $25! I sold a brand new Wordwriter for...stand back...$25! Games were flying put the door for pennies on the dollar. Chronoquest...$10! And that was just the beginning. All and all, the auction raised $20.90 for the club, and auction sellers earned a little over $209! (Still don't think this club is a good business deal?)

The door prize, a $25 gift certificate to Jaxons' was won by club member James Blount. Congratulations James.

We had two new members join our ranks: Frank J. Yrigoyan and Joerg Schluter. Welcome to our club. Isela and Frank Padilla also renewed their memberships for another year, even though they have moved overseas! Thanks to all for showing faith in the ST, and the club.

Copies of the Atari revolution were handed out to all in attendance.

The dinner at Jaxons' was poorly attended, but the folks that were there seemed to have a good time. I won the gift certificate, sorry Pete and James.

We rescheduled some meetings due to the PC Ditto II delay, so now it looks like February's meeting will be the Ditto II demo, March looks like Word Processors, and April will be a great one when our librarian Norm Bates does a "Best Of Public Domain" demonstration.

Paul Stampfli would like to see a response to a Name the Club Contest, with the winner getting a prize of some sort. We have had some difficulty with the ST Club name, as some people confuse ST for Street, and therefore we become the Street Club of El Paso, which makes us sound like a bunch of homeless people. I have proposed Atari ST Club of El Paso, now let's hear your suggestion.

Mark Davis was wondering if anyone would like to become the club's "Hardware Man". Ever since Bob Pack left, we have had a gap in the hardware expertise department. Any volunteers?

Well, I hope the new year is going well for you! remember our second meeting of the month, and keep on computing!

Viva el Revolution! Tim

TACE TINKER ACE OF OKLAHOMA

Tinker ACE of Oklahoma meets the first Saturday of each month at 1 PM (12:30 set-up time) in the Moore Public Library, 225 S. Howard, just off of SW 4th and I-35 in Moore. TACE can be contacted at 104 E. Northrup, Midwest City, OK 72110 or at the TACE BBS (405) 755-9561, 24 hrs., 3/12/2400 baud, running Oasis 4.3 software with over 60megs online storage. ST & 8bit support. Dues: Full - $20.00, Correspondence - $15.00. Dues are prorated at $1.25/month for correspondence membership and $1.66/month for full membership.

President	Greg Ray	(405) 964-3765

Technical Ad	Ron Hamilton	(405) 387-5649

Secretary/Treasurer Report-December

How are you all doing in this rather chilly weather we have been getting recently?

Terrible, isn't it?

Well, I bet you all are wondering what went on at the meeting this past December....especially you who did not show up (shame on you). Well, we handed out some 'crossword magic' disks for the disk of the month...I enjoyed it, at least.

People, we need to get those submissions for the magazine up, and soon! Come on, get your name in a national magazine! It isn't hard, write a review, write an informational article, write whatever, and see if you can get YOUR name published.

Next meeting will be the first week of January (which I am sure you are aware), on the 6th. Be there. Bring a freind.

Stephen C Moffit.

SOFTWARE & HARDWARE FOR SALE

Falcon and Mission Disk $25 —Never Opened!
F16 Combat Pilot $20 —Also Never Opened
Galactic Conqueror from Titus $15 —w/Registration Card
Titan from Titus $10 —Complete w/Registation Card

TRI-CITY ATARI GROUP

The Tri-City Atari Users Group meets the last Saturday before the 18th of the month, at 9 am at the Rudy Zauel Memorial Library, on the corner of Center and Shattuck in Saginaw Township. Upcoming meetings are January 13, and February 17th, 1990.

President	Steve Volker	(517) 685-9035
ST Librarian/Tech	LeRoy Valley	686-6796
Treasurer/Sec	Marty Schmidt	792-6029
8Bit Librarian	Ted Beauchamp	686-8872

Club dues are still only $20.00, which provides support for both the 8Bit and ST, and full access to the club's PD library, along with a year's subscription to the Atari Interface Magazine. Check your mailing label, if you need to renew (or haven't joined us yet!), DO IT NOW!

FIRST UP... ...la..la..la..the Hackers were nestled all snug in their beds while visions of accelerator boards danced in their heads..la..la.. So, how was your Christmas? Did you find any STEs or VIDI STs or DDSs or GCRs or GTSs or DCAs or GFAs or OS2s or GOGO STs or LDWs or VDT VCRs or any other computer related alphanumerics under your '89 tree?

I played a little catch up myself, getting things I wanted that most people had already acquired last year. I got Quantum Paint and ImageScanner to name a few. Both interesting and powerful but already as old as the Motorola 486. My, but doesn't computer technology grow old very quickly? (Oh..Oh,..he's reminiscing..) I remember the first computer I ever owned, the TI99/4A hybrid, with an extended memory of a whopping 48K!! Then there was that 64K computer, (you know the one), that could be used to play anything, and bankswitched itself into more exciting and amazing things, and then I had 512K!!, humming under the hood of the futuristic-like, Atari 520ST, a 'gem' of a machine in anyones home, and now I have access to 1,000,000 bytes of waiting, excitably RAM, purring along at speeds undreamed of even twenty-five years ago!! But today there is so much more available! Keyboardless PCs! Voice-Activated Terminals! Holographic Displays! Writable CD-ROMS! Laser Memory! Space-Grown Crystal Memory! Hundred-Megabytes! Gigabytes! Psuedo-Artificial Intelligence! Computers that have left our Solar System!

And how much of this do we take for granted?! We still can't wait for the next unimagined spaceflight adventurer game, or the next 'Faster than ever before' disk copier, or machine accelerator. Whew! Being a computer hobbyist is life in the fast lane, huh?!

Anyway...HAPPY NEW YEAR!!! We really seemed to have a lot to look forward to. (Just the promises Atari needs to fulfill will take the whole year.)

WHAT YOU MISSED! Now that was a MEETING!! (What do you think, have I used enough exclamation points so far in the text?...NAW!!) Just about everyone remembered about the change of time we decided on last month. Most were here at the standard, 15 minutes after the hour point, which has become the normal arrival time for our club. Everybody had their telltale unmarked box, filled with all kinds of juicy gadgets and software, for the annual Christmas swap meet. LeRoy informed me after-the-fact, that the prez was responsible for bringing the annual, Christmas-cheer coffee pot to the December meeting, so I expected a few more of the group to fall asleep during my update speech. (I wasn't disappointed.) There were donuts and cookies and lively conversation though.

We talked about the visit from Atari's new User Group Rep., Bob Brodie, who will be in Michigan in February. It will probably be the 17th or 18th, at the Student Union at U of M, says AIM's pretty Managing Editor, Pattie Rayl. We will be getting together a group of those interested in going, and do the carpool thing, next meeting. We also finished up the registration form that AIM had sent us last month. The response was a lot better at this meeting, and, I think, more closely resembles the concerns and opinions of our club. I will be sending it back to them any day now. (If you're interested in what we had to say, ask me for a copy of the form.)

By the time you are reading this, the Community Fair Weekend show at Fashion Square will have been just over. We will have a brief report at the January meeting about all the activities that went on and such. You should have heard more about it from our new POSTiCARD EXPRESS newsletter, which we sent out last month to all active members, to make sure the real important stuff gets out before the next meeting, instead of relying on the arrival of AIM. Hey! Nobody's perfect...

Practical Solutions and Soft-Logik have both approached us recently about some great software and hardware promotions coming up in the next few months. As I understand it, we can get free, or nearly free products, by demoing them at the club meeting, and reviewing the products in our newsletter, and sending them a copy of the newsletter. This is quite an offer!! Though I can bring up some criticisms of Atari's support of the User Groups in the last few years, I think we all have to agree that third party hardware and software providers have continuously gone to extraordinary lengths to support and work with us. Thank you Practical Solutions, Soft-Logik, and all those who have always been there for us. More on this later.

WHAT YOU SHOULDN'T MISS... Next month, Al Jennings will be demoing that product we wondered if we would ever see...Chaos Strikes Back! (aha...another exclamation point), the second chapter to the DungeonMaster adventure. (Or, DungeonMaster II: The Revenge...if it were a movie.) I am already excited about seeing it, and Al says it's everything we wanted it to be so...BE THERE!!! If anyone still wants to see the April Computer Chronicles show, which spotlighted on Atari, or a comprehensive video of the Anaheim World of Atari, (with about twenty minutes of questions and answers with Sig Hartmann), Al's got it--just ask. REMEMBER!! (Two more!...Three...) E*veryone who comes to the meetings is expected to have some amusing or thought provoking anecdote to share with the rest of us...o.k.!!*

ON ANOTHER NOTE... I am excited about the year 1990, and all that can come out of Atari this year. But, I have just read something which upsets me a bit, and dampens my hope some of a truly consumer-oriented Atari Corporation. According to Charlie Young of ST WORLD, in his column All Things Considered, the December 1989 issue, Sig Hartmann is leaving (has left) Atari. I am not sure how that affects you, but I have met the man, listened to him, critically examined what he had to say, believed him, and had renewed faith in Atari, through him. I am really disappointed to see him go. I am sorry for two things especially...I didn't get the chance to say goodbye, and I didn't get the chance to say 'Thank You'.

Equipment volunteers for January:

ST Equipment: Al Jennings is bringing his color monitor, and Steve Volker with bring his system. Jerry and Ted, as usual, will bring the 8-bit equipment. Thanks Everyone.

FOR SALE:

Mars 3rd Drive Cable, never used, orig. $31.95, asking $25. Blitz Copy Cable, works great, disk with software, $35. Perry Mason game, original documentation, asking $12. All items for ST/MEGA and include *free* shipping (in the continental USA). Call Rich at (717) 238-3528 after 4:30 PM EST or contact RDEEN on GEnie.

Atari 130XE, 1050 Disk Drive with original boxes and disk-based games, $250. Numerous 8-bit cartridge games, $4 each or best offer. Call John Hileman at (717) 938-8753 between 6-9 PM EST or contact J.HILEMAN1 on GEnie.

The Washtenaw Atari Users Group meetings are held every second Tuesday of the month at 7:30 pm in the Michigan Union building on the campus of the University of Michigan on State street at the Corner of S. University in Ann Arbor.

Club dues are $15 per year and provides access to the PD library and subscription to AIM. Meetings feature demos of both 8bit and ST software and hardware. Non-members and questions are welcome. Officers can be contacted by BBS at Molin's Den at (313) 420-0407.

General Meeting, 12/12/89

The December Games & Entertainment Meeting was held on 12/12 in the Wolverine Room of the Michigan Union. Much of the evening was spent in light chit chat and game play on several computers supplied by members. Midi Maze ran on 3 STs while a 4th machine was kept busy playing a variety of additional other "favorites" and Bob Retelle showed us how to treat his favorite disease (Dungeon Master Elbow...) by using a mouse left-handed while demonstrating/playing the new release of Chaos Strikes Back, the long awaited release of Dungeon Master II. BobR has apparently practiced this A LOT! When asked to summarize his first impressions of the game, BobR's eyes lit up like a Christmas tree and he said, "It's just like Dungeon Master! only more so!" (Thank you Bill and Pattie Rayl for bringing your copy of the program to the meeting!)

On the 8-bit side of the room, members were treated to games which used the light gun, and enough other golden oldies to bring a nostalgic tear to one's eyes. It was interesting to note how many good games have appeared over the years on the magazine disks, and some members indicated their disappointment that Analog magazine is no longer being published as yet another bastion of the 8-bit genre fades into history.

President Craig Harvey announced the January meeting topic would be Telecommunications, and efforts are being made to incorporate a discussion of Packet Radio in the agenda. February's topic will be Emulators, and we will be making every effort to show PC and Mac emulators on that night. February's topic coincides nicely with an expected visit by Bob Brodie, Atari Corp.'s User Group Coordinator, who will be in town with a STacy in tow. Bob will be the guest speaker at the Feb. meeting of Mactechnics, the local Macintosh club, to be held on Saturday 2/17, and will also speak at a special meeting to be held for interested Atarians on Sunday 2/18 in the Michigan Union. (Watch for announcements regarding time and location on local BBSs and here in AIM magazine. -Mike) Craig also informed the members that TWO copies of the latest version of PageStream had been donated to the club, along with a demo disk for the ST Library, by Soft-Logik. One copy will be raffled at the February meeting, and the fate of the second is still being considered. SL donated the software in exchange for a subscription to the club's newsletter and a review which is to appear in that newsletter.

Many thanks to both Soft-House Computer Center of Garden City, and to State Street Computer of Ann Arbor for their generous donations to this year's door prizes. Several members also contributed books and entertainment software from their own personal libraries. Prizes ranged from games to word processor packages to books as well as some coupons from the club disk libraries. Cookies and cake and soft drinks were supplied by Dick Selke and, (presumably...) his wife. The Chocolate cake was SUPERB!

Michael Olin, Sec'y - 12/17/89

People Are Talking About DC UTILITIES

"The wizards at Double Click Software have decided to bombard us with several top notch utilities at once in their first commercial software venture, and are these programs ever good!"
— ST ZMAG

"Squish loads and decompresses programs faster than a standard ST would take just to load the same program full-size."
— COMPUTER SHOPPER

"In keeping with the spirit of pushing the ST and its programs to the limit or past the envelope..."
— ST REPORT

"You won't want to be without this superb utiltiy disk and it's a steal at the price DC is asking."
— ST PLUG

only $29.95

DC SQUISH Save valuable disk space! Compress executable programs and desk accessories up to 1/3 their original size! And your programs stay executable! Makes programs load faster too!

DC DESKEY 2.0 Make any GEM program 'Expert Friendly.' Assign keystrokes to GEM drop down menus in any GEM program! Over 2000 possible key combinations!

DC XTRACT A super fast, pure assembly desk accessory that allows you to xtract, test, or list the contents of any ARC file. DC XTRACT is 4X faster than ARC.TTP, only 12K in size, and always ready when you need it!

DC RAMIT The FASTEST RAMdisk bar none! Allows you to make the RAMdisk look just like a floppy! Save the contents of the RAMdisk to one file, for quick loading of the same files! MUCH MORE!

DC DSKORG Make your DESKTOP.INF file an executable program! Change desktop windows, icons, the complete desktop layout quickly and easily by double clicking one program.

DC SEA Create programs from ARC files! That's right! DC SEA (self extracting ARC) allows you to make a program that will extract or list its own ARC contents.

All programs are 100% pure assembly language

"The ingenuity of ST programmers simply amazes me at times, and this is definitely one of them."

Bill Rayl
Atari Interface Magazine
December 89 Issue

.ACCESS! is the First and ONLY GEM WINDOW based Command Line Interperter Desk Accessory available for the Atari ST. It supports most of the standard MS-DOS and Unix commands as well as batch processing functions. *.ACCESS!* contains commands to perform most disk operations such as displaying directories, copying, moving, renaming, deleteing files. Other commands include the creating and displaying of text files, formatting disks, displaying/setting file attributes, and the displaying/setting of time and date. All in all *.ACCESS!* contains nearly 40 commands, 22 programming functions and 12 control flow batch processing keywords! Several versions of *.ACCESS!* are supplied including Desk Accessory, TOS, TTP and special AUTO folder version.

AIM is produced on a 2.5 Meg Atari ST, HP Laserjet II with PacificPage Postscript cartridge and PageStream

From The Reader's Viewpoint

Dear AIM Editors,

The DOM was great! It had a mixed variety for all. This has got to be one of the finest PD disks for the ST around!

The ReadMe file was especially well done. I was prepared to instruct our non-modeming ST users how to use ArcShell in extracting the PD files from the AIM DOM. I was totally surprised to find out that all the files are self-extracting LZH archives. Nothing could be more simpler than that! Everyone was well satisfied and delighted with their disk. I think it is much better than the Mag/Disks on the newstand!

Tracy Hendershot
PACE, Duluth, MN

[Editors' Note: Thank you for your kind words, Tracy. We hope all the AIM participating clubs are as happy with their disk subscriptions as PACE is. If anyone has any suggestions for us, please let us know! We will endeavor to keep everyone happy with each new Disk of the Month.]

Dear Bill and Pattie,

You are probably aware of "The Revolution" movement. I have recently become aware of The Revolution and I have decided to join up. What have I got to lose? I am willing to put forth the effort to do whatever I reasonably can to get Atari to actively compete in the American market again.

I know it is hard the longer one has been using Atari products to take any effort to change things seriously, but the alternative is to sit and complain. I like the idea that we make a splash, if nothing more.

Thank you for your consideration of our serious effort. Long live the Revolution!

David Brzezinski
WAUG!, Ann Arbor, MI

[Editors' Note: David, thank you for your comments. We appreciate them very much.

We support the idea of a greater Atari presence in the US home computer market, although we cannot directly support The Revolution. It is our feeling, since there are many different user groups represented in Atari Interface Magazine, some with opposing views on the Revolution issue, that we cannot make a formal stand one way or the other.

We do, however, wish to encourage those who are actively following the procedures and advice of Artisan Software. We will continue to promote and support the Atari computers and Atari users as we have been doing since we became publishers of the Michigan Atari Magazine in December, 1987.

Naturally, we would like very much for everyone's efforts to be rewarded with increased advertising of the Atari home computer line, increased support from Atari to their users, and increased support from Atari to their developers.

Talking with Bob Brodie and Charles Cherry has fostered hope and optimism that substantial change may be in the works, but the high executive turnover at Atari dampens these hopes.]

Atari Interface Magazine is a monthly publication that also serves as an official newsletter of several independent Atari user groups and is not affiliated with Atari Corp. in any way. AIM is published by Unicorn Publications, 3487 Braeburn Circle, Ann Arbor, MI 48108, (313) 973-8825 voice, (313) 973-9137 BBS. A subscription to AIM is included in membership in any participating club or may be obtained directly from Unicorn Publications.

AIM does not knowingly reprint copyrighted material without first obtaining permission from the source. Non-commercial user group publications are granted permission to reprint articles from this magazine as long as credit is given to AIM, the author and club (if applicable). Opinions expressed within articles in this magazine are solely the views of the author(s) and do not necessarily represent the opinions of AIM or any participating club. Atari Corp News

Atari reportedly made a good showing at the Winter CES in Las Vegas, NV. In the West Hall of the Las Vegas Convention Center, the Lynx and California Games was being displayed with the help of two bikini-clad women on roller-skates and a "day at the beach" backdrop. Meanwhile, back at the private suite in the Mirage Hotel, Atari was showing the Lynx, Portfolio, 2600 and 7800 game machines and the ST.

According to Andy Marken of Marken Communications, Atari's PR firm, Atari is projecting 1990 production of one million Lynx machines and the game development system for the Lynx is now available for companies interested in making games for the Lynx.

Bob Brodie, Atari's not-so-new-anymore user group manager, recently held an online GEnie conference where he discussed his upcoming plans (including a visit with Michigan area user groups on Feb. 18) and other Atari happenings. It seems nearly unanimous that hiring Bob Brodie was the best thing Atari did in 1989.

The STe

Canada has the STe and dealers have been selling them anywhere from $699 to $899 Canadian (approximately $600 to $800 US). With built-in Blitter, easy memory upgrades using SIMM modules, full stereo sound capability and more, the STe is already a big hit in Canada, causing decreased sales of normal STs and even Megas!

Reports from dealers across the US indicate they have not been able to order 520STs from Atari since mid-December. Some of these dealers indicated they had heard Atari would be dropping the 520ST, although Atari has denied this. A handful of dealers have also reportedly received word the STacy2 and STacy4 laptops should be on their shelves in two to three weeks from this writing. That means dealers should, hopefully, be able to get them by the time you read this.

Developer News

MichTron of Pontiac, MI, has announced availability of the Fast FAX modem and software, giving Group III FAX capability to any Atari ST. The software includes a phone directory that can store over 1000 company names, contact persons and FAX numbers. List price is $699. Contact MichTron, 576 S. Telegraph Rd., Pontiac, MI 48053, (313) 334-5700.

Universal Item Selector III has been released, offering a number of enhancements over previous versions, including an UNDO function, movable window allowing users to place the item selector anywhere on the screen, ability to lasso multiple files and more. Retail price is $24.95 and upgrades are $5 + $2 S&H. Contact Application and Design Software, 120 NW "E" St., Grants Pass, OR, 97526, (503) 476-0071.

Gribnif has an upgrade to NeoDesk (version 2.05) with support for the ST's "GEM Pipeline." This allows special "NeoDesk Accessories" such as the recent freeware NeoDesk Recoverable Trashcan (found on this month's AIM Disk). The Trashcan will store deleted files, which can be recovered until the Trashcan is "emptied," much like the Macintosh.

Gribnif has also announced plans to release NeoDesk CLI, a command line interpreter in a GEM window (similar to .ACCess! from Rock Digital) that will utilize NeoDesk's capabilities to the fullest. Also coming from Gribnif is the NeoDesk Developer's Kit, so others can write NeoDesk Accessories. For more details, contact Gribnif Software, P.O. Box 350, Hadley, MA 01035, (413) 584-7887.

Another contender in the "improve your ST desktop" arena should be shipping by the time you read this. DC-Desktop from Double Click Software offers a number of "desktop enhancements" and features similar to NeoDesk. DC-Desktop can even use icons from NeoDesk and, since it isn't a desktop replacement, DC-Desktop works in all resolutions and reportedly with no compatibility problems. List price is $39.95 and owners of NeoDesk can get DC-Desktop for $20 with original NeoDesk disk. Contact Double Click Software, P.O. Box 741206, Houston, TX 77274, (713) 645-3759.

PC Ditto II has been shipping in quantity and many people have been experiencing problems installing Ditto II in their machines. In some cases, because PC Ditto II is a 4-1/2x7 inch board, reports are coming in that the board simply will not fit in some machines!

Most problems, however, are occurring with the chip clip that is supposed to allow solderless connection to the ST's 68000 chip. It seems the clip isn't giving a good, solid connection for many people.

Owners who have soldered the board in are reporting Ditto II works like a champ! Ditto II even has a Norton SI rating of 4.0, a 33% speed increase over the figures in Avant-Garde's original ads. List price is $299.95. Contact Avant- Garde, 381 Pablo Point Dr., Jacksonville, FL 32225, (904) 221-2904.

Disgruntled do-it-yourselfers with no real hardware experience are looking seriously at an alternative in Supercharger. Supercharger is a hardware IBM emulator from Germany that plugs in to the ST's DMA port. At $399, Supercharger is a bit more expensive than PC Ditto II or PC Speed from MichTron, but Supercharger doesn't require opening your ST and comes with MS-DOS 4.0. Contact Talon Technologies/Medionix, 243 N. Highway 101, Ste. 18, Solano Beach, CA 92075, (619) 755-8808.

Beckemeyer Development, makers of the MTC-Shell multi-tasking environment for the ST has recently changed phone numbers. Their new voice number is (415) 530-9637 and you can reach their BBS at (415) 530-9682.

Ralph Turner, author of "The Atari ST Book of Tips and Instructions," has released a new book entitled "Intermediate and Advanced Atari ST Subjects." Written in Mr. Turner's concise and understandable style, this new book helps the ST owner get through often confusing topics such as hard disk management and optimization, IBM emulation, building your own hard drive system from scratch, sector and file editing and much more. In all, 158 pages of valuable information. List price is $16.95 + $2 S&H. Contact Index Legalis Publishing Co., P.O. Box 1822, Fairfield, IA 52556, (515) 472-2293.

Games and Game Accessories

Following closely on the heels of the original game, the Bloodwych Data Disk #1 has been released by Mirrorsoft of the UK. As the game story goes, by defeating the Dark Lord in the original Bloodwych game, you actually only sent him back to his original plan of existance. Now, he's *mad* and transports you to his turf to take his revenge. Although Mirrorsoft has not found a US distributor, the Data Disk is available from many dealers or from mail order. The best price I've seen as yet is $18.95 from Joppa Computer Products, 3909 Pulaski Highway, Abingdon, MD 21009 (800) 876-6040 for orders or (301) 676-1948 for information.

For gamers who want the ability and freedom of one-handed joystick operation, like in the arcades, Duggan Dezign has released Stik-Gripper. An all-steel joystick clamp that secures your favorite joystick to a tabletop or desk, Stik-Gripper is designed to fit a wide variety of joysticks and is built to last. A number of online users have been praising Stik-Gripper as a great bargain at only $18.95 retail. Contact Duggan Dezign, 16 Oak Ridge Dr., West Warwick, RI 02893, (401) 826-0140.

On a similar note, Canadian-based Advanced Gravis has begun shipping their new MouseStick. This nifty product emulates both the standard joystick and the ST mouse. The MouseStick supports screen resolutions of 320x200 to 640x400 and allows you to customize a number of features via LCD menus. List price is $129.95. Contact Advanced Gravis Computer Technology Ltd, 7033 Antrim Ave., Burnaby, British Columbia, Canada V5J 4M5, (800) 937-0062.

Online News

Z*Magazine, Ron Kovac's long time 8bit online publication, has formally called it quits, citing lack of new 8bit news and products as the cause for its demise. ST*Zmagazine has also been discontinued and, in its place, Z*Net Online has been born. As the name implies, it is the online complement to Kovac's Z*Net hardcopy user group newsletter supplement. With this change, the GEnie Z*Mag accound is no longer active and all email on GEnie should be addressed to the new Z-NET account.

ST Report has also undergone some format changes and has been "reborn" as CPU NewsWire, reflecting its support of multiple computer systems through its CPU Report feature.

SOME LIKE IT... HOT!

The CodeHeads announce:

HOT WIRE + MAXI FILE

- "When the START editorial staff first saw HotWire, our collective reaction was 'Wow!'"
- By far the **fastest, easiest way to run programs** on the Atari ST...from a floppy disk **or** from a hard drive!
- Build menus for all your most commonly-used programs. Load new menus with a single keypress or mouse click!
- New **Ledger** function records time spent in programs of your choice.
- **Passwords** may be used to restrict unauthorized access to certain programs.
- New **on-screen clock**, appears in the programs that you choose.
- Unlike other shells, HotWire works correctly with all programs, just like the GEM desktop.
- A **seamless interface** offers direct access to MultiDesk and MaxiFile.
- Full-featured file-handling utility lets you **move/copy/delete/rename/touch/lock/hide** any combination of files and/or folders
- Runs as a desk accessory **or** as a program in any resolution
- Incorporates **every** file/disk feature of the GEM desktop plus much more
- Intelligent **disk copying** routines
- **Rename folders** - Print directory listings
- Store **comments** about any file/folder
- Unique and intuitive user interface designed for easy, speedy operation
- **Customizable** for your style of use
- **Keyboard equivalents** for all operations
- Quickly select from up to 20 of your most-used paths.
- Even runs programs and loads documents.

Here's what our users are saying about HotWire and MaxiFile:

"The HotWire/MaxiFile combo has **changed the way I use my ST**."
"I haven't used the standard GEM desktop in weeks."
"Without HotWire and MaxiFile I'd be totally lost on the ST."
"...a tribute to **assembly excellence**." - "MaxiFile is **a wonder**!"
"HotWire and MaxiFile really 'beat up on the competition'!!"
"...you'll need to package it in asbestos because it is too **hot**."
"**AWESOME!**" - "Super!" - "a veritable software gem!"

HotWire Plus (includes MaxiFile)	$49.95
MaxiFile	$24.95
HotWire	$39.95
G+Plus - a replacement for Atari GDOS	$34.95
MultiDesk - load unlimited desk accessories	$29.95
CodeHead Utilities - a collection of useful programs	$29.95
MIDIMax - a powerful MIDI tool for performers	$49.95

Phone: (213) 386-5735. Visa, Mastercard, AmEx accepted. Shipping charge: US $2, Canada $3, Europe $5. CA residents add 6.5% sales tax.

Atari Support in the Motor City

An Outsider's View

Gregg Anderson (RACE)

Hi folks. I just returned from a little visit with the family in Detroit, Michigan and thought I'd pass on a few tidbits of info. Contrary to popular opinion, Atari is NOT dead in the heartland of America. And while not as robust as it once was, Atari dealer support there is also far from terminal.

Much to the annoyance of my sister and brother-in-law, one of the first things I did after landing at Detroit Metro was to grab six pounds worth of yellow pages and list all the Atari dealers I could find.

Would you believe there are seven Atari dealers still in business in Detroit and its surrounding communities? I thought I'd died and gone to Heaven. I live in South Dakota where the nearest Atari dealer is in Denver—about 425 miles as the Jeep rolls.

Despite some of the nastiest winter weather Detroit has seen in the last twenty years (rain, snow, sleet, ice, power outages, and roads only an ice skating polar bear could love), I pressed on and visited six of the seven dealers. The seventh is primarily a mail order business and doesn't have a real "storefront."

What follows is a list of the Detroit area dealers with a short description of the shop and what they offer.

Basic Bits 'N' Bytes, Westland, 313-595-3171

Basic Bits 'N' Bytes is a full service Atari dealer offering productivity and entertainment software for the ST owner as well as software support for a handful of other systems. There was a large selection of European games on display as well as the more familiar domestic titles. Basic handles the full Atari line along with a few PC clones.

They're also an Atari service center and offer a selection of domestic and imported Atari magazines. There were two 1040ST systems available for demos in addition to a PC clone or two. Estimated cost for a TOS 1.4 upgrade was $99 (6 chip) and for a 520ST 1Meg upgrade the cost was $150.

As a side note; Basic used to be a six store franchise. They are now down to a single sales center of average size (though a busy one, the phone never stopped ringing while I was there).

Soft House Computer, Garden City, 313-422-6760

For hardware, Soft House handles only the ST line, though they do offer software for a few non-Atari systems. Unfortunately, they had to drop their 8bit support some time ago. They're serious about selling the ST though and were actively demoing a 1040 system to a new customer while I was there.

Soft House is an authorized Atari service center (with full time technician) and offers a wide range of domestic and imported Atari magazines. As with Basic, the salesperson I spoke with was well informed on Atari related matters and very positive on the system's capabilities.

They offer a wide selection of productivity and entertainment software and have a surprisingly large assortment of European titles not generally available here in the USA. Estimated cost of a TOS 1.4 upgrade was $99 (6 chip) and for a 1Meg upgrade the cost would be $200 (socketed).

Rite Way Computers, Warren, 313-751-2454

In both total size and overall selection, Rite Way is the largest computer dealer I visited. They offer full support for the Atari ST, Atari 8bit, Laser Apple clone and a number of PC Clones.

As with the two previous shops, Rite Way is an authorized Atari service center and has a software selection that almost boggles the mind. There were literally rows upon rows of titles from both the US and Europe (though I must admit there were many multiple copies of the same package present).

All in all, it was an impressive display of both hardware and software. While there, I watched a professional demonstration of the ST's MIDI capabilities being given to a customer on a Mega4/SLM-804/Megafile system.

The individuals I spoke with seemed well informed about their products and more than willing to take the time to help a potential customer. Interestingly enough, the only computer that seemed to attract interest while I was there was an Atari ST system. Rite Way charges $104 for a TOS 1.4 upgrade and $175 for a 1 Meg upgrade.

Command Computer, Warren, 313-573-8130

Though an active Atari dealer since 1981, Command Computer was the smallest Atari dealer I visited. This by no means implies that they don't support the Atari line, but it does say that they've been forced to expand into other systems at the expense of their Atari availability. Command Computers supports both the ST and the 8bit systems and actually sold more 8bits over the Christmas holiday than they did STs. The best seller for them this year was the 130XE. Command Computer is an Atari service center and capable of handling repairs on any of Atari's systems.

Sector One International, Sterling Heights, 313-978-2208.

Sector One was a major surprise for me, a store totally dedicated to the Atari 8bit computer. Yes, they have an ST or two available, but 99% of the store is devoted to the original Atari computer and to little else. I saw software and hardware items there I hadn't seen in years, in fact I've not seen this type of 8bit support anywhere since early '83.

The shop is owned and operated by someone whose name should be familiar to any 8bit owner—Jim Steinbrecker (father of the original A-Modem terminal program). Jim is probably the most knowledgeable man I've ever met on the 8bit Atari and is without doubt the most supportive of that system.

As he says, "it's possible to outgrow a specific computer, but no computer is ever truly obsolete. Least of all the Atari XE which is as capable a system as any." What can I say, if you've a question or a problem with any 8bit Atari computer system or are looking for that specific program for your 8bit then this is the shop to visit.

Team Computers, East Detroit, 313-445-2983.

Team Computers was the hardest for me to find but only because I was starting out from the far west corner of Detroit. Team handles the complete line of Atari computers along with a line of Amstrad PC clones. As with most of the other area dealers, they are a full service dealer and registered service center for all Atari systems. Team was also one of the few shops I visited that had a complete Mega4/SLM804/Megafile30 DTP system up and running on display. In fact, they had three ST systems and an XE system set up for demos.

Both individuals I spoke with seemed very familiar with the Atari line and only too willing to extol its strengths and advantages over the competition. Team Computers even use their STs to support an active DTP and graphics production center they operate from their store.

As with Basic, Soft House and Rite Way, they offer an impressive display of domestic and imported software for the ST and a surprisingly large selection of 8bit software as well. Team charges $99.95 for a TOS 1.4 upgrade and $175 for a 1Meg upgrade on a 520ST.

TEAM COMPUTERS

22205 Kelly
East Detroit, MI 48021

Color/Monochrome Monitors - 19" Moniterm monitors
The latest software and magazines - including imports
Mail orders accepted We match prices with other Atari dealers!

Innovative Concepts, Warren, 313-293-0730

Don't bother to try and visit Innovative Concepts, they don't have a regular show room like the rest of the Detroit area Atari stores. That's because they are first and foremost a mail-order shop for the Atari line. They advertise in many of the more popular Atari related magazines (and many of the larger newsletters).

Currently they are enjoying great success with their line of specialty cables for the Blitz back-up system and the always popular XFormer ST to 1050 cable. For specific details on what Innovative Concepts has to offer be sure to check out their latest advertisement in your newsletter or favorite magazine.

There you have them, seven Atari dealers in the Detroit metropolitan area. Since Detroit and its surrounding communities have over three million inhabitants, that works out to almost 1/2 million people per Atari dealer. Not so impressive when you consider how many MS-DOS, Apple, and What-have-you dealers are available in the same area.

Still, it's better than it might have been and may even improve if Atari takes the right steps over the next year. But before you think I'm being overly optimistic let me point out that the present number of Atari dealers is only a fraction of what it used to be.

Three years ago Basic was only one of six stores with the same name, and others have "bit the big one." Shops like Strom, United Computer, Claus and others have all either dropped the Atari line or gone out of business.

What did the remaining Atari dealers have to say about Atari and its computers? Without exception, ALL were supportive of Atari's hardware. They like the ST and feel it offers an outstanding value in the price/performance area. They like the ST's reliability, its power, and even its software.

What they don't like is its lack of availability and some of the policies of the Atari Corporation itself. The number one dealer complaint was Atari's total lack of national advertising. Most dealers find it difficult to sell a product that no one (outside of the "inner circle" of Atari supporters) knows exists.

The second major problem was a serious lack of product availability. 1040ST and Mega2 systems were in serious demand over the last few months here, as were monochrome monitors, yet these were virtually unavailable to Detroit area dealers.

The third problem (but generally the most mentioned) was the poor dealer support offered by Atari. Often dealers found themselves the last to be notified of new products, left out of distribution chains and generally ignored except when it came to paying bills.

Fourth was the problem of promises made but not kept. Several dealers complained about Atari's promise to not announce or discuss products before shipping them, and then doing exactly that (ie: Portfolio, STacy, TT, etc). This tends to cut badly into sales of current hardware. Coupled with that complaint was Atari's release of the Portfolio with an "Atari only" order phone number that totally cut out the local dealers long before any of them could get their hands on a Portfolio. The general difficulty in contacting and working with the local Atari Representative was mentioned as a problem, along with a reduction in available software support for the ST (mainly from US companies).

Finally the failure of 3rd party companies to repackage older programs "on the cheap" and release them was mentioned, though this applies mainly to older 8bit software. Overall the feeling of the dealers was that they couldn't survive as an Atari only dealer, that most had to offer some clone support to stay in business.

So how was business? Two of the Detroit area dealers reported their Christmas season was good to very good, two reported no real change and two reported a decline in sales. As for the overall year of 1989, the report was less encouraging. Four reported that sales were stable but generally below expectations. Two actually had a decrease in sales over the previous year, though they chalked that up to a generally lackluster retail market.

This is not good news folks, when the best report I can get is one of stable overall sales. That means trouble even in a slow year. A lack of growth is the same thing as stagnation, and stagnation is the first step in decay.

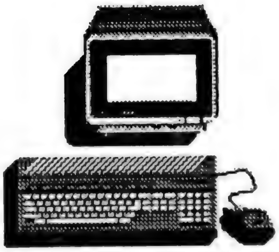
Not everything is negative though. Most dealers admitted that, as difficult as Atari is to work with, they're really no worse than Apple, IBM, CBM or any of the others. In fact several dealers confessed that Atari was generally more willing to listen to them than other computer companies. One dealer explained that Atari's main problem was one of "no flash," that Atari just isn't as noticeable as the competition.

So what's my overall feeling? First of all, that there is a lot of support for Atari in the Detroit area, if you're willing to drive a little ways to reach it. Second is that almost all of the area dealers are VERY positive on the ST system and are willing to go out of their way to support it. Third is that Atari itself should try a little harder to help and support its dealer force, and that the Detroit area dealers would be only too willing to help them do that.

Lastly is that driving in Detroit is an experience in and of itself. It's not that the roads are in terrible shape (though thanks to the cold, salt and traffic most of them are), or that Detroiters drive like it's the last lap at the Indy 500 (they do). It's more a feeling of being trapped in a combat zone without warning.

All kidding aside, despite the rough roads, high speeds, and ice covered intersections (including the one that got my brother-in-law T-boned), the drivers of Detroit showed themselves to be skilled and courteous, giving this out-of-town visitor more than a few breaks.

Me and My Husband's ST



by Merry Iverson (FACCS)

Since becoming the FACCS editor, I have been trying to learn how to use the ST—my husband's computer. I thought I should read the manuals, but Norman said it's easy to use so you don't need the books.

Doing November's newsletter was the first time I had used the ST all by myself. In the past Norman always loaded in the program and had it all set up and ready for me to type in my articles.

Then, when I was done, he would come and save it to the disk for me. All I had to do was send it to the editor, but this time it was different. I ran into my first problem when I tried to load in the word processor—on my XE you just load the disk in and it's ready to use—not so on the ST.

When you put the word processor disk in the ST drive and turn on the ST you are only loading in the menu. [Ed. Note: "Loading in the menu" = booting to the ST desktop.] This is where the challenge began—I had to guess which file I needed by looking at the abbreviated file names on the disk. When I found the one that sounded closest to what I needed, I didn't know how to load it. That's when I first used the *mouse.*

It was just terrible—I had one problem after another trying to get that program loaded in. (I think I would rather have been playing with a real mouse—they're easier to get along with.) It was very difficult for me to move my finger fast enough for the double click needed to load in programs, and when I finally did click fast enough the mouse had moved and I loaded in the wrong program.

By the time I had finished the newsletter I still could not use the mouse very well. (I think I spent more time trying to load in programs and saving articles than I did typing in the articles.) I could not seem to get the hang of it—or my fingers couldn't.

I was very thankful Norman did the publishing program. I told him where to place the articles and he set up the publishing program and placed the articles where I told him. We did have a couple of problems, but Norman was able to resolve them. The next problem came about when we went to print the newsletter.

We just bought a new Panasonic wide carriage 24-pin printer. We thought it would make it easier with the wide carriage to print the newsletter. But, the program did not have a printer driver for our printer and it did not allow for a wide carriage printer, only a narrow one.

Fortunately, last summer we were also able to purchase a Panasonic 1124 printer, and by doing landscape, the printer was able to print the newsletter sideways. This surprised me, as I had never seen a printer print sideways like that.

As you know, we did finally get it finished and mailed, but personally I prefer my little XE. It's what I am use to, and I enjoy using it. I started with an old 800 and worked up to an XE. All these machines were basically the same, they all ran the same programs more or less. I find it real hard to change, and the ST is a new and completely different computer. I could have been using an IBM or MAC and not have known the difference. My nerves would have been just as shot.

I'll use the ST for the newsletter because the publishing programs on the ST are far superior to those on the 8bit side, but for everything else I think I would just as soon stick to my 130XE. I'm comfortable with it and it does everything I enjoy doing on my computer very well.

My 14-year-old son bought an ST with his own money saved from doing his paper route because he likes the games on the ST. But he still has his old 800 set up to play the games he likes in the 8bit section. He has also bought a Nintendo for the games he likes that are not available on either of the Ataris.

My point is that every person who buys an Atari does so for their own reasons, and I do not think that one machine is any better than the next. It just depends on what the computer was going to be used for. As long as the computer you are using does what you need it to do, that is all that is important.

I wrote this article about my trials and tribulations on the ST so other first time users won't get frustrated when it seems that nothing is going right with that new computer.

Practice and asking questions is the best way to learn more about your computer...don't be afraid to ask. This is the only way to improve your skills and uses of your machine. Learn all you can or need about your computer. Only you can set the limits on yourself.

IS THERE A TACTICIAN IN YOU?

WARGAMES ON THE GROUND

Tim Feenstra (GRASS)

Ready for more? Good, because now we get to a real bonanza of strategy simulations for the Atari. Unlike the limited supply of naval games, there is a vast collectionof titles that deal with man-to-man combat at any level and in many different periods of history, and some that deal with confrontations that might have been or might still be.

A Little History

First, let's look at the early days of computer wargames. It seemed only natural that the computer would be used for this purpose because of its ability to incorporate many aspects of the large board games without all the record keeping involved. Some of the board games require many people to play, and one campaign can last for months. In these games, it takes a lot to keep track of all the units, their current condition and status, and to keep the orders to each unit straight.

The early computer versions were simple enough, usually with a dot grid used for a map, letters or numbers to indicate your forces, and a limited number of orders and tactics which could be used.

While antiquated by the games of today, it is still interesting to return to these early efforts from time to time to try your hand again. Some of the titles that come to mind are *Midway* and *North Atlantic Convoy Raiders* from Avalon Hill.

Avalon Hill is big in the board game world and it is not surprising they were among the first to turn to the computer to make playing these simulations more enjoyable. *Panzer JAGD,* another Avalon Hill game, uses graphics for a map, and includes options for different levels of play. If you find any of these early releases in a bargain bin, pick them up. They are worth the few dollars they might cost today.

1941 The Eastern Front

Today, graphics and realism have been improved greatly. In the Beginner's category comes the only entry from Atari Corp. that I know of with *1941 The Eastern Front*. This is a joystick game, placing you in command of the German forces invading Russia. You issue move orders to divisions of infantry and armor, striving to capture Moscow and other major cities for points. Combat occurs during the movement phase when your units move into contact with Russian units.

Units are rated for muster strength, a rating indicating quantity, and combat strength, representing quality. If the combat rating falls too far below the muster rating, the unit becomes more of a liability, as it will need to be protected and rested until it recovers. Destroyed units will sometimes pass some of its muster points to friendly units next to it, but the receiving unit will lose combat strength, due to the morale of the incoming points and their affect on the new unit.

When units get isolated, their combat rating is cut to indicate the loss of supply, and will usually require a major effort to rescue them before they are eliminated. Then comes fall and the mud that bogs your units down. If you are not in position to defend yourself, this could be disastrous. Next, winter brings snow and frozen rivers which let your units move fairly freely again.

At the higher levels of play, you can alter the mode of your divisions from standard to movement, assault or static (good for defense).

On cartridge, and available in many discount catalog listings for $10.00 to $15.00, this is a good game to get your feet wet. It was also an APX release back around 1980, when Atari still cared for its users (I have not seen it that way in a long time.) This is a solitaire only game, with turns marking a week in the war, and can be played in one or two nights. It does have a save game function, useful when playing the long "expert" level, which might last a week or so.

Another APX release, modeled after 1941 is *Saratoga.* I think this one might still be available from the Antic catalog. It covers much of the Revolutionary War, and plays much the same as Eastern Front.

Wargame Construction Set

Moving to SSI, we come to a series of games which include probably the most popular wargame to date, *Wargame Construction Set.* The pattern from SSI has been to use a good game system for more than one game, I guess because it requires less programming than to do each new game from scratch.

This series includes Field of Fire, NAM and Panzer Grenadier.

These play with a joystick, and each turn is divided into a series of move and fire phases.

Wargame Construction Set is a two-disk set that includes a game editor to allow you to alter one of the supplied scenarios or to create your own. There are a lot of factors to be set here, but that is not difficult. You may have up to 31 units for each side, and each unit has 12 attributes which cover firepower, range, defense, weapon type, assault factor, unit type, movement allowance, armor, anti-armor, transportation and, lastly, if unit may dig in. There are a lot of different icons (symbols to represent different type units) that resemble tanks, trucks, copters and men, as well as some that are just symbols. The instructions do a pretty good job of explaining what each factor does and how to set them for maximum realism.

Before you create your units, you design a map for them to fight on. There are roads, hills, trees, buildings, mines, rivers and bridges. How these parts appear on the map depends on the 'scale' you choose. In Tactical mode, each map hex is between 20 and 100 meters across. Tactical/Operational ranges from 100 to 500 meters. Operational goes from 500 meters to one or two kilometers and Strategic mode ranges from one or two kilometers to 10 miles or more per hex. Using a joystick, you pick terrain icons then place them on the map anywhere you wish. In the smaller scales, line of sight is important—you cannot fire at what you cannot see.

With a little thought, any conflict you can think of can be created here, and to prove the point, the author has included not only the usual WWII stuff, but also a futuristic battle for an asteroid mine, a rescue mission by delta force, an early battle in WWIII, First Bull Run from the Civil War, and a 12th century castle siege.

Field of Fire covers several battles fought by Easy Company of the 1st Infantry Division. Your company might include rifle teams, machine gun and mortar crews, bazooka teams, forward observers, anti-tank guns and even tanks. You may play one of the eight scenarios, or play a game that spans all eight.

This is a good game to see how small arms tactics work. Your troops will have to advance on a position, and the computer will do its best to stop you. The enemy units are hidden until they fire or move, so you cannot tell which is the best route to the objective until you scout ahead and find them. The scenarios include a night patrol, the D-day landings, clearing a city building by building, crossing a river bridgehead, blocking a German advance, patrolling along a road in the mountains of Sicily and defending a town during the Battle of the Buldge.

FA•ST

“ICD sells a superb, excellent, wonderful tape backup unit. I love mine, and it's saved me any number of times.. There's nothing else like this in the ST world; priceless and fast.”
-Dave Small, Gadgets by Small

“Using the ICD Tape Backup was surprisingly simple and faster than imaginable. It was so fast that I doubted it was real.”
-John Nagy, reviewer for Computer Shopper

“The ICD FA•ST Tape system is a dream come true. The hardware works flawlessly, and the software is incredibly flexible and easy to use...it's simply the best way to back up your hard drive.”
-Charles F. Johnson, Codehead Software

ICD has been backing up Atari users since 1984. With hard drives, host adapters, printer interfaces, and the new FA•ST Tape Backup, ICD offers you more! Call us for information on our products. **(815) 968-2228**

ICD

Nam, of course, puts you in the middle of 6 major battles during the Vietnam conflict. You might command U.S., South Vietnamese, South Korean or U.S. Special Forces squads. Again, the enemy is hidden until contact, and can disappear quickly if you don't catch them properly. Objectives here include a supply convoy under V.C. attack, search and destroy, clearing an underground cave network, using Air Cav. for a clearing action, an armored battle and the attempted re-taking of Hue by the U.S. in 1968. Many of you probably remember this war—here is your chance to find out what it was really like.

Panzer Grenadier goes back to WWII and introduces the concept of armored infantry as developed by the German army because its armor usually left the infantry behind during major advances along the Russian front. The German answer to this problem was the Panzer Grenadiers—highly trained, mobile infantry units that could keep pace with the armored Panzer units and help clear cities and woods where armor was at a disadvantage.

This game will demand sound combined arms techniques, using your armor and armored infantry together to achieve victory. The units here are company-sized, and include their own transportation where appropriate. You get elements of a Panzer regiment, some artillery and, of course, your Panzer Grenadier regiment. Scenarios include the assault on a Russian bridgehead to stop a Russian advance, holding Kirovograd against a Russian counterattack, a probe deep into Russian territory and, as the war progresses, more defensive situations.

All of these games play very similarly. Wargame Construction Set can create two-player scenarios, but the rest are solitaire games, played with a joystick. Each turn starts with an 'observation' phase, where units that require rest or are under assault can be rested. This is followed by several 'movement and fire orders' phases for both the player and the computer. This varies a little for each game, but you generally get two movement and two fire phases per turn.

MicroProse Wargames

Another series, this one from Microprose, is a little more involved but still plays with a joystick. Crusade in Europe, Decision in the Desert, and Conflict in Vietnam are operational level with units of division and regiment size. All three have a number of scenarios with several variants, more than can be listed in this text.

Crusade in Europe covers the war in Europe from D-day (6-Jun-1944) to the end of 1944, with scenarios covering the major battles and objectives, such as the river Rhine, the Battle of the Buldge, and Operation Market-Garden, as well as as the entire battle for France. The variants offer "what if" situations to the historical setup for those who feel things could have been different.

Conflict in Vietnam offers scenarios from the French defeats in 1954 to the American withdrawal in 1972, also with many variants for each of the historical situations. The units here are usually regiments or battalions, and include armor, air cavalry and armored calvary.

I have not played *Decision in the Desert*, so I won't guess at it, but I assume it includes the same type of scenarios and variants of the other two games. These games play in real time, meaning that they do not have turns and do not stop for you to issue orders to your units. Orders are issued while the action is underway, much the same as in real life, though the games do 'pause' a bit if you give orders quickly to a lot of units. The action can be paused to scan the map if you wish, which is useful in some of the large maps that cover more than one screen. Play is only stopped during orders for a two-player game so one player may issue orders while the other player leaves the room.

Orders, given with the joystick, set the units to four possible states—attack, move, defend and reserve. Objectives for attack and move are set by moving the cursor to the desired area and pressing the fire button. While line of sight is not a factor here, supply is, and units without supply lines quickly use up their supply and will only defend their position. Reserves come into the game from the friendly side of the map and must be moved to the area you want them. You may play either side in these games, and you may also play with limited intelligence (enemy units will only be seen when in contact with your forces). Depending on the scenario, these games may take many hours to complete, so there is a save game function.

These are good, involved simulations, yet they are easy to learn and play. While Conflict in Vietnam is not a game I play often, (I never did like that war), I really enjoy Crusade in Europe and look forward to the day I get Decision in the Desert.

I almost forgot a fourth game here—*NATO Commander*, fought in Europe during WWIII. Forces can be division or regiment size, whichever you choose and includes units from many of the NATO countries involved in the defense of Europe from the Warsaw Pact forces to the east.

A nice touch here are chemical and nuclear weapons, but you can use nukes only with the approval of the President. He usually doesn't see things as bad as you do, so he says no a lot. Chemical weapons have side effects too, but I will leave that for you to find out. The Air forces are the ace-in-the-hole for the badly outnumbered NATO forces and must be used to their fullest potential to stop the invading "Red forces."

Guderian and Gulf Strike

Avalon Hill has a good pair of games in Guderian and Gulf Strike. *Guderian* is the German drive to capture the city of Smolensk in 1941 played in 12 turns, each representing two days. The units are divisions divided into three regiments, and the stacking limit allows only three units to occupy each hex. With the joystick, move the units, or an entire stack, to the desired location. If they come into contact with the enemy, you will be prompted to assign a target hex for combat. One thing I do not like about this game is the inability to use mass attacks, as each enemy unit may only be attacked once each turn. There is a railroad feature, and as the Germans you must cut rail lines to stop Russian units from using them to get to the hot spots quickly. Other features are leaders for the Russians, random Russian units to simulate the untried state of the Russian army at the start of the war and the usual need to keep your units in a well-supplied state.

Gulf Strike, though still a simple game to play, includes land, air and naval forces during a Soviet attack into the Persian Gulf area. This game is a little out of date, for in it Iran is a U.S. ally, and we all know what they did a few years ago. Still, this game is a pleasure to play, because of the scope of forces involved. Iran, Iraq, Saudi Arabia, Kuwait and the Soviet border are on a map that covers several screens. As well as forces from the above mentioned countries, British, French and U.S. forces ply for control of the gulf area and its oil production. Land forces are state-of-the-art armor and armored infantry, while the air units include groups of most every type of aircraft that would have been in use there just a few years ago.

I like the naval forces, since the U.S. has 2 aircraft carriers in the area as well as a battleship and some submarines. The Brits and French have subs and minesweepers. The Russian naval forces include some cruisers, a helocarrier and subs. Game play is similar to Guderian, using a joystick to issue orders and each turn is two days. Like NATO Commander, it is the Air Force which must balance the power on land, as the Soviets have an advantage of position and numbers, but their naval forces will be left wanting against the big U.S. carriers (my favorite part). For a close look at how a modern war might develop, this is the game to play, and with such large force to command, two or three players could divide up one side and each control a certain aspect (land or air) or just certain countries' forces. This could show how different countries must work together against a common foe. The instructions are very good and give a lot of information about the forces and equipment used in the game.

Combat Leader and Battalion Commander

Two more real time games from SSI are Combat Leader and Battalion Commander. These use both joystick and keyboard—the joystick to move the cursor and the keyboard for orders. *Combat Leader* puts infantry squads and tank platoons at your command simulating tactical combat from WWII through the 1980's and has the weapon ratings for England, France, Germany, Italy, Japan, Poland, the Soviet Union and the United States during WWII and China, England, France, Germany, Israel, Japan, the Soviet Union and the U.S. in more modern times.

Battalion Commander gives you an entire battalion of modern fighting units of company and platoon size. Weapons for the Soviet Union, China and the U.S. are included. You may command at the company level or command a single company at platoon level, with the computer handling the rest for you. This is a good game to get the feel for the chain of command involved in a battalion.

Both games allow the creation of your own scenarios, but are only solitaire. They play quickly and can be completed in one to four hours depending on the size and type of the battle. You may choose between meeting engagements involving forces of about equal size or to attack or defend an objective. They are very good games considering their age—already four or five years old—and make very good introductions to some of the more advanced games we'll get to later.

Well now that I have rekindled my interest in some of these games, I think I'll take my leave of you and go into battle. Until next month, good hunting, and we'll see you after the battle.

COMPUTER VISUAL MARKETING NEWS

SPRING — PROVIDING COMMUNICATION FOR BUSINESS — *1990*

CVM NOW FORMING NATIONAL AD NETWORK YOU CAN BE A PART OF RIGHT IN YOUR OWN HOME FULL OR PART TIME !!!

TED TURNER DID IT, SO CAN WE

TED TURNER DID IT SO CAN WE Says JT Jocz owner and founder of COMPUTER VISUAL MARKETING, a new company dedicated to providing unequaled entreprenurial opportunities to both computer and videophiles. Three year ago even before the term"DESKTOP VIDEO"was coined Jocz was creating graphics screens on his little old COLOR COMPUTER (trademark of Tandy Corp.), and displaying advertising screens in public for a fee. Even then Ma & Pa sized advertisers were anxious to get their message to the public on this most dynamic media--TELEVISION.

Now, after years of innovating and perfecting the techniques and procedures, CVM has put together a full BUSINESS KIT, including an eight by ten bound business planning guide, which covers every phase of setting up your own local CVM network and cashing in on the very best home entrepreneurial opportunity which has ever existed.

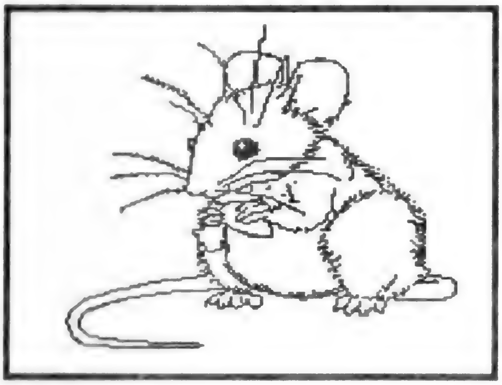
The Business Kit also includes a one hour VHS video cassette showing over 150 ad screens which CVM NATIONAL has shown for profit in public. An actual sequence showing an ad screen being created in real time is included.

Its like having a high priced consultant at your side for every step of the way to form your own local network.

Your business kit allows you to use the CVM name in your business and even supplies forms which you will use.

We call it the non FRANCHISE-FRANCHISE, as it's your business 100% with no continuing fees to CVM NATIONAL. You keep all of the profits from your own local network and later if you wish, you may join the CVM NATIONAL AFFILIATE NETWORK. This is an excellent project for an individual or a user group!

ATARi 520ST is the trade mark of ATARI CORP.



YOUR MOUSE BRINGS BIG BUCKS!

WHAT DO YOU GET

CVM Furnishes a complete kit of materials and information which will allow you to set up and operate your own local advertising network.

We review your exsisting equipment and tell you what equipment is required for a minimum CVM studio.

We tell you how to set up your studio, how to set up display locations, how to sell ad screen subscriptions, how to create ad screens, how to bill your customers and how to keep records.

We also provide tax tips, and info on how to maintain good customer relations, We even furnish special forms which will be helpful in operating your business.

We show you how one hours work can be used over the years to bring in hundreds or even thousands of dollars.

We show you over 150 ad screens which CVM has ran for our customers, This not only provides ad screen ideas but indicates to you who would be good clients to call on. We also include three free issues of the CVM newsletter CONCEPT, which will keep you up to date on activities and furnish additional tips for operating your local network. All this for the charter price of $149.

WHAT IS REQUIRED

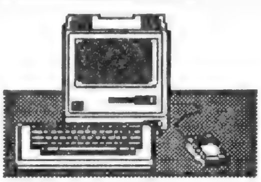
DESKTOP VIDEO is a marriage of computer and video technology. YOU PROBABLY ALREADY HAVE 80 % OF THE EQUIPMENT REQUIRED.

Much of the additional equipment required can be purchased from up front collections from your advertising clients.

You will of course require a computer capable of creating graphic screens and outputting a recognizable NTSC video signal along with software.

You will also require video equipment which will allow you to produce the computer output into a cassette format, and a VCP and TV set for each display unit you operate. Again except for the first display unit, these can be purchased with up front money collected. Since all artwork will be digitized, no artistic skills are required. All procedures are easily learned.

All of these procedures are fully covered in our material. The annual profits from a single display unit can be as much as $20,000 per year, depending on location and clientele, again all explained by CVM. Dont wait order your business kit now.



The ATARI 520 ST is especially well suited to the CVM CONCEPT.

Chaos Strikes Back from FTL

Bob Retelle (MACE)

Well, Dungeon Master fans, it's finally here...the long awaited sequel to the most popular computer game for the Atari ST.

Lord Chaos is back, and *this* time he's *angry!*

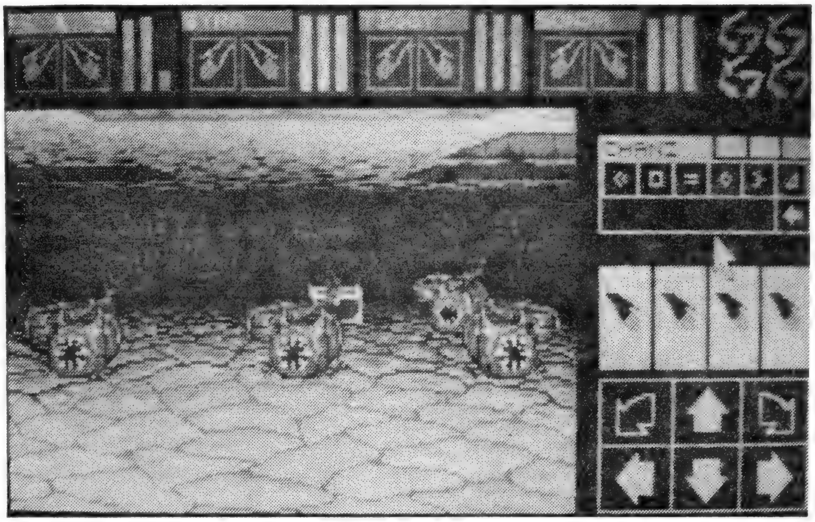
Actually, the way the scenario for this "Expansion Set #1" goes, Lord Chaos foresaw his defeat at the hands of your group of Champions and prepared his revenge even as you were descending in to the Dungeon to fuse him back together with his Good side.

He created a secret dungeon below the one you were exploring and concealed four deposits of Corbum ore in well hidden locations. This ore is draining the mana from the world and weakening the bonds which hold him captive. When enough magic has been drained away, he will be free once more to wreak havoc upon the land.

Unfortunately, he seems to have forgotten that this much power, concentrated in such a small area, will also destroy the universe! It's been a year since your party of four Champions defeated Lord Chaos, and your wounds have long since healed.

But now, you've been summoned back to Mount Anaias to help the Grey Lord find and destroy the four Corbum ore deposits before they can release Chaos once again, and before the world is destroyed in the process. You'll need all the skills you learned in Dungeon Master to survive this challenge.

Released almost exactly two years after the original Dungeon Master, this game takes the same familiar dungeon world and expands it greatly.



The game has the same excellent balance of easy playability and challenging situations. The screen looks the same, and all the intricate details which added so much to Dungeon Master are still here. Essentially this *is* the same game, continued on to higher levels of difficulty.

The Chaos Strikes Back box indicates that it "Requires Dungeon Master," but this is not strictly true. The game is a complete standalone game and could (maybe, just possibly) be played without having first played Dungeon Master.

But, it's highly doubtful anyone could survive long without the experience gained in the relatively "easy" Dungeon Master dungeon (yes, this game is *that* much more difficult...it makes Dungeon Master look like a romp through a playground!).

You *can* use your Dungeon Master party if you have a Saved Game disk from DM or you can start a new party from the 24 new Champions provided on the new game disk. Unfortunately, while your Champions retain all their statistics, such as Health Points and Mana, they're stripped of everything else.

They'll enter the secret dungeon of Chaos Strikes Back without armor or weapons, without food or water, and without any of the nifty gadgets they had picked up along the way in DM. They start the game wearing literally nothing but their smiles and with nothing but their (your) experience to see them through.

Eventually they'll find weapons and armor, and many magical items, but surviving long enough to find them will be your first challenge.

Utility Disk

The game comes with a second disk, the Chaos Strikes Back Utility Disk. This disk has several nice enhancements to the Dungeon Master world and is used in the somewhat complicated process of starting a new game. When you boot up the game disk, you're presented with a familiar looking screen, allowing you to choose either to enter the "Prison" (this version's "Hall of Champions"), or to Resume a Saved game.

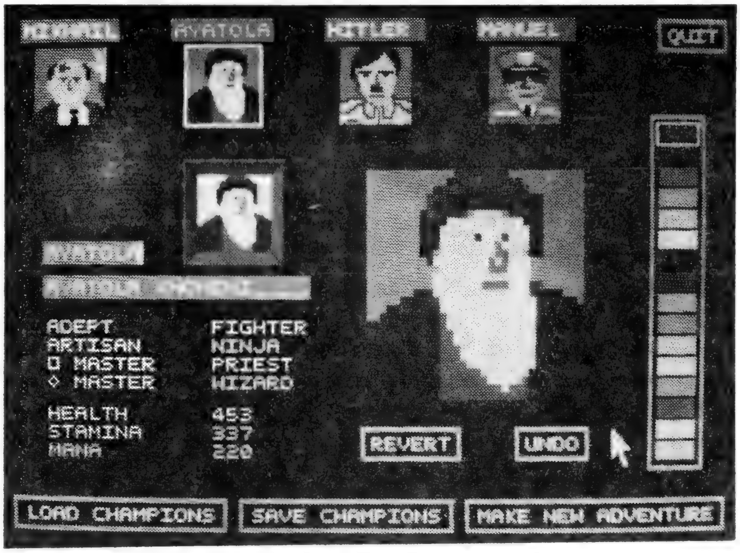
If you want to start a new party using the new Champions, you'd enter the Prison and browse among the portraits of the Champions frozen in the magical mirrors. The first thing you'll notice is that the Champions are very different from the ones in Dungeon Master. For one thing, they're all much more advanced than the Champions at the beginning of DM were, as is necessary for this more difficult game.

Another difference is that there are far fewer "human" Champions, and a great many more, er, unusual types. There are Pixies, Insects, Ghoulish-looking characters and even Incan warriors. After exploring for awhile, you'll notice there are only 22 Champions...hmmm...thought there were supposed to be 24. Yes folks, in this game, there are hidden areas in the "Prison," and just to get the game started with a "bang," there are monsters in there too!

Once you've made your selections from the new Champions, you need to Save the group to a disk (there is no exit to the Dungeon from the "Prison"). Then you have to boot up the Utility disk and select the "Champion Editor" to "Make a New Adventure." If you decided to keep your old Dungeon Master party, you can skip exploring the Prison, and just use your old Saved game disk at this point.

Changing the Character's Appearance

Did I say "Champion Editor"...?? Yes, one of the new enhancements added in this game is the ability to change the pictures of the Champions by using a little drawing utility on the disk, and saving the portraits back to the Saved game. You can draw a mustache on Halk, give Wuuf an afro, or, umm...see what *really* happens when you throw Sonya's golden bra across a pit to trigger the hidden switch on the other side!



ADEPT FIGHTER

HEALTH 453
STAMINA 337
MANA 220

A Sample of Characters from E&L Production's disk

Speaking of which, there are also 24 NEW portraits of the old Champions on the Utility disk, "enhanced" to reflect their experience in Dungeon Master. The Warriors look meaner, the women look more voluptuous (must be the exercise swinging those heavy swords) and the non-human characters look, well, even more non-human!

The portraits can be saved back to disk as individual files, which means you can trade them with your friends or upload them to BBSes to share with other CSB players. There are already quite a few Champion portraits to choose from, including an entire set of familiar Bloom County faces (imagine battling Deth Knights with Opus the Warrior, Steve Dallas, Oliver and, of course, Bill the Cat!).

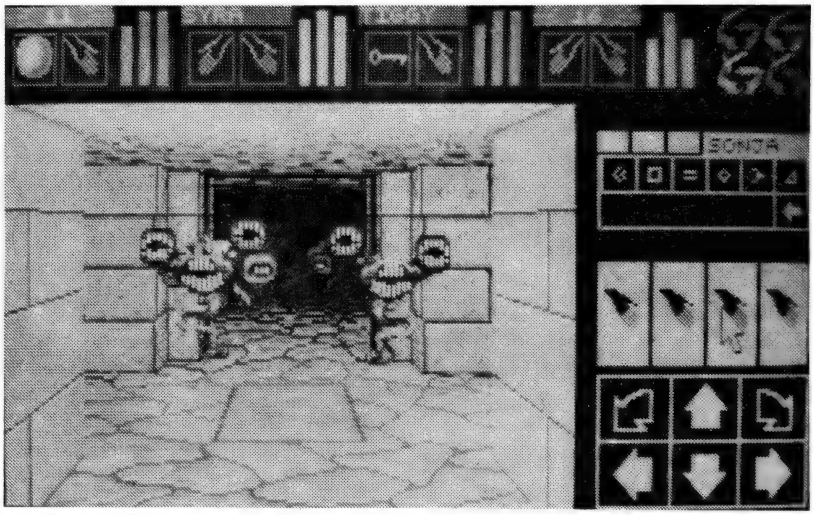
Other Champion portraits I've seen include Calvin and Hobbes and a complete set from "Lord of the Rings." In fact, E&L Productions has recently introduced a disk with more than 50 new Champion portraits to be used with CSB. The disk includes Peanuts characters, the entire set of four Pac-Man ghosts, Madonna (truly awe-inspiring), Norman Bates and the scary bunch of "World Leaders" shown in the photo below. This is a really fun addition to the game and allows everyone to have their own customized version!

Also on the Utility disk is the Chaos Strikes Back "Hint Oracle." If you get stuck at a particular puzzle, or stopped by a certain door, the Hint Oracle may be able to give you the help you need to get past that point. While I might be a little prejudiced in favor of a nice warm hintbook, the Hint Oracle can come in handy if you don't have a hintbook yet.

The procedure is a little awkward, much like the "Hintdisk" approach for Dungeon Master. When you need help, you have to first Save the game onto your save disk, then reboot your ST with the CSB Utility disk. The Hint Oracle on the Utility disk will ask you for your Saved game disk and will read in your current position in CSB from the Saved game. Then it will display a menu of hints available for that spot in the game. These hints will range from general information about the monsters in the vicinity to specific information about whatever puzzle or door is in that location.

The Oracle can *only* give information about the *one* specific location where you Saved the game, and many times the hints it gives may not address the specific problem facing you. But, it's very handy until you get a good hintbook (grin). After you've read the Oracle's hints, you have to completely reboot the CSB game disk and Load in the Saved game disk again to resume playing. It's awkward, but usable.

Now back to the game itself...be forewarned, Chaos Strikes Back starts out tough and gets even tougher! Do you remember the Purple Worms from Dungeon Master? (I'm sure you



do.) Well, imagine starting out completely naked, no armor, no weapons, in total darkness and surrounded by worms. This time they're a yellow or golden color, but they're just as mean.

This first room serves to set the tone for the game, as you soon find out that the worms are among the easier monsters to kill! It also serves to introduce your party to quick death (almost embarrassingly quick death, as when I demonstrated CSB to a local user group, sight unseen...the score was Worms:4, Me:0 and the game was over very quickly). Several people on CompuServe had complained the game was just *too* hard, but once they got into it and got their confidence back, they decided they liked it after all.

One of the things FTL has done to increase the difficulty of the game is to make the groups of monsters larger. Remember the Knights of Dungeon Master? In CSB, the Knights are wearing new designer armor, apparently modeled after Lord Chaos' attire, which gives them a much "meaner" appearance. They're a great deal harder to kill than those wimpy Knights in DM, and while they do occur one at a time, they also tend to pop up in groups of four. Until you hit upon a strategy for killing them that works for you, a good tactic is to "Run away! Run away!" (Actually, poison gas clouds and direct frontal attack seems to work pretty well. Fireballs don't seem to be all that effective against Knights.)

There are places where you'll run into entire rooms filled with groups of monsters, and your only hope is to try to retreat into an area where you can take them on one at a time. Luckily, none of the monsters have learned how to climb stairs yet, so you can still dash up (or down) a stairway to rest and recuperate (assuming there's nothing waiting for you at the top of the stairs!). Also, doors can still be used to attack monsters, although there are a lot of doors that have to be chopped (or otherwise permanently opened), making them useless for defense. Many of the doors in CSB are locked, of course, and finding the right key for the right lock can be quite a challenge.

The Hint Oracle will tell you what kind of key is necessary for a certain door if you get completely stumped, or you can just start a key collection and keep trying them all. Tiggy, in my party, has so many keys she jingles when she walks (and I *still* can't get through that Black Metal Door!) Something new in CSB is the ability to use lockpicks on some of the locked doors, assuming you can find the lockpicks in the first place. I haven't found them yet, so I'm still looking for keys.

Another thing FTL has done to change the game a bit is to add some randomness to which items are found in some locations. Every time you restart the game, you'll find different things in different locations. This also means that the game is slightly different for other people who are playing the game at the same time. I found something different where others had reported finding the lockpicks, for example. There had been some talk about the Dungeon itself being random too (headaches for mapmakers!), but it now appears that while it's very convoluted, the layout of the Dungeon doesn't actually change.

Difficulty in Mapping

This time, the Dungeon isn't so neatly laid out as it was in Dungeon Master. There isn't the "Level by Level" progression that we had before. Instead, there are four "Ways" radiating out from a central point, each one corresponding to one of the four Skills (Ku, Ros, Neta, and Dain for Fighter, Ninja, Priest and Wizard skills). Each one has more than one way in, and each also has different paths, chosen at random when you enter. This gives the appearance of the Dungeon changing from time to time, and also makes mapping a lot more difficult. There are a lot of stairs and a lot of small areas on levels connected by more stairs, so you end up doing a lot of up and down travel, in addition to exploring on an individual "level." This also makes it a lot more difficult to describe just where you are in the Dungeon.

In DM, it was fairly easy to say you were "just outside the entrance to the 'Wizard's Workshop' on the Firestaff Level" and know that everyone else would know what you meant. I've been up and down so many staircases, I don't have the slightest idea *where* I am! Eventually, you'll find the path through each of the four Ways, and find the Corbum ore in each. Then you need to find the "Fulya Pit" to destroy the ore (and the "level" the Fulya Pit is on *does* change each time you enter it).

Difficulty in Surviving!

The bonds holding Lord Chaos have been so weakened that you'll even run into him again on this Level, but this time you don't have your trusty Firestaff, so all you can do is avoid him. Find and destroy all four of the Corbum ore deposits and you'll win the game (and of course, save the world).

Lord Chaos is nicely enhanced for the new game, and there are quite a few new monsters among all your old familiar friends like Screamers and Spiders (some of which have been "enhanced" too...for instance, the Spiders have mustaches this time).

You remember the Dragon in Dungeon Master and how hard he was to kill? Well, let me tell you about the Dragon Den...or, on the other hand, I'll let you find out for yourself (heh heh). I'll just say that when you finish fighting *five* dragons in a row, you *know* you've been in a fight! There are dragons *everywhere* in this game.

After a little while trying to remember my magical spells from Dungeon Master, it was easy to get into Chaos Strikes Back. The spells are all the same (no new ones!), and everything works the same as in DM. As far as I've seen for myself, and heard from others, there are also no new sounds in the game, at least in the Atari version.

My impressions of the game? It feels good to be back in the Dungeon again, exploring new territory and meeting new challenges. The enhancements FTL has made have added a lot to the game. I only hope that the NEXT "Expansion Set" doesn't take two more years! If you liked Dungeon Master, you'll like Chaos Strikes Back. It takes a classic computer adventure game and adds entire new dimensions to it!

GENERATION GAP PLUS

The Genealogy program for Atari ST/Mega computers

- Easy to use menu and function key operation.
- Prints family group sheets, pedigree charts, name lists, etc.
- Unlimited note fields for each record.
- Automatic linking of family members.
- LDS ordinance data supported.
- ALL printers supported, including SLM804 laser, HP Laserjet/Deskjet and more!
- Works in monochrome or color mode.
- On screen pedigree chart.
- Requires 1 megabyte of memory and dbl-sided drive (hard drive recommended).
- Up to 2 billion records (depending on storage capacity).
- Not copy protected. • Regular upgrades. • Excellent support!

==

Version 2.1, which is scheduled for release during the first quarter of 1990, will include these new features!

- Full GEDCOM in and out support • Descendant charts •
- Determine relationships • Faster execution

Only $49.95 Prices include shipping to anywhere in North America

Regular GENERATION GAP is available for 520ST w/single drive. $39.95

Discover maximum driving pleasure with Alpha Systems products. Software and hardware known for high marks in gutsy technology, understandable documentation and, yes, super, low prices.

Get more mileage out of your ST. Choose Alpha Systems. Ultra performance — now and to grow on.

ST PROTECTION TECHNIQUES (Book/Disk Set)

NOW SHIPPING!

Everything you always wanted to know about protection schemes and state-of-the-art in copy protection.

Includes software disk with *Automatic Program Protector.* Lets you create custom disk formats and check them automatically. Learn how to specify password requirements, disk checks, and set limits on number of program runs.

Also contains reviews of popular ST back-up programs and detailed explanation of ST disks and drives.

Only $39.95

NEW! **BACK TRAK UNLEASHES DOUBLE-SIDED DISK DRIVES**

New *Back Trak* software gives ST users more — for less.

Double-sided drives are now standard equipment on all ST computers, but software companies continue to churn out programs on single-sided disks. For those of you with double-sided disk drives, it means wasting 50% of your disk's capacity! With blank disks costing up to $5 each, you waste dollars every time you buy a program or make a back-up!

Back Trak allows access to backside of single-sided disks, **doubling your storage capacity**. Use newfound space for files, saved games, even boot (self-loading) programs. *Back Trak* lets you boot off front or backside of disk. And, allows booting from drive A or B. (Booting from drive B proves invaluable if your internal drive ever breaks down.)

Fully compatible with copy protection programs like *ST Copy, Copy II ST* and *ProCopy, Back Trak* even lets you put protected programs on the backside of your disk. For example, save games on backside of *Dungeon Master* — then switch back and forth instantly without swapping disks. Or, save a two-disk set on a single disk.

Every time you use *Back Trak,* you save time and money. And, you'll see less wear and tear on drive heads as you utilize your double-sided drive's full potential.

With this pure software program, there are no special connectors to fool with. No cables to cut.

Only $29.95

SWITCH/BACK MAKES YOU A SWITCH HITTER

You'll wonder how you ever got along without it!

Switch/Back lets you load two or more programs into your ST and switch between them with lightning speed. Works with games, business programs, utilities, compilers, you name it. Although only one program is running at a time, the other is available instantly. A press of the button returns you right where you left off! Ideal for word processing and customer service applications.

Gaming feature lets you save almost any game, then continue playing. If you get into trouble, just switch back to where you were, as many times as you like! Instant replay!

What's more, *Switch/Back* lets you save many **protected** programs as standard TOS files — to be stored together on disks, compressed, or even run off a hard disk.

SWITCH BACK

"Switch/Back has saved me time and money and proven to be an excellent tool for practical as well as entertainment applications."

Judith Chang
ST World, August 1988

"Alpha Systems has done it again. Another great product!"

LeRoy Valley
ST Informer, August 1988

Switch/Back combination hardware/software package requires at least 1 meg of RAM (or a Megadisk or Polydisk cartridge). Hardware plugs into printer port for easy use. It's transparent to any printer activity. Just plug it in — leave it in.

Only $69.95

NEW!

JAM MASTER

Amateurs and professionals — turn any inexpensive MIDI keyboard into a full-featured digital sampling synthesizer and four-track recording studio! You'll be jamming in no time with complete record and playback capability.

Jam Master requires a cartridge-based sound digitizer for output such as *Digisound Professional,* and any MIDI compatible keyboard. Create your own sounds with any ST digitizer. Or, experiment with 50 prerecorded sounds, from drums to violins.

Jam Master is packed with powerful features like full keyboard mapping. Assign your keyboard to as many as **32 different sounds,** any number of octaves. Play chords up to four keys at a time. Even blend four completely different sounds.

Advanced recording studio feature records music as you play. Record two, three, up to four tracks, and play back together. You'll be a one-man band! Complete *Beat Box* drum patterns (playout of up to four digitized sounds at once) can be added as a single voice, and played along with three more sound tracks! Adds a full drum accompaniment to your recordings.

This first-of-its-kind program actually lets your ST play back in real time. Record an expert pianist, play back and watch your keys go to work as your ST transforms into a player piano. It's fun and fascinating!

A real-time, fine-tune feature allows total pitch control. Lets you tune-up with the band. 40K sampling rate capability offers superior quality. (The faster the sampling speed, the higher the sound quality.)

TECHNICAL SPECIFICATIONS

- Plays four-voice polyphonic digital sound
- Incorporates *Beat Box* drum tracks as one sound
- Supports sampling rates up to 40K
- Supports looping and decay
- Keyboard mapping up to 32 different samples
- Built-in four track sequencer
- Unlimited note range changes
- Frequency fine-tuning
- Compatible with all ST computers
- Requires: cartridge-based digitizer for output and any MIDI compatible keyboard

Limited-Time
Special Introductory Price
Only $49.95 (List Price $69.95)

Digisound

A blast and a half! Complete with special effects like echo, reverse, squeeze, looping, pitch manipulation, mixing, fade in/out, and envelope control. Oscilloscope mode and waveform editing features mean you're in control. Cut and paste features let you prepare speeches and sound effects like a pro.

Compatible with any MIDI keyboard. Even turns your Atari ST keyboard into a musical synthesizer. Each key plays a different pitch. Just press keys to make a sound. It's that easy.

"The Cadillac of ST sound digitizers. If you plan any serious sampling and sampling editing, go with Digisound."

Jim Pierson-Perry
START, July 1989

"All the nice little touches are there to make it a joy to use for years to come. I'm in love with the product."

LeRoy Valley
ST Informer, June 1988

DIGISOUND PROFESSIONAL — The high-fidelity sound system used by professionals.

Provides two input jacks (one for unpowered source, i.e., microphone or turntable, and one for powered source, i.e., tape player or TV). Allows playback through monitor, stereo, external amplifier or headphones. Input and output gain controls accommodate any kind of equipment. Special logarithmic sampling gives wider dynamic range with less distortion.

Only $149.95

DIGISOUND ST — Offers one input jack.

Accepts input from cassette player, TV, stereo, VCR, amplifier or powered microphone. Sound can be played back through monitor speaker (color or monochrome). Digisound was used to create the voice commands in *Chessmaster 2000.*

Only $89.95

COLOR COMPUTEREYES™

Capture your picture, or your favorite star's, with the first and only full-color video digitizer for the ST!

Color ComputerEyes uses any standard video input — video camera, VCR or video disk. Works in all ST resolutions. Low resolution provides 16-shade black & white or full-color pictures. Features automatic calibration of contrast, brightness and white balance.

"A major breakthrough in video digitizers for the ST."

LeRoy Valley
ST Informer, August 1988

Pictures can be used with *PowerPrint II, Degas, Neochrome* and others. Plugs into cartridge port for easy setup.

Only $199.95

Beat Box

NOW AVAILABLE!

You and *Beat Box* will make awesome rhythms together from waltz to rock, rap to jazz, whatever your preference. **No musical knowledge required!**

Polyphonic drum machine software comes with over 35 prerecorded digitized sounds including drumbeat, cymbals, human voices, computer voices, synthesizers, bass guitar and more.

Create your own drum and musical patterns in **four** voices. (They said it couldn't be done!) Combine and arrange up to 30 different patterns to create an entire rhythmic composition! An ideal accompaniment for musicians. *Beat Box* provides you with your own custom drummer for the price of a metronome!

Beat Box contains a public domain player program so you can share your musical masterpieces with friends.

No need for special equipment. Sound is played through monitor, amplifier or stereo. Also compatible with all ST sound digitizer cartridges, including *Digisound Professional.*

"Very impressive. Even with all four sounds at once, playback sound quality is superb."

Dave Edwards
START, December 1989

"I recommend Beat Box to anyone interested in exploring the area of drum or pattern sequencing of sample sounds or anyone interested in exploring their musical talents."

Tom Tjarnberg
ST World, June 1989

Special Introductory Price
Only $29.95 (List Price $39.95)

DIGITAL MUSIC PRO SYSTEM

Complete package for capturing, manipulating and performing with digital sounds and music. Includes *Jam Master, Digisound Professional* and *Beat Box.* (Requires a MIDI keyboard.)

Only $199.95

POWERPRINT II

PowerPrint

NEW FEATURES:

- NOW SUPPORTS SPECTRUM PICTURES
- THREE POWERFUL WAYS TO PRINT ".IMG" FILES

Create picture-perfect banners, posters, wall-size business graphs and more! *PowerPrint II* makes it easy, with unequaled clarity and resolution.

Zoom option lets you blow up small portion of image. Mirroring is great for T-shirt iron-ons. You can also reverse shades in printed image so blacks become whites and vice-versa — just like a photo negative. Image can be rotated 90° to print up and down or across the page.

Print 16 shades for incredible detail. Selective shading allows you to print multi-color pictures by printing one color at a time with color ribbons.

"PowerPrint works perfectly. A must for your program library."

Donna Wesolowski
ST Informer, May 1988

PowerPrint II lets you capture and print almost any ST screen. Works with *Star, NEC, Citoh, Gemini, EPSON, XM8048* and compatible printers.

Only $39.95

DIGISPEC

Get a feeling of creative power with the ultimate in computer video digitizing. Simply capture an image with your *Color ComputerEyes* and color video camera (or VCR, video disk, etc.). Then run *Digispec.* Watch your picture develop into a spectacular image of up to **512 different colors!**

Low resolution brings out detail in backgrounds and faces for highest quality image possible. Clarity is unsurpassed. Shading feature uses technique called dithering to create and display images in up to **24,389 simulated colors!**

Only $39.95

PROFESSIONAL VIDEO SYSTEM

Everything you need to capture full-color video images and print them with professional quality on your ST. Comes complete with *Color ComputerEyes, PowerPrint II* and *Digispec.*

Only $249.95

Shufflepuck CAFE™

Tim Holt (El Paso)

Imagine the bar scene from Star Wars. All of those strange creatures, some almost human, some far from human, all playing together in the bar. It was a Hollywood classic scene, and several movies have tried to steal it...most recently, Star Trek V.

Now that you have the bar scene in mind, place the famous non-video arcade game Air Hockey in your mind. Remember Air Hockey? You had a little red paddle, a four inch puck that rode on a cushion of air and your task was to defend your goal. The first person to score 10 points won.

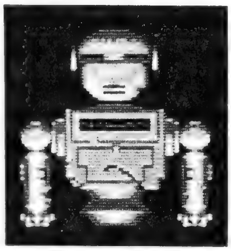
Simple, elegant and no longer in many arcades because arcade owners found that four video games could earn four times the number of quarters and take up the same amount of space as one Air Hockey table. Such is life.

Now, you put both of those great parts of my teen years together and what do you get? A great new game from Broderbund: Shufflepuck Cafe.

In Shufflepuck Cafe, you are the opponent of several aliens in a tournament to determine the champion of the Shufflepuck board. The puck glides across the table as if on a cushion of air, and all you have to do is keep it from going past you and breaking the protective glass.

Skip Feeney

Sounds easy. And for the first few opponents, it is. Skip (no relation to Skip, our DRC BBS sysop) is your first opponent, and he is, by far, the wimpiest.



DC3-ALSO

Every time you get it past Skip, he congratulates you with a digitized "Nice shot!"

With each win, you move on to a different opponent, such as DC3-ALSO, Vinnie the Dweeb, Princess Bejin, and the ultimate test—Biff Raunch, current champion.

There are nine opponents in all, each with their own mannerisms, that make the game interesting.

Lexan Smythe-Worthington, for instance, will take a sip of his cocktail and give a drunken hiccup and wink whenever you put one past him. When the game is over, he will fall backwards—passed out from all the inebriations he has had that evening.

Lexan

Princess Bejin has interesting psychic powers, and Visine Orb cries when he loses. All of these effects make the game visually fun to play.

Playing Shufflepuck

The play itself in Shufflepuck Cafe is excellent. The puck moves realistically across the play field, and I could not notice any "scrolling effect" that plagues so many games.

A great job by the programmers. Your paddle is controlled by the mouse. Move the mouse forward, the paddle moves forward. Backward is backward, etc.

I did notice you cannot move the mouse extremely fast in the forward direction, as the action on the screen cannot keep up with your movement. However, reverse and side to side movements *did* keep up with my movements.

If ever a game cried for the cordless mouse by Practical Solutions, this is it! If you have one, get this game immediately. I got so mad at my mouse's cord I could have screamed!

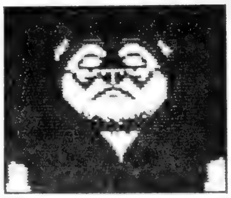
Princess Bejin

You literally will lose control over your mouse, not because of any fault of the game, but because the game enthralls you so much, the placement of the mouse on a mouse pad is secondary on your mind. I suggest either removing the mouse pad or getting a 4 ft by 4 ft mouse pad.

Okay, so you get so darn good (sure!) that you beat old Biff in the tournament and become a champion. Now what?

Well, the makers of Shufflepuck Cafe thought you might ask that, so they added a few extras to make playing the game more interesting for "experts."

For example, you can adjust the size and weight of the puck. Too



Vinnie the Dweeb

good at normal size? Shrink it in half and see how good you are. You can also adjust the amount of power your forward and sideways spins will have on the puck. (In pool they call that "English.")

Still not enough for you? Okay, you can add blockers in the middle of the Shufflepuck table that make the puck bounce back to you when you least expect it. You can adjust the size of the blockers as well. You can also adjust the size and weight of the puck.

You can even adjust the playing ability of the practice robot so that you can practice on him before you enter the tournament. The robot can be as good as Biff, or as poor as Skip.

You may save the tournament at anytime, I suggest *before* each opponent. That way, if you lose, you can reload the tourney at the point you lost at, instead of having to start all over again with Skip.

Shufflepuck Cafe is a winner! Challenging for the adults, and easy enough for the kids. I highly recommend you make Shufflepuck Cafe one of the first purchases of the new year.

Indiana Jones and the Last Crusade: The Action Game

Mike Bonkowski (MACE)

"Indiana Jones and the Last Crusade: The Action Game" is one game I was really interested in.

I have seen all the Indiana Jones movies and own copies of all the movies available on video tape. I even now own both of the action games released based on his adventures. I would say I am a Indy enthusiast.

However neither game I own, Indiana Jones and the Temple of Doom or Indiana Jones and the Last Crusade really give me what I want. That is—to be in his shoes. And since adventure games, like Infocom's, are not for me, I guess this is the best I can do.

The Graphics

This game, from Lucasfilm Games and U.S. Gold, is outstanding in the graphic sense. A lot of the title pictures are digitized from the movie. The characters are well defined, and move smoothly. The action screen fills about two-thirds of the screen and, like the characters, is well detailed. The bottom third contains the life and energy meters and level title.

Unlike many other games, the meters are colored bars instead of a simple number. It takes getting use to. Many times I have looked at the life or energy bar and wondered how much was left.

Faults in the Last Crusade

However, defects show. One noticeable one is that the same antagonist appears over and over a majority of the time. Sometimes, two and three of him at the same time! What is he, a clone? To give an idea what I mean, one time I was playing when I just killed one, I turned around and two exact duplicates were right behind me, following each other, shooting.

Another important note...never touch the other characters. It's guaranteed to lose a life. Just a touch will drain away your energy faster than you could believe.

In addition, if you should happen to fall off one of the ropes in this game, forget trying to grab back on. You should be able to attempt to grab back on, if you are close. Meanwhile, your energy level falls with you. You can literally die in no more than a few moves at the very beginning. There is no way I know of to replenish the energy lost. Sorta rough on the beginners.

Also, there are no other options. One game, one skill level of play. There is no way to increase or decrease the degree of difficulty.

Game Play

One surprise—being an action game, it wasn't extremely high on the frustration factor, even though I have not gotten past the first level. After getting to a certain point in the level, if you should die, you are not sent back to the beginning. You are, instead, sent to a point predetermined by the computer.

Case in point—if you cross the underground lake in the first level, the next time you die, you are sent back to a point on the shore of the lake, not to the beginning of the level. Nice touch.

The documentation is good, I guess. Lucasfilm decided to print the docs on a "newspaper" type material in a light blue ink. After playing for a while, it gets hard to read. The reasoning I was told for this printing was to prevent piracy. Which brings me to my next point.

Copy Protection

I hate copy protection! Especially when it passes the absurd. I understand the right of the producer to protect the program from being stolen, but this one is bad. I would play this game more, but it scares the heck out of me every time it loads. To hear my internal drive, to coin a phrase, "act like it's trying to read track 200" bugs me no end. I wonder if the drive will need an alignment soon due to this program and others.

Overall, except for the copy-protection mainly, I would consider it a fairly good game. I don't like it as much as Empire or Gunship, but it's not all that bad. But that copy-protection has to go. How about something like Microprose or Interstel have? Just "Type in a keyword from the instruction manual" idea. It would save a lot of headaches.

Indiana Jones

BECKERCAD ST

Terry Frits (RACC)

CAD—Computer Aided Design. If you ask, I think most people would describe a CAD program as a high level drawing package. I would describe it more as a drafting package, whose aim is accuracy in drawing.

When I purchased my first Atari ST in 1985, I had visions of doing all sorts of graphics on this fantastic machine. Since then, I have not been disappointed, as many paint, drawing and CAD packages have been released for the Atari ST and new programs are coming out all the time.

The question to be asked now is, "can the ST be a serious CAD machine?" Well, several years ago I would have said, "No, not with only 1 meg of memory, the small monochrome screen, and slow graphics redraw, plus limited printer/plotter support."

But, today that is quite a different story, with the Megas, blitter chips, high resolution 19" monitors, and a full array of printer/plotter drivers available. The Atari line is becoming a true contender in the CAD market.

What really makes a CAD system is the level of software available, and BeckerCAD ST is one of those programs to be looked at by the serious draftsman or woman.

First, let me say that my main purpose for owning a CAD system is to draw house plans and do minor landscaping, not engineering prints. I do deal with engineering prints where I work, but I don't work off our CAD/CAM station or draw prints.

Before I list the features of BeckerCAD ST, I'll say I am very impressed with it. It has one of the most user friendly interfaces I have come across, using icons, drop down menus, plus keyboard and function keys together, without using too much of anything.

Superb Documentation

The manual is a hard cover, three ring binder with hard box—the kind that comes with a lot of the nicer Atari software. The manual has a table of contents, appendices, glossary of terms and an index. Each section of the manual has a cardboard separator with tabs sticking out that make finding topics a breeze. Other software companies take note, *please.*

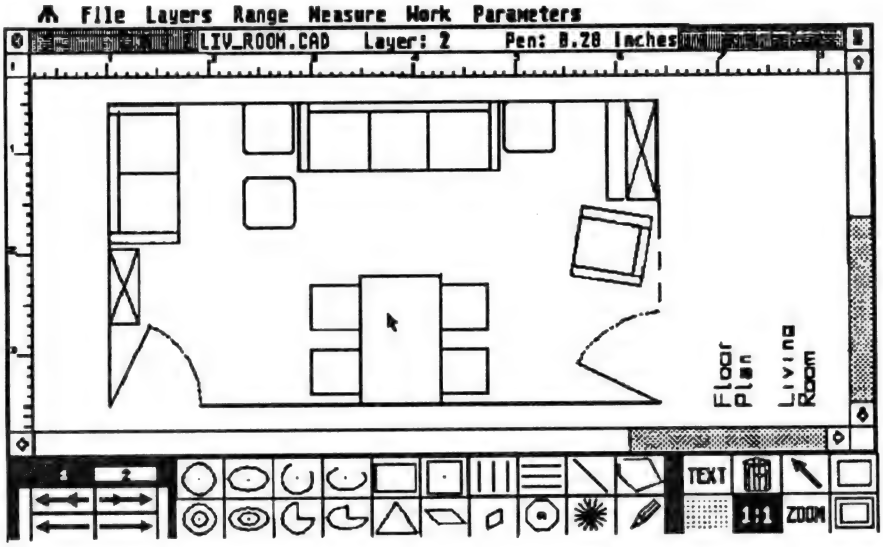
The sections of the manual are...

1) installing and starting the program
2) introduction to CAD
3) introduction to GEM, which explains GEM and BeckerCAD to the novice ST user and introduces the different functions of the program (including a tutorial), right through to the professional features
4) is the system reference manual which goes into more detail on each function
5) is the appendix
6) is the index

The manual starts by telling about CAD and the different uses in design and manufacturing applications. If you are new to CAD, I highly recommend reading this section.

As I read through the manual, I would say to myself it's too bad BeckerCAD does not have this or that special feature, only to read further and find the feature of which I was thinking.

One of those features is "break line." Once I draw the outside of a house, I want to break a line to insert windows or doors. BeckerCAD not only breaks lines, but also breaks circles and arcs. Another feature was the saving of the drawings. I was thinking how I



wished the program saved the drawings so I could use them in my desktop publishing package, only to find they can be saved in Degas .PI? or the .CAD extender.

Hardware Requirements

So, let's take a walk through BeckerCAD and see what special features it has. First off, the hardware requirements are an Atari ST with 1 megabyte, TOS in ROM and one 720K floppy drive and/or a hard drive (recommended).

BeckerCAD is a 2D drawing program. Once the program has been installed, it is not copy protected and may be copied to either another disk or hard drive (for security backup reasons of course).

As far as printers, the program uses Epson/compatible dot matrix, Atari SLM804 laser, NEC P5/6/7, Apple Laser Writer, HP Plotters and PostScript printers and phototypesetting machines. That should cover just about everyone, I think. BeckerCAD uses GDOS to print to non-PostScript printers, but uses special vector character sets instead of GEM fonts.

Feature-packed Icons

The program has two sets of icons at the bottom of the screen—the first set contain the regular features and the second set are what they call the "professional" features. To change from one set to the other, you click on the 1 or 2 box at the bottom left of the page.

On the far right bottom of the screen are 8 boxes that have the icons used with both boxes (named the right icon bar), and they stay on all the time. These icons contain the boxes to get the text, trash can, arrow icon (which allows the manipulating of lines, circular objects or cross hatching lines), range marking frame (which is used to mark any desired section of the drawing for manipulating), grid, 1:1 representation, zoom and last zoom functions.

BeckerCAD ST also has one of the most unique UNDO functions I have seen on any program. In the bottom left hand corner of the icon tools are four boxes with arrows in them. The top two boxes have double arrows and the bottom two have single arrows. Two of the boxes face left and two to the right. When you want to remove something from your drawing, you click on the single left arrow to delete the last object you drew...click on it again and the next object you drew is wiped off the screen. Click on the right single arrow and the objects are replaced in the order they were removed. The double arrows do the same function but keep removing and adding as long as the arrows are held down.

If that isn't enough, you can define a range with a rubber band and cut it to a function key. The range is saved to that function key, then the range area is deleted by dragging it to the trash can. When the area is needed again, just press the paste option and the same function key it was saved to, and back it comes with a crosshair to place it where you want on the page. This is a great feature for moving furniture around in a room or making major changes.

BeckerCAD Screen Showing Icons and GEM Menu Bar

BeckerCAD also has many circle drawing features. There's the circle, ellipse, circular arc, elliptical arc, concentric circles and ellipses, and circle and ellipse segment (pie shapes). Other geometric shapes that can be selected are square, rectangle, triangle, parallelogram and polygon. All of these features (plus others) are in the first icon bar.

The second icon bar is described as "a series of very powerful graphic and architectural drawing commands." Mostly, these commands allow for editing of existing lines and objects. Some examples would be: plumb line, (which draws a line 90 degrees to an existing line), trim first line, trim both lines, and one of my favorites—break line, circle or arc.

Others are: rounding corners (makes a rounded corner from two connecting lines), chamfer, pull lines and corners, change line length, create angle, three point circle and arc, concentric circles, tangent between point and circle and between two circles, plus many more. There is even a crosshatch feature, with the crosshatches being editable.

GEM Menus and Keyboard Shortcuts

The above are only the icons—BeckerCAD ST also has GEM drop down menus and keyboard shortcuts. The GEM menu bar contains the File, Layers (BeckerCAD ST has 300 layers that can be turned on and off individually for viewing separately or combining to view as a whole), Range (allows for saving, clipping, cutting, pasting, etc. of objects) and Measure menus (to enter the sizes of objects either manually or automatically), and a "Parameters" sub-menu to set scale, precision from 1 to 1.000, and units of measurement.

There is also a regular Parameters main menu that allows for screen setup, such as page size, turning on and off the ruler, cross hair, grid and rounding. You can also set the line sizes and styles, cross hatching and text attributes from the Parameters menu.

If all these things were not enough (and I have not covered all of BeckerCAD ST's functions), there is more. There is also a macro interpreter called PS, which is a stack oriented programming language. This allows for exact placement in the drawing program. It is very similar to the PostScript language and has full function key shortcuts, graphics commands and math functions.

Symbols and Fonts

Now comes one of my favorite parts—parts, better known as symbols libraries. BeckerCAD ST comes with a whole mess of them. There are symbols for the electrical and electronic world, from resistors, capacitors and diodes to home appliances, lighting, meters and loud speakers. There are also symbols for the plumbing world (for real flow charts—water that is!) and the heating world, plus one of the best architectural symbols libraries I have seen.

There are symbols for stoves, bathtubs, sofas and counter tops—there's even a grand piano. The objects can be loaded in, sized to your furniture sizes and moved around to see how they fit in the room. It sure beats picking up the couch five times and moving it around the living room! You can also create your own symbols and save them to the library. There is no engineering symbols library, but since this is not a 3D CAD package, I doubt it would be used for extensive engineering drawings.

One more feature and I am done with an overview of this program. I will quote from the manual, "The font editor of BeckerCAD provides a complete tool for creating, editing and processing fonts. Even the untrained user can easily create a personalized character set using the font editor." Yes, BeckerCAD even has a font editor that lets users design their own fonts.

So, What's Missing?

Now, before I start sounding like a salesman for Abacus, there are several things I think are needed in this program. I would like to have the following: draw a point to end and middle of a line, line to end of line and center of line, double lines and boxes (to draw walls,etc.) and an integrated program for printing. Output programs are confusing and time consuming at best. As long as I am constructing a wish list, I would also like color dot matrix printer support with each layer assigned a different color if desired.

The cursor seems to jump around a little when moving on the screen, and it seemed a little sluggish. I was running it on my 1040ST, and when I switched to the Mega 4 with blitter chip turned on it worked much better. I don't see this as a serious problem but an annoyance more than anything else. When drawing lines, (like tangent to two circles), the line does not appear to touch the circle sometimes, but when I zoom in on the area the lines are touching. This may be a result of the monitor not being of a high enough resolution, but it can be confusing at times.

Most of the above wants can be done with several keystrokes or operations, and should not stop anyone from buying this program. I understand Abacus has been offering several deals on BeckerCAD, making it a real bargain in today's CAD market. BeckerCAD is easy to use and learn and appeals to the artist/architect in all of us. Give it a try, I don't think you'll be disappointed.

BeckerCAD ST $395

QuiQuiQuiQuiQuick ST 1.8

The Software Screen Accelerator

Bill Rayl

Look out, Turbo ST...you've got competition and it's catching up *fast!* Darek Mihocka and Ignac Kolenko of Branch Always Software have released their first commercial software product, Quick ST, which offers speedups comparable to Turbo ST at a fraction of the cost.

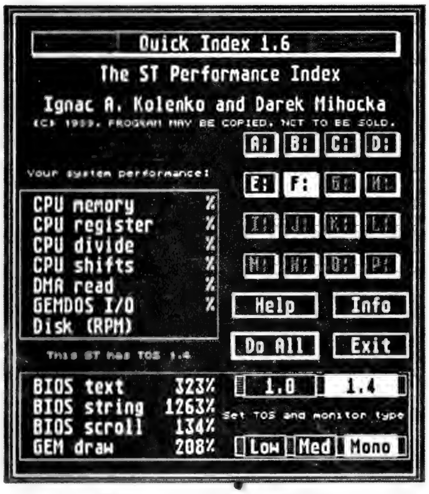
Quick ST was originally released as part of the shareware Quick Utilities. Although much slower and less compatible with other software than Turbo ST in those earlier releases, Quick ST was an instant favorite of many who felt Turbo ST was a little pricey. Most Turbo ST owners, such as myself, didn't really pay that much attention to Quick ST...Turbo ST was just plain faster.

Well, times change! Quick ST is now a commercial product and is a very serious contender for anyone wanting to squeeze more speed out of their machine.

Benchmark Results

Having the luxury of both Turbo ST and Quick ST, I decided to do some testing using Quick Index (part of the above mentioned Quick Utilities). Figure 1 and 2 show the results on my 520ST with 1Meg upgrade, monochrome monitor, TOS 1.4, no blitter and only Charles Johnson's Desk Manager and Atari's TOS14Fix installed at bootup.

As you can see, Quick ST is slightly *faster* than Turbo ST 1.57 in all the text functions...and not too far off in GEM speedup! Both programs are faster on a color monitor. In all fairness, I must point out SofTrek has recently released version 1.6 of Turbo ST, but comparisons in the README file on the Quick ST disk show Quick ST 1.8 still beats Turbo ST 1.6 in the BIOS Text and BIOS String tests.



```
Quick Index 1.6

Odious Comparisons

Apart from similar results in the benchmarks, Quick ST and Turbo ST have a couple more similarities. First, both products have separate versions for color and monochrome monitor users.

But, even here there are differences. Turbo ST is a desk accessory, and as such, users who own both monitors either rename the proper accessory at bootup (perhaps by using Desk Manager) or use the larger version of Turbo ST that supports both monitors. With Quick ST, both color and mono versions reside in the AUTO folder and the proper one will boot at startup. No mess, no fuss.

Both programs also support custom desktop fonts, such as those loaded by Charles Johnson's Fontrix accessory (boy, that guy's name keeps creeping in here!). However, Turbo ST seems to have trouble with multiple changes of the desktop font...it kept reverting back to my very first font choice, no matter how many times I tried to change it. When I told Quick ST I wanted to change the font, it listened.

SofTrek and Branch Always Software both have very good upgrade policies. SofTrek will upgrade Turbo ST if you send them your original disk and $5, and they have a special upgrade policy for qualifying user groups. (Call SofTrek at 407-657-4611 for details.)

Not to be outdone, Branch Always will send a new version of Quick ST on disk for only $3 to any registered owner (no need to send in your original disk) and will do Email upgrades on CompuServe and GEnie absolutely FREE.

Two other very important reasons why you might consider buying Quick ST over Turbo ST are memory usage and price...in both cases, Quick ST weighs in about half of Turbo ST. The full version of Turbo ST uses over 50K of memory and the individual color and mono versions use about 40K each. The mono version of Quick ST uses around 20K, while the color version uses only 16K. A "stripped down," slower version of Quick ST is included that takes up only 10K of memory.

As for price, Turbo ST retails for $49, while Quick ST is an unbelievably low $19.95!

Other Features

For those fortunate enough to have a 19" Moniterm monitor, Quick ST is sure to make you happy...providing "the same level of speed on a 1280x960 screen as it can on a 640x400 screen." Sorry, I can't test this out (boy, am I ever!). Branch Always promises to support any high rez monitors that become available for the ST.

Version 1.8 of Quick ST also fixes one of the most annoying "features" of previous versions. When quickly moving the cursor in a text editor or word processor, the cursor would disappear during the move. This sure made it hard to know just how far you'd actually moved the cursor without stopping. That has, thankfully, been fixed. Quick ST 1.8 also supports the HI50 program allowing 50-line output to monochrome monitors.

I've tested Quick ST with piles of software, both commercial and public domain, and it has performed like a champ with such packages as LDW Power, Flash, ST Writer, SuperBase Pro, PageStream, BB/ST, CBreeze (Quick ST does not speed up the "tiny" text mode in this program, but it does support "large" and "medium" modes), and Hotwire/MaxiFile. Of course, I haven't used Quick ST as long and comfortably as I have used Turbo ST...but I have found no incompatibilities as yet.

Also included on the Quick ST disk is a copy of the Quick Index benchmarking software, the Quick View text file viewer and a demo version of Quick ST 1.8 that can be uploaded to your favorite BBS.

With Quick ST 1.8 around, SofTrek's super fast version 2.0 of Turbo ST (as shown at many AtariFests in 1989) can't be released too soon...for SofTrek's sake!

Quick ST $19.95

The Reviews Are In!

"... If you own a hard drive ... then RUN, don't walk, to your nearest Atari dealer and ask him to order DIAMOND BACK from Data Innovations, Inc."

Victor T. Albino, ST World

"...The overall winner has got to be Diamond Back...it creates GEM compatible disks at image backup speeds...This is the one I use, and I use it a lot. It's Dependable!"

LeRoy Valley & Ron Robinson, ST Informer

DIAMOND BACK is packed with features, from its custom format/verify routines, to its use of script files, it's in a class by its self. Here are just a few of the features packed into DIAMOND BACK: • EASY to use completely GEM interface and online help • File compression & encryption • Selectable incremental backup, by date or archive bit (using TOS 1.4) • Load/ Save backup configurations • Automatic drive switching • Backup/Restore any number of drive partitions, directory paths, single directories, or even specific files or types of files • Recreate the original tree structure or specify a new directory structure during restore.

Feature for Feature, DIAMOND BACK offers the hard drive owner, more POWER and FLEXIBILITY than any other backup program currently available for the Atari ST/Mega computers.

FULL COUNT BASEBALL & COURT SIDE COLLEGE BASSKETBALL

Full Count Baseball & Court Side College Basketball are games for the true sports lovers in the family. Both are statisticly based simulations, which we believe offer the sports fan the most accurate statistical game play of any sports simulation for Atari computers. Full Count comes with teams from the most recent season plus 52 great old time teams and Court Side includes 286 teams from the most recent season plus 70 all-time great college teams.

Diamond Back, Full Count Baseball and Court Side College Basketball, are Available NOW. Retail price for Diamond Back is $39.95, sports games retail for $39.99 (each). Dealer inquires welcome.

Enhance your publishing power.

Migraph Hand Scanner.

Add scanned graphics to all your projects quickly and easily with the Migraph Hand Scanner.

The Hand Scanner provides a scanning window over 4″ wide with four scanning resolutions: 100, 200, and true 300 and 400 dots per inch. It also offers adjustable contrast, three dither settings for scanning halftones, and a special setting for line art.

Build your own library of images. Logos, photographs, books, illustrations . . . provide you with an unlimited supply of art.

Touch-Up,™ Migraph's high resolution image editor, lets you scan *and* edit your images. Powerful editing tools include crop, invert, resize, flip, cut and paste, multiple zoom levels, a full array of paint tools, and much more.

When your images are "pixel perfect", import them into your favorite ST publishing programs like Calamus, Fleet Street, PageStream, and Publisher ST. In addition, several save formats let you use your images on the PC and Mac.

The Migraph Hand Scanner and Touch-Up. Powerful tools for professional publishing.

For all Atari ST and Mega systems with monochrome or color monitors, 1MB memory and 3.5″ DS disk drive.

See your dealer today for more details or call us direct. Dealer inquiries invited.

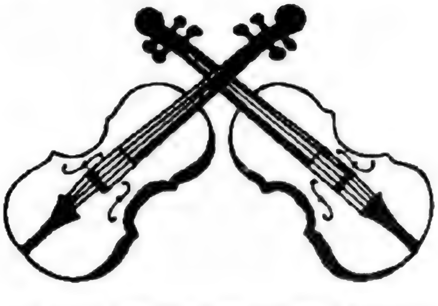
Mini MIDI Lessons #3



Morris G. Miller (El Paso)

What Does MIDI Cost?

Like watches, MIDI can cost as little or as much as you want to put into it. I can give you some price ranges, but they are arbitrary. I can give you some recommendations, but they are generalities. You will still have to evaluate for your application and make the final decisions.

The three basic components, aside from the computer, are the sequencer (software), keyboard and synthesizers, and the music sound system. The first two are most urgent to this discussion.

A starter sequencer is available from the public domain for most popular computers. I recommend starting with one, even though I did not. This allows you to find and settle on a keyboard first.

Most vendors provide low-end versions of their sequencers starting in the $30 to $60 range. The high-end versions of the same programs will be from $300 to $700. Accessories can cost up to an additional $500, costing $20 to $100 for each added utility.

Software is expensive, but good programs are worth it. The low-end versions will not have all the features of the expensive versions, naturally, but will possibly have everything you need or want. Again, try them first.

Keyboard selection is more difficult, and should come first. As in a previous discussion, decide whether you need your emphasis on the keyboard or the synthesizer. Don't be carried away by the "local" features, such as rhythms, chords and fancy noises the keyboard can make while you play it. Most of these things will not be recorded on the MIDI. However, if your daughter will enjoy playing it live, then consider it.

New keyboards start about $130 and go to $3000 or more. Keep an eye on swap meets, yard sales, classified ads and pawn shops. Someone gets a good bargain every day, somewhere.

Not all keyboards give the same amount of information. If touch sensitivity (how fast and hard the key is pressed and released) is important, then keep it in mind.

The difference? If the keyboard does not record how loud the note is performed, then it must be added in the editor. If the keyboard does not respond to touch sensitivity, it is very probable the synthesizer in it also does not. That could be more important. Does it have input for foot pedals, modulation control, pitch bend (glide pitch while playing), or pan (stereo balance)? Many keyboards and their synthesizers are only monophonic (one output, not stereo). Examine it carefully. Seek advice and help if necessary.

You can add the sound system and cassette recorder as anything from a simple AM/FM radio and cassette recorder to a grand home music system. It should be stereo. The rest I leave to your imagination.

Why Should I Do MIDI?

Maybe you shouldn't. MIDI is not for everyone any more than is rhubarb pie. Ugh!

Why would I want to hear Fredrick Chopin's Polonaise played on a synthesizer when I have a compact disk of Philippe Entremont in performance? Because

1) You had fun entering the music;
2) You gained a lot of understanding of both the music and Chopin by doing so;
3) It was edited until you had the performance interpretation you felt Chopin himself would give it;
4) You feel it is your performance, as though you are playing it, doing it your way.

It can be performed on any of a dozen and a half different pianos or played by a trumpet and bass or whatever interpretation you want to put on it.

Besides, who says you have to play Chopin? Try your hand at "Moonstruck." I'll bet you don't have that on CD. Put your own weird interpretations of sounds into it. It can sound "spaced out," tin-pan, heavy-metal, or whatever. Or, very smooth.

Did you ever want to sing with your own orchestra or combo? You got it! Record it and amaze your friends. It's a great way to find out just who your friends really are!

Sheet music is in abundance. A lot of it is not on CD. Some of it was out of production before the record player was invented. You have a way of playing it anyway.

And talk about inventing—that is my main interest in MIDI. I write songs, mostly a cappella (vocal).

Innovative Concepts

Happy Doubler
Happy owners can now program their drives to be fully compatible with ICD's US Doubler! Also includes FREE Happy and Doubler type utilities. **Only $19.95**

Imitation Controller
Happy 1050 owners can now go from the Fast or Slow modes, with the flick of a switch! **Only $39.95**

IC1050 Controller
For ALL 1050 drives—Similar to our Imitator Controller, except without fast/slow switch. **Only $29.95**

1989 Antic Award Winner
The Graphics Image Scanner for the Atari 8bits! Now, Easy Scan II is even better! Excellent for User Groups, clubs, churches and other uses! **Only $99.95**

Memory Upgrades
Memory Upgrades are NOW affordable again! All kits include RAM and software! **Call for latest pricing.**

XF35 Kit
Now, XF551 owners can convert their drive to the newer 3.5" format and have a massive 720K of storage! Includes Upgrade ROM, adapting cables and complete instructions (3.5" drive and cage not included). **Sale Price $29.95**

SIO Switch Box
Allows you to control two computers with one peripheral setup, or one omputer with two peripheral setups! **Only $49.95**

Modem Mouth
A small device that allows modems that do not have an internal speaker to "hear." **Only $29.95**

The Blitz Cable

The BLITZ Cable plugs into the out jack of your "A" floppy drive, plugs into your "B" floppy, and then into your ST's printer port. With the INCLUDED software, comes the ability to make back-up copies of MOST (if not all!) of your commercially protected software, in either single or double sided formats! And, it reads/writes so fast, it is also great for copying unprotected ones as well! **Only $34.95**

Upgrades for Your ST

If your ST has the solder-spots for the **Blitter chip** (normally only on the Megas), you can nowget the Blitter for **only $75!** Price incudes: parts, installation and testing! Save $10 off the above price, if you are having the Blitter Upgrade done at the same time as a memory upgrade installed!

TOS 1.4 Six Chip set installed—**Only $100** (Includes FREE utilites!)

Upgrade your 520 ST's **memory** to **1Meg** for only **$150;** upgrade your 520 and 1040 to **2.5Megs** for **$350** and to **4Megs** of internal RAM for **$550!** Have a Mega2? Upgrade to **4Megs** for only **$350!** All prices INCLUDE installation, return shipping, handling and insurance. On the 2.5 and 4 meg upgrades for the 520ST and 1040ST, we use the New World upgrade board (the best!).

Hardware for Sale

520STFM—Only $369.95 Complete with built-in Double-Sided Drive, TV Modulator, cables, Owners Manual, and Language Disk. **1Meg 520STFM—Only $499.95** **MegaFile 30—Only $499.95** Higher capacity Hard Drives are also available. Call or write for more info.

The Basics of BASIC

Rick Burton (RACE)

To further explore "graphic illustrations" of the characteristics of color, this month we will start to tie the SETCOLOR and COLOR commands together. Be patient enough to read carefully *and* type example demos as you go. Soon you will appreciate 8bit capability and become a painter of pixels.

Last month we saw that SETCOLOR is followed by three numbers separated by commas. The first number was used to select text, border, and background. From now on, we will call this the register number or SETCOLOR register. Each SETCOLOR register contains "default" colors and brightness. Registers are numbered 0 to 4. Using GRAPHICS 3 as an example, the following is a rundown on these registers:

SETCOLOR 0: contains orange—access with COLOR 1
SETCOLOR 1: contains light green—access with COLOR 2
SETCOLOR 2: contains dark blue—access with COLOR 3
SETCOLOR 3: not used in GRAPHICS 3
SETCOLOR 4: contains black—access with COLOR 0 (also controls background)

Notice the COLOR command can access SETCOLOR registers! The great COLOR/SETCOLOR connection! Different color commands can be used at the same time to draw different colored lines on your monitor. The desired color command precedes the line or lines to be drawn that color.

Confused? Fire up that 8bit and type this:

```
10 GRAPHICS 3+16
20 COLOR 1
30 PLOT 8,2
40 DRAWTO 8,22
50 COLOR 2
60 PLOT 20,12
70 DRAWTO 20,22
80 COLOR 3
90 PLOT 32,8
100 DRAWTO 32,22
110 GOTO 110
120 END
```

There you have it—a simple bar graph. Compare the SETCOLOR register chart with the commands found in the demo program. COLOR 1 accesses SETCOLOR 0 (default orange), COLOR 2 accesses SETCOLOR 1 (default light green), and COLOR 3 accesses SETCOLOR 2 (default dark blue). Now let's stir up a new color on our artist's palette. Change SETCOLOR register 1 by typing:

```
55 SETCOLOR 1,5,6
```

Run this demo with the new program line. When the paint brush is dipped in COLOR 2, out comes violet! (See last month's Basics for details on SETCOLOR and a color table.)

A last note—line 15 from last month should have read: 15 FOR X=1 TO 14 STEP 2. Apologies for the typo. We'll see all you 8bit artists next month for more "graphic illustrations" of the characteristics of color...

Join The Revolution!

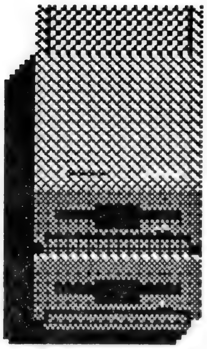
Ed Fletcher (P3ACE)

In the December issue of "Keeping PACE", Donald Thomas, President of Artisan Software, proposed a planned REVOLUTION to expand the Atari Users base in the U.S.A and get Tramiel's attention at the same time. He also offered a disk-based handbook that outlines a program of weekly of events that Atari User Groups can take part in to accomplish these objectives. I have not seen "The REVOLUTION HANDBOOK" but I like the idea! P3ACE has ordered the disk. We plan to make a copy available to all our members and encourage them to take an active part in the REVOLUTION.

However, I see no reason why we should wait for instructions. Every Atari User has his or her thoughts on what is the most important problem that WE, the Tramiel family and Atari Users must solve first. What ever your ideas are put them in a SHORT letter and send copies to Jack Tramiel, Chairman of the Board, and Sam Tramiel, President, at the following address:

Atari Corporation, 1196 Borregas Ave., Sunnyvale, CA 94086

Make copies of your letter available to other Atari Users in your User's Group, on Bulletin Boards, and to dealers (if you are lucky enough to have one.). They may agree with your point of view and join the REVOLUTION. There is POWER in NUMBERS!



IN YOUR DRIVE # 26

Special Christmas Edition

Good Ol' Chet (ACCD)

All right, so it isn't Christmas! It was when I started this, so it should count for something. With the colds (I'm running a 101 fever now, thank you), pneumonia, impacted sinus, and accidents which have befallen my family, I've spent so much of my time in doctor places that I have hardly had a chance to glance at STella (our lovely ST).

And in a calculating move by my oldest daughter and wife (Hm...that reads as if I have a younger wife somewhere), all the computer equipment and desks were moved in a random fashion (RND(0)*.57) so that I'd have a difficult time finding anything. I now have to turn my head at a 90 degree angle to see the mono monitor, and my phone wire won't reach to my modem.

This has all been an obvious conspiracy to keep me from writing another In Your Drive. Foolish mortals all, as any can plainly see that I *did* finish it. However I'm unable to straighten my neck now.

Dungeon Master Sequel

Chaos Strikes Back is the sequel to the best selling Dungeon Master, and it compares to DM as Hellfire Warrior did to Temple of Apshai. By that, we ask you to remember just how VERY tough H.W. was compared to the Temple. Chaos dumps you in a locked room with those *&^$#@! Worms on ALL SIDES OF YOU, f'r cryin' out loud!! A real killer!

I spoke out previously against the dungeon crawling adventures, such as Dungeon Master, which actually call themselves role playing games. They're not, and they tend to take the most unrealistic scenario type of rolegames—a "dungeon" which more properly resembles interiors of a castle, which is populated by hundreds of dozens of monsters and bandits which never heard of the food chain because they've been living a few doors from each other for God knows how long, and only turn violent when you enter the picture.

So, yes, Chaos is just as unrealistic as its mother program. But we tend to forgive more when it's running on a computer. The dungeon crawl is perfect for a program—you *can* limit the parameters, define the boundries, and limit the options of the player without seeming arbitrary. Like other computer games, it has the advantage of always being there when you want to play. (I don't care *how* much your spouse loves you, she is *not* going to get up at 2 am for a quick rolegame session!)

I mentioned RazRats again last month, one of my favorite beer and pretzel games. The author's brother asked my why I didn't mention the address for mail order, so here it is: JCN Software, Jerry Nolan, 1047 Brahman Ln, Uma, AZ 85364, (602) 782-0708.

Usually, I don't mention mail order for two reasons. The first is that this column was originally a part of the Mile High Atari newsletter; anyone reading it knew of our local Atari stores. The second reason is that I actively discourage mail order except as a last resort. Not only do I have a permanent grudge against the Postal Service, but I've seen what happened to Atari stores when all their customers went the mail order route instead of supporting their stores.

The Tax Advantage

Which is as good a time to lead into The Tax Advantage from Double Eagle will only be available by mail for us Atarians who use the XL/XE version.

Why? Because not enough of us bought it last year; they sold only around 600. It would have been easy for them to drop Atari from their line—every one else is. I'm grateful to them for continuing the program for us, and am ordering a copy. If you do anything with your taxes beyond the 1040EZ form, I suggest you pop $25.95 + $3.50 postage and handling to 'em right away.

I'm an acredited VITA tax worker, and I fill out other people's taxes regularly. But I STILL use Tax Advantage to save hours of my time, and a few cubic feet of storage space. I've made mistakes from time to time when doing taxes by hand. NEVER have I made a mistake using Tax Advantage; that's why I use it each year. Double Eagle Software, 2340 Plaza Del Amo, Suite 215, Torrance, CA 90501.

I thought I'd mentioned the address of Skills Improvement last time, because their excellent study helps are available ONLY by mail. That address is Skills Improvement, Box 595, Aurora CO 80040, (303) 695-6187, and, as I've said, their Generic SKT program is useful to anyone studying for ANY kind of test.

PageStream 1.8

Pagestream, version 1.8 could

easily be called a brand new desktop publisher. I've been unable to crash the thing—and I've tried. The manual is excellent! The Quick Start section will get you up and running—and you may never need to go farther. For 90% of everything you'll do, this section is plenty. But if you greedily want MORE, there's more. PageStream is also an excellent word processor, with most of the features you'd expect from a word processor. If you don't have a good drawing program, you can create or modify pictures with PageStream's formidable art options and tools. (Sheesh! The rotating and alignment features are something I never thought I'd find easy to use!)

And quick! Hoo boy, is your screen output quick! Almost makes up for the tedium of waiting for the printer to get done!

The many options of PageStream are so varied that we could take up the whole magazine. Take a good look at the back of the package, if you have an Atari store around. The back of the box is FILLED with lists of features in teeny tiny print...and it DOESN'T list them all.

For some examples of PageStream's output, take a good look at the magazine you're holding. If last issue was an indicator, Pattie 'n' Bill are liable to be running color covers often...and this layout sure yam easier to read than past issues of (for instance) ST LOG.

PageStream will not make you into a graphics artist, nor will it magically impart the knowledge and skills of a layout artist. The manual will give you many headstarts, and the program is simple enough to "keep out of your way" while you're learning. Get a few good books from the library and learn about typesetting layouts the way the big boys at the New Yorker do it. And produce!

Speaking of AIM

Who was? We were, y'know, up there in the PageStream review. In just three issues, AIM has passed my previous favorite Atari-zines (STart and ANTIC), even without color photographs. I honestly get a kick out of reading other clubs' successes and troubles. And I find the irreverent style and straightforwardness of the writers here refreshing and entertaining. (The recent debate about big vs little clubs comes to mind, as does Jim Cox's excellent description of the Portfolio in use.) Would one of the remaining professional magazines have the nerve to publish "the Power of Advertising?" Perhaps, but it would have been edited into impotency. This article should be read—and answered—by the folks at Atari who can't seem to make a dent in the American market and don't remember how to try.

A great magazine, which I'm grateful to be in, and to read. This goes to the top of my "Must Read" stack every month.

I don't know about anyone else, but this cold makes me feel miserable. I think I'm about ready to end this IYD early.

Barry Manilow and the Atari Computers

Tim Holt (El Paso)

I was thinking the other day about the things that I like. Now, even though I am a child of the late 60's and early seventies, I grew up with some peculular tastes. I like conservative folks like Paul Harvey and Rush Limbaugh, but on the other hand, I would not miss a day of Liberal, er, All Things Considered on National Public Radio.

I am Republican, but support gun control and am pro choice. So you see, my tastes vary. I also like the underdog. My favorite team while I was growing up was the New England Patriots, merely because they regularly got the snot beat out of them. I pity the underdog.

I also like Barry Manilow, and Atari computers, two of America's big underdogs.

Okay, I know what you are saying to yourselves: Barry Manilow? The guy is a wimp, a limp wrist, a wuss. All he can sing is nasily boring love songs that are overproduced and sound like an orchestra exploded behind him while he was recording!

Good Lord, Holt, Barry Manilow? He sang "Mandy" and "I Write the Songs," geesh! Those are horrible songs! Only lonely women on Saturday nights with thoughts of suicide listen to Barry Manilow! If you were a real man, you' be listening to Bruce Springsteen, or better yet, if you were a real Texan, you would be listening to Willie Nelson!

But wait, I say, to those who don't understand. Barry Manilow does other things besides those nasily love songs! Really! Have you ever heard of an album called "2:00 PM Paradise Cafe?" It was an all jazz album, with Mel Torme, and the great Sarah Vaughn! No orchestras, no exploding string sections! It was a great album! It was nominated for three Grammys for Jazz. Did you know that? Have you listened to that album?

No, the unimpressed say to me, it is a Barry Manilow album, and that is all that is required to make a judgement. No listening required. Well, I say, unswayed by their ignorance, have you heard the album "Swing Street?" It was another Grammy nominated album, and it had the great jazz singer Diane Schuur, Kid Creole and the Coconuts, the great sax man Tom Scott, and Phyllis Hyman. Surely with such an all star line up, the album cannot be all bad! Nope, the doubter says, it is Barry Manilow, and anything associated with Barry Manilow cannot be good.

Have you ever seen Barry Manilow live? They had to move the Tony awards to another theater this year, because his live show in New York was held over for two months! Surely, a Broadway theater sold out for three solid months means something!

I stopped telling people that I liked Barry Manilow a few years ago. It seemed that no matter what I tried to do to convince them otherwise, Barry Manilow was a wimp, and I was a de facto wimp for buying his albums. So I do not tell people too often anymore that I like Barry Manilow. I guess I got tired of trying to convince people that something they didn't think could be good, was in fact, good.

I have almost come to the same point with Atari computers. Game Machine they scream! No really, it is 16 bit, a little dynamo, can run MAC, and IBM!

So? They ask me. Atari is a game machine company! I saw an Atari game in the arcade at the mall!

No no! It is a different thing all together I say. Go away, they tell me. Atari is Chinese for game machine they tell me, they read it in an Amiga magazine! It cannot be good no matter what it does! What if you come to my house and I will show you? No need, they reply, it is Atari. Their mind is made up.

I sigh an exhausted sigh. I grow tired of trying to convince people the ST is a great little machine. I know it is, and there are lots of others too, although not a majority by a long shot, that know what a great little machine it is. But folks have a tendency to prejudge, no matter what the facts say to them. These are the same people that serve on juries in your city. Makes you wonder, huh?

So I will continue to buy Barry Manilow albums, and go to Barry Manilow shows, and buy and use Atari computers. I know some things that other people don't.

And if someone comes up to me and says all Barry Manilow music is for old ladies and lounge lizards, I will just smile and nod my head. And when someone else comes up to me and says Atari is a game machine, I will smile and nod my head also.

And I will go home, put on 2:00am Paradise Cafe, and boot up my Atari ST. And I will smile at the fools who don't pity the underdogs...

Phantom Drives and the SH204

Or...How My Hard Drive Did Funny Stuff with TOS 1.4

Glen Dulin (COAC)

I had proudly, and with enthusiastic anticipation, installed TOS 1.4 in my 1040ST. I turned on my hard drive and then the computer—and oooooh!—I was impressed with TOS 1.4 and its new goodies. I like it! I like it!

But wait...I noticed I was able to access a ramdisk that wasn't there (I had a G: icon on the desktop). I noticed DBman was accessing this drive that wasn't there. No errors! Uh oh! What are these ROMs doing to me? I just spent all this money for a *big bug!* I hadn't heard anything about this.

Later, I talked to a friend, Bob Kanski, who is in the club. He asked if I had tried just booting from floppies. No, I hadn't. He had TOS 1.4 installed and, using floppies, it didn't show any signs of this malady. I then booted off floppy—no problem, no phantoms. That's fine, but I wanted to use my hard drive.

In the meantime, Bob called another club member, David Powers, who had an SH204. When Bob got back to me, he taunted me and refused to tell me about some new information he got from Dave until he had extorted a promise that I would buy him a Coke.

After I gave in to this extortion, he told me Dave had had the same symptoms when he had upgraded to TOS 1.2. Hmmm! I took my computer to Bob Stiles, who has a 50meg ICD and everything worked fine...no bug.

So, what's the cure? It turns out that Atari's SH204 has a faulty chip with the insidious and devious name of AMPAL written on it. Even without a new TOS, this chip does not report errors back to the operating system correctly. You may do writes that didn't write correctly and no error would be reported. It may do incomplete seeks or corrupt formatting or have uncorrectable data reads.

It just so happens this chip also allowed the phantom drive syndrome. I could have G on the desktop but not installed, and when I pulled up the file selector, I also got drives F: and H: that were not installed or on the desktop. And, yes, you could get a directory off of these drives. It was, however, a directory of a real drive, usually the last one accessed.

Enter Berkeley Microsystems and the ADE (Atari Drive Enhancement). On Dave's advice, who cured the problem with the ADE, I sent for the chip, and with about ten minutes of work I had it installed in the SH204.

The installation is easy, TOS 1.4 works like it should and the three of us are now living happily ever after.

Even if you don't get your TOS upgraded, I would recommend getting this chip for your SH204. It's cheap insurance against a possible corruption of the drive.

ADE Chip $19.95 + $2 S&H

Crossword Magic 4.0 from Mindscape Now Public Domain

Stephen Moffit (TACE)

Crossword Magic is an older program (1983) that is an excellent utility for creating crossword puzzles on your 8bit Atari. It has many options and works on graphic printers such as the Epson FX-80 and many others.)

The main menu is as follows: create a puzzle, print a puzzle, copy a puzzle, erase a puzzle, finish a puzzle, edit a puzzle, play a puzzle and exit program. If you choose to "create a puzzle", you will be asked if you wish to have adjustable puzzle sizing, allowing the computer to adjust the puzzle size as you go along, or for you to fix size. In any case, the computer will then allow you to enter the answers to the puzzle, allowing you to "backdate" as you go along, and to "relocate" the answer to legal places.

The computer will also keep track of words you were unable to place and then will attempt to place these words at the first opportunity (you may erase or add to this list.) After you have entered all your answers, it is time to enter the clues, which may consist of three half lines of text (you will be able to keep track of what answer you are on by the highlighted word.)

When you wish to print it, you may accept the current printer driver or choose from approximately 20 drivers. The program will automatically number the boxes and black the unused spaces. The printout include the puzzle, clues, answers, and a word list (all printed seperately, if you wish.)

SPEED
LIMIT
8MHz

Go ahead. Punch it.

For the ATARI 520ST, 1040ST, MEGA and STACY.
Step a generation ahead with **TURBO16** by Fast Technology. The **TURBO16** accelerator can move your ST into high gear. Upgrade your ST and achieve *up to double the speed* in some applications.

Take Your ST Past Its Limits.
TURBO16 will *dramatically* increase your desktop performance. Complex illustrating and page layout is no longer a *drag, click and wait.* **TURBO16** will increase your ST's speed from 8MHz to a *blazing* 16MHz. A state-of-the-art 16MHz processor and 32k high-speed cache memory add the power that lets you *soar*. **TURBO16** is fully compatible with standard ST software, including *Spectre 128* and *pc-ditto*, and **TURBO16** makes games *fly*. **TURBO16** has a far greater effect on productivity than a hard disk, and at **$299 suggested list**, a far lesser effect on your wallet.

Easy To Install, Easy To Use.
TURBO16's installation requires only the removal and replacement of your ST's 8MHz 68000 chip, and connection to the ST's MMU chip 16MHz clock. That's it! The low profile package will not interfere with other upgrades, and **TURBO16**'s special features optimize your ST's operations. **TURBO16**'s speed can be controlled by way of an optional, dealer-supplied hardware switch, auto folder program or desk accessory. Take full advantage of your ST's power with **TURBO16.** See your Atari dealer today, or contact Fast Technology.

TURBO16 is a trademark of Fast Technology. **Atari** is a registered trademark and **ST**, **520ST**, **1040ST**, **MEGA** and **STACY** are trademarks of Atari Corp. **Spectre 128** is a trademark of Gadgets by Small, Inc. **pc-ditto** is a trademark of Avant-Garde Systems.

We won't tell.

FAST TECHNOLOGY P.O. BOX 578, ANDOVER, MA 01810 PHONE: (508) 475-3810

For 520ST, 1040ST, 520STfm and MEGA

MEMORY:

Expand your St's memory to ONE Megabyte, TWO and ONE-HALF Megabytes or even FOUR Megabytes with tech-specialities plug-in memory modules. All memory boards fit under the R/F shield. The CPU is completely available for any future enhancements (blitter, coprocessors, PC-emulators, speedup kits etc.). No soldering is required.

520ST modules use 256K DRAMs for upgrades to 1 MB and 1 Megabit DIPs for 2-1/2 and 4 MB upgrades. All boards are fully socketed and the expandable boards can be configured for either 256K or 1 Mb chips. This means that you can start by upgrading your 520 to one Megabyte and later move up to either 2.5 or even 4 Megabytes--the maximum for any ST, even the Mega! Installation is completely solder-free. Comes with detailed illustrated instructions and a one (1) year limited warranty.

expandable boards:

520A	Socketed, no RAM	$129.
520B	1 MB, socketed	$179.
520C	2.5 MB, socketed	$297.
520D	4MB	$465.

Blitter Upgrade:

520STfm/1040, new motherboard, Installed	$ 99.
Combined with TOS 1.4, Installed	$199.

Upgrade your 1040ST or 520STfm just as easily!

Send us your **520STfm** and we will upgrade it to ONE Megabyte by installing a second bank of memory, easily removable in case you want to upgrade again. Complete with installation for only $149 plus shipping.

Or install one of our **1040** (fits 520STfm too) memory boards and upgrade your ST to 2-1/2 or even 4 Megabytes. There are nowadays four (4) different versions of the 1040/520 motherboards around. If you bought your ST less than 2 years ago, you need to check your machine, detailed info in our catalog.

Version "0" fits all 'old style" 1040/520 with 6 ROM chips under the power supply. Limited space above the 1040 mother board prohibits the use of conventional sockets in one bank. Optional "ZERO Height" sockets allow you to have this bank socketed too, so you can plug in or exchange 1 Mbit chips. The "ZERO-Height" socket kit is also available separately so you can install it at any time!

1040A	1 Bank sockets, no RAM	$110.
1040B	Fully socketed, no RAM	$149.
1040C	2.5 MB + 1 bank sockets	$317.
1040D	4 MB, 32 1 Mb DRAM installed	$485.

Version "1" fits all 1040/520 with the memory chips under the power supply. Available room prohibited the use of "DIP" packaged chips. The main board is only 6.4" x 2.9" and needs "ZIP" packaged 1 Mb x 1 DRAM. It fits in the area under the power supply with the shield installed and stays 0.5" away from the CPU to allow attachment of other upgrades. More details in our catalog!

1040B1A	1 bank socketed, no RAM	$149.
1040B1	Completely socketed, no RAM	$189.
1040C1	2.5MB, no sockets	$297.
1040C1A	2MB installed, 2nd bank socketed	$317.
1040D1	4 MB installed	$495.

Upgrades for version "2" and "3" of the 1040/520 motherboard also available! Prices same as above.

All upgrades can be equipped with a Clock Option on the Memory Board, comes with software, only $30.
Stand-alone CLOCK, please specify 520/1040 and your version of the motherboard $38.

EXPANDABLE Hard Drive Kits

come complete with software and all parts needed to get the system operational, 1 year ltd. warranty. There are right now three different case styles available:

1. Tower Type, 10" wide x 6.8" high x 15" deep, if sitting on your desk with monitor on top , with full SCSI interface and 'DMA-through'

-150 W PC power supply w/fan

-room for up to 5 half height hard drives or combination full/half height

-mounts on floor, under desk or on desktop

-can power up 520ST and external floppy drives.

-optional delay circuit for CPU allows fully automatic power-up!

T0S	No Drive, install your own emb. SCSI drive	$265.
T0	No Drive, MFM controller	$299.
T0R	No Drive, RLL controller	$475.

Complete with drive mechanism:

10 MB	$485.	20 MB	$565.	30 MB	$695.
40 MB	$745	64 MB	$795	85 MB	$895.

2. Monitor Style, 13.25" wide (same as MEGA) x 15" deep x 3.8" high with single port host adapter

-ready for up to three 1/2 ht or 1 each full/half ht. hard/tape/floppy drives

-55 W power supply with 115V fan

-can be placed under monitor or at side of your desk

M0S	No Drive, install your own emb. SCSI drive	$179.
M0	No Drive, MFM controller	$295.
M0R	No Drive, RLL controller	$365.

Complete with drive mechanism:

10 MB	$395.	20 MB	*$395.	30 MB	$545.
40 MB	$685.	49 MB	*$625.	64 MB	$795.
85 MB	*$795.				

3. Desktop Style, 4.5" wide x 6" high x 13" deep with single port host adapter

-ready for 2 1/2 height or 1 full height drive

-55 W power supply

-optional fan available (add $18)

D0S	No Drive, install your own emb. SCSI drive	$149.
D0	No Drive, MFM controller	$279.
D0R	No Drive, RLL controller	$349.

10 MB	$355.	20 MB	*$369.	30 MB	$525.
40 MB	$695	49 MB	*$595.	64 MB	$725.
85 MB	*$745.				

ATARI MEGAFILE:

Replace the 20 MB drive in your MEGAFILE 20 with a 42 MB 40 ms autoparking drive. Comes with a 1 year warranty on the drive mechanism. Exchange price including installation with your drive in good condition: $260., $369. outright.

Gain 65 MB of high speed (22ms av., 5 ms track to track) storage. Exchange with installation: $360., outright $449.

SUPRA 20/30 and ASTRA 20 MB:

Upgrade to 49 MB high speed storage with auto parking, 500 K/s transfer rate. With installation and transfer of your existing files: $379.

Host adapter cards are separately available and come with software and DMA cable or additionally with case and 6' round shielded SCSI cable with embedded power supply lines. Prices after the "/" are for version with case and cable. 1 port $79/119 full SCSI $119/159

CPU CASES:

Upgrade 520/1040 to the MEGA standard.

- Separate CPU and keyboard, gain space for three each 3.5"/5.25" floppy, hard or tape drives in two separate drive bays. Full height drives will also fit.
- A 150 W power supply with fan provides power for all possible combinations and keeps everything cool
- Reset button on keyboard
- A delay circuit allows fully automatic HD power-up.
- Monitor can be switched on/off with CPU, using an optional cable.
- Our kit uses a steel case 18" wide x 12" deep x 8" high, easily strong enough to support a high resolution monitor.
- The original keyboard gets a low profile enclosure, 18.7" wide x 7" deep x 2" high, consisting of a metal bottom part and the modified plastic top of the original case, supplied as exchange or you do the modification your self. The kit comes preassembled and installs without soldering. All mounting kits, wire harnesses and connectors to modify a standard machine are included.

Complete kit, please specify your machine type $295

OPTIONS:

Hard Drive kits for the CPU case consist of host adapter/controller with support bracket if necessary, DC harness and control cabling and might also be used with customer supplied case/power supplies. Kits with controller cards come with connections to two 5.25" drives. Kits for embedded SCSI drives come with one SCSI connector. Additional connectors $8. installed.

C0S	No Drive, install your own emb. SCSI drive	$99.
C0	No Drive, MFM controller	
C0R	No Drive, RLL controller	$299.

20 MB	*$295.	30 MB	$465.	40 MB	$595.
49 MB	*$525.	64 MB	$725.	85 MB	*$685.

Cable sets to connect additional 3.5"/5.25" floppies also available, please see catalog.

KEYBOARD KITS:

We noticed quite a lot of interest for our keyboard parts used in the CPU CASE. Keyboard kits consisting of metal bottom case, connecting cable with reset and modified plastic tops on an exchange basis are available separately for $69., please specify your machine type.

Space limitations don't allow a more detailed descriptions. For complete 24 page catalog contact:

tech-specialities Co.
909 Crosstimbers

AIM Disk of the Month

ARC602.TOS—Latest update to ARC. Features include subdirectory archiving support, more detailed statistics on archive data size and up to 175% speed improvement over ARC 5.21C.

ARCSH21B.TOS—ARC Shell, the program that adds a full GEM interface to ARC.TTP and LHARC. New features include full support of ARC 6.02. ARC Shell is shareware, Copyright 1990 Charles F. Johnson and Little Green Footballs Software.

ARC_LZH.TOS—This program automates conversion of ARC files to LZH files. It can also help convert self-extracting files to normal LZH files and vice versa. Needs ARC.TTP, LHARC.TTP, SFX_LZH.PRG and DESELF.TTP to take advantage of all the features.

ARTST230.TOS—Art-ST is a powerful drawing program that works in all resolutions. Among its many features are: lines, boxes, circles, text, fine pixel editing, area fills with user-definable monochrome or multicolor patterns, copy & paste and support for Neo/Degas/Degas Elite compressed pictures. Art-ST uses all available memory to support multiple picture buffers! This gives about 8 buffers on a 520ST and over 110 buffers on a Mega4! Works in color and monochrome. Shareware from Robert Birmingham.

BAPACK.TOS—Branch Always Program Packer reduces the size of your executable (.ACC, .PRG, .TOS and .TTP) files so they take up less disk space, yet still run properly. Typical compression is about 30 to 50%. GEM-based, runs as a PRG or ACC. From Darek Mihocka and Ignac Kolenko of Branch Always Software.

CHEETAH2.TOS—Cheetah 2.0 is a *fast* file copier that can transfer up to 15 megs a minute! Perfect for hard drive owners.

CONCORD2.TOS—GEM-based Bible concordance program. Provides a fast, powerful and very easy way to access the Bible and to find words, combinations of words and phrases. Included in this file is the KJV text of the Pauline epistles (Romans through Philemon).

DCSHOWIT.TOS—This incredible little program replaces the 'SHOW' command used to view files. View uncompressed DEGAS (.PI?) and NEO pictures by simply double clicking on them and choosing 'SHOW' from the system dialog! Allows scrolling through text using the mouse. DC ShowIt is freeware and copyright (c) 1989 Double Click Software. NOTE: This program sometimes shows "garbage" before showing the selected text file...this does not cause any damage, the program simply doesn't clear the keyboard buffer before "showing."

DESKMG31.TOS—Version 3.1 of Desk Manager, the bootup program that uses the mouse to select DESKTOP.INF files, AUTO programs, ASSIGN.SYS files and desk accessories. Simple to configure and use. Written in 100% assembly language. Shareware, (c) 1990 Charles F. Johnson & Little Green Footballs.

DTPAINT.TOS—DTPaint is a desk accessory paint program and .IMG file editor. Monochrome ONLY!

FLIPSIDE.TOS—Flip Side allows use of double-sided diskettes on single-sided drives. Only Side 1 will be accessible on a SS drive, but DS drives will be able to access both sides. This feature is similar to many of the PD disks sold with European magazines.

KXPSET25.TOS—Set up your printer's font, character/line spacing, italics, emphasized, tab stops, etc., easily and quickly. Written for 24-pin printers, but works with Epson-compatible 9-pin printers as well. Runs as PRG or ACC, high or medium rez. Written by CIS Sysop Bill Aycock.

LGSEL16B.TOS—Little Green Selector, the complete and powerful replacement for the GEM item selector. New features include a "quick extender selection" feature and the ability to type any ASCII character on the "Selection" line. Shareware, Copyright 1990 Charles F. Johnson and Little Green Footballs Software.

MX2NET20.TOS—MX2Net MIDI network for two ST's. Also included is an RS-232 version of the program. Includes options to set the GEMDOS clock, view the screen of the remote machine and read network status. Allows disk and memory sharing. Connect two STs together and share a single hard drive and printer!

QST18DMO.TOS—This is a fully working, no time limit demo version of Quick ST 1.8. This demo is much slower than the retail version, but still show a lot of speed increase. Color and monochrome versions included. The monochrome version supports the 19" Moniterm monitor. This demo uses only 10K of memory. Quick ST is a commercial product of Branch Always Software.

RELTREE2.TOS—GEM-based "family tree" that allows you to organize, sort, store and print up to 36 generations of your ancestors (600 on a 520ST, 2,000 on a 1040ST). Works in color and monochrome.

SPHERICL.TOS—An action/strategy demo of a UK game, Spherical. Use the wizard's wand to create a path for his crystal ball to follow. This game runs on Megas and most STs, but very old 520STs may not display the whole playing screen and tend to flicker a bit. Color ONLY!

SPINDEMO.TOS—The Globe Demo, a globe made of spinning dots that *you* control. Endless patterns are created using keys which control things like speed, angle and size. The effects are mezmorizing and beautiful. Color ONLY!

TRASHCAN.TOS—The NeoDesk Recoverable Trashcan from Gribnif Software. This "freeware" desk accessory adds a recoverable trashcan to NeoDesk 2.05 (or later). With it, you can recover any deleted files at a later date (by opening the trashcan). Documentation is included, plus a patch program to upgrade NeoDesk if you have a slightly older version.

All files on this disk are self-extracting LZH archives...simply double click to extract! Readers can purchase this disk by subscribing to the AIM Disk of the Month, contacting one of the AIM participating clubs or by sending $6/disk to Unicorn Publications, 3487 Braeburn Circle, Ann Arbor, MI 48108. Please specify the Feb. 1990 disk when ordering.

People Are Talking About DC UTILITIES

"The wizards at Double Click Software have decided to bombard us with several top notch utilities at once in their first commercial software venture, and are these programs ever good!"
— ST ZMAG

"Squish loads and decompresses programs faster than a standard ST would take just to load the same program full-size."
— COMPUTER SHOPPER

"In keeping with the spirit of pushing the ST and its programs to the limit or past the envelope..."
— ST REPORT

"You won't want to be without this superb utiltiy disk and it's a steal at the price DC is asking."
— ST PLUG

only $29.95

DC SQUISH Save valuable disk space! Compress executable programs and desk accessories up to 1/3 their original size! And your programs stay executable! Makes programs load faster too!

DC DESKEY 2.0 Make any GEM program 'Expert Friendly.' Assign keystrokes to GEM drop down menus in any GEM program! Over 2000 possible key combinations!

DC XTRACT A super fast, pure assembly desk accessory that allows you to xtract, test, or list the contents of any ARC file. DC XTRACT is 4X faster than ARC.TTP, only 12K in size, and always ready when you need it!

DC RAMIT The FASTEST RAMdisk bar none! Allows you to make the RAMdisk look just like a floppy! Save the contents of the RAMdisk to one file, for quick loading of the same files! MUCH MORE!

DC DSKORG Make your DESKTOP.INF file an executable program! Change desktop windows, icons, the complete desktop layout quickly and easily by double clicking one program.

DC SEA Create programs from ARC files! That's right! DC SEA (self extracting ARC) allows you to make a program that will extract or list its own ARC contents.

All programs are 100% pure assembly language

What if the Atari Computer Club of Denver had a meeting and nobody came? by Chet ("Is TONIGHT the meeting?) Cox

Our January meeting is famous for its low turn-out, and the reason is that it always falls JUST after New Year's. This year it was on 2 January, and even I forgot it. If a new person hadn't called me ("Is the Atari meeting tonight?" he asked. "Godfrey Daniels! It IS tonight!!" I calmly replied.), we'd have been short a meeting chairman.

As it was, I rushed, forgot my notes and other props, and had to bluff and lie my way thru the meeting ("Yes, we INTENDED for tonight to be a short meeting. Go home."), but was saved by Tom Iowa. Mike McCutcheon (Editor Mike) wowed us with further tricks and somersaults of SpartaDOS X - the Cartridge. One thing we learned is that if you have a 1200XL (which we did that night), you have to take the cartridge apart to fit it into the 1200.

Everyone determined that the Swap Meet is for sure definitely on for the March meeting. Here's your chance to unload some dusty old disks, folks! The tables are free to members; $15 to strangers.

Ed plugged the STIG meeting, of course. And Tom Iowa, who turned down the Exec Director's job (Say hello to Joe McWilliams as our new exec.), won the door prize: a vintage 2600. Hm? You say you didn't know that Atari also makes game machines?

Stigs And stones -- the STIG meeting for January

This would have had to be some important meeting to bring me out. I was coming down with a whopper of a flu bug, I'd just gotten out of a night class, and the meeting would have been half over by the time I got there.

But it couldn't be helped! Lou Mendoza was going to show how to convert a cheap Radio Shack disk drive into an ST-lovin' drive. The Other Ed was going to show another game (which name I never DID catch!), and a new fractal program was going to be demonstrated. Joe (Moneybags) Ronda was going to thrill us with slides of his vacation to CES. Oh yeah, and Ed expected me to demonstrate PageStream and Monitor Master.

Sure enough, the Other Ed was just finishing up his demo of a game which looked suspiciously like an ST powering down as I arrived. (I repeat: Ed, what WAS that game???) Lou was finished (drat!), the fractals had fracced, and I was expected to jump into the fray.

Except that I had LOST MY VOICE due to that *&%$#@! flu virus! Reaching back into my college days to remember my voice lessons, I faked something which sounded suspiciously like a cross between Donald Duck and the sound those cross country ski machines make. It was FUN watching everyone cringe! For an encore, I contemplated scraping my fingernails on the blackboard.

If ever there was a match made in heaven, the Monitor Master and PageStream is that match! With the Monitor Master, I was able to show both the DETAIL of PageStream on mono, then show the COLOR on the color monitor. Ed Fason (NOT the Other Ed. Keep 'em straight here!) had printed pages on several printers: a dot matrix, an inkjet, and a color inkjet or laser.

Joe threw out some life-size screens from the Lynx -- and some life-size paper reproductions of the Lynx itself. If arcade games are your meat and potatoes, you'll fall in love with this hand-held monster. He mentioned more about What Atari Was Willing to Talk About in their little out-of-the-way room at CES. Once again, we're hearing that this year is the year of Atari. (Most likely, the year of the Lynx and the Portfolio. Sigh. Where's STacy?)

Starfleet Meeting Minutes by Thomas Oughton

January 12, 1990 Officers present: Guenther, Oughton, Robique Chris Guenther assumed office as president of Starfleet Atari User Group. C.J. gave up the reins of office with his usual grace and calm. You all should have been there to see it.

The club librarian attempted to demonstrate several Programs added to the library. The programs were all ARC'ed and the directory on the disk showed 999+ free sectors. We assumed that the disk may be good so we used the Sparta-Dos X cartridge to un-ARC one of the programs. This proved to show that at least some of the programs on the disk were corrupted. We then examined the use of DISKFIX.COM delivered with DOS 2.5. This program repairs the Volume Table Of Contents (VTOC) on a disk. This program restored most programs, but 5 of the files on the disk were lost. Once the disk was "repaired" the Sparta-Dos X cartridge was used to view the contents of the ARC'ed files. Included were several AMP music files, a couple of games, several text files, and a couple of utilities.

A new program from the Translator Z, TZSTRIP is a basic program that will take a text file and strip certain control code from it. It will also perform a word wrap on the file to a column size specified on the main menu. This program is written in BASIC and is very SLOW. TZSTRIP will run with TURBO-BASIC which is greatly recommended.

The new president demonstrated Kyan Pascal. This development system includes a operating system, editor, compiler, and debuger. The operating system uses the same command names as UNIX. The command to get a directory of disk files is called "ls". "cat" is used to concatenate files. These are all Pascal programs and just by renameing the files, you can rename the commands. The editor is a full featured editor and could be used as a word processor. The compiler produces a stand alone object not requiring an extra library or runtime file to be loaded separately. This system was compared to the other Pascal system, Draper Pascal, demonstrated a couple of months ago. Either system could be used to produce usable Pascal programs, but only Kyan creates stand alone object files.

The meeting broke up at about 9:00. Then several programs were copied from the library.

Atari Computer Club of Toledo is an independent user group founded in 1980. A.C.C.T. is the only Atari user group in the NW Ohio/SE Michigan area that provides help and support for and from both 8-bit and 16-bit computer users.

Club members receive, as part of their dues, Atari Interface Magazine and access to the 8-bit and ST public domain software libraries. Disks are $2/8-bit and $3/ST, non-members may purchase disks at a slightly higher cost.

A.C.C.T. meets on the second Monday of the month from 7-9 pm at Bassett's Health Foods, 3301 West Central Avenue (Westgate Shopping Center), Toledo, Ohio. 8-BIT SIG (yes, I said 8-bit) held monthly at the home of Jim Herzberg. Dates and times announced at meeting. ST SIG held monthly at the home of David & Brenda Micka. Dates and times announced at meeting.

A.C.C.T. may be contacted at 6107 Greenwycke Lane, Monroe, MI 48161, by calling Dave Micka at 313-241-1157 or Michael Justice at 419-242-7797 or via Fantasy Island BBS.

President:	David Micka	313-241-1157
VP & 8-Bit Librarian:	Michael Justice	419-242-7797
Secretary:	Sharon Hill	419-423-2135
Treasurer:	Rose Taylor	
ST Librarian:	Brenda Micka	313-241-1157
Fantasy Island BBS (3/12/2400)		419-691-6459

ATARI FEDERATION

Secretary's Report This is my first report since being voted into office, I hope I am up to the task. I would like to thank Chester Hadley for his assistance and advice in getting me started.

The 8 January 1990 meeting was called to order by the newly elected president, Phil Rominger. Items discussed were:

Computer Connection is going out of business! (Woe is me) They have marked nearly everything down by 25% and will close by the end of the month. There is a slim possibility that someone will reopen the store.

Steve Jordan's BBS is going off line, permanently. Someone is buying his equipment and software though, to start a new BBS. The Phoenix BBS, 735-3315, should be online by the middle of the month.

Mike Sieben donated 20 Acusoft disks of P.D. programs to the ST library. Herb Kanner would like to remind everyone to watch the expiration date on their club membership cards, and to pay their renewal fee promptly. Also, he has disks for sale, 3 1/2", double sided, fully guaranteed, for 65 cents each.

Cascades Atari Computer Enthusiasts

CACE

Cascades Atari Computer Enthusiasts is the Atari Club in and around the Jackson County area. The Main purpose of the club is to help inform new users and to promote the use of the Atari Computer in the community.

President	Brent Fisher	(517) 764-4599
Vice-President	Tim Hotchkiss	522-8912
Secretary	Joe Cripps	782-0199
Treasurer	Craig Schaff	787-3970

The CACE BBS is run by the club and is open to anyone with a modem. The number to call is (517) 787-4011. The current membership dues are $14.80 per year, and are payable at any of the CACE monthly meetings, or by mail to the PO Box. Club membership includes access to the entire club software and publication libraries, along with a monthly published newsletter.

Any written communication with CACE should be sent to PO Box 6161, Jackson, MI 49204. Our meetings are held on the second Saturday of the month from 1 pm to approx. 4 pmat Boos Center.

Fishing Around by Brent Fisher

Like hi everyone, how are you all doing? I know that you will never believe this but I have got some important news for everyone. We will be holding our meetings in the Boos Center in Loomis Park again. To enable this to occur though one change had to take place. We will now be meeting every second Saturday instead of the normal Sunday. So in consequence, I realize that some of you might have tried to make it to the East Side Lounge and found no one there. So we should have a solid spot for meetings like we did before. Our next meeting will take place at the Boos Center on February 10th at 1 pm. I suppose we can meet until the building closes if the membership wants. Other than the fact that the BBS is operating as we speak (I think). Our only problem seems to be that we can't get anyone connected at 300 baud. More than likely we will be changing the software to BBS Express Professional. But in the mean time please bear with us.

One last thing before I let you go. If you are looking for Atari 8bit software check out the guys at No Frills Software. They have got a pretty extensive list and some pretty good prices. Also they are planning on re-releasing SynCalc so give them a call in you are interested. Those of you who wish to write can reach them at: No Frills Software, 800 East 23rd Street, Kearney, NB 68847 Of course if you wish to call you can get them at 1-308-234-6250. Anyway have a good Valentine's day.

Central Connecticut Computer Club

The Central Connecticut Computer Club is the oldest, still operational Atari club in the state. Conceived in December of 1980, and operational in January, 1981, the CCCC continues to serve the Atari community. New blood is welcomed, and of course, old hands are always welcomed back.

Meetings of the CCCC are on the third Wednesday of each month. The meets kick off at 7:30 and usually include presentation or demos of various hardware or software items. The meetings are held at Eastern Computer Video, 1207 Meriden-Waterbury Turnpike, Milldale, CT 06467.

Prospective members may call Rich Scheidel (203) 589-9035 or 589-3738. Failing that, call Tim Brandt, (203) 283-0500 or writeC-CCC, 127 Pinnacle, Bristol, CT 06010.

Dues are $25 per year, $30 for family plan. Includes Voting membership, newsletter, access to Club library (8bit and ST), access to club magazine library, discounts on computer and video supplies at Eastern Computer-Video, and access to the CLub message base at Ultra Project BBS.

Yo addicts.....February blues has hit hard in the East. Cold as hell (here up on the hill anyway). Had an interesting encounter on Compuserve January 14 in the Atari 8 Conference room. Met the Prez of AUGOUG and had a private talk which was interesting..... seems we are not alone in looking for users. Further talks may produce a joint meeting...wouldn't that be special?

Received the package from Soft-Logik and added PageStream 1.8 to the library. Heh...they're still shaking their heads trying to understand how we got it. Well here's the story. I received a letter from Soft-Logik asking if our group was interested in getting the "User's Group Package". Actually, they asked if we had recieved it yet and to apply for it if we hadn't. We hadn't, and then we did, so they sent it. Understand? (Look at them shake their heads). Well next on the agenda is to learn how to use it. Thanks again to Soft-Logik for the package. We WILL do a review on this in the near future.

Also something I want to discuss is the upcoming User Group Officers meet in February down in Ol' New Jersey. It's obvious now that February 17th will NOT be the meeting date. Bob Brodie has a previous engagement in Michigan for that same date. AND we DO want him to be there. More on this as things get clearer. Be advised. I will welcome anyone in our group that wishes to go. It's only about a two and a half hour drive to the meeting site from Bristol. The purpose of the meeting is to A: Setup a network of co-operation between clubs on the operation of libraries, newsletters and BBSes.

B: To increase communication between clubs to strengthen clubs in Membership, public relations, and dealing with other problems throughout the user groups community, and finally C: To show ATARI & the manufacturing community an organized front for the advancement of the Atari computer systems. The goals to be reached include re-establishment of local retailers and a North-East Atari Computer Show...YAY! I really would like to see both of those goals. Like I said...more later.

Next month....a review of the Migraph hand scanner..and also!! A premier showing of the "Special Joystick from Spectum Holobyte for Falcon that Tim can't remember the name of right now" Got that? Supposed to be Cat's Backside for control (gotta be nice here, don't know whose lil' kid is reading this).

Well I tell ya...I gotta run. It's getting late here and I still got to get ahold of Pattie. zbye.

COAC

Central Oregon Atari Club

- Dedicated to Central Oregon Atari Users and Enthusiasts Since 1986 -

President:	Norman Moore	(503) 447-3598
ST-VP:	Bob Kanski	(503) 548-8201
8-bit VP:	Marc Hitson	(503) 648-0513
Treasurer/Ed	Glenn Dulin	(503) 382-3956
Secretary:	Nancy Kanski	(503) 548-8201

Address: Central Oregon Atari Club, P.O. Box 6824, Bend, OR 97708. Membership dues are $1.00/month and $1.00/year for each addition family member. We meet every second Saturday of the month at 5:00pm at the Ann Rita Conference Center, which lies just in front of St. Charles Hospital on Neff Road in Bend.

From the Secretary

I hope this Holiday Season has been a special Blessing to you all, the New Year is off to a great start and with Valentine's Day here I wish you all a very Special Day! In writing this it sounds funny to mention the holidays when by the time you read this it will be Valentine's Day; but at the time of this writing I am thinking of you all hoping you had a great holiday season.

Our December meeting was filled with lots of excitement and plenty of delicious treats provided by some very wonderful people. THANK YOU once again! We had Nomination of Officers in December and decided at the same time to hold elections as well. We have two Vice-Presidents, one for the ST and the 8bit to encourage more participation and involvement of our 8bit members.

Our door prize winners are: Randy-Norman's nephew: Atari Duffle Bag Danny Hyde: Canister of M&M's Norman: Certificate to Rolaines Cantina Jim Downes: Certificate to Izzy's Congratulations Everyone!

Greg May became our newest member at the December meeting. At our January meeting we had the Video Key from Practical Solutions demoed by Arron Leis. We are going to raffle this thing off in March at yet another another PIZZA FEED. Tickets for the raffle are a $1 each and will help to pay for pizza. Tickets are already being sold see the club insert for a review of the product. Nancy

FACCS

First Atari Computer Club of Spokane

F.A.C.C.S. is an independent, non-profit computer club formed in 1981 by local Atari computer users. We currently meet on the 2nd Thursday of each month at 7 PM. All visitors are welcome to come to any meeting. Membership is $15 per family and includes our club newsletter, access to our public domain libraries and to the club levels on the Atari Zone BBS (3/12/2400 baud, 24 hrs/day, call 509-326-5741).

At The Board

The November 9th elections were validated, to see new officers check out the officers listing above. Results pertaining to the other issues on the ballot were the amendment to the By-Laws allowing non-F.A.C.C.S., non-Atari users of the Atari Zone may be appointed to SigOp of a certain area. The vote to consider a non-smoking place to hold our meetings was overwhelming. The officers also confirmed the appointed officers listed above.

In accordance with the By-Laws the officers chose to clarify some of the rules and regulations governing our BBS and SysOp to aid each new SysOp in the performance of their duties. If you would like to know more contact me for further details.

Other Board decision affecting the BBS were: Approval of Nancy Prevost as Co-SysOp and Rebecca McKinley as the first non-F.A.C.C.S., non-Atari SigOp; a separate area has been set aside for users age 16 and under; a general file accessible to non-F.A.C.C.S. Atari users has been established as an inducement to join the club. Also if the BBS becomes to busy for F.A.C.C.S. members be able to access it, a special night for club members only may be set aside.

Tim Osborne has requested each officer to supply an itemized inventory of all F.A.C.C.S. equipment. The Treasurers report showed us still running in the red, however we are checking into a couple of fund-raisers. Members are being encouraged to renew their memberships early to help us through this crunch. Bits, Bytes & Nibbles has consented to allow us to put some of our store disks, on consignment, in their store. Price we have set on the sell of these disks shall be $5.00 each. Ed Hicks is ironing out the last few details of the agreement.

F.A.C.C.S. is now a participating club in the Atari Interface Magazine (A.I.M.), a Michigan based Atari User Group Newsletter. Among the advantages to our club through A.I.M. are the possibility of the reviewing of new software products and getting an ST disk of the month for use in our club. Articles, members wish to submit must be turned into Merry Iverson by the conclusion of each General Meeting.

The annual Northtown Mall Computer Fair was held Nov. 18th & 19th. There were a number of problems with this year's show, mostly due to screw-ups on the part of the Mall Management, and a lack of publicity. Plans are already underway to insure that the 1990 show will be more productive. Several Board members are checking into the possibility of a spring Computer Fair at University City in the Valley.

The F.A.C.C.S. sponsored Inland Empire Computer Enthusiasts (I.C.E.) were ready for distribution at the Mall Show and have been placed in several area computer stores. Plans are underway to produce a new edition every 3 - 4 months. The goal of the I.C.E. is to acquaint everyone in the area with all the users groups in our area.

Finally, the Board discussed ways to encourage and support our new and old members, with a primary concern on ways to more actively support out-of-town members who cannot make it to the monthly meetings. Starting with ways of making our club library more accessible to such members.

The Officers are actively searching for a new meeting place. If you know of a community center or school in your area that is willing to allow us to meet there please let us know. Meanwhile we will continue to meet upstairs at Tidyman's at Five-Mile.

Submitted by Nancy Prevost F.A.C.C.S. Secretary

GKAUG ATARI

GREATER KALAMAZOO ATARI USERS GROUP

GKAUG meets once a month by invitation only as time permits. Membership is through the MACE organization for those who want the AIM magazine and other benefits.

President:	Frank Fellheimer	(616) 657-6106
Archiver:	Dave Oldenburg	
Librarian:	Bill Berner	
2nd System/GKAUG BBS		(616) 385-2448

We run a 130XE using BBS EXPRESS! PRO Node #197

No meeting scheduled for this month. I will try to get one for us towards the end of this month, or at the beginning of next month. I am in the process of installing library shelves for my computer literature... seems as if the stuff can really pile up a bit.

Purchased a copy of YEMACYB/4 for my Star NX-1000 C color printer. I have only had time to do one print out so far, but it certainly does do a color print-out in pretty quick time... and you don't have to swap ribbons or reset the paper. It includes the older YEMACYB and some other utilities to assist you in converting various graphics schemes for use by the printer. More about this when I finally get a chance to look at it more. I am still reading the directions (we all do, don't we ?).

GRASS

GRAND
RAPIDS
ATARI
SYSTEMS
SUPPORTERS

Next Meeting: 6:30 P.M. Wednesday, 7 Febuary 1990. Wyoming Public Library. 3350 Michael S.W.

Tim Feenstra	President	(616)784-6230

5625 Buthview N.E. Comstock Park, Mich. 49321

Greg Williams	Vice President	(616)698-7319
George Nosky	Treasurer	(616)942-1527
Bob Bulliment	Secretary	(616)457-1766
C Baughman	Librarian	(616)795-7373
Marvin Waid	Membership	(616)897-0194
Gary Heitz	Director	(616)676-0112
G Borysiak	Director	(616)896-9358
Charlene Bird	Director	(616)795-3593

Presidents Monthly: 18 January 1990

I would like to take a moment to welcome the new officers elected at the December meeting. Gerry Borysiak and Len Brothers are active participants and their help and insight will be greatly appriciated. Charlene has moved up to a new position and will fill in for Chuck while he is at camp during the summers informal meeting, making the disk library available at all meetings.

The new GRASS officers held a meeting last night, Wed. 17 Jan. 1990, and discussed several issues about the upcoming year. One item was the purchase of a complete system for the group. Since the group did not have the usual magazine subscriptions last year, it was decided that the funds left over could be used for purchase of a demo system for use at the monthly meetings. Anyone know of a good deal on a computer and drive, please let one of us know. We are looking for a 130XE and a XF551 disk drive, and a printer would be nice.

You will notice that the dues listed above are still $22 for the year. With the purchase of the computer system, the dues could not be reduced this year and still pursue the Page 6 magazine from Europe, and try once again to have an Atari Fair this year. More on the fair as things are worked out and details are set.

A major portion of the officers meeting was spent with the concerns of the newer members to the group, most who have not had their Ataris long and did not feel comfortable with the level of demos we have been having. Starting with the February meeting, there will be the usual type demo for the entire membership, but it will be preceded by small group sessions dealing with the demo topic at the beginning and intermidiate levels, as well as a place that you advanced users can gather and have at the topic in any manner you wish (or choose your own). With a large portion of the membership belonging to the new member/owner level, we feel that this should offer something for everyone at the meetings, as well as address those little problems that plague new users.

Remember, March is dues month. Yup, it is that time again. Join in March, and don't miss any of the good meetings in the upcoming year.

The loss of many experianced Atari users to the ST and IBM worlds takes with it a lot of knowledge that most of us need to keep our systems growing and expanding. This is a great problem for those of us who still are not ready to trade in our 8bit Ataris, but we can overcome it. There is one positive side effect of this, and that is the availability of lots of good used 8bit hardware and software at some really good prices. There have been some great deals on Atari products at the last couple meetings. If you are still adding to your system, watch the sale tables at the meetings and keep an eye on the for sale messages on the local BBS's, you might just come accross the piece that you need. Above all, don't lose faith, the Atari 8bit will be around for quite a while yet, even without the support of that company in California.

HACE

The Houston Atari Computer Enthusiasts meet on the fourth Wednesday of the month, 6:45pm at the Health Economics Corporation, 2400 West Loop South, in Houston, Texas. The club supports all Atari computers from the 400 to the Mega4.

Membership is $22 per year, and gives full access to our BBS (713) 458-9923, access to our disk, magazine and newsletter libraries, a subscription to AIM, and our local news journal UPDATE ATARI. There are also other benefits, such as store discounts, door prizes, workshops, telephone help when you have problems, and much more! For more information, please contact one of our officers or drop us a line !

HACE P.O.Box 460212 Houston, TX 77056

President:	Bill Kithas	713-855-0815
Vice President:	John Hauser	713-458-0595
Secretary:	Bob Leeper	713-665-3229
Treasurer:	Jim Salmon	713-879-8119
Newsletter Editor:	Tracy Webber	713-981-5343

Editor's Corner

Fellow Atarians, this is our club's first issue of AIM, so I hope that you will enjoy it as much as I have over the last four months that I have read it. We will continue to publish our own local journal, UPDATE ATARI, thanks to a healthy treasury and a strong show of support. Think of AIM as your replacement for Analog and STlog, which died back in '89.

Our February 28 meeting will focus on telecommunications, with special attention to be given to file transfers, connecting up with mainframes, and the ever-popular D-term program. If you have ever had questions or problems with calling a BBS or online service, this is the meeting to attend.

The March 28 meeting will be an Atari Sound & Light Extravaganza. We will present a multi-computer graphical, musical show with 8-bit Ataris running awesome graphic displays and lighting to the sounds of ST generated midi-keyboard music. If you thought last summer's music presentation was great, wait til you see this! By the way, any Midi-musicians who would like to assist on this demo, please give me a call ! Tracy

State of the Club!

My first exposure to HACE was in December of 1987. As a new Atari owner my interest in HACE was to seek help with my computer. I found an active club but it became apparent later that the leadership had found other things to do and for an while I thought "Oh My! goodbye HACE". Then, Tracy Webber rallied the Club together and got things organized. Later, Tracy found HACE a free meeting place, which really helped the club's finances.

By then I was interested in becoming more active in HACE and discovered a core of leaders that supported Tracy. Jim Salmon, Editor and later President; Keith Swoboda, who rescued our Disk Library; John Hauser with fantastic dedication kept The HACE BBS going strong; George Iken our Atari Sage kept the newsletter supplied with articles to the point it became a true resource; The board members: Joel Altman, Lee Lassus, Bob Leeper, and Jon Derry - These guys did all the behind the scenes work that gave HACE its strength.

I know I have left some names out but the point has been made - HACE is doing great, because of good leaders and workers. Read the Treasury report at the next meeting and you will note a healthy club. Phone the BBS and see the Heart of HACE in action. Read UPDATE ATARI and find out about Atari users in Houston. Attend a meeting and enjoy good fellowship and information about any Atari you may own. (Even if its a Portfolio.) What this adds up to is that THE MEMBERS OF HACE ARE DOING GREAT BECAUSE THEY ARE HACE. Members and members-to-be, there is more to come. No change in dues, just more for your hard earned money. 1990 will start with excellent programs at our regular meetings. 1990 is going to be a good year for HACE. The state of the club is great! Bill A Kithas

Layton ACE of Utah

The L.A.C.E. Club Meets in the basement of the Clearfield Library every secondWednesday of the month at 7:00 p.m. Mark your calendars for the next two meetings: January 9, 1990 and February 13, 1990.

Irwin Brooks	President/ST Librarian	(801)731-1516
Richard Clark	Vice President	(801)825-5823
Ken Karchner	Secretary/Treasurer	(801)776-8015
Lonnie Allen	8-Bit Librarian	(801)392-4450

Upgrade your 520 ST or 1040 ST without a Board

I'm still excited!!! I'm sorry, but I can't get over the fact that my old 520 ST now has a full two (2) megs in it. No, it's not a 520 STfm with an upgrade board in it. In fact, it does not have an upgrade board in it at all! It's all on the motherboard and all soldered in. Nothing floating around under the RF shield and possibly shorting out. Nothing to get in the way of the accelerator board or the hardware IBM emulators available. Just your plain ole garden verity 1 Megabit RAM chips in 18 pin sockets. It's even possible to use the new SIMs to do the same thing.

This mode cut my upgrade expense in HALF. Half the price of buying the upgrade board and the RAM. At a cost of approximately $300 that is not peanuts to me. This upgrade costs the price of the chips and sockets. That's all! Since the sockets are cheap and the chips are below $10 each, it turns out to be far cheaper than buying the Mega 2 computer even if someone would buy the old machine at full price. Why bother now. Outside of the Blitter, it has nothing I don't already have (except the possibility of going to 4 megs).

If you are reading this to discover how to do it, then I'm sorry. I will not be giving the details here. Don't get me wrong, I think this information should be spread and I don't think it should be kept a secret. However, it will take me some time to writeup the exact procedures for how to do it and at this point I don't know how if any desires it. Do you want the instructions? If I get enough reponses for this information then I will take the time and write down the procedures that I used to make this mod. Be warned though; it is very time consuming (5 hours) and requires circuit board traces to be cut and wire-wrap jumpers to be installed. It is not for the faint of heart. However, if you're up to that kind of hands on work, both in talent and guts then this mod maybe for you. Write me if you want me to print the directions. I will respond one way or another in a later LACE presidents column to this survey. Irwin Brooks, 3897 South 2275 West, Roy, UT 84067.

P.S. It sure is nice to run this word processor with a resident spell checking dictionary and thesaurus.

January LACE Club Meeting

At the January 10th meeting, Dave Young demonstrated SpartaDOS. It was a very interesting and enlightening demonstration. I knew of it when I was into the Atari 8bit arena more, but always thought it was just another DOS competing for the DOS supremacy in the overcrowded DOS field. Now in retrospect, I feel that I really missed the boat (arg). I could have gotten more enjoyment out of my Atari 1200XL than I did. I learned that it was far more powerful than I had thought it was. And, far more compatible with the existing application software titles. In fact, I heard it from more than one say that once you've tried SpartaDOS, you'll never go back to Atari DOS 2. I certainly can understand that after seeing this demo and to go one further, I still think that it is being sold short. More people should be using this fine ICD product. Thank you Dave for a fine demonstration. It was very informative.

Upcoming demonstrations will include the following;

PC Speed or PC Ditto II for the ST and Diamond OS and Blitz for the 8bit. If other demos or information is of interest to you then speak up. This is your club. We want to share and serve. But to do that we have to KNOW! Let us help your desires. Then, don't miss out. Come to the meetings. I'm always glad I do, so will you be.

M.A.C.E. — Michigan Atari Computer Enthusiasts

Michigan Atari Computer Enthusiasts receive, as part of their dues, Atari Interface Magazine. Members are also entitled to purchase disks from the 8bit and ST public domain software libraries. 8bit disks are $3 and ST disks are $4 each, and if you buy three disks from either library, you can choose a 4th disk absolutely FREE! Non-Members may purchase disks at a slightly higher rate. Mail order is also available.

For a catalog of current disks in our libraries, send $2 for either an ST or 8bit catalog to MACE, PO Box 2785, Southfield, MI 48037. MACE can also be contacted throught Ed Hanson, (313) 675-0044 or Bob Retelle (313) 483-7358. MACE meets on the Third Tuesday of each month at 7:30 at the Southfield Civic Center at 10-1/2 Mile and Evergreen Roads in Southfield, MI.

MID-OHIO ATARI USER GROUP

Mid-Ohio Atari Users Group Post Office Box 134, Ontario, OH 44862 The Mid-Ohio Atari User Group supports all models of Atari computers. We meet at A&B Computers, located in the West Park Shopping Center on Park Avenue West in Mansfield. The meetings are the third Saturday of each month, from 7pm until 9pm. Demonstrations are welcomed,and pirating is expressly forbidden.

MAUG is a participating club in the Atari Interface Magazine group. As such members receive an issue of AIM every month for no extra charge. Club dues are $7.50 per year for all members. The club maintains a disk library for both the 8-bit and ST line of computers. There is also a special MAUG section for members on the DataQue Support BBS, for email and file downloads. The number of the board is (419) 529-5197.

Recent News From Yur Prez:

Well, here it is 1990, and Atari is still in business despite all of the rumors of the last decade! Who would have ever guessed? There have been many changes over the years, but one thing is for sure.... Atari is still unique in the computer industry.

The Atari Lynx is gaining high praise in the reviews I have seen; and of the people which are lucky enough to have been able to snag one, they seem to be quite happy with their purchase. It seems to be a nice little unit, which is loaded with features and performance.

Here locally, nothing has changed as far as the structure of the MAUG group, and the same officers are in place as last year by default <sigh>. The meeting dates as you know by now are the THIRD Saturday of each month starting January 1990 at the new

A&B Computer location in the West Park Mall.Any member which has not payed their dues yet SHAME ON YOU! This will be your last club magazine <you freeloader you!> from us. Please send your $7.50 per year (or 65 cents per month) to the club address made out to "MAUG c/o Chuck Steinman".

Have fun, and bring some demos! ;^)
Chuck

Middle Georgia Atari Users Group
M.G.A.U.G.

The Middle Ga. Atari Users Group is the sole Atari Club in the Middle Ga. area. We are composed of 60 members of which approx. one half are ST users. Club president Pete Miller can be reached by phone at 912-922-5666. The M.G.A.U.G. address is 115 Feagin Mill Rd., Warner Robins, Ga. 31088. MGAUG meets the second Sunday of each month at 2 PM at the Warner Robins Library. Annual dues are $5 with the newsletter optional. Use of the club library is free to all paid members.

January Meeting

The turnout for the January meeting was good. Mike Carter brought his ST and Hard Drive. I brought my new MIDI keyboard and our fee product from Practical Solutions. Among various things discussed were the recent lawsuits by Xerox, The makers of ZoomRacks (what ever happened to that program!) and Apple.

We discussed the Revolution that was supposed to start this year and was sponsored by Artisan Software. Seems that the guy that was supposed to get it all started was hired by Atari so no one was quite sure if the Revolution was going to get off the ground. I hope that some of you will try to do something for the Revolution after all it can't hurt. Myself I have sent a letter to Mr. Tramiel (more on that later) and have signed up a subscription to Current Notes -- in the Spirit of the Revolution. One of the projects that I am considering is making up a booklet or brochure to send to local businesses and printers to tell them of the Atari and its great value. I would like to see some input on this to see what I should include. Also another project that I would like to do is to take up a contribution to get one of the Macon Schools a program such as Teachers Pet or E-Z Grade.

I mentioned a letter to Mr. Tramiel -- well yes I did send him a 2 page letter of some of what I feel are some of the more important issues that we have discussed in the club. I basically touched on three subjects -- Warranty, Mass Merchandising and Price. With practically all IBM dealers (even Mail Order) offering at least a 1 year warranty and many with extended warranties for under $100, I felt that the ST was well past due for an increase in its warranty coverage. The new STe is supposed to be manufactured with reliability in mind and I feel that Atari has had enough time to iron out all of the bugs in its hardware. I am always embarrassed when I'm trying to sell someone on the ST and they ask me about the warranty. Come on Atari -- some of my sons toys have better warranties than the ST.

Second of all -- when I went to the Atari show last year and talked to Mike Dendo he mentioned that the 520ST and 1040ST would be Mass merchandised and the Mega's only sold at Atari dealers but I we have failed to see such a move. I think it's past time for a mass merchandiser, we need to get some ST's on the shelves somewhere.

Third of all I feel that the Atari may have to look at some of it's prices. A local dealer sells a IBM clone with 2 drives, 512K ram and EGA monitor for only $889. The prices on the IBM's seem to come down each month while that ST's have been the same price ever since they came out. RUMOR! Rumor has it that a 1040STe can be bought dirt cheap in Canada. Now if we could just see a break for the U.S. market.

One other thing that seems to be touching a sore nerve with many Atari dealers and potential dealers is the way Atari handles its sales to dealers. It seems that dealers are forced to buy hardware bundles from Atari rather than what they feel that their market may handle. This has stalled one dealer in our area because Atari wanted him to buy many Mega computers that he didn't feel that he could sell -- what he wanted was some 520's and 1040's. This bundling of hardware that Atari requires may be handicapping the incorporation of new dealers. Commodore recently dropped support for many of its dealers and this may be a good time for Atari to fill that void.

In other news we had a drawing for our latest FREE product from Practical Solutions -- the VIDEOKEY. Lee Mavity was the lucky winner. LEE plans to hook the VideoKey to his giant screen TV so that his son can play games on the big screen. He expressed some concern whether he would be able to get his ST back after this move though. As the winner Lee gets the unique opportunity to write a review for the newsletter, Lucky Him. Our next product that I will request will be the Wireless Mouse. I am sure that most of our members will be interested in taking a look at this product.

Also at the club we had some brisk sales on used software. If you have a program that you are not using anymore then you should bring it to the meeting and perhaps there will be someone that can use that program that is growing dust at your house.

That's about it for this month. The meeting in March will be on the 11th at 2pm. at the library. I hope to see you there, bring your new software for us to look at.

PORTS ATARI
PACE
COMPUTER ENTHUSIASTS

President	Tracy Hendershot	525-1058
Vice President	Larry Nadeau	525-7430
Sec/Treasurer	John Zupansic	394-9326
STLibrarian	Don Henricksen	729-6309
8bit Librarian	Gary Armbrust	729-6906
ST Coordinator	Geoffrey Bennett	722-3354
8bit Coordinator	Aaron Potopinski	525-1058

Membership to PACE is $30.00 per year or $9.00 per quarter. General meetings are held at 6:30pm on the third Sunday of every month. In the event of a holiday, a new date will be chosen and will be posted within the pages of this newsletter and on local Bulletin Boards. Membership includes a monthly newsletter, monthly meeting, FREE Disk-of-the-Month, access to our BBS, FREE printer ribbon re-inking, and FREE copying priveleges to our VAST collection of 8/16 bit Public Domain programs. Ports A.C.E. is an alliance of families with a mutual interest in the Atari Computer and is an independent, non-profit organization. PACE hardware assets: 130XE, 1050 Drive, MacInker and a Supra 300 baud modem. Any written correspondence should be addressed directly to Ports A.C.E., Tracy Hendershot, 4835 Crosley Avenue, Duluth, MN 55804.

From the President...

Just when everybody thought that the 'ol 8bit's were dead, do we find more members with XL's and XE's joining PACE. Interest in the 8bit line dropped to an all time low in December. We even considered selling our 130XE/1050. After some discussion, it was decided to leave our super reliable 8bit system for club use and loaning purposes.

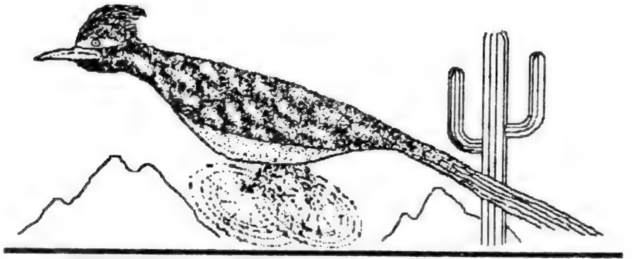
We can count on about one more month of winter weather before warm spring air will arrive. And along with that, waning interest in the computer (not for me!) We will most likely suspend PACE meetings during the months of June, July and August (about enough time to build a house, huh Tom?) It worked out well last year and made our nine other meetings much more productive. So, enjoy the remaining meetings before summer break and make the best of them!

Our first AIM Disk-of-the-Month was promptly devoured last month. This has got to be one of the finest PD disks for the ST around! I was prepared to instruct our non-modeming ST users how to use ArcShell in extracting the PD files from our upcoming AIM DOM. I was totally surprised to find out that all the files are self-extracting LZH archives. Nothing could be more simpler than that! I have known that self-extracting files existed in the IBM world, but this is the first time I've encountered them for the ST. To activate these self-extracting files, just place the file on a blank disk (or within a folder on your RAMdisk) and double-click it. The file will now grow to its original, uncompacted, executable form. Everyone was well satisfied and delighted with their disk.

Nomination of officers will take place during our February meeting. Bring along your suggestions and nominations. Note: In the Feb '90 issue of Electronic Musician magazine, Atari has a full page ad for their Stacy 4 portable computer for musicians (and the rest of us.) Pick one up at your local music store, TODAY!

I'm sure you are all aware of the ST-Express situation by now. This publication has ceased operation along with Analog/ST Log. This leaves just a few excellent monthly ST oriented magazines on the newsstands now. What hurts the most is that we had just subscribed to ST Express and received just one magazine/disk for our $74.95. Too bad they didn't return our check and say, "Obviously, we CAN'T take your money because we're ready to go bankrupt." Just to go through the motions, I have sent a letter inquiring about our late magazines and disks.

The next two PACE meetings will be on February 18th and March 18th 1990 at 6:30 in the Wisconsin D.O.T. Building. Call any of the officers for directions. See you there!



PHAST - Phoenix Area ST

Richard Covert	President
Lance Summers	Vice-President
Jim Keho	Recording Secretary
John Steiner	Treasurer
Mike Zachary	Membership Secretary/Sergeant at Arms

PHAST members, this should be your SECOND copy of the AIM magazine. If you were not at the last meeting, you missed the change-over of the officers (mine and Richard's first). The meeting got off to a slow start (as usual) with some more items to hash over such as continuing to look into incorporation as a non-profit club, deciding to mail a post card as a meeting reminder on the off-month mailing of PHAST TIMES, continuing to look for a new meeting place, planning a membership drive, and continue notifying the software companies that we exist.

Once all of that was said and done, we started in on the demos: The first of which was Word Flair demoed by John from Computer Works. This is a combined word processor and publishing room (graphics) program. The second was an old game called Sentry demoed by yours truly. This game proved to be a sleeper with me, that is, the first time I played it I thought I might have over-spent on this one (on special for $10) but on playing it a little more, I found that it had some hidden qualities in the higher levels that required thought at REAL-TIME. Overall not too bad of a little game. The third demo was Oids given by Rich Covert. This too proved to be a little more that just another shoot-em-up type of game.

We will have a demo of at least one game and one applications program for each meeting.

We meet at the First Methodist Church on 19th Ave just South of Dunlap. All interested people are welcome to check us out. See you at the meeting in FEB...Lance.

P3Atari Computer Enthusiasts (P3ACE)

Serving the Colorado Springs, Colorado ATARI community since 1982. PO Box 17779, Colorado Springs, CO 80935

President:	Rick Reaser,	380-8082
VP ST:	Dave Koster,	550-1410
VPXE:	John Sandgren,	559-5933
Treasurer:	Jerry Sundee,	574-0005
STLibrarian:	Rick Mount,	596-8631
XELibrarian:	Dave Koster,	550-1410
Editor:	Ed Fletcher,	596-1130

The Prez Sez by Rick Reaser

After some fierce electoral competition, "back room deals" and employment of heavy political machinery, P3ACE has a new president--me. We have also managed to reshuffle some of the other officer positions in the club as well. The full list is given under our masthead.

Note that dynamic Dave is filling in for two positions. This is temporary! If you would like one of these positions, please let me know. Our new officers were elected at our annual combined 8bit/16bit meeting in December. For those of you that missed it, that was a super meeting. There were lots of goodies to eat as well as some very good software deals (thanks to Horizon Computers). We also wish to thank Horizon for providing our "guest speaker" for the evening.

So where are we headed this coming year? My association with P3ACE has been short for sure, but my impression is that we have a fairly solid group of dedicated Atari computer enthusiasts. With Dave Koster's excellent leadership, it will be hard to top last year's efforts. So first and foremost, we need to continue our tradition of support to our members. Second, we need to continue to grow. We will be looking for new innovative ways to attract people to Atari computers and P3ACE. One of the things I am interested in is having the club support the "Atari Revolution." For those of you who have not heard about this, it is a plan for the Atari users to take matters into their own hands and try to get more exposure and support for Atari computers here in the U.S. More about this later.

This should be the second appearance of P3ACE in AIM. P3ACE members, Ed Fletcher and I would like you comments on this replacement for our own newsletter. (We would like some good articles to submit to AIM as well.)

I plan on being up on Vector Space (719)-687-1838 and GEnie on a frequent basis. So feel free to leave notes for me there as well as calling me at home (719-380-8080). Speaking of Vector Space, Rick Mount has posted a provocative article (FCC.TXT) about an effort by the FCC to tax us modem users. I strongly recommend you download it and write your Congressman now!

At the February ST-SIG,(the 4th Thursday), Dave tells me that the topic of discussion will be Fantasy Role Playing Games. The March XL/XE SIG(the 1st Tuesday) will cover various types of menu programs. Hope to see you at one of our upcoming SIG meetings.

In closing, I just want you to know that I am an 8bit kind of guy, though I have a strong interest in the ST/Mega. I just hope that Atari is still alive and kicking by the time I get around to buying an ST/Mega. If we Atari users keep working at it, I'm sure we can influence things to keep Atari on track.

RACC

ROCKFORD ATARI COMPUTER CLUB
ALONG THE ROCK RIVER KNOWN AS
"THE GREATER BLACKHAWK REGION"

We meet at Rock Valley College, the third Saturday of each month. Meetings start at 9am, and usually run untill noon. We are a support group, dedicated to helping each other learn and enjoy both ATARI 8-BIT and ST/MEGA computers. Our meetings are open to everyone. Address is RACC c/o Andy Learner 3902 15 Avenue 1 Rockford, IL 61108 CAMILLE 2OOO BBS 815-397-5327

ANDY LEARNER	President	815-397-5316
MARK KUNKEL	ST VP	874-5546
JAKE OLBRICH	8-Bit VP	332-5303
ROGER CREEDY	Secretary	877-3769
THOM LOFTHOUSE	Treasurer	654-1863
DAVE ZOLMIERSKI	8BIT Librarian	654-0247

The Short Report:

Time again to set out the AIM article. I just got the January issue yesterday, and today I have to rush to get this on the wire, for the deadline. I don't envy Pattie or Bill at all, they surely have a tough job, co- ordinating all that has to go into this production, and get the club releases at the wire(like I always turn in!)

We decided to participate in SOFT-LOGIK'S Pagestream promtional package deal, so this is the first piece I am am outputing with it. So far I like what I see of it's capabilities. I have used ST Publisher, but this seems to be a lot more powerful. One of the noticeble drawbacks I have found is that it is almost essential to use a high rez monitor.

I could use Publisher on the color monitor, but Pagestream uses a different font structure and even at 200% page view, I cannot make out what some characters are. However, it does work great on the B&W monitor. The only other thing is when trying to import graphics, scanned IMG files crash the one MEG machines mercilessly. So save those work pages often,y ou DTP'ers.

Till next month G'DATA.

Andy

Rushmore Atari Computer Enthusiasts (RACE)

3512 Lawrence Dr. Rapid City,
SD 57701 (605) 348-6331

The Rushmore Atari Computer Enthusiasts is a nonprofit organization of Atari computer owners not affiliated with Atari Corp. Meetings are held on the third Saturday of each month, 2pm, at the Westminster Presbyterian Church. Annual dues are $12 for basic membership and $15 for membership and newsletter. RACE offers the Black Hills Atari owner hardware and software support and the largest library of public domain Atari software in the state of South Dakota.NOTE: No piracy will be tolerated at any RACE function!

President:	Rick Burton	(605)-642-5353
V. President:	Gregg Anderson	(605)-348-6331
Secretary:	Mike Douglass	
Treasurer:	Mike Randall	
NL Editor:	Mike Harbison	
ST Librarian:	Mark Wolf	(605)-923-2841
XE Librarian:	Ken Kayle	(605)-343-7289

President's Particulars

First I want to issue some well deserved thanks to individuals who have contributed to RACE.

Thanks to Ken Kayl for jumping in to the librarian position and picking up the library articles.

Thanks to Chris for the enlightening and entertaining surprise demo. (Great pics, Gregg!)

Thanks to Gregg for all the many contributions to RACE. We'll miss ya but hey, when ya gotta go, ya gotta go! Even if it is to the Med.

And thanks to all new officers and anyone who has pitched in. Even if we are losing Mark W. too. (Orders are orders).

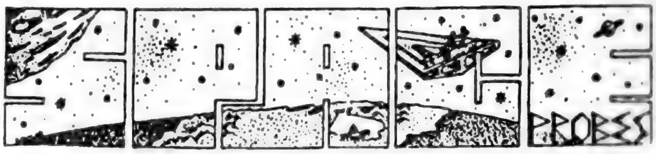
The practical application theme will be continued at January's meeting with processing documents. I am still persuaded that my Atari is not just a paper weight, desk ornament, or fancy arcade machine only. It is a tool and a very powerful and useful one at that! See all you RACE drivers Saturday the 20th...Rick Burton

8Bit Library Corner by Ken Kayl

Welcome to Rushmore Atari Computer Enthusiasts (RACE) 8bit library. What will we offer this month? Let's first review RACE's Disk #45. Race Disk #45A has F-15 Construction Set, this is shareware, written by Chris Wareham. Basically, if you are tired of the original missions on F-15 Strike Eagle, this will allow you to create new and different missions. What you need is some time, the original F-15 Strike Eagle, an empty disk, an atlas, and a joystick. This is an especially good program, as you can create maps of the trouble spots around the world and assist in victories.

On 45B are Utilities. Some examples are; Ceasar's Clock shows what a digital watch would look like if it used Roman Numerals, DiskLabel makes a disk label. Home Inventory creates a home inventory file (this one writes and reads the inventory file to cassette, some Basic programming would be required to modify it to work on disk). Key 6 Cipher encodes and decodes messages, the messages can be typed in or read in from tape. It also stores to tape (Some Basic programming would be required to modify the program so it used disk.). Build 2X creates an autorun to run any Basic program. Bubble Sort is an example of a bubble sort program. Compactor compacts any LISTed program. Compare compares two LISTed programs to see if they are the same program. Dup Fast duplicates a single density disk in two passes. Memory Dump dumps the memory to screen or printer. Renumber will renumber a LISTed programs line numbers. Real Time Clock places a clock on the upper right corner of the screen.

We'll also review RACE #57 and #58. RACE #57 is TURBO BASIC for the an Atari with 48K. RACE #58 is TURBO BASIC for the Ataris with more than 48K. RACE #57 is double sided, so most of the documentation is on the back of #58, I'd recommend getting both #57 and #58 if you are going to be using a 48K machine (you only need #58 if you have 64K or more). These and the entire 8bit library will be at the February meeting. Cost is $2 for members and $3 for nonmembers. If you have suggestions for types of software you want in the library or reviewed here let me (Ken Kayl (605) 343-7289) know.



Meeting NoticesCombined Club Meetings: January 15, 1990 (7:30 to 9:00 PM) at the Camp Hill Shopping Mall Community Room. This date is different from that listed in the December newsletter.

Future Meetings: February 19, 1990 (7:30 - 9:00 PM) March 19, 1990 (7:30 - 9:00 PM) April 16, 1990 (7:30 - 9:00 PM) May 21, 1990 (7:30 - 9:00 PM) June 18, 1990 (7:30 - 9:00 PM) July 16, 1990 (7:30 - 9:00 PM)

All meetings will be held at the Camp Hill Shopping Mall Community Room until further notice. Currently all dates are set for the 3rd Monday of the month.

STANCE

President	Claudette Tishcler	226-5644
Vice-Pres	Gary	521-2855
Treasurer	Kathi Koenig	892-0881

Disk Librarian	Barbara Carlstrom	371-2732

The ST Atari North Coast Enthusiasts (STANCE) is an independent, not for profit Atari computer user group and is not affiliated with Atari Corporation, or any of its affiliates, in any way.

$12.00 per Year with a one time sign up fee of $13.00.

STANCE club meetings are held every third Monday of each and every month at B & G Electronics, (located at 15729 Madison Ave., Lakewood, Ohio 44107) starting at 7:15PM

ST CLUB EL PASO

The ST Club of El Paso is the only Atari ST and Mega user group in the El Paso area. The ST Club has proven to be a benefit not only to new users, but also to the "old hacks" of computing.

We now meet twice a month at the Richard Burges Library, 9300 Diana. The first meeting of the month is always the second Saturday of the month, at 12:30pm. The second meeting of the month is held on the last Thursday of each month at 7:00pm. Meetings feature demoes of the latest ST software, as well as help for the those that might be having problems with their computers.

Membership in the ST Club of El Paso includes a year subscription to the magazine you are holding in your hands, discounts on software at Jenkins' Computer Store, and access to one of the largest public domain libraries in the nation. We also offer technical help, and we sometimes have a party or two when we run out of computer things to talk about. Voting membership is $20 a year, Sponsored and Newsletter only memberships are $15 a year.

To become a member of the ST Club of El Paso, call 915-821-2048, or write the ST Club of El Paso at 10953 Yogi Berra, El Paso, Texas 79934.

President: Tim Holt 915-821-2048
Vice Pres: Morris Miller 594-1906
Sec't/Tres.: Joann Anderson 751-2710
Editor: Paul Stampfli 821-4861
Librarian: Norm Bates 593-6234
ST El Paso BBS 751-7837
Data Retention Center 821-0006

From The Prez...

I hope you made it to the January 13 meeting! Excellent! I could not have been happier! It looks like we are getting too big for the library meeting room. I NEVER thought I would hear myself say that! We were really tight in there, and the fact that the thermostat was set at 405 degrees didn't help! But it was a good meeting nonetheless. Pete Rosh brought ALL his equipment down and demonstrated the Migraph Hand Scanner, as well as Touch Up. I want to thank Pete again for doing such a great job. Clarence Klassen came up with a great use for Touch Up: If you are, shall we say, not in top physical shape and want to get a job, scan a picture of yourself, then use Touch Up to lose about 50 pounds. Only in our group would you get that idea!

Next, David Thurman showed off his LYNX Game System, with California Games on it! What a beauty! I was expecting a so-so thingy (that's a George Bush word), but it really is a beauty! Now, how to get one without my wife knowing about it....

David also won the door prize: The Tweety Board from Practical Solutions. Congratulations David!

After the meeting, a midi maze mini competition was held. David Thurman defeated myself, JR, James Blount and all comers. Now, if we can get the guy to join the club...

We discussed the latest ST news, and got into a lively discussion on whether or not the club should go into the BBS busness. From the impression that I got, most members thought it was a good idea. We will vote on whether to do so at the next meeting. Here is how STE-EP (ST Enthusiasts of El Paso) would work:

I have volunteered 30 megs of my hard drive to run the board. The club will pay for the Express BBS v.3 and the line to my house. The club's library will be ONLINE, and all members will have total access to the board. There will be areas on STE-EP that will be for members only, and access will automatically be given to any member, no matter where they live. Most felt that charging a fee would kill the board, so there will be no fee. People calling from outside the club will be able to access most message bases, and some file areas, but not all. That will be for members only. The board will dedicated to the ST Club, and the ST line of computers. SysOps will be myself and Paul Stampfli, and then there will be SigOps, people responsible for one area of the board, such as the ST Report or Z MAG areas. Anyone wishing to be a SigOp needs to see myself or Paul and we will gladly give you an area of your very own! The board will be online all day, and most hours of the evenings. The only times that it will be off line is when I have to use my computer (Hey, I only got ONE!) and when we have to upload stuff and maintain the board. I hope you like the idea of STE-EP and I hope you use the thing if we get it! If you haven't got a modem, and was waiting to see if there was a good reason to, then STE-EP is THE reason. I will say right now, that if we get it, then this BBS will be THE finest Atari ST BBS in Texas and New Mexico. We already have the finest club in both states, we might as well have the best darn BBS as well!

Please welcome the following new members to our club: Stanley Page from Las Cruces, George Chaves and Jens Salomon from El Paso. Welcome all!

Some people were already asking me about the next club auction! Well, I am trying to space these out about every six months, as I don't want the club to become the ST Flea Market Club, so look for the next auction to be around June.

If you are in the military, and you are transferred, please let us know where you are going, so that you can keep getting AIM, even if you aren't in El Paso. Plus, we want to keep in touch with all our members. If you move, drop us a line and let us know.

Remember, the March meeting is Spectre GCR (or Word Processing), and the April meeting is "The Best in Public Domain" with our librarian Norm Bates. May is "Games" so if you have a nifty game you wish to show the club, let me know so that I can schedule you. June will be "Auction" and club nominations, and July is our annual club elections.

Until next month, Viva El Revolution!
Tim

Secretary/Treasurer Report—January 1990

A new decade and yet another Atari- oriented magazine biting the dust (and another going bi-monthly). I suppose that just shows that we (Atari fans) must stick together now more than ever. That said, I think it is time I give back the soap box... We have several 8bit disks-of-the-month this time. They include: "MYCOPR" and a sign maker, some Printshop(tm) icons from the Genesee Atari Group, an RLE picture viewer, a game called "Search for the Jewel of Strength", a game called "chopperoids", and "Surfs up" (double sided), and Genesee Atari Group's game disk #107 and #205. If you wish to acquire any of these disks or any other we might have, please contact me (or one of the other officers) at the above address. I can better offer help if it is in writing rather than over the phone, thank you.

We had a good time at the January meeting and missed you all who could not make it. If you wish to upgrade to an ST, perhaps you should look into an offer made by Innovative Concepts (on the CopuServe 8bit forum). As far as the issue of us merging with OKCACC (Oklahoma City Atari Computer Club) it turns out that they are not interested in a equitable merger, so it has been decided to not pursue the matter further at this time.

Stephen C. Moffit (CIS ID# 75006,2204)

TRI-CITY ATARI GROUP

The Tri-City Atari Users Group meets the last Saturday before the 18th of the month, at 9 am at the Rudy Zauel Memorial Library, on the corner of Center and Shattuck in Saginaw Township. Upcoming meetings are January 13, and February 17th, 1990.

President	Steve Volker	(517) 685-9035
ST Librarian/Tech	LeRoy Valley	686-6796
Treasurer/Sec	Marty Schmidt	792-6029
8Bit Librarian	Ted Beauchamp	686-8872

Club dues are still only $20.00, which provides support for both the 8Bit and ST, and full access to the club's PD library, along with a year's subscription to the Atari Interface Magazine. Check your mailing label, if you need to renew (or haven't joined us yet!), DO IT NOW!

WAUG!

The Washtenaw Atari Users Group meetings are held every second Tuesday of the month at 7:30 pm in the Michigan Union building on the campus of the University of Michigan on State street at the Corner of S. University in Ann Arbor.

Club dues are $15 per year and provides access to the PD library and subscription to AIM. Meetings feature demos of both 8bit and ST software and hardware. Non-members and questions are welcome. Officers can be contacted by calling Craig Harvey at (313) 994-5619 or by BBS at Molin's Den at (313) 420-0407.

General Meeting Minutes

The January meeting of WAUG was held on the 9th. Craig called the meeting to order at 7:45pm by announcing the meeting topic: Telecommunications.

Craig also reminded/informed the members of the upcoming visit of Atari's own Bob Brodie, User Group Coordinator, who will be in Ann Arbor on Saturday, 2/17, to speak to the local Macintosh users group about STacy and Spectre GCR. (Naturally, it would be kinda neat if a lot of Atarians showed up at the Mac club meeting...) Bob will also be the star of a meeting to be held on Sunday that same weekend for all interested Atarians to attend. (Meeting will be held in the Anderson Rooms of the Michigan Union, starting at 1pm.) WAUG's "considerable influence" (Craig...) is responsible for arranging the meeting space free of charge.

Craig announced that Treasurer Dick Selke is now soaking up sun in Arizona (expected to return in about 3 months... Nice work if you can get it!) so any questions about membership and/or treasury should be referred to Craig. With that in mind, Craig went on to announce the raffle of one of the PageStream packages we received last month from Soft-Logik. Tickets will sell for $1 each, and the drawing will take place at the end of the February meeting.

8Bit Librarian Mike Millage demonstrated the latest version of BobTerm on the XL, noting its support of Compuserve's B-Protocol and other nifty features. Mike seemed less than excited about the software, indicating he has had some great difficulty making it work with SpartaDOS but this is understandable since the author also wrote MyDOS... Mike DID comment that the system offers a much larger buffer than does Express, so it probably will be very popular with those who do a lot of file transfers and capturing.

Guest speaker Ben Cranston of Soft-House Computer Center spent the major portion of the next hour discussing how to use the KA9Q software package that allows an ST to access the InterNet. Since there are no phone lines in the Anderson Room, Ben simulated a session of file transfers by connecting two STs together via null modem, all the while answering questions from the members. Ben received a round of applause for his efforts, and Librarian Russ Crum was immediately besieged with requests from members wanting to purchase copies of the TelComm Disk Special.

Russ announced that he had completed a major overhaul of the club's ST disk library. The entire contents of the library have been transferred onto double sided disks, and all files are now ARCed thus reducing the number of disks he has to maintain from 140+ to 51. Accordingly, there is also a new ST Library Catalog Disk. In addition, the new AIM monthly disk will be placed in the library regularly along with other magazine disks.

Russ also announced that the club's library will now be available to rent (members only.) While sales of disks will still be an option, members can now choose specific categories to rent (in their entireties) for a rental fee and a deposit that will vary depending upon the number of disks taken.

The next meeting of WAUG will be held on February 13th The feature topic will be Emulators, with discussions of PC Speed, PC Ditto II, and Spectre¢GCR.

QUICK ST

Software Screen Accelerator

Now includes
Quick Index
and
Quick View
for one low price!

For use with any Atari ST or Mega ST, color or monochrome

Quick ST increases the speed of text and window operations, making most programs run faster and smoother, even if your computer doesn't have a blitter chip installed. Features include:

- written in 100% 68000 assembly language
- screen text prints 2 to 10 times faster
- screen scrolls are as fast as with a blitter chip
- dialog boxes and windows draw faster
- makes TOS 1.4 and blitter chips even faster
- text editors redraw and scroll faster
- uses only 10K to 20K of memory
- desktop updates faster
- file selectors scroll through directories faster
- compatible with GDOS and other utilities
- supports custom desktop font loaders
- not copy-protected
- only a fraction of the cost of other software or hardware accelerator upgrades

Installation is easy! Just copy the **Quick ST** files to the AUTO folder of your boot disk. Separate color and monochrome versions load automatically. No renaming is required. No desk accessory menus are used.

The fine print: Quick ST works by replacing parts of GEM and BIOS with much faster code. Normal text output is 2 to 10 times faster. Screen scrolling is up to 80% faster. GEM text and line operations are about twice as fast. Programs that don't use TOS directly (such as games and emulators) won't benefit from the speed increases. Disk operations and mathematical calculations are also not affected. The blitter chip alone has almost no effect on the speed of text or line drawing, so Quick ST can be used to speed up a blitter based system.

Quick Index is the *de facto* benchmarking software for the Atari ST. It uses 11 different timing tests and accurately benchmarks the performance of your computer. Use it to test software accelerators such as **Quick ST**, hardware accelerators such as the blitter chip or 16 MHz boards, or the performance of disk formatters, hard disks, and RAM disks. All results are displayed as a percentage of the speed of a standard floppy disk based ST. **Quick Index** can also install as a desk accessory.

Quick View is a very fast text file reader. It quickly displays Atari ST and Atari XE text files and allows for both forward and backward scrolling. Readers of *ST Zmagazine* files will appreciate the ability to flip to the next or previous topic with a single keystroke. **Quick View** can also print the files and toggle between a 25 and 50 line display on a monochrome monitor. **Quick View** can accept a command line, and can be installed to load any time a text file is double clicked on the desktop.

.ACCess! is the First and ONLY GEM WINDOW based Command Line Interperter Desk Accessory available for the Atari ST. It supports most of the standard MS-DOS and Unix commands as well as batch processing functions. *.ACCess!* contains commands to perform most disk operations such as displaying directories, copying, moving, renaming, deleteing files. Other commands include the creating and displaying of text files, formatting disks, displaying/setting file attributes, and the displaying/setting of time and date. All in all *.ACCess!* contains nearly 40 commands, 22 programming functions and 12 control flow batch processing keywords! Several versions of *.ACCess!* are supplied including Desk Accessory, TOS, TTP and special AUTO folder version.

AIM is produced on a 2.5 Meg Atari ST, HP Laserjet II with PacificPage Postscript cartridge and PageStream

From The Reader's Viewpoint

Dear AIM Editors,

I am sick and tired of commerical programmers and software manufacturers complaining about piracy. Show me the programmer who has never used a public domain program, who has not received *free* help from a friend, fellow employee, computer club member or book from a free library.

Those Pirate Blasters owe a debt to people who gave and give free help. Public domain programs did not just materialize. Individuals spent hours, days, weeks developing and sharing their works with the computer community. This is what makes the computer world grow so rapidly.

Piracy decriers who benefitted from someone's freebees now want to get wealthy for their labor. Is this how those disk mongers repay the pioneers and friendlys?

Computers are one of the greatest things that befell Humanity. Our progress is being accelerated like never before.

Handicapped are becoming exceedingly productive; the mentally ill and slow learners are achieving astoundingly. New ideas, instantly displayed on monitors, soon grow into physical realities.

There are minds in our world waiting to be opened. The cure of some devastating ill lies in one of them. Alas, the cost of a computer and software is beyong the reach of too many.

Rather than restrict the availability of software and computers because of cost, they should be distributed to everyone on Earth. If piracy helps to accomplish this, then I am for piracy.

Friendily yours,
Joseph Hicswa
Passaic, NJ

[Editors' Note: Hmmm...]

Dear AIM,

I recently had the new TOS 1.4 ROMs installed in my 1040ST and must admit that there is a great improvement. However, I am now stuck with several older programs that just won't run anymore. Many of these "Golden Oldies" as I like to call them, I considered favorites, but they have now been rendered useless by the new improved TOS. It seems to me that Atari Corp. should supply some type of translator disk with the ROMs as with the XL machines.

I have tried loading in the very first version of TOS from disk, and then loading the program, but had no luck...strange, as I was sure that would work.

I have also heard rumors "some company" out there was producing an upgrade board with enought sockets to accomodate both the old and new TOS ROMs, and allow you to switch between the two.

What are we Atarians to do after spending our hard-earned money on good (in my opinion) software? Throw it away? I realize the programmers didn't exactly follow the rules in writing these programs, if they did, there would be no problem.

But I seriously doubt too that they would recall, rewrite and redistribute TOS 1.4 compatible versions. Many of the companies no longer support the ST , and some have even gone out of business. Any advice or comments from your readers would be greatly appreciated.

Thank you,
A Golden Oldies Fan
No Address Enclosed

[Editors' Note: You're in luck! Darek Mihocka has written a program called QuickTos which replaces your TOS 1.4 with other TOS versions from disk. You actually should have been able to boot TOS 1.0 from disk and use your old programs, assuming they aren't auto-booting games.

With QuickTOS, all you need to do is copy your original TOS.IMG file to the same directory/folder that contains Quick TOS, then run Quick TOS.

Darek originally wrote this program to run current software on the STe. This program is now available on the March AIM Disk of the Month and the online services.

Atari Interface Magazine is a monthly publication that also serves as an official newsletter of several independent Atari user groups and is not affiliated with Atari Corp. in any way. ATARI BULLETIN BOARD

by Bill & Pattie Rayl

Atari Corp. News

David Harris has been moved over to President of Atari Entertainment Division from President of Atari Computer, after holding that post for only a short time. Meade Ames-Kline was named to fill the President of Atari Computer position. Meade comes from the Koala Springs Beverage Corp., which produces a trendy California soft drink.

Atari has scheduled April 1st to be the debute of the Atari "Power Pack" or "Advantage," whichever name is decided upon, in the Los Angeles area. The Power Pack will be test-marketed there in large retail stores like May Co., Sears, Mongomery Wards and other "cornerstones" of shopping malls. The Power Pack will be a 520STfm packaged with approximately 15 different software titles, and it is said to retail at $399. Tentative software titles include WordWriter ST, Data Manager ST, Swiftcalc ST and NeoChrome.

STe and Stacy

The new STe, which is to replace the 520/1040ST on the Atari Dealer's store shelves, has passed Atari's internal FCC testing and has been submitted for testing to the FCC. The machine is expected to pass without problems and should be available to dealers by early April.

The wait for the Stacy portable should be over soon as well. The release of the Stacy was held up at Atari headquarters because of a problem with Conner hard drives in the first Stacys. It seems the Conner drives parked themselves whenever any software attempted to access any other DMA device.

It took some time to discover the cause, but while Conner is fixing the problem Atari has been busy building Stacy2s and Stacy4s with the intention of installing the drives once Conner develops the fix. The demand for the Stacy has been so great the first production run has already been sold.

One word for people seeing advertisements for the Stacy1. The Stacy1 is not in production let alone passed FCC testing, so it will be some time before the Stacy1 is actually available in the US.

Manager of User Group Services, Bob Brodie, travelled to Michigan with stop-overs in Chicago and Denver recently. He spoke to many of the user groups from Michigan and Ohio. And while in Chicago and Denver awaiting his flights, he met with user group members -- a marathon of user group meetings if there ever was one!

Developer News

Darek Mihocka and Ignac Kolenko have released Quick ST II and Quick Tools, Volume 1. Quick ST II is a significant improvement in the Quick ST program, with increased GEM speed, customizable fill patterns and even the ability to place DEGAS pictures on your desktop.

Quick Tools is a collection of utilities able to run as either applications or desk accessories. These include a command line interpreter, a fast file finder for hard drive owners and an excellent label making program. A demo disk for Quick ST II and Quick Tools is available for $5 from Branch Always Software, Box 2624, Station B, Kitchener, Ontario, Canada, N2H 6N2.

RONSAT Technologies has announced the release of STonehenge II, an external RAM-drive for the ST. STonehenge II connects to the ST via the DMA port, and has a DMA through port to daisy-chain STonehenges or hard drives. STonehenge II comes in 265K and 2Meg configurations and is completely assembled in a small modem-type casing.

STonehenge's data and retention is completely separate from the ST, so in case the system locks up or bombs, the information in STonehenge's RAM will not be lost.

The 2Meg version retails at $599 and the 256K, easily-upgradable version sells for $449. RONSAT may be contacted at (708) 520-8003 (voice) and (708) 520-7812 (modem, log in as Info).

MicroVision, from Beaverton, OR, has announced their ST/Mega hard drive kits with either 325 Megs or 650Megs of data storage. The "footprint" of the hard drive is 9.5"x10"x4.37" and includes cooling fan, power supply, SCSI connector and external switches for SCSI ID and write protection.

MicroVision uses Maxtor mechanisms with an average of 18ms access time. MicroVision can be contacted at 18180 Cornell, Suite E, Beaverton, OR or (503) 690-6639.

Dorothy Brumleve has done it again! She's released Super Kidgrid, a creative graphics design program for children ages 3-11. Super Kidgrid offers experiences in patterning, shapes and color, and can be both entertaining and challenging. For more information, contact D.A. Brumleve, PO Box 4195, Urbana, IL 61801 or phone (217) 337-1937 during business hours.

Avant-Garde Has pc-ditto II Fix!

It was announced recently on the on-line services that Bill Teal at Avant-Garde Systems has solved the timing problems which caused most pc-ditto IIs to not work. The fix involves removing two chips from the pc-ditto II board and sending them back to Avant-Garde to be replaced. These two chips are labeled U27 GLUPAL (part TIBPAL 20L8-25CNT) and U15 EMSPAL (part TIBPAL 16R4-25CN). They are still working on a fix for the blitter and Mega expansion port problems.

Artisan Software has announced the release of Word Quest Utilties, a gem-based system to use with Word Quest and Word Quest 2 crossword puzzle files. This utility will not be made available through dealers, but can be purchased from Artisan Software, PO Box 849, Manteca, CA 95336 for $19.95 plus $1.50 shipping and handling.

Titus Software Corp. has just released Knight Force, a sword fighting game, for the ST. Your object is to travel through five time zones, gathering amulets, defeating monsters and overcoming obstacles to get into the Castle of Doom and rescue the Princess Tanya from the evil sorcerer Red-Sabbath. The different times include medieval, prehistoric and present day.

Electronic Arts has released The Hound of Shadow, a game based on the stories of H.P. Lovecraft. This game introduces the Timeline system for generating your character. You may choose your sex, occupation and hobbies. The choices you make can influence the outcome of the game, and once you've completed this game, you may take your Timeline character through more EA graphics/text adventures.

Atari Shows

The Toronto Atari Federation will be sponsoring an Atari Show on April 1st at the Airport Hilton in Mississauga, Ontario, Canada from 10 am to 6 pm. TAF sponsored a successful show in November, '88. For more information, call (416) 425-5357.

The first World of Atari show this year is scheduled for April 7 and 8 at the Disneyland Hotel in Anaheim, CA. Some reports say this show will be better than last year's Anaheim WOA. For more information, contact Rich Tsukiji at ST World.

The Pittsburgh Atari Computer Enthusiasts will be sponsoring the North East AtariFest '90 at the Chartiers Valley High School, near Pittsburgh on April 28 and 29. Bob Brodie from Atari is scheduled to attend, as are a number of important Atari developers. User Groups can obtain a table at the show for only $25. For more information, call (412) 843-0682 or the PACE BBS at (412) 571-0891.

pc-ditto II
A Big, Fast Upgrade

Hadley Nelson (ABLE)

On January 10, 1990 at the ABLE ST SIG meeting, one member brought in his new pc-ditto II package he had just received from Avant-Garde Systems. The serial number seemed to indicate this was the fifth production unit.

For those who are new to the Atari ST scene, pc-ditto is a software product, developed by Bill Teal of Avant-Garde, which enables one to run most popular IBM software on the Atari ST. It literally transforms your ST into an IBM compatible.

Pc-ditto II is a long-awaited and eagerly sought upgrade to the highly regarded pc-ditto. Pc-ditto II is a hardware/software product developed to significantly improve the speed and enhance the video presentations over that of pc-ditto.

The pc-ditto II (hereafter called PCD II) package (see Figure 1) consists of a surprisingly large main printed circuit board, a small daughter board called the PCD II connector, two ribbon cables (16 and 34 wire) that connect the two boards together and some insulation material for the main board. There is also a bottle of liquid used to improve the electrical connection between the PCD II connector and the legs of the MC68000 processor chip inside your ST.

On the main board, there is an empty 40 pin socket for an optional 8087-1 math coprocessor chip.In case the socket is to be left empty, a jumper wire is provided to bypass the chip. In addition, the package also includes a PCD II systems disk containing the software necessary to make PCD II work and an Installation Manual.

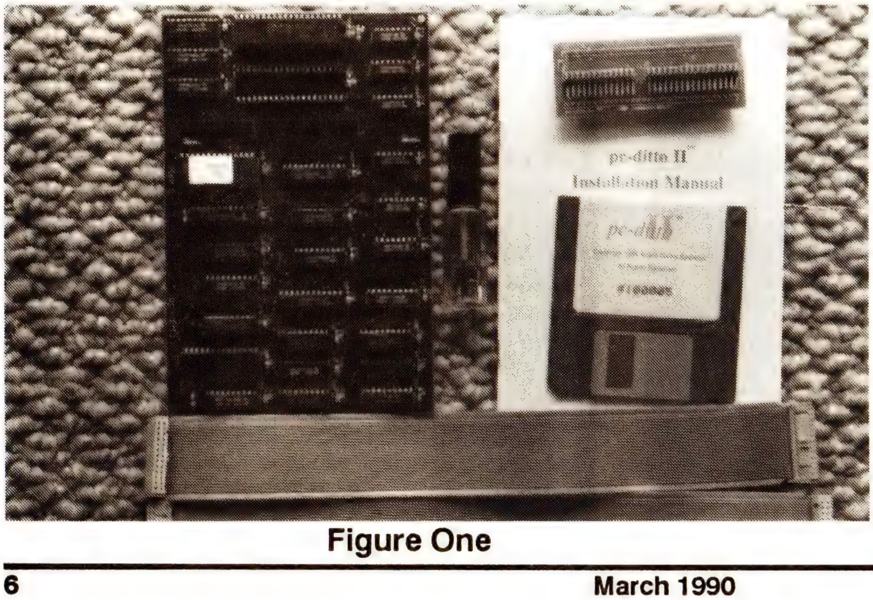

Figure One

Installation Manual

Let's look at the Installation Manual. It has no Table of Contents, no Index and no page numbers. The manual appears to have two chapters and three Appendices.

Chapter I is the Introduction and generally describes the pc-ditto II package. The package we examined appears to be missing the User's Manual and the registration card. Other customers have reported the system disk missing from their packages.

[Ed. Note: According to Avant-Garde, the User's Manual is the same as that for pc-ditto, and since all current shipments of PCD II are to owners of PCD I, those owners already have a User's Manual. As for the registration card, since PCD II is currently being shipped directly from Avant-Garde to preregistered customers only, the registration card is also not needed.]

Chapter II describes a 30-step hardware installation procedure. (It is noted that Step 13 is missing entirely.) It takes the first 14 steps to describe how to remove the shielding from the computer and the last eight steps to describe reassembling the computer. Step 15 tells you to locate the Motorola 68000.

Steps 16 and 22 tell you to orient (since there are no keyways on the connectors) and connect the ribbon cables to the boards. Steps 17 and 18 tell you to clip the PCD II connector (hereafter called the chip clip) over the 68000 chip after aligning the notch. There is no instruction in the Installation Manual on how to use the bottle of liquid provided to increase conductivity of the connections. Steps 19 and 20 describe how to install the math co-processor if it has been optionally purchased, or how to bypass it otherwise.

An almost unbelievable omission from the manual is the total lack of any mention of where the main board is to be placed in the computer. The Installation Manual does not discuss how to implement the IBM emulation mode at all. It does refer the user to the User's Manual (missing from the package we inspected) to learn about the software on the PCD II system disk.

Appendix A discusses troubleshooting. First off, Avant-Garde only warrants that PCD II will work with the IBM software identified on the certified list included on the system disk. Regarding hardware troubleshooting, the manual refers to using the PCD2DIAG.PRG diagnostic program...which is not on the system disk and is also not available at this time on GEnie or CompuServe.

The manual specifies Avant-Garde does not warranty PCD II for use with non-standard or modified computers.

Appendix B provides a nice write-up on how to obtain customer support from your dealer and from Avant-Garde Systems by letter, by telephone or on-line. Unfortunately, much to the consternation of users, it has been practically impossible to contact Avant-Garde by any means for the past several months in support of either pc-ditto or PCD II.

Appendix C describes the product warranty. The message here is that if problems occur, one should take prompt action to return the package to Avant-Garde insuring that the product has not been modified or damaged in any way.

The PCD II Connector (Chip Clip)

The chip clip is a daughter board used in making connection to the 68000 chip. It consists of a printed circuit board with two rows of 32 pins on the bottom, along with two alignment pins to contact the chip ends. The top of the board has two male connectors, one having 26 pins and the other 34 pins. The chip clip fits over the 68000 CPU chip. Only tension connects the pins of the chip clip to the legs of the CPU chip. Since a poor connection here will definitely cause a lockup and a system malfunction, the chip clip is considered a weak design link in the system.

Reviewing messages on the telecommunication services, it appears the chip clip connections are indeed causing problems and in at least one case, Bill Teal, himself, recommended soldering the clip to the chip as a solution. This seems like an excellent idea.

It is also understood that Avant-Garde will market an Expansion Bus connector for Mega owners which replaces the chip clip and will plug directly into the Mega Expansion Bus port.

The PCD II Main Board

The main board is a 7x4 inch printed circuit board having a large number of components and many socketed chips on it. It looks well made, sturdy and like a prototype. According to Avant-Garde, each board is tested (burn-in) before shipping to the customer.

The original board design was to use a gate array instead of the usual multi-processor chips used in the clones. However, a design change was made late in the development cycle to utilize the standard NEC V30 chip as used in the SuperCharger and PC Speed, competing IBM emulators for the ST.

pc-ditto II
Installation Manual
pc-ditto II
Connector REV.C

The Chip Clip

The gate array components are still on the main board and are used along with the V30. The main board will support CGA (Color Graphics Adapter) graphics, provide usable mouse support and allow parallel printer, RS-232 and hard drive operation with up to 640K memory. One user, namely Jim Allen of Fast Technology, has reported a Norton SI rating of 4.0, making PCD II many times faster than an IBM PC-XT or PS/2 Model 30. According to Avant-Garde, upgrades will be software only and free. The first upgrade will include EGA (Enhanced Graphics Adapter) and EMS (Expanded Memory System) support.

The main board contains the empty socket for the optional math co-processor. It should be noted that only the 10 MHz 8087-1 co-processor chip (about $100) will work. Chips with other suffixes are slower and will not work.

A major problem with the main board is its physical size. PCD II is warranted to operate on the 520ST, 1040ST and the Megas. It is becoming apparent that the board will not fit into some unmodified computers, let alone those machines that have been modified with memory upgrades or an accelerator board.

It is believed that the final production board could be significantly smaller if surface mount technology is used.

Connecting Cables

The two interconnecting ribbon cables are too big and inflexible. The connectors do not have keyways. It seems that smaller, more flexible cables would be more satisfactory.

PCD II System Disk

The PCD II system disk contains the following list of files and folders:

README.1ST
CERTPGMS.DOC
KEYBOARD.DOC
/STPROGRAMS
  PC_DMENU.PRG
  PCDMENU1.RSC
  PC-DITTO2.PRG
  PC_D2.1
  PC_D2.2
  AHDFIX2.PRG
  AHDFIX.DOC
/PCPROGRAMS
  PC_DFMT.COM
  PC_DDRVR.SYS
  PC_DMOUS.COM
  PCDSETTD.COM
  PC_DHD.SYS
  CACHE.COM
  CACHE.DOC

Users of pc-ditto will recognize the main programs, as they are very similar. In particular:

PC_DMENU.PRG—This program allows you to change the characteristics of PCD II to your taste. Such parameters as colors used by the monochrome and graphics palettes, disk drive assignments and others are configured by this program. This program should be run first, before PC-DITTO2.PRG.

PC-DITTO2.PRG—This is the main program. Clicking this program will start the IBM emulation using preferences selected in PC_DMENU.

Conspicuous by its absence is the diagnostic program PCD2DIAG.PRG.

Conclusions

PCD II is not vaporware and is available for $299.95 from Avant-Garde Systems. The PCD II hardware/software package is operational on Avant-Garde's computers and a few users have been able to get it installed and working. On those few computers where PCD II is working, it has been successful in running (bug free) all the PC software that worked with pc-ditto, but at a much higher speed. Whereas pc-ditto was more a novelty showing that IBM PC software could be run (slowly) on the ST, PCD II makes the ST a viable, useful PC clone.

Unfortunately, based upon messages on GEnie and CompuServe, a vast majority of PCD II customers have encountered one or more of the following difficulties:

1. Running the PCDITTO2.PRG results in lock-up or a "No pc-ditto II Hardware Installed" message. The likely cause is bad or improper connection of the PCD II hardware.

2. MS-DOS does not properly boot. The likely cause is an interrupt timing problem peculiar to your particular computer. Avant-Garde is aware of this problem and is working on a software fix that will be placed on the networks for downloading.

3. The PCD II hardware does not fit into the computer. This problem may prove insurmountable, although one innovative user ran the ribbon cables out the back of the computer case and placed the PCD II main board into a Radio Shack box. The ultimate solution may be to redesign the main board to be substantially smaller (like PC Speed) and make a more flexible chip clip.

The PCD II package betrays a hectic race to get the product out. The packing list does not tally with the actual items delivered (e.g., there was no user's manual delivered, but there was a bottle of liquid not mentioned in the list). The Installation Manual must surely be classed as below mediocre. The chip clip is poorly conceived at best and will, almost certainly, be a cause of inoperations during the life of the product (unless it is soldered onto the 68000).

There seems to have been a major design change in the main board during development that may have caused it to be unnecessarily large. In any case, the main board is *big* and will prove to be a vexing problem for PCD II users with memory upgrades or computers not prototyped by Avant-Garde. Avant-Garde has an excellent written policy of free software maintenance and upgrades, but recent customer relations have been terrible.

How to Write an Article
It's Easy, Just Give It a Try!

by The Guru (SPACE)

How does one begin to write an article for Atari Interface Magazine? That's a good question. The first place to start with an article is at the beginning. I'm not trying to be funny, but that's usually a good place to start.

Getting Started

The first thing you have to do is choose a subject (i.e. a program, a game, a piece of hardware, or even an opinion—like I said we'll take anything). Hints and Tips are especially appreciated by other users. Reviews are good because they tell the readers whether a certain item is worth purchasing or not. Readers should also know what kind of computer background you have to determine your credibility.

After you have chosen a subject, you must begin collecting background information. By that I mean you have to try out the software/hardware. During this stage you should be taking notes. (They can be mental notes.) Just remember the highlights, areas where you had difficulty, anywhere the documentation didn't cover the area very well or anything else out of the ordinary.

Proper Reviewing

Be sure that if you couldn't find something in the manual that it really wasn't there. Nothing makes a publisher madder than someone who is too lazy to look in the manual. If it wasn't there or was difficult to understand don't make excuses for the publisher. Also, it is wise to get someone else to double check your facts, particularly in the case of a negative review.

Outlining

The next thing you might do is put down an outline to help you through the writing. This is not always necessary, but it may help you if you get stuck. And it gives something to go back to and expand if you need more material.

From your outline, you can begin your writing. This first output is known as a rough draft. This doesn't have to be perfect. Remember nothing is ever *perfect*. Even those papers in college where you may have got a 100, there was probably something wrong with it (maybe it just wasn't considered wrong by the grader—did you remember to cross all your "T's" and dot your "i's"?). The editors here aren't that picky about the minor things.

Editing Your First Draft

Next, you can look at your draft and make changes. After you make changes, you should have somebody look at your DRAFT. They should look to see if everything is understandable. They can also look for misspellings or grammatical errors if they know much about the English language.

If you have a spelling checker be sure to use it. You'd be surprised how often people forget to run it before saving their text file. *Us computer users is not two particlar bout that eglish stuff* <<Grin>>.

Structure in Your Article

Other notes to remember when writing an article are that it should have an opening (or beginning), a body (or middle) and a closing (the ending). You should have a minimum of at least three paragraphs.

Finally!

The next thing to do is submit your article to us. At this time, you can do this one of several ways. You can send us a printout with your article, and if possible, you should get it to us on a 3.5" disk. If you'd like, you can upload the file to our BBS (313) 973-9137, or to us on GEnie and Delphi (UnicornPub) or CompuServe (71361,411). We'd prefer either ASCII (with no control codes—ie, no centering or bold) or STWriter and AtariWriter format. Please don't justify your text margins (i.e. leave your text "ragged right), and put two returns between paragraphs.

Remember to be yourself when you are writing articles for the magazine. We're not looking for another William Shakespeare, just informative and helpful articles. After your first article, they all get easier. I was able to tap this out in less than a half hour (You can probably tell, can't you?). Good luck!

Beware of Evil GEnies

G.L. Ray (TACE)

Have you ever had one of those days when nothing seems to go right? How about "Have you ever had one of those articles when nothing seems to go right?"

Well, this particular article has been through quite a bit from the time of the original inspiration, until finally arriving on disk to the AIM Editors—cross my fingers. This is the third, count 'em again, third time that I have written this particular piece. On each time previously, the disk upon which this article was saved met an untimely accident.

You see, I haven't had my ST very long, only about 9 months. Unlike my 8bits, I do not have an unexhaustible supply of disks, so I do a lot of reorganizing, moving files from one disk to another. As I collect enough utilities to fill a disk, for instance, I start juggling files around, condensing disks, discarding files in which I'm no longer interested.

Well, not once, but twice I have gotten confused and formatted my word processor data disk, and wiped out many hours of work. Well, I just hope that this rendition is as good as the first was.

Troubles with GEnie

First of all, the episode that I am about to describe took place on GEnie, but in no way am I trying to cast a negative view upon that information service. On the contrary, GEnie is still the only service that I use, and I would recommend it heartily to anyone interested in telecommunications services.

Last April, I was trying out my new ST over the phone lines, using Interlink software, which was also new to me. I was having problems, and I garbaged up my data disk directory. I believe that I may have switched disks and didn't reread the disk, or something.

At any rate, I messed up the whole directory of the disk to the point that I could not read or write to the disk. So, frustrated, I just pulled the plug, so to speak. I turned off the computer without doing anything else, while still online, and quit for the night. I didn't use the modem for a few days, but I eventually got around to trying again.

The Plot Thickens

All seemed well and good, until the first of the next month when I got my VISA bill, or should I say when my wife did. When she brought me the bill...well if looks could kill, she'd be collecting on my life insurance. GEnie had billed us for $1286...that's right, *$1286*. I thought that surely she had just misread it, $12.86, right? *Wrong!* $1286.

I was furious...and then I was scared to death. What if I had sleepily left my computer hooked up, online for several days. I mean, something that stupid is not beyond me.

Panic in the Streets

Frantically, I began searching through my GEnie manuals for a number to call to clear up this mess. I fumbled through the various pages until, finally, I found a number to call. The woman who answered did a quick check, and informed me that I had used their services continuously, during prime time hours, from the 4th of April through the 8th.

A Stolen GEnie Account?

At this time I was thinking that someone must have gotten my User I.D. number somehow, and stolen time at my expense. So I decided to head to the phone company the first thing the next morning. The only access that I have to GEnie is through long distance. So I knew I would have a pretty accurate record of my usage.

What I found out was that I had accessed GEnie on April 4th and again on April 8th, for a little over two hours total. I began to see a pattern, as these were the exact dates that I supposedly began and completed my marathon modem session.

That afternoon I called GEnie again, and this time I got a woman who was a little more understanding. I explained my problem, and she told me there had apparently been a "Hang." She told me that someone from the Billing department would call me back later.

Resolving the Problem

I waited a couple of days, and I called again. I got the same woman again, and she asked me to hang online while she personally went to the billing department to check on it. She returned with the same message, there was probably a "Hang," an audit would be done to check for sure, and someone from Billing would contact me.

So I waited again for a couple of days. We called our bank and told them about our problem. They instructed us to pay our normal payment, and wait about the $1000 plus that we were over our limit until this was all cleared up. Still no reply.

Finally!

So once again I called GEnie to inquire about the status of my problem. Again I got the same woman, and she was shocked that I had heard nothing. Once again she went personally to the Billing department to check it out. She was informed that the Billing department had tried repeatedly to contact me (although I had left the number to our 24 hour answering service), and then she gave me their message.

There had indeed been a "Hang," and "I" would have to contact "my" bank and file a dispute of charges to clear it up. (Why couldn't they just give me a credit???) That's what my bank representative said also... "Why couldn't they give you a credit?"

All's Well that Ends Well

So now, after spending more long distance phone calls to clear up a problem that could have been cleared up at their end, I finally get the charges removed. All in all, it took over three weeks to clear up my VISA bill, all the time not being able to use my card because it showed me well over my credit limit.

But that is minor compared to what could have happened. What if I didn't have good phone records to trace my usage and determine the problem? What if I used a direct payment withdrawl, instead of my VISA card to pay the bill? (Talk about returned checks!!!)

The moral of the story...how about "Beware of Evil GEnies?" Or more realistically, "Be sure to double-check your usage charges...you may be overcharged and not know it." And always be sure to sign off. I don't know for a fact that this is what caused the "Hang," but it sure couldn't hurt. *Right?*

By the way, my actual charges for the month of April were a little over $14...just about what I figured.

ATARI USER GROUP SWAP FEST

Weekdays 9am till 1pm 708-680-9596

The Reviews Are In!

"... If you own a hard drive ... then RUN, don't walk, to your nearest Atari dealer and ask him to order DIAMOND BACK from Data Innovations, Inc."

Victor T. Albino, ST World

"...The overall winner has got to be Diamond Back...it creates GEM compatible disks at image backup speeds...This is the one I use, and I use it a lot. It's Dependable!"

LeRoy Valley & Ron Robinson, ST Informer

DIAMOND BACK is packed with features, from its custom format/verify routines, to its use of script files, it's in a class by its self. Here are just a few of the features packed into DIAMOND BACK: • EASY to use completely GEM interface and online help • File compression & encryption • Selectable incremental backup, by date or archive bit (using TOS 1.4) • Load/Save backup configurations • Automatic drive switching • Backup/Restore any number of drive partitions, directory paths, single directories, or even specific files or types of files • Recreate the original tree structure or specify a new directory structure during restore.

Feature for Feature, DIAMOND BACK offers the hard drive owner, more POWER and FLEXIBILITY than any other backup program currently available for the Atari ST/Mega computers.

FULL COUNT BASEBALL & COURT SIDE COLLEGE BASSKETBALL

Full Count Baseball & Court Side College Basketball are games for the true sports lovers in the family. Both are statisticly based simulations, which we believe offer the sports fan the most accurate statistical game play of any sports simulation for Atari computers. Full Count comes with teams from the most recent season plus 52 great old time teams and Court Side includes 286 teams from the most recent season plus 70 all-time great college teams.

Diamond Back, Full Count Baseball and Court Side College Basketball, are Available NOW. Retail price for Diamond Back is $39.95, sports games retail for $39.99 (each). Dealer inquires welcome.

Arbitrary Discrimination? Another Opinion

Lloyd Pulley, Sr. (PHAST)

The January issue of AIM had an article by Mr. H. Jake Olbrich titled "Piracy = Arbitrary Discrimination." After reading Mr. Olbrich's article several times (and learning more about farm machinery than I really wanted to know), I was still confused about his basic premise and even more confused with how it fit into his farm machinery introduction.

I had four other people read the article and got four different interpretations of what was being said. Was he saying that by pirating, the Atari community is shutting itself out of the market? Was he saying that the Atari market is being discriminated against and that discrimination is arbitrary? Was he saying that the computer and/or software industry is an oligopoly and is shutting Atari out of the market? Or was it all or none of the above?

Since I'm not exactly sure what he was saying, I will attempt to discuss the three things that I *think* he was trying to say. But the first thing I will do is ignore the first 2/3rd's of the article, as I don't want to get into a discussion about farm machinery, and I saw little or no connection between it and the last 1/3rd of his article.

Definitions

The second thing we need to do is to define our terms and make sure that the sum of the words in the article mean the same to all of us. I have found the biggest source of misunderstanding is that different words and terms mean different things to different people. So I will rely on Webster's dictionary for my definitions.

Webster's defines *arbitrary* as "guided by will alone; high-handed; despotic; absolute." It also defines *discrimination* as "faculty for drawing nice distinctions; perception; a difference in treatment between persons, places, things." Finally, it defines *oligopoly* as "control of a market or service in a given market by a small number of companies or suppliers."

Oligopolies

Let's start with the oligopoly topic first and get it out of the way. A good example of an oligopoly in the marketplace is Coke and Pepsi. They probably control 80-90% of the cola market. Yes, there are some other colas, but basically these two companies control the marketplace, and it is very hard for any company to enter into the cola market and compete with the two major powers.

Is the same true in the computer market? It sure is! Apple and IBM (and clones) control the major part of the computer market. But just as Royal Crown and Jolt have found a niche in the cola market, there is room for the Atari ST/Mega (and Commodore Amiga) in the computer market *if* they are marketed properly.

Atari has been in the computer market for a long time and had brand name recognition. Atari had a big userbase to pull from, there are/were millions of 8bit Atari owners. The ST had the price, power and user friendly interface to find it's own niche in the computer market.

Did you notice all the "had's" in the above paragraph? By improper marketing, little or no support for developers and dealers, a lack of computers for the US market (when there was a demand for them) and bad managerial decisions, Atari has lost most of the potential advantages that it had 4 years ago. Can it gain back these losses? That remains to be seen. But the oligopolistic control of the computer marketplace by Apple and IBM has had little effect on the Atari ST market, other than to give the potential ST customers that Atari's bad marketing has driven away a place to go.

On to Discrimination

Next, let's discuss the discrimination issue. Is the ST being discriminated against by the software and hardware companies? I'm sure that it is. Remember that discrimination isn't necessarily bad, it's part of business and human nature and that there are different types of discrimination.

If you were WordPerfect Corp. (example only) and sold more units of your product to the IBM market in one month than you've sold in the ST market totally in two years, you would treat the IBM market differently than you would the ST market. Thus you'd be guilty of discrimination ("a difference in treatment between persons, places, things") but you'd also have good business sense.

Now, if you were brand "X" company and were thinking of getting into the ST market and saw (perception) that WordPerfect was making little or no profit on its product in the ST market, you would think twice about entering it. Now add in the "perception" that Atari has 1/6th the dealers today than it did 3-4 years ago, the "perception" of Atari's past record of bad marketing, limited support of its dealers and developers, the "perception" that the Atari users are the worst pirates in the computer industry (more on that later), the "perception" that there are probably only 200,000-250,000 ST units in the US (and the number isn't growing very rapidly), and you'd think three times before entering the ST marketplace. Would these perceptions of the Atari marketplace be discrimination? Yes, but it would also be good business.

So we've decided the Atari ST marketplace is discriminated against (at least some of the time) but is that discrimination "arbitrary?" Is there a good reason for it or is it "high-handed, despotic, absolute." Or maybe it is simply "oligopoly" discrimination?

One good example of arbitrary discrimination is Electronic Arts. When the ST first came out, they said they wouldn't write software for it no matter how successful it might be. What was the rationale for this decision? They felt the 8bit Atari market had cost them too much money. This type of attitude could be considered arbitrary discrimination, the 8bit Atari market has no bearing on what the 16bit market will do. (NOTE: E/A later changed their minds and ported some of their software titles to the ST.)

But this attitude is the exception, not the rule. Most software houses are businesses and they are in business to make money. If you show them where it's in their best interest to write software for a specific computer, they will write the software no matter how they feel personally about the system.

Then what about the "ogligopoly" discrimination? Are some computer manufacturers telling software houses not to write software for the ST? I'm sure that IBM and Apple have *hinted* to some of their major software companies that they'd just as soon have them write software only for their system. But while IBM might "hint" to Lotus not to write for the ST and Lotus might obey IBM's "hints," there are 1,000 other software companies more than willing to step into any situation where there is a profit, no matter what Apple or IBM might want. Again, any companies that are ignoring the ST market because of ogligopoly discrimination are the exception and not the rule.

So How About Piracy?

Let's see, what does that leave? Oh yes, the piracy issue. Let's preface this issue with the comment that all software publishers, for any computer system, know their software is going to be pirated. Just as retail sales stores know that "x" percentage of their stock will disappear due to shoplifting, and adjust their prices accordingly, the same goes with the software industry. To think that piracy will ever completely disappear is wishful thinking. So are the Atari ST users worse pirates than normal? Is this the reason that software companies don't program for the ST?

To answer the first question, I had to go to some of my acquaintances who are pirates. (It is not the purpose of this discussion as to whether I should be acquainted with pirates/thieves, anymore that it is the purpose of this article as to whether I should be acquainted with someone who cheats on their taxes.)

What I found out was very interesting, to say the least. It seems there are only about 1/2 of the ST pirate BBSes available today as there were 2 years ago. Also, many of the ST pirate BBSes now are "forced" to carry ST and Amiga software because there isn't enough ST software and users to keep their boards busy anymore (but few Amiga boards carry ST software). Another interesting tidbit was that many of the ST pirates now have moved to the Amiga. I found out that it's just as easy, if not easier, to get Amiga, Mac and IBM software as it is ST software. Does this sound as if the ST users are worse pirates than users for other systems? I don't believe so.

The basic problem is there just aren't enough STs being sold in the US. It's a given in the software industry that most software is sold to new system owners within 90-120 days of the purchase of their systems. After you own your system for over 120 days, you have much of the basic software you need and you become more particular in your buying—how many word processors or terminal programs do you need? As long as new people are walking in off the streets and buying systems, they are buying software.

But when there are few dealers, a negligible amount of advertising and few systems available for sale, all of a sudden we find very few new people coming in and buying systems. When there aren't people buying new systems, there aren't people buying new software. When you have a growing system, piracy isn't perceived to be as much of a problem as it is when you have a stagnant system (when you are making $1000 a week, a $10 loss isn't much but when you're making $100 a week, the $10 becomes more noticeable).

What are the Conclusions?

After all of the rhetoric, what do we have left? There is little proof that there are oligopolistic practices against the ST market. There is little doubt that there is discrimination against the ST market, but it hasn't been proved that the majority of this discrimination is arbitrary and not deserved. There is no doubt that there are pirates in the ST market but little, if any, proof that they are any worse than in any other computer market.

The one thread finding it's way though all of these topics is the lack of Atari marketing and support. Let us not ignore, or condone, piracy in any form, but let us also not ignore Atari's place in this problem. If the ST had proper marketing, support and advertising in the past, none of these so-called problems would even be being discussed here today. We'd be too busy telling everyone about the new software and hardware that we have available for our systems.

People Are Talking About DC UTILITIES

"The wizards at Double Click Software have decided to bombard us with several top notch utilities at once in their first commercial software venture, and are these programs ever good!"
— ST ZMAG

"Squish loads and decompresses programs faster than a standard ST would take just to load the same program full-size."
— COMPUTER SHOPPER

"In keeping with the spirit of pushing the ST and its programs to the limit or past the envelope..."
— ST REPORT

"You won't want to be without this superb utiltiy disk and it's a steal at the price DC is asking."
— ST PLUG

only $29.95

DC SQUISH Save valuable disk space! Compress executable programs and desk accessories up to 1/3 their original size! And your programs stay executable! Makes programs load faster too!

DC DESKEY 2.0 Make any GEM program 'Expert Friendly.' Assign keystrokes to GEM drop down menus in any GEM program! Over 2000 possible key combinations!

DC XTRACT A super fast, pure assembly desk accessory that allows you to xtract, test, or list the contents of any ARC file. DC XTRACT is 4X faster than ARC.TTP, only 12K in size, and always ready when you need it!

DC RAMIT The FASTEST RAMdisk bar none! Allows you to make the RAMdisk look just like a floppy! Save the contents of the RAMdisk to one file, for quick loading of the same files! MUCH MORE!

DC DSKORG Make your DESKTOP.INF file an executable program! Change desktop windows, icons, the complete desktop layout quickly and easily by double clicking one program.

DC SEA Create programs from ARC files! That's right! DC SEA (self extracting ARC) allows you to make a program that will extract or list its own ARC contents.

All programs are 100% pure assembly language

The ParSec Graphics Board

Courtesy STatus Mag.

This article appears courtesy of STatus Disk Magazine and originally appeared on their disk. For more information on STatus, contact STatus Disk Magazine, Suite 299, 4431 Lehigh Road, College Park, MD 20740.

NOTE: As I write this, 6:42 a.m. on 2/5/90, we have this news exclusively—to our knowledge!

One of the long standing dreams and wishes for the Atari ST owner has been to own the mythical ParSec Graphics Board. Early reports of its capabilities, revolving around a TI34010 running at 50mhz, were absolutely incredible, and the prospect of such a board attached to the ST added considerable stock to the idea of sticking with an ST for video work (at least for me!)....

A few minutes ago, I spoke with David Encill of Elmtech Research, the company behind this exciting new product. David explained to me some of the exciting capabilities of the ParSec while answering "down-to-earth" questions from a prospective buyer.

First of all, the ParSec Graphics Board connects to *any* Atari ST via the cartridge port. This means a 520ST could operate in conjunction with the ParSec, just as well as a Mega 2.

The ParSec comes in two models: the 4768 and the 8768. Initially, the capabilities are scaled down to a resolution of 1024x768 with 16 colors/scanline from 4096. As an aside, David mentioned that unlike the regular ST, this means you can pick 16 totally different colors for each individual scanline! With 768 scanlines, this means a lot.... This "base" model comes with 768k of VRAM (Video RAM), but is easily expanded to the same level as the 8768 mode with more RAM.

The ParSec 8768 contains approximately 2.5 MB of VRAM with another 4 MB of "program memory." At this time it should be pointed out the ST doesn't control the ParSec like a traditional graphics board; rather, the ST works as an I/O device to it, much like the Mega would for the Atari Transputer Workstation (which is certainly not available here in the USA).

With all of this memory, the ParSec can perform some astounding feats: 1024x768 with 8 bit planes (256 colors) from 16.8 million or 32768 colors per screen (using true 15 bit video)

All of these modes, I might add, are not for just "still-shot" images, but are used for full-fledged animation.

The ParSec also comes standard with its own RS-232 and SCSI ports so it will not hinder itself (or the ST, which probably can't be hindered by an expansion running at 6.25 MIPS!) by relying on the ST's capabilities.

ParSec Software

Thus far, the hardware looks impressive, but the first question that sprang to mind was whether this expansion would have any software to utilize these mind-boggling specifications.

David mentioned no less than *four* (4) packages planned for the ParSec. One, "Da Vinci," is included free with the ParSec, and functions as a basic artist's program which exploits the ParSec's unique capabilities.

"Topaz," a GEM emulator, will permit it to run ST GEM applications with little or no incompatibilities. It might be noted that Calamus did *not* work on it in its present state, but the Topaz programmer, who is German, is working with DMC (also German) to insure compatibility.

(NOTE: Calamus has had problems with other expansions, such as the Fast Technology Turbo 16. I believe the problem with the Turbo 16 was fixed, so we can only hope that they will be as expedient with the ParSec!)

"Chimera f/x" is a full-featured package which takes up where Da Vinci ends. Chimera f/x is designed to reproduce on the ParSec the traditional artists tools, such as brushes, pens, pencils and sketching tools.

It doesn't stop there, either, because it even takes into account the amount of pressure applied to the drawing tool and mimics the response it would have on the ParSec. Chimera f/x also has another unique feature: It will function as the basis of other programs, letting them utilize its capabilities.

The next two programs do just that. David described them as a "solid modeling program which can even import CAD-3D files or Amiga Sculpt 4D files" and a "fractal landscape generator." To say the least, I was absolutely stunned by the possibilities of such a package...

Also, since video professionals need the ability to digitize and genlock live images, Elmtech is planning to offer both a digitizer and a genlock. David didn't give me any details on the genlock, but the digitizer sounds exciting. It will be capable of "grabbing 250,000 pixels in 8 bit video (256 colors) in real time." This, obviously, is not a toy.

According to the August 1989 issue of ST World (U.K.), the ParSec's suggested list price is 920. Converted to American dollars, that is rougly $1500. The exclusive North American distribution rights belong to Datel Electronics, a large company that has a base of operations in both the U.S. and England.

Programmer Details

Finally, a typical STatus interview with a developer wouldn't be quite right if we didn't get some kind of information about the men behind the product. David and I had a good laugh about some of the older machines, and how we grew up with our first computers. Mr. Encill's first computer was an Atari 400 with 16K of RAM.

He also seemed to be just as excited as I was about the ParSec and its prospects on the Atari ST. I asked him about the decision to make it for the ST first, and he said that the main reasons were that "the ST was outselling the Amiga back when we started on it, and the ST also lacked video support." Seeing this market as growing, and empty in the vital area they could provide a product in, Elmtech began working on the ParSec as an ST expansion. However, he did mention that it can be easily modified to work on an Amiga or Apple Macintosh and that versions for those machines will be (most likely) forthcoming.

(NOTE: We tried contacting Datel Electronics, 1-702-734-9100, in Nevada for more details. After speaking to Richard Ollins, it seems we've broken this story just as things are developing. He confirmed the agreement between Elmtech U.K. and Datel had just been completed, but it would be another two or three weeks until Datel received actual units in order to properly present the product to the public. They also mentioned it will not be sold through dealers, but direct from Datel. There was no information on any plans for developer support or incentives through Datel for the ParSec, and Richard referred all inquiries to those effects to Elmtech, in England.)

Universal Item Selector

Version 3.0

John Hileman (SPACE)

Type of program: Utility
System Requirements: Any ST
Copy protection: None
Comments: Buy it!

Recently, Application and Design Software introduced version 3.0 of the Universal Item Selector (I will refer to it as UIS from now on). It's a replacement for the standard GEM item selector and I consider it a must.

When UIS is installed in the auto folder of your boot disk or drive, it will automatically replace the standard file selector. Some of the features it offers over the standard (TOS 1.0) item selector are: buttons to select the drive, ability to change the order in which files are shown, ability to show only those files with an extender selected by the user (without having to type that extender), ability to select files by rubber banding or shift-left click for multiple file operations like deletion, name changes or copying.

The program may be set so that the date and time on a file is retained when the file is copied. This only works from within UIS. If a file is copied from the desktop, the current date and time will appear on the file unless anther utility like ICD's COPYFIX.PRG is used.

UIS also allows the user to:

Touch (update the date and time of) a file

Print a file or view it onscreen

Format disks and create folders

The program is self-modifiable, so the user can change the way files are seen for selection. The default number of files shown is 12. The font size can be adjusted so that 16 files are seen. Up to 36 filenames can be displayed in a special wide mode, or 12 to 16 in wide mode with all file characteristics (date, time, and size) shown.

UIS can be moved to a different place on the screen (this would be handy for those with larger monitors). The user has the option to permanently save the new parameters, or to just use them for the current session.

Installation of this version of UIS requires the user to enter his or her name and the serial number of the program before use. The installation disk includes a RAMdisk and a desk accessory that will call UIS from the desktop or from programs that use a non-standard file selector. UIS also comes with a much improved manual, a 38 page booklet.

I can't imagine using my ST without UIS. It's a utility that every ST owner should have.

UIS is available from
Application & Design Software
120 NW "E" Street
Grants Pass, OR 97526.

The cost is $24.95. Those wanting to upgrade from version II should return their original disk to the above address along with $7 (which includes shipping and handling).

[About the Author: John Hileman is a member of the Southcentral Pennsylvania Atari Computer Enthusiasts (SPACE). He shares his computer time with his wife and two children.]

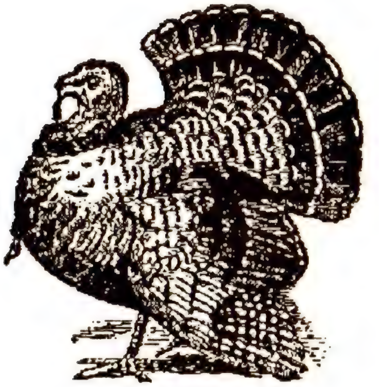
OUTRUN TURBO TURKEY FOR THE ST



Tim Holt (El Paso)

Hop in your Porche 959, pop down the roof, pop the clutch and head for the open road. Go from New York City to Los Angeles in the quickest amount of time. On the way, encounter police, road barriers and other drivers who do not have your feel for the open road.

Sound good? Yeah, I thought so too, so I picked up U.S. Gold's latest: Outrun Turbo. The package says that "Driving's Biggest Game Just Got Bigger" and "More Car, More Road, More Action."

I am a sucker for packaging. Just ask the club members that saw my review of "Roadwars," my all-time golden turkey award winner. I was duped by the pretty pictures. I was drawn in by the hope that maybe, just maybe, this version of Outrun would work on my ST, unlike it's brother, who never ran on my computer even after returning it to the mail order place three times. Sad to report, I must add Outrun Turbo to my list of ST Turkeys.

Well, I was happy to see that Outrun Turbo did in fact, run on my ST. However, I realized this game left something to be desired when I first started, unfamiliar with the controlling, and promptly ran over a crowd of spectators. Did this stop my car? No, I just kept going! (Mass murderer lose on the streets!)

But I digress...let me get to the game, then I will get to carving the turkey.

The premise of Outrun Turbo is that you and your girlfriend are driving in a race from New York to Los Angeles. Along the way, you must negotiate road hazards and out run the police. You must also get through each stage in a certain amount of time. Usually, this amount of time is in seconds, so you can get from New York to Washington D.C. in 55 seconds. If only Amtrak could be so lucky.

Getting to certain places allows you to add options to your car, such as the type of tire you want. You may even change cars at certain places. The first option you get is whether or not you want manual or automatic transmission. (I suggest you use the mouse to control your car, and get automatic transmission.) At every stage, the scenes change. For instance, if you get to Pittsburgh, it will be snowing. Get the idea? Okay, now, let's talk turkey:

Turkey Award #1: Outrun Turbo's car is difficult to control no matter what option, mouse or joystick, you chose. The space bar controls the "Turbo booster," moving the mouse left or right turns the car, left mouse button accelerates, right mouse button decelerates (and shifts if you chose the manual transmission). No matter what you do, the car simply cannot be controlled unless you stop the car, and the turbo cannot be turned off unless you run into something, flip over or stop your car.

Turkey Award #2: The amount of time given for each stage makes little or no sense. Let me give you an example: From New York to Washington D.C., the driver is given 55 seconds. If you make it there *before* your time is up, you are given 40 seconds to make it from Washington to Pittsburgh. If you crash and have to start from the beginning in Washington, then you have 50 seconds. In other words, you are not given any reward for good driving! As a matter of fact, you are penalized for making it ahead of time. What do the instructions have to say? "Watch out for trees." How helpful.

Turkey Award #3: The scenes are hilarious! Towering mountains near Washington D.C. A blinding snowstorm in Pittsburgh is three snowflakes blowing across the screen! Skyscrapers look like sheets and are two dimensional. The "road hazards" can simply be run through as if they do not exist. Even the dreaded police cars can simply be run through. Go ahead, aim right for them! They simply will disappear after you run up to them. Only if you run completely off the road will your car flip over in the famous "Outrun Flip."

Turkey Award #4: The instructions are terrible. Of course, they also happen to be in about 15 other languages, and might help you in any foreign language classes you are taking. The instructions help only for the first time you drive. After that, you are on your own. Kind of like life, huh? (Excuse me, I got profound for a second.)

Turkey Award #5: The music is really bad. After about two minutes of that mindless dribble, you feel like ripping the guts out of your monitor's speaker.

Okay, don't take my word for it. Go out and buy Turbo Outrun! Dump $40! I did! If this is the type of program others try to emulate, we are in *big, big trouble!*

Largest Free RAM 789K
Feb 16, 1990 10:32:20 PM
TOS 1.6 Dated 7/29/89

Coming soon: The Quick Tools! A collection of many useful utilities which can run as applications and desk accessories. The Quick Manager accessory displays time, date, free RAM, and TOS version, and allows for instant access to the file selector. Quick Manager can access the other Quick Tools accessories from its own built in desk accessory menu. Quick CLI makes complex file manipulations easy. Quick Find searches for any file on the hard disk, FAST! Also includes Quick Inf, Quick Lock, BA Pack, Quick Print, Quick Label and more. Download the free Quick Tools demo, or order the Quick Tools / Quick ST II demo disk for $5.

Our products are available at Atari ST dealers in Canada, the U.K., and the U.S. Or order direct and add $3 per order for shipping. Call for foreign prices. Call or write for our free product catalog. Demo disk only $5.

Life from the Hardware Bench

Dave Koster (P3ACE)

It's been a busy month.

First came Ed's 130XE. We'd both upgraded our 130s to 320K RAM late last year (using the Scott Peterson plan) and neither machine "came up" right away. This mod requires taking out one bank of 64K RAMs and replacing it with 256K chips. Add one more chip piggyback and some wire and voila! 320K.

I'd done this once before and it worked fine, except that you have to be super careful unsoldering the chips. Atari must glue the traces down with spit, they come off the circuit board at the slightest touch. I found the problem with my XE after much searching (a broken trace, naturally). Ed's machine was another story.

The previous owner had installed a daughter board over the location of the operating system ROM to allow him to switch between the old 800/XE/OMNIMON operating systems. It was a neat mod, pathologically well done, with LEDs going to the top of the case showing which OS was active.

Unfortunately, I think it was this mod that hosed ours up. We found more broken traces and fixed them, and the thing actually booted once. The OS board was loose on the socket, and it probably put a spike in the system. Anyway, the computer stopped working. Maybe forever.

We socketed nearly every chip, traced most of the circuits, and still couldn't bring it back to life. I spent 5 to 10 hours working on the thing before I gave it back to Ed to continue the process. We'll see...if Ed's skilled ministrations can't fix the thing, maybe I'll ask for it back.

And Then There Were STs

There were three STs on the bench last month. One I was selling and the new maybe-owner (Scott) asked for the "piggyback" 512K-to-1M RAM upgrade. He even came over to watch (against my better judgement, which turned out to be correct). I've done quite a few of these and they don't scare me like they used to. It's surprising how much semi-abuse the ST can absorb.

Anyway, solder-solder, snip-snip, I hurried through wanting to prove I knew which end of the iron was hot. The upgrade was done in about two and one-half hours, a new record...but I was confident it would work fine. It didn't.

Scott left scratching his head and thinking about PC clones. As soon as I took a hard look at the thing I saw (in my rush) I had made the connections from the new chips to the circuit board in the wrong place. Rats!

I called Scott and said to come over and pick it up. He got it home and was impressed for 12 hours, until it crapped out again. I make a house call, take it apart, (it works), put it together again, (it still works), go home wondering what went wrong. It stopped working again a day later.

I went back to his house knowing full well I'd either find the problem or take the thing back home with me. As soon as I opened it, I saw that some of the copper foil used to cover the (vacant) RF modulator holes had been bent down and was touching the top of the board. AH HA! Ripped all that stuff out, fired it up again, *another* problem! Looked again; a piece of the supposedly ripped-out foil had fallen on the board. Removed the shrapnel and applied power. OK; it works.

We put it all back together and it stopped working again. I started taking deep breaths.

We stripped the whole machine down to the board again. Then I saw tiny pinpricks in the shrinkwrap I used to protect the new RAM cables running on the underside of the board. The component leads were poking thru the insulation when we'd close the case up; they were fine when everything was apart! So we rerouted the leads, taped them down, and closed up for (hopefully) the last time. Many lessons learned on that one!

The next ST came in with a Tech-Specialties upgrade board that wasn't working. This was a lesson in instruction reading. The folks had installed it on the board right (it's a "solderless", with pins and sockets that go over and under chips on the ST circuit board). I spent 45 minutes trying to get it going before I stopped and read the instructions completely.

It became obvious then that the RAM chips were in the wrong sockets and the jumper block was trying to use 1M chips instead of the 256K ones we were using. Happy to find something so obvious, we arranged everything right and put it back together.

Still didn't work, but we were getting closer. We took it out once more, and hey!, there was a broken wire on one of the cables. Spent another hour replacing both eight pin cables, since we were sure it'd break again. Plugged it in and the new memory came right up.

The last ST just had a pc-ditto II installed and died right after. Ditto II has a connector that jams down on the 68000 chip, with cables running from the connector to the board itself. The main board is huge compared to other insert systems I've worked with (memory upgrades, Tweety Board, etc.) and it's hard to believe you could find a comfortable resting place for it inside the case.

The ST owner had done a good job installing the connector, choosing to solder the thing in rather than to rely on it making good contact just pressing it on. We got lucky with this one. I spotted a solder splash (it looked just like a pad!) shorting out two pads, flicked it away, and the ST came right up. After that we spent an hour checking out the pc-ditto board for faults and couldn't find any. I had heard many were DOA, which is too bad because (other than the size!) it looks well designed and produced. If I had one, though, I'd build an external box for it rather than shoehorning it inside the ST.

The bench is clear now, but Ed's XE is still in the back of my mind. Maybe I'll give him a call...just to take another look.

POKEY Stereo Upgrade for Atari 8bits

Codename: GUMBY

Chuck Steinman (MGAUG)

This is an information file for adding stereo sound capabilities to an Atari 8bit computer using two POKEY chips. While it is a simple installation compared to most, it still requires some experience with soldering and electrical assembly.

Note: Installation of this modification will void any warranty you may have on your computer. Chuck Steinman, DataQue Software and AIM cannot be held responsible for the installation of this upgrade or any incidental or consequential damage to any equipment or persons using this upgrade or any variation of it. In other words, you are on your own.

This upgrade will only provide stereo output for software written specifically for this upgrade. It will not produce stereo output for existing software. Also, the keyclick will NOT be fed into the stereo outputs, as it does not originate from POKEY. A modified version of the Pokey Player, which produces stereo sound using existing Pokey Player files is available on GEnie, CIS and my BBS. It is called GUMBY.ARC

Parts Needed

A second Atari POKEY Audio Chip, available either from BEST (#CO12294, $5.00) or B&C ComputerVisions (#C2294, $3.50)

74LS14/74HCT14 Inverter, available from BEST (74LS14) (#CO16541, $0.30) or Jameco (74HCT14, $0.29)

1000 Ohm, 1/4 Watt Metal Film 2-5% Tolerance, available from Jameco in lots of 10 (#R1.0K, $0.50 for 10) or Radio Shack in lots of 2 (Dont know P# or $)

Two RCA style phono jacks, available from Radio Shack, Jameco or other electronics outlets

Two 0.01 (or close) 16V (or more) bypass capacitors, available from Jameco (#DC.01, $0.10 each)

Two short (6-12" each) sections of shielded audio cable

A standard dual RCA to RCA patch cable

Optionally, two 50K single turn trimmer pots, available from Jameco (63P50K, $0.89 each)

Inverter Information

Bend up all pins of the inverter except for pins 7 and 14.

Cut off the narrow part of the pins which were bent up.

Install the inverter over the top of the existing 74LS14 (or another 74LS part if more convenient) on the motherboard. Make sure the new chip has its locator notch/dot on the same end as the chip below it.

Solder pins 7 and 14 of the inverter to the same pins of the lower IC.

Run a small wire (wire wrap type works best) from pin-1 of the inverter to pin-13 of the CPU. The CPU is part number CO14806 on the XL/XE series.

On the old POKEY there is a 3K pullup resistor connected between pin-31 and Vcc. Unsolder this resistor and remove it.

Run a small wire from pin-2 of the inverter to pin-3 of the inverter, and then on to POKEY pin-31. Note that you can use the pad where the resistor was just removed. Be sure to get the correct one.

POKEY Information

Bend up all pins on the new POKEY which are marked with a minus on the diagram. This includes POKEY pins 8, 9, 11-16 and 18-29. (See Figure 1 on following page.)

Cut off the narrow part of each pin bent up.

Tin each lead which was NOT bent up. This includes pins 1-7, 10, 17, and 30-40. These pins are marked in the diagram as *, >> or <<.

Now, bend up the pins indicated by the >> and << symbols. Do NOT cut these pins short.

Place the new POKEY on top of the old POKEY in a piggy-back style.

Solder the unbent pins of the new POKEY to the old POKEY. If your original POKEY was in a socket, then it is easier to connect the two if it is removed. Make sure no excess solder flows down the pins to the narrow part of the OLD POKEY. Reinsert both POKEYs into the original socket.

Solder the 1K resistor from pin 37 to Vcc. The most convenient location to pick up Vcc is where the 3K resistor was removed earlier.

Solder a wire from pin-31 of the new POKEY to pin-4 of the inverter.

Mount the two RCA jacks on the rear of the case, preferably in an area close to the POKEYs.

Solder a bypass capacitor to each of the center conductors of the RCA jacks.

* With the trim-pot knob facing

you, pin 1 should be to the left side. Solder a wire from this pin on each trimmer, to a ground trace on the motherboard.

* Connect the free end of the bypass capacitor to the center pin of the trimmer (one capacitor to each trimmer).

* Connect the shields of the audio cables to the provided solder lugs on each RCA connector, and the center conductor of the free terminal of each trimmer.

Connect the center conductor of the free end of the audio cable which is connected to the left RCA jack/trimmer/cap to pin-37 of the OLD POKEY.

Connect the center conductor of the free end of the audio cable which is connected to the right RCA jack/trimmer/cap to pin-37 of the NEW POKEY.

The shield of the audio cable on the POKEY end, should be cut and taped (or heat shrinked) so that it does not touch anything.

Run a 18-20 AWG wire from the ground lug of the RCA jacks to the wide ground area on the motherboard. This normally makes contact with the shield box that covers the motherboard.

You will now be able to connect the two RCA cables to an AUX (or Tape) level input of a stereo or boom box.

* I would suggest centering the trimmers in their travel, and adjusting them as needed to get the best clarity. You may want to glue the trimmers to the back of the cabinet to keep them from moving around.

* NOTE: Optional steps. On my system the POKEY outputs worked fine without the trimmers. So I just connected the bypass capacitor on each RCA jack to the apropriate audio cable center conductor. This was driving an AUX 350mV input of a Pioneer SPEC-1 preamplifier.

POKEY Registers

I will only elaborate on registers used to produce sound in the stereo upgrade. All registers which were in the original POKEY will appear in the second POKEY 16 bytes higher in memory. The extra UART, key scanner and pot scanner could be used for all kinds of neat projects.

Figure 1 — POKEY Pinout

Location	Name	R/W	Function
$D200	AUDF1	W	Audio Channel #1 Frequency (Divide F/n)
$D201	AUDC1	W	Audio Channel #1 Control (Vol/Distort)
$D202	AUDF2	W	Audio Channel #2 Frequency (Divide F/n)
$D203	AUDC2	W	Audio Channel #2 Control (Vol/Distort)
$D204	AUDF3	W	Audio Channel #3 Frequency (Divide F/n)
$D205	AUDC3	W	Audio Channel #3 Control (Vol/Distort)
$D206	AUDF4	W	Audio Channel #4 Frequency (Divide F/n)
$D207	AUDC4	W	Audio Channel #4 Control (Vol/Distort)
$D208	AUDCT1	W	Audio control for channels 1-4
$D20F	SKCTL1	W	Serial Port Control
$D210	AUDF5	W	Audio Channel #5 Frequency (Divide F/n)
$D211	AUDC5	W	Audio Channel #5 Control (Vol/Distort)
$D212	AUDF6	W	Audio Channel #6 Frequency (Divide F/n)
$D213	AUDC6	W	Audio Channel #6 Control (Vol/Distort)
$D214	AUDF7	W	Audio Channel #7 Frequency (Divide F/n)
$D215	AUDC7	W	Audio Channel #7 Control (Vol/Distort)
$D216	AUDF8	W	Audio Channel #8 Frequency (Divide F/n)
$D217	AUDC8	W	Audio Channel #8 Control (Vol/Distort)
$D218	AUDCT2	W	Audio control for channels 5-8
$D21F	SKCTL2	W	Serial Port Control

Each Audio Channel Frequency Register is an 8-bit value which is a divisor of the primary frequency.

Each Audio Channel Control Register Controls the Volume and Distortion of each channel. The bits are assigned as follows:

76543210 ----vvvv	Volume control bits. Range controls volume as follows: 0000 lowest volume level \/ 1111 highest volume level
---s----	Volume only bit. Directly controls audio output: 0 Speaker output is off 1 Speaker output is on
ddd-----	Distortion code. Code is assigned as follows: 000 5-bit/17-bit poly noise 001 5-bit poly noise 010 5-bit/4-bit poly noise 011 5-bit poly noise 100 17-bit poly noise 101 pure tone 110 4-bit poly noise 111 pure tone

The AUDCTn register controls all channels. There are several functions assigned to this register as follows:

Bit-7	Makes 17-bit poly into 9-bit poly counter
Bit-6	Clock Channel-1 with 1.79 MHz (CPU rate)
Bit-5	Clock Channel-3 with 1.79 MHz (CPU rate)
Bit-4	Join channel 1 and 2 to form 16-bit range
Bit-3	Join channel 3 and 4 to form 16-bit range
Bit-2	Insert filter in channel-1, clocked by channel-2
Bit-1	Insert filter in channel-2, clocked by channel-4
Bit-0	Switch clock base from 64kHz to 15kHz

The SKCTLn register controls various functions of the POKEY device, and only has to be initialized to a value of three to assure all four channels of POKEY are active.

NOTE: To detect if the upgrade is installed, look at the 8 extra pots, they will be all zero. Also the key code register will be also zero. If you compare the keycode at $D209 with that of $D219, and $D219 is zero, the upgrade is installed. You may want to mask IRQ's during the test for safety.

Here's how you can reach Chuck via modem if you have any questions about GUMBY or the Turbo-816: GEnie: DataQue.1 CIS: 71777,3223 or BBS: (419) 529-5197, 300/1200bps, 24 hours]

"I'll try, but I've never debugged a program before."

SOME LIKE IT... HOT!

The CodeHeads announce:

HOT WIRE + MAXI FILE

- "When the START editorial staff first saw HotWire, our collective reaction was 'Wow!'"
- By far the **fastest, easiest way to run programs** on the Atari ST...from a floppy disk or from a hard drive!
- Build menus for all your most commonly-used programs. Load new menus with a single keypress or mouse click!
- New **Ledger** function records time spent in programs of your choice.
- **Passwords** may be used to restrict unauthorized access to certain programs.
- New **on-screen clock**, appears in the programs that you choose.
- Unlike other shells, HotWire works correctly with all programs, just like the GEM desktop.
- A **seamless interface** offers direct access to MultiDesk and MaxiFile.

- Full-featured file-handling utility lets you **move/copy/delete/rename/touch/lock/hide** any combination of files and/or folders.
- Runs as a desk accessory **or** as a program in any resolution.
- Incorporates **every** file/disk feature of the GEM desktop plus much more.
- Intelligent **disk copying** routines.
- **Rename folders** - Print directory listings.
- Store **comments** about any file/folder.
- Unique and intuitive user interface designed for easy, speedy operation.
- **Customizable** for your style of use.
- **Keyboard equivalents** for all operations.
- Quickly select from up to 20 of your most-used paths.
- Even runs programs and loads documents.

Here's what our users are saying about HotWire and MaxiFile:
"The HotWire/MaxiFile combo has **changed the way I use my ST.**"
"I haven't used the standard GEM desktop in weeks."
"Without HotWire and MaxiFile I'd be totally lost on the ST."
"...a tribute to **assembly excellence**." - "MaxiFile is **a wonder**!"
"HotWire and MaxiFile really 'beat up on the competition'!!"
"...you'll need to package it in asbestos because it is too **hot**."
"**AWESOME!**" - "Super!" - "a veritable software gem!"

HotWire Plus (includes MaxiFile)	$59.95
MaxiFile	$34.95
HotWire	$39.95
G+Plus - a replacement for Atari GDOS	$34.95
MultiDesk - load unlimited desk accessories	$29.95
CodeHead Utilities - a collection of useful programs	$34.95
MIDIMax - a powerful MIDI tool for performers	$49.95

Phone: (213) 386-5735. Visa, Mastercard, AmEx accepted. Shipping charge: US $2, Canada $3, Europe $5. CA residents add 6.5% sales tax.

For Those Who Don't Want to Read the Book

Jimmy Boyce (CACE)

Well folks, here we are! Oh, you noticed I was not here last month? Thank you. You didn't notice I wasn't here last month? Probably one of those users of some other brand of word processor. I forgive you.

Where were we? Oh yes, we are going to make a printer driver for the Panasonic KX-P1080i Printer. Let's start by thumbing through the manual <pgs. 46-47> along with getting the custom printer driver menu up on the screen in the manner we discussed last time we got together. Now that the menu is on the screen, the battle begins.

First, you see INITALIZE EVERY LINE. To be honest with you, I do not know what that means. According to the book, it doesn't matter because this is not necessary with most printers, and it is not necessary with the 1080i. So, arrow down to the next command, which is the LINE FEED AND CARRIAGE RETURN. Now we get into the good stuff. Strike the [RETURN] key and there is the predicted screen change and the "?" prompt at this point. For a 1080i, type in [1] [0] [RETURN]. So far, so good! Now the cursor has moved down a line and another "?" appears.

You have typed in your first command for a Panasonic KX-1080i printer. Aren't we proud of ourselves? What do you mean, "no!" How could you not be? You say you have run out of numbers and that stupid "?" is still there and I didn't tell you what to do next! Oh, sorry about that. Try another [RETURN].

Now you should be back to the menu, with the arrow right where you left it. That is not your problem, either? Tell me, Bunky, what is your problem? You don't have a 1080i? Did I forget to tell you to get out your printer manual and look up LINE FEED AND CARRIAGE RETURN? Go for it, Bunky...I will wait. While we wait for him, let me show you some pictures of my granddaughter...

Oh, Bunky is back with us. That's the right book, and you have found the command and are typing it in right now. Good boy, Bunky. Please note that some printers have more than one command for this function. Hang in there for a moment...I will explain and you can go back and finish it.

Now arrow down to the next command—UNDERLINE OFF. Strike [RETURN], next to the "?" type in [2] [7] [RETURN]. Same song, second verse...type [4] [5] [RETURN]. Same song, third verse...type in [0] [RETURN] [RETURN].

Now, if your line feed and carriage return was in the form of two commands, then enter them in the aforementioned manner. Be sure to start from the beginning of the command sequence. The first command will be lost if you don't retype it (on the assumption that you typed it in and then went on to the next command, that is).

As a side note, remember that in order to use the underline command in your text, you must strike the ATARI LOGO key (otherwise known as "that little key in the bottom right hand corner of the keyboard that has a symbol that is divided from top right to lower left and is dark colored at the top side of the divider and light colored on the bottom side of the divider").

Or you can just place the cursor at the beginning of the text you want underlined, hold down the [CONTROL] key and strike the [U] key. Repeat this proceedure at the end of the text you wish to be underlined to make it quit underlining.

Now that you understand the process for entering this code (you do understand don't you, Bunky? Good, I am proud of you), I am going to list the rest of these "text commands" and give you the [CONTROL] key codes you will use in your text to access them.

I hope this does not confuse you. Believe me, I am not trying to belittle your intelligence with that statement, but this stuff can get a little strange until you get used to the commands.

A couple of notes for you: First, whenever there is a command like [CONTROL][G][2] for instance, hold down the [CONTROL] key and type [G], then release the [CONTROL] key and type in the [2]. DO NOT PUT A SPACE BETWEEN THE [G] AND THE [2].

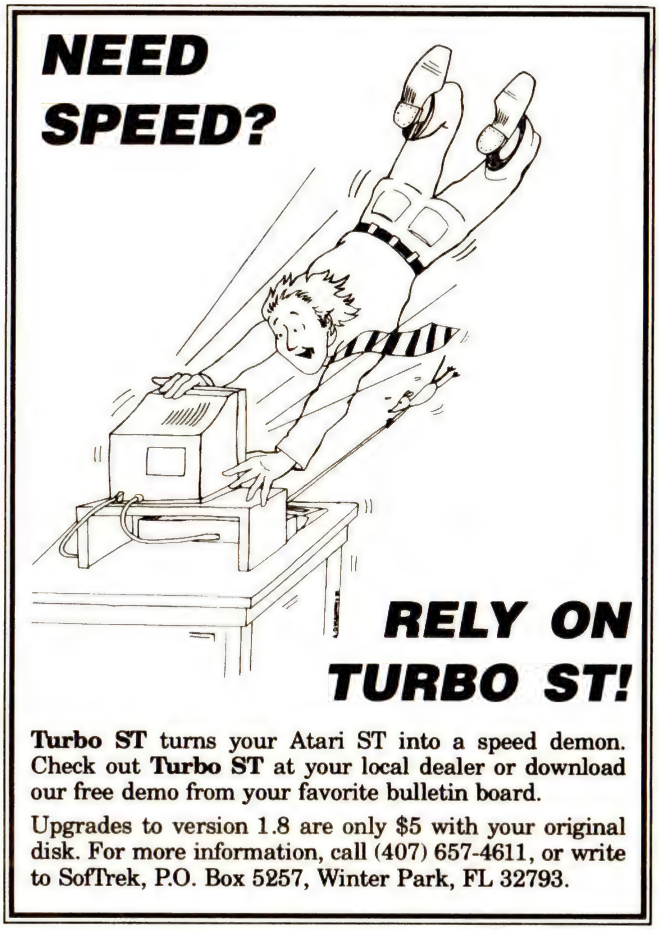
Second, when using the superscript command for showing degrees (as in angles or temperature), DO NOT USE A ZERO...use a lower case [O]. I have not figured out how to use powers of a number, except to put in a space between the numbers...the computer cannot recognize the command and a power as seperate commands. It thinks you are giving an erroneous command and ignores it. Example: you want to type three to the third power. If you type in 3[CONTROL][G][7][3][CONTROL][G][9], nothing will happen, because AtariWriter+ doesn't recognize ^G73. Type it in as ^G7 3. Sorry folks, it's the nature of the beast.

I have been using the printer driver shown below for quite a while now and it has served me well. Another note concerns the LINE FEED AND CARRIAGE RETURN and RETURN WITH NO LINE FEED. Somewhere I read those two commands should be 155. This caused me a lot of dip-switch setting changes on those itty bitty, teeny tiny switches when I changed to other programs I have and wanted a hardcopy of something.

Well, after some experimentation and cussing and threating to send the printer back to Japan, I found that just a simple line feed command was all that was necessary for LINE FEED AND CARRIAGE RETURN but a 155 command was necessary for the RETURN WITH NO LINE FEED. Thus ended my dip-switch setting problems.

Experiment! The commands will not hurt anything, other than wasting some paper. So, without further rambling on my part, let's get on with the little chart I have put together for you to use. Remember, this only works on a Panasonic KX-P1080i printer!

Well folks, that's about it for printer drivers for this month. I have put in a chart that cannot be single columned, and the people that put this little rag together will probably never let me write for them again. However if they do, I will see you next month.



NEED SPEED?

RELY ON TURBO ST!

Turbo ST turns your Atari ST into a speed demon. Check out **Turbo ST** at your local dealer or download our free demo from your favorite bulletin board.

Upgrades to version 1.8 are only $5 with your original disk. For more information, call (407) 657-4611, or write to SofTrek, P.O. Box 5257, Winter Park, FL 32793.

For 520ST, 1040ST, 520STfm and MEGA

MEMORY:

Expand your St's memory to ONE Megabyte, TWO and ONE-HALF Megabytes or even FOUR Megabytes with tech-specialities plug-in memory modules. All memory boards fit under the R/F shield. The CPU is completely available for any future enhancements (blitter, coprocessors, PC-emulators, speedup kits etc.). No soldering is required.

520ST modules use 256K DRAMs for upgrades to 1 MB and 1 Megabit DIPs for 2-1/2 and 4 MB upgrades. All boards are fully socketed and the expandable boards can be configured for either 256K or 1 Mb chips. This means that you can start by upgrading your 520 to one Megabyte and later move up to either 2.5 or even 4 Megabytes--the maximum for any ST, even the Mega! Installation is completely solder-free. Comes with detailed illustrated instructions and a one (1) year limited warranty.

expandable boards:

520A	Socketed, no RAM	$129.
520B	1 MB, socketed	$179.
520C	2.5 MB, socketed	$297.
520D	4MB	$465.

Blitter Upgrade:

520STfm/1040, new motherboard, Installed	$ 99.
Combined with TOS 1.4, Installed	$199.

Upgrade your 1040ST or 520STfm just as easily!

Send us your 520STfm and we will upgrade it to ONE Megabyte by installing a second bank of memory, easily removable in case you want to upgrade again. Complete with installation for only $149 plus shipping.

Or install one of our 1040 (fits 520STfm too) memory boards and upgrade your ST to 2-1/2 or even 4 Megabytes. There are nowadays four (4) different versions of the 1040/520 motherboards around. If you bought your ST less than 2 years ago, you need to check your machine, detailed info in our catalog.

Version "0" fits all 'old style" 1040/520 with 6 ROM chips under the power supply. Limited space above the 1040 mother board prohibits the use of conventional sockets in one bank. Optional "ZERO Height" sockets allow you to have this bank socketed too, so you can plug in or exchange 1 Mbit chips. The "ZERO-Height" socket kit is also available separately so you can install it at any time!

1040A	1 Bank sockets, no RAM	$110.
1040B	Fully socketed, no RAM	$149.
1040C	2.5 MB + 1 bank sockets	$317.
1040D	4 MB, 32 1 Mb DRAM installed	$485.

Version "1" fits all 1040/520 with the memory chips under the power supply. Available room prohibited the use of "DIP" packaged chips. The main board is only 6.4" x 2.9" and needs "ZIP" packaged 1 Mb x 1 DRAM. It fits in the area under the power supply with the shield installed and stays 0.5" away from the CPU to allow attachment of other upgrades. More details in our catalog!

1040B1A	1 bank socketed, no RAM	$149.
1040B1	Completely socketed, no RAM	$189.
1040C1	2.5MB, no sockets	$297.
1040C1A	2MB installed, 2nd bank socketed	$317.
1040D1	4 MB installed	$495.

Upgrades for version "2" and "3" of the 1040/520 motherboard also available! Prices same as above.

All upgrades can be equipped with a Clock Option on the Memory Board, comes with software, only $30.
Stand-alone CLOCK, please specify 520/1040 and your version of the motherboard $38.

EXPANDABLE Hard Drive Kits

come complete with software and all parts needed to get the system operational, 1 year ltd. warranty. There are right now three different case styles available:

1. Tower Type, 10" wide x 6.8" high x 15" deep, if sitting on your desk with monitor on top , with full SCSI interface and 'DMA-through'

-150 W PC power supply w/fan

-room for up to 5 half height hard drives or combination full/half height

-mounts on floor, under desk or on desktop

-can power up 520ST and external floppy drives.

-optional delay circuit for CPU allows fully automatic power-up!

T0S	No Drive, install your own emb. SCSI drive	$265.
T0	No Drive, MFM controller	$299.
T0R	No Drive, RLL controller	$475.

Complete with drive mechanism:

10 MB	$485.	20 MB	$565.	30 MB	$695.
40 MB	$745	64 MB	$795	85 MB	$895.

2. Monitor Style, 13.25" wide (same as MEGA) x 15" deep x 3.8" high with single port host adapter

-ready for up to three 1/2 ht or 1 each full/half ht. hard/tape/floppy drives

-55 W power supply with 115V fan

-can be placed under monitor or at side of your desk

M0S	No Drive, install your own emb. SCSI drive	$179.
M0	No Drive, MFM controller	$295.
M0R	No Drive, RLL controller	$365.

Complete with drive mechanism:

10 MB	$395.	20 MB	*$395.	30 MB	$545.
40 MB	$685.	49 MB	*$625.	64 MB	$795.
85 MB	*$795.				

3. Desktop Style, 4.5" wide x 6" high x 13" deep with single port host adapter

-ready for 2 1/2 height or 1 full height drive

-55 W power supply

-optional fan available (add $18)

D0S	No Drive, install your own emb. SCSI drive	$149.
D0	No Drive, MFM controller	$279.
D0R	No Drive, RLL controller	$349.

10 MB	$355.	20 MB	*$369.	30 MB	$525.
40 MB	$695	49 MB	*$595.	64 MB	$725.
85 MB	*$745.				

ATARI MEGAFILE:

Replace the 20 MB drive in your MEGAFILE 20 with a 42 MB 40 ms autoparking drive. Comes with a 1 year warranty on the drive mechanism. Exchange price including installation with your drive in good condition: $260., $369. outright.

Gain 65 MB of high speed (22ms av., 5 ms track to track) storage. Exchange with installation: $360., outright $449.

SUPRA 20/30 and ASTRA 20 MB:

Upgrade to 49 MB high speed storage with auto parking, 500 K/s transfer rate. With installation and transfer of your existing files: $379.

Host adapter cards are separately available and come with software and DMA cable or additionally with case and 6' round shielded SCSI cable with embedded power supply lines. Prices after the "/" are for version with case and cable. 1 port $79/119 full SCSI $119/159

CPU CASES:

Upgrade 520/1040 to the MEGA standard.

- Separate CPU and keyboard, gain space for three each 3.5"/5.25" floppy, hard or tape drives in two separate drive bays. Full height drives will also fit.
- A 150 W power supply with fan provides power for all possible combinations and keeps everything cool
- Reset button on keyboard
- A delay circuit allows fully automatic HD power-up.
- Monitor can be switched on/off with CPU, using an optional cable.
- Our kit uses a steel case 18" wide x 12" deep x 8" high, easily strong enough to support a high resolution monitor.
- The original keyboard gets a low profile enclosure, 18.7" wide x 7" deep x 2" high, consisting of a metal bottom part and the modified plastic top of the original case, supplied as exchange or you do the modification your self. The kit comes preassembled and installs without soldering. All mounting kits, wire harnesses and connectors to modify a standard machine are included.

Complete kit, please specify your machine type $295

OPTIONS:

Hard Drive kits for the CPU case consist of host adapter/controller with support bracket if necessary, DC harness and control cabling and might also be used with customer supplied case/power supplies. Kits with controller cards come with connections to two 5.25" drives. Kits for embedded SCSI drives come with one SCSI connector. Additional connectors $8. installed.

C0S	No Drive, install your own emb. SCSI drive	$99.
C0	No Drive, MFM controller	
C0R	No Drive, RLL controller	$299.

20 MB	*$295.	30 MB	$465.	40 MB	$595.
49 MB	*$525.	64 MB	$725.	85 MB	*$685.

Cable sets to connect additional 3.5"/5.25" floppies also available, please see catalog.

KEYBOARD KITS:

We noticed quite a lot of interest for our keyboard parts used in the CPU CASE. Keyboard kits consisting of metal bottom case, connecting cable with reset and modified plastic tops on an exchange basis are available separately for $69., please specify your machine type.

Space limitations don't allow a more detailed descriptions. For complete 24 page catalog contact:

HAVE YOU DRIVEN A FERRARI LATELY?

THE PRACTICAL SOLUTIONS CORDLESS MOUSE

Rich Deen (SPACE)

The smooth body, hugging contours, fully independent suspension, and sleek lines...OOOHHH, it handles like a dream. The engine of this machine is like no other. It purrs along and you don't even notice it's there.

The Sports Car of Mice

Am I talking about a sports car? You betcha! I'm talking about the sports car of mice...the Cordless Mouse by Practical Solutions. This is not your average "Joe Mouse." This rascal is truly a magnificent marvel of engineering.

It may seem like I am pouring superlatives on like a kid with maple syrup and pancakes. And I am, but I am simply amazed and overjoyed by this new mouse. I was not looking to replace my standard Atari mouse, I just thought I would give the interesting little creature a try. Well, now I'm hooked!!! I don't think I can go back to using the mouse with a tail.

There are many people who like the Atari mouse, but there are probably just as many who don't. Many of them have moved on to the BEST mouse or one of the other replacement mice on the market, and that's fine. The Atari mouse is functional, and when my computer was new I didn't mind. But after owning my 1040 for four and half years, I've come to notice more of it's downfalls and limitations.

Some of the drawbacks of the standard Atari mouse are: the lack of clarity when double clicking, having to "push the tail" when moving the cursor to the top of the screen, cable clutter, and the problems of the roller ball and sensor shafts constantly needing to be cleaned. These weaknesses are not major problems, but, along some other limitations, they do add up. The Cordless Mouse overcomes these limitations AND more!!!

When I first received the Cordless Mouse, the manual was missing. This was not Practical Solutions' fault. But, from reading advertisements and articles in other magazines, I was able to get the mouse up and running in two minutes. Basically, all you have to do is pop two AAA batteries in the slot on the underside of the mouse, plug the receiver end in and go.

Anatomy of a Mouse

This mouse differs slightly from a mouse with a tail in that it does not have a tail coming out of the front, but it has a small bulb instead. It is similar to those on your handheld TV remote control device.

There is also a receiver with a cable which plugs into the standard mouse port. This receiver is approximately 2" (Wide) x 2 1/2" (Deep) x 1/2" (High) in size and has a see-through red plastic face. Inside the face is an LED light which lights when the mouse is moved (convenient for determining if the mouse is "still awake").

On the side of the mouse is a small button. This is a very nice feature of the Cordless Mouse, because after three to five minutes it automatically shuts itself off and goes to sleep. To turn it back on, just press the side button.

One of the things I like the most is it's shape. Compared to the Atari mouse, it has a true sports car shape.

Sleek Styling

The longer part of the slope on the Atari mouse is in the back or the part closer to your wrist. But the Cordless Mouse is just the opposite. At first, I thought this would be awkward and it did take a day to get used to. That, along with the fact that the Cordless Mouse is only about two-thirds as high as the Atari mouse make it one of the most comfortable I've ever driven.

The Cordless Mouse is advertised as having an operating range of up to five feet away and up to 45 degrees to each side. The one I have works up to six feet away.

One Draw-back

If the mouse has one problem (and it may just be me), it is that the mouse picks up body oils and dirt on the buttons very easily. Even at that, it cleans off easily with a damp cloth.

One last interesting side note is that this mouse is even capable of operating with a obstacle in the way. I have used a piece of paper, my hand, and have even covered the bulb with my finger and it still works.

Practical Solutions has done it again! They have provided us with another marvelous peripheral. The list price is $129.95, which I originally thought was steep. I have since seen it discounted and it is easily worth this price.

One more thought, a Ferrari is not for everyone. Likewise, the Cordless Mouse is not for everyone, but if you're looking for a little luxury item for your ST then this one is a highly enjoyable replacement! I *completely* recommend it!

Go ahead. Punch it.

SPEED
LIMIT
8MHz

For the ATARI 520ST, 1040ST, MEGA and STACY.
Step a generation ahead with **TURBO16** by Fast Technology. The **TURBO16** accelerator can move your ST into high gear. Upgrade your ST and achieve *up to double the speed* in some applications.

Take Your ST Past Its Limits.
TURBO16 will *dramatically* increase your desktop performance. Complex illustrating and page layout is no longer a *drag, click and wait.* **TURBO16** will increase your ST's speed from 8MHz to a *blazing* 16MHz. A state-of-the-art 16MHz processor and 32k high-speed cache memory add the power that lets you *soar.* **TURBO16** is fully compatible with standard ST software, including *Spectre 128* and *pc-ditto*, and **TURBO16** makes games *fly.* **TURBO16** has a far greater effect on productivity than a hard disk, and at **$299 suggested list**, a far lesser effect on your wallet.

Easy To Install, Easy To Use.
TURBO16's installation requires only the removal and replacement of your ST's 8MHz 68000 chip, and connection to the ST's MMU chip 16MHz clock. That's it! The low profile package will not interfere with other upgrades, and **TURBO16**'s special features optimize your ST's operations. **TURBO16**'s speed can be controlled by way of an optional, dealer-supplied hardware switch, auto folder program or desk accessory. Take full advantage of your ST's power with **TURBO16.** See your Atari dealer today, or contact Fast Technology.

TURBO16 is a trademark of Fast Technology. **Atari** is a registered trademark and **ST**, **520ST**, **1040ST**, **MEGA** and **STACY** are trademarks of Atari Corp. **Spectre 128** is a trademark of Gadgets by Small, Inc. **pc-ditto** is a trademark of Avant-Garde Systems.

We won't tell.

License to Kill

Mike Bonkowski (MACE)

Drat! I'll get you! Take that. And that! No, I'm out of bullets. I'll make a run for it! You @*/$, you shot me in the back. I'll get you back, you %&*(#! in a minute.

License to Kill from Domark Limited is an action game that very closely follows the latest James Bond movie. It is a multi-level, multi-role game in which you control helicopters, boats, tankers and even has a part where you bare-foot waterski behind a plane, something I wouldn't ever try in real life!

The game opens with you flying a helicopter, shooting at snipers on top of and inside buildings and trying to get close enough to headquarters to attempt to capture Sanchez, and evil drug smuggler.

When you are dropped off the chopper, you must fight a running gun battle to return back to the chopper, because Sanchez is trying to escape in a plane. This isn't easy, because you have limited ammo and the only way to replenish it is to shoot the enemy forces. And not all of the forces carry extra ammo.

You can also shoot at the oil drums. After four shots, they explode, obliterating any forces around the drum. Must be nitro or acid in there! The people literally evaporate! Once in the chopper, you must tie a rope around the tail of the fleeing plane—in under two minutes—or you loose a life.

Then, you must fight frogmen and boats to catch up to the pontoon plane that is taking off. After stealing a harpoon gun and spearing a pontoon, you take off waterskiing, dodging rocks and buoys to gain control of the plane. Are you having fun yet? Good.

Finally, you drop from another plane to an 18-wheeler to battle Sanchez. You have to dodge other tankers and jeeps, which are firing missiles at you.

I have killed two joysticks already in this game—thank goodness I have a "License to Kill." I know, that's bad, but I couldn't pass it up. Ok, I could have, but....

This is an intense game. The enemy forces never run out of bullets, and you can only carry three extra clips plus the one in the gun itself. Should you attempt to carry any more, the clip disappears. And your bulletproof vest allows only five hits before you die.

Thankfully, you are given a total of 5 lives at the beginning, however more would have been nice.

Graphics are outstanding. Buildings, planes and even the ground are nicely detailed. The game screen almost fills the entire screen, except for a small strip along the left side which shows the important statistics for each level, like lives, bullets remaining, oxygen left in tank and miles remaining—all visibly displayed.

I only have two qualms with this game. If, or should I say when, you get kill in a level, you are sent back to the beginning of that level, not where you were killed. Arrggh! And, like most programs from Europe, it is copy-protected. But, the protection is not that bad, unlike other programs I have used. I would recommend this game to anyone who likes almost non-stop action. If you will excuse me, I have a brand new Wico to kill.

NEAR--US REGIONAL MEETING

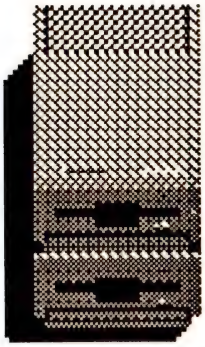
Rick Deen (SPACE)

On Saturday, February 17, 1990, approximately 23 officers representing eight Users Groups from throughout the Mid-Atlantic states and Germany met at the Bell Labs Research Center Auditorium in New Jersey. The main goals of this meeting were to discuss the sharing of information; increasing communications between Users Groups; strengthening Users Groups and providing users support. An alliance was formed by the representatives of these eight clubs with the hope of attracting more groups as their momentum grows. The alliance took the name North East Atari Regional - User Support group, or NEAR-US for short.

Some of the short term goals include setting up a communication network through the use of BBS network nodes; providing a regional newsletter to the affiliated clubs (detailing contacts with each User Group, meeting locations and dates, officer names, action within group Library and BBS's). The group decided upon a $10 registration fee to provide monetary assistance for the quarterly newsletter. Tentative meetings are being scheduled on a quarterly basis.

The following clubs participated in the initial meeting: Jersey Atari Computer Group, Lehigh Valley Atari Users Group, Atari Berks Users Group, Long Island Atari Users Group, Old Hackers Atari Users Group, North East Atari Team, South-central Pennsylvania Atari Computer Enthusiasts, and PA Bit Byters Atari Users Group from Germany.

If your group would like more information, contact Ron Motley at: Lehigh Valley Atari Users Group, P. O. Box 1307, Allentown, PA 18105 Phone: (215) 433-6685.



IN YOUR DRIVE # 27

Good Ol' Chet (ACCD)

It has happened! I warned you! There's no new software around STella (our pet ST), nor Mnemosyne (our arrogant 800XL) to write about. I'm broke! I can't afford to keep buying new products just to keep you folks reading.

For some reason, my wife insisted on spending our money on *food* instead of software. What a radical concept! So...nothing to review.

"Thank Fuji!" I hear you each cry, eh? Well, forget it! You're not getting out of this *that* easily!

Instead of some software, hardware or any-kinda-ware, let's talk about a book you need to read. Your users' group should have a copy; it comes on disk. If they don't have one, you can download it from AIM's BBS. Look for the file REVOLT.ARC and get into the Revolution.

Somewhere, *The Revolution Handbook* got the reputation of being radical and/or dangerous. A careful reading dispels these notions almost immediately. What we have here is an Atarian's version of Thomas Paine's "Common Sense," with a heartfelt attempt to put Atari on everybody's lips by the end of 1990.

"Heart" is the word for *The Revolution.* It's very easy to look at it and say author Donald Thomas could have come up with a better name for the revolution itself. "Revolution" is a negatively charged word, nor does it specify it's an *Atari* revolution to begin with. But when you're speaking from the heart, you often choose emotional words. Thomas speaks to us with words of extreme passion; he *cares* about these computers and our Atari community with a feeling that sweeps you up.

His calendar of events are, despite the passion, logical and workable. They might NOT change the tide of the Atari community in our favor, but odds are the Revolution will do quite a bit of good.

One way or another, The Revolution WILL change the way that we look at our users' groups, the way Atari looks at each of us and the way the rest of America looks at Atari.

It's a good cause. No, it's not up there with housing the homeless, saving the whales or serving your community...but, oddly, it can lead to work which will do just these things. Thomas urges commitment to your fellow Atarians. Such a commitment can only lead to a stronger community, both within and outside of our users' groups.

There is *so much* we can do for each other and for our non-Atarian neighbors. Won't you please pick up a copy of *The Revolution Handbook* and read it?

(A personal aside to Donald Thomas -- Yes, I know you said a monetary contribution to the effort isn't mandatory. But I WILL be sending $15 in two paychecks' time. Your concerned efforts should not include using your own funds for the mailings, etc. I urge everyone who has read and joined The Revolution to help out by a contribution.)

How about that? Almost an entire IYD without a lousy joke? Guess it's time for me to say:

Jeep!
Chet

COMPUTER FORGERY

Alan Brewster (BACE)

"The computer will change the way we do business... The computer will revolutionize banking... Use of the computer will affect every aspect of our lives..." All of us have heard these predictions and have seen them come true as the cost of the medium has reduced.

Then, there's always those who charge Big Brother will misuse the computer's abilities. While this article is about the misuse of the computer, it's not about Big Brother.

Desktop publishing is the forger's greatest boon. Because computer equipment is readily available and reasonably cheap, the forger can work in the privacy of his own home (reducing the likelyhood of getting caught) and making a quick return on his investment.

In fact, the Secret Service has just stumbled across one such "enterprise," and it was their first case of this nature. Using a personal computer, a scanner, and a laser printer, the forger produced a phony letterhead, several bank checks, and a couple of cashier's checks.

By using essentially the same process, a Forbes Magazine reporter produced a phony Forbes check. Although the article did not indicate if the check was actually submitted to the bank, it did graphically demonstrate how close the forgery looked to "the real thing." [Forbes, 27 Nov. 1989]. And NO, the article is not a "how to" manual.

One of the reasons a forgery of this type is difficult to detect is due to the increased legitimate use of computers in the business world. There are ways to make your business less vulnerable to this type of fraud.

1) Use checks with a minimum of two colors. Select colors that are more difficult to reproduce such as blue or yellow.

2) Request your check supplier to show you a variety of "safety paper," (that is, paper with the cross-hatch pattern that will not photo-copy well.) Then choose a paper that is not in common use. Green and blue are the most common safety paper and is used for checks and prescriptions.

I would select a less used color paper such as pink. Also inquire if it is available with a watermark. This reduces the availability of the supplies necessary for a forger to make a successful copy *easily*, so he/she may decide to go after another business instead.

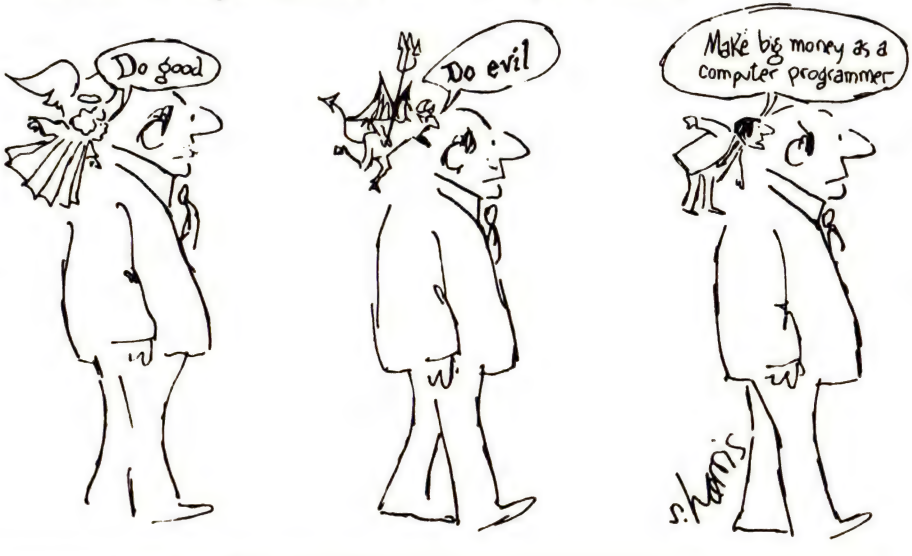
3) Make sure your check has something...anything...printed on the back. A couple of lines for endorsement, or a release such as insurance companies use will do.

These lines are usually gray and appear so because they are "screened." In other words they are just like photos in the newspaper, made up of small dots, but are actually printed with black ink.

4) Have your checks embossed with your logo. Although this is initially expensive, it is the most effective single option one can take to thwart the forger. The cost of the die for the embossing will vary according to the size and complexity of the logo, but it will also make for a classy check. You might even be able to use the same die for your letterheads and envelopes.

Practically no bank is prepared for this kind of forgery according to the November issue of Forbes magazine.

If you can't take the above listed precautions, don't worry too much. The banks are the ones who have to take the losses, and consequently *they* will institute the changes necessary to safer guard everyone's money.



Do good
Do evil
Make big money as a computer programmer
s.harris

The Right Brain

Paul Stampfli (El Paso)

Well, greetings and salutations. I didn't get my article printed last month. AIM is getting bigger, better, stronger, faster, and I guess there wasn't room for me. But I'm happy to see that the articles that were published were of excellent quality in all areas.

AIM

I want to thank Bill and Pattie Rayl for their efforts with AIM. They are doing a superb job. With the change to Pagestream 1.8, and the improved timeliness of their deliveries, (I got mine three days before the meeting in February), I don't think I could be more satisfied with the service.

Our club made a good decision in going with AIM. I hope that Bill and Pattie can continue their excellent business. I also hope they are making a profit from it. After all, in the final analysis, profit is the name of the game.

Atari and Profit

Speaking of profit, one of the things that caused a lot of debate in the February club meeting was the recent turn of events at Atari. If ever a company seemed to not *want* to make a profit, it's Atari today.

I understand, (*rumor*) that they fired all their district salesmen all over the USA. Jenkins', our one and only authorized, or unauthorized for that matter, Atari dealer in town hasn't gotten any Ataris since mid-December. Come on folks, how can a business stay in business without product? I can see it now, "Step right up folks, see the Atari, the machine that we've been telling you about, the miracle of the '90's."

"Sure is great, I'll buy one!"

"That's wonderful, just give me your money and we'll get it to you whenever, if ever, they make anymore, I've got this display model Mega, and a used 520ST, course now boy, I can get you a Portfolio, but it'll take two weeks and we don't have a clue if they are going to change the model next week, update, improve it, or just drop it all together in favor of a different design." Scary, isn't it?

I heard on the news a few years ago, and darned if I can remember who said it, but basically the quote was "A *recession* is when your neighbor is laid off, A *depression* is when *you* get laid off." That's about where we are now.

The rumor on the street is that Jenkins' has about had it with Atari and is considering going to MS-DOS only, or MS-DOS and Amiga, and dropping the Atari line. If that happens, the closest Atari dealer will be two days away by car. Think about it...

That brings me full circle to the perplexing question of mail order. There is zero doubt that mail order hurts retail stores.

Mail order is cheap, fairly fast, generally doesn't charge tax, will take credit cards without a surcharge, and the *reputable* companies try very hard to make sure the customer is satisfied. The potential to get ripped off very badly does exist. You must know with whom you are dealing.

Retail stores are generally considerably more expensive than mail order, generally have instant availability, sometimes charge a surcharge for use of a credit card, and the *reputable* companies try very hard to make sure the customer is satisfied. The potential to get ripped off very badly does exist. You must know with whom you are dealing.

So where does that leave us. Why even bother dealing with a retail store when mail order is available? Well, when was the last time you could call a mail order business and get a support question answered? What is the actual responsiveness of the program, and how good are the graphics, really?

Would a mail order business have loaned my operation a Portfolio for thirty days to try out to see how well it integrates into my office? With no charge, no fault, and no questions asked? Jenkins' did, because they want to keep their customers coming back. Think about it...

When I go shopping for computer stuff, I am CHEAP. My goal is to get off as light as I can and try to save a buck at every corner. But I have to stop and think about it now. Is it better in the long run for me to give a mail order company $100 dollars for a cordless mouse, or to give Jenkins' $129.95 for it? Or can I maybe cut a deal with Jenkins' and get it for a few bucks less?

I deal with the local dealer every chance I get. If I can get within a few percent I buy locally and try to make my bucks count as much as I can. Now it looks like Atari, the very company I support with my bucks, has taken care of the local, authorized, dealer situation for me. Thanks a lot guys!

IS THERE A TACTICIAN IN YOU? PART III

Tim Feenstra (GRASS)

Early on the morning of July 1, a small force of around 6,500 men, under the command of General Heth came into contact with a force under the command of General Wadsworth. Heth was looking for supplies, and shoes, for the forces under R.E. Lee, who was in Pennsylvania trying to take advantage of the disarray in the Union Army.

Wadsworth was patrolling near the city of Gettysburg on reports of Confederate activity and had taken up a position along McPherson's Ridge to halt any advance into Gettysburg. With less than 4000 men, Wadsworth was given assurance by the corps commander, Reynolds, that a strong infantry force would be there by afternoon.

The battle that started that morning in 1863, lasted for three days and grew to include 150,000 men from the Army of Virginia and the Army of the Potomic. For three days, each side poured in every available unit and vied for the advantage—the high ground around Gettysburg.

The Gettysburg System

Gettysburg is the namesake to the series of games we'll cover here, which means they all use a "system" first developed for Gettysburg: The Turning Point. Each game in this series plays about the same, with only minor rule changes to reflect improvements to the playability and realism of this system. From their release, they have been called some of the best wargames available for computer gamers. With five games in this series, this column will be devoted solely to them.

First, the gameplay of all five is very similar, so let's cover that in one area so as not to repeat it several times. The map scale is from 100 to 200 yards to the hex, and the units are Demi-brigades (1/2 brigade). I think the units are divided like this to cover a more realistic area with each brigade, which could be as many as 2,000 or more men each. Each turn is from 1 to 2 hours realtime, depending on the game, and is split into double movement orders phases for each player.

If you play the beginner level, you can even use the joystick to move your units, but some of the realism is lost in this level. In the intermediate and advanced levels, you use the keys 1-8 to move your units in the desired direction. There is usually a compass rose (a diagram of the direction for each number) at the bottom of the screen alongside the orders menu. To move a unit, place the cursor on that unit and press the space bar to get that unit. Pressing the 1-8 keys will now move the unit, until the movement points for that unit are exhausted.

While in the map mode, the text area at the bottom will show the locations X,Y coordinates, the terrain type, the elevation, and the time and date of the turn and which phase it is. While scrolling in map mode when playing with hidden units, remember that only units that are visible to your units will be displayed on the map. There could be a whole division behind a hill, in a woods, or moving around behind you if you don't watch your flanks. Of course you could play without hidden units in which case all units for both sides will always be visible, but what's the realism in that?

Unit Mode

When you access or pick up a unit, the text area will display information about that unit. The unit's name, number of men, location in X,Y format, ammo supply, morale, mode, movement points, terrain, and facing are shown as well as whether the unit is disrupted, set to melee (an assault after firing), or set to advance after the enemy retreats from the objective hex. The target hexes X,Y location is also displayed. Pressing P will display page 2 of the stats, which include fortification level, command control ratio, efficiency, fatigue, which weapon the unit has and the corps commander.

When in unit mode, you issue that unit its orders by moving the unit, assigning targets and changing mode. When playing the advanced level, it is a good idea to keep your divisions together or the command control ratio will go down and so will their efficiency. Now let's look at the games themselves.

Gettysburg: The Turning Point

The Battle of Gettysburg, 1-3 July 1863, started out with one division on each side, facing each other on opposite sides of Willoghby Run, a stream a little west of Gettysburg. The first day found the Union forces outnumbered, just trying to hold the Confederate advance. However, before the end, there were 84,000 men committed to the battle, 12,000 of them cavalry. The Confederates, frustrated by the strong defense of the Union forces, committed 67,000 men to the defeat of the Union force that reports had stated amounted to no more than a corps. In reality, the union army fielded 7 corps, and a cork of cavalry. The Rebel forces consisted of the 1st, 2nd, and 3rd corps of the Army of Virginia, a cavalry corps and a support corps of 8500 men.

This is an excellent game, played from either side, as there are possibilities for victory with a little luck and sound tactics for both sides. Playing the south, advance as far as possible on the first day, keep the north retreating as long as you can. Victory will depend on the capture and defense of some key hills just south of Gettysburg, and the Union will outnumber you on the second and third day of the battle, so you must have taken your objectives by then. The north must simply survive the first day, while keeping the Confederates to as little an advance as possible, your main forces will not arrive until the second day, so you will be hard pressed to hold up the Rebs.

Battle of Antietam

On 17 September 1862, General George McClellan had carefully cornered R.E.Lee at the city of Sharpburg. This was to be his battle, for up to this point, his victories had been few and costly, some called him over-cautious. With a force of 67,000, he had the Rebel forces back to the Potomic River and planned on the defeat of the south in one fateful blow. Using the same cautious assaults he was criticized for, he committed his forces piece-meal, allowing the Rebs to get numerical superiority at the point of contact.

R.E.Lee, trapped between the river and the advancing Union army, had no choice but to position for the attack he knew would come on the morning of the 17th. His 35,000 men were outnumbered almost 2 to 1, but using the terrain and defensive positioning, he was able to meet the advancing units with equal or greater numbers and hold the line against McClellan's drives.

How this one comes out, I'll leave to you. It is a very interesting game, the Confederate forces are not able to ward off a full frontal attack and still keep their flanks covered for an encirclement. But that is not how it happened that day in 1862. One of the play options will recreate McClellan's piece-meal assaults by allowing only a set number of divisions active on a given turn. Of course, you can play without that limitation.

Rebel Charge At Chickamauga

The Army of Tennessee, 52,000 strong, moved into position to defend the city of Chattanooga. Under the command of General Braxton Bragg, they were to seek out the Union Army of the Cumberland, a 50,000 man force under the command of General William Rosecrans, who had been driving toward Chattanooga for some time and had sent the last of the area's defenders retreating south. The two forces met in the heavily wooded area between Chickamauga Creek and Missionary Ridge.

The very limited sight distances over most of the battle area posed several problems for both sides, the enemy force locations were impossible to know until the units came within the limited contact distance afforded by the wooded cover. The small superiority the C.S.A. had was negated by the fact that the Union forces were concentrated with the Rebel units in a circular pattern around them.

This game allows for several small battles if you and your opponent's forces get spread out over a large portion of the map. Flanks and surprize attacks are just part of the tactics that can spell defeat for the player not ready for what comes out of the woods.

Shiloh:Grant's trial in the West

I do not have, nor have I played this one, so all I can tell you is that it is the Battle of Shiloh, which took place 6-7 April 1862, and that it was historically one of the decisive battles of the war. One feature here that is not in the other games, is the 2 Union gunboats that can be used to bombard enemy positions while your forces are moving up to new positions or perhaps retreating under heavy fire. I look forward to getting this one soon.

Sons of Liberty

The last entry is not from the Civil War, but from the Revolutionary War, and has not one but three battles included. Bunker Hill, 17 June 1775, places an American force of 3,000 on the defensive positions of Breeds and Bunker Hills against 2,700 elite British. The battle lasts for one day, and you do well if you can keep them from advancing past you onto Bunker Hill which is the key to controlling the whole area around Charlestown.

On 19 September 1777, 7,000 Americans clashed with 5,500 British near the Hudson River in an area known as Freeman's farm. Remember, the British troops are the best in the world, and the Americans are a ragtag collection of men with the desire to be free from the rule of a king thousands of miles away.

The last scenario is Monmouth were more than 12,000 Americans and 8,200 British fought near Monmouth Courthouse and along the Weamaconk Creek ravine. There is a lot of cover along the creek, and the extra Americans can be used to keep the British spread out to avoid a flanking move around north of the ravine or south of Wemrock Brook.

Sons of Liberty plays like the other Gettysburg series, with weapon ranges and unit morale and efficiency adjusted to suit the period of the 1770's.

These are excellent 2 player games. The computer, though tough, follows the same strategy. A human is very unpredictable.

Good Luck, have a glorious battle!

THE BASICS OF BASIC

Rich Burton (P3ACE)

Now that we have established a connection between SETCOLOR and COLOR commands for drawing lines on the screen, it's time to use SETCOLOR registers for text. On with another "graphic illustration" of the characteristics of color. Once again, sitting down at the old 8-bit as you go through these concepts is the easy way to become a proficient video wizard.

Accessing SETCOLOR registers with text happens in GRAPHICS 1 or 2. (The text window will be eliminated by adding +16 for now.) Printing large text to the monitor in these GRAPHICS modes takes a special PRINT command that looks like this:

```
PRINT #6; "text to be printed"
```

The group of characters following PRINT is essential to accomplishing this specialized printing, but SETCOLOR registers are accessed by the style of characters within the quotes! In GRAPHICS 1 and 2, as in the other modes, SETCOLOR registers contain "default" colors and brightnesses. Here's the registers and corresponding character styles:

SETCOLOR 0: contains orange - access with uppercase characters
SETCOLOR 1: contains light green - access with lowercase characters
SETCOLOR 2: contains dark blue - uppercase inverse video characters
SETCOLOR 3: contains red - access with lowercase inverse video characters
SETCOLOR 4: contains black - controls background

Now we can have our cake and eat it too! Various colors of text at the same time. This is very similar to the lines drawn last month

```
10 GRAPHICS 2+16
20 POSITION 7,4
30 PRINT #6;"ORANGE"
40 POSITION 7,5
50 PRINT #6;"green"
60 POSITION 7,6
70 PRINT #6;"BLUE"
80 POSITION 7,7
90 PRINT #6;"red"
100 GOTO 100
110 END
```

You will need to type blue in line 70 and red in line 90 with inverse video. Run this program and there you have it...another fine "graphic illustration" of pixel power. Stir up a new color in register 3 by typing:

```
85 SETCOLOR 3,6,6
90 PRINT #6;"violet"
```

Don't forget to type violet with inverse video. That is a designer text if ever I saw one! Let's shrink-wrap them by changing line 10:

```
10 GRAPHICS 1+16
```

I would like to encourage all budding artists to experiment, dabble and fool around with these commands. 'Nuf for now. Join me next month for more "graphic illustrations"...

Limited supply

1050s (reconditioned) **$165**

Koala Tablet replacement black membrane pads only $15 each

Have Stacy—Will Travel
Bob Brodie Comes to Michigan

Pattie Snyder-Rayl

On the weekend of Feb. 17 and 18, Bob Brodie was in Ann Arbor, MI attending several meetings of computer enthusiasts.

Bob came to Michigan to talk to Atari User Groups and a Macintosh User Group, and he showed off the STe's color and sound capabilities as well as the Stacy, Lynx and Portfolio.

He was invited by the MAC-Technics Macintosh User Group based in Ann Arbor to demonstrate the power and flexibility of the Atari Stacy portable computer and the Spectre GCR from Gadgets by Small on Saturday, the 17th. He spoke in a large university lecture hall filled with approximately 400 Macintosh enthusiasts.

"The room was very intimidating," Bob said afterwards. "But the audience was very courteous and even the president of the MAC-Technics club was emphasizing the strengths of the Atari ST line.

"When I told the group they could purchase a complete desktop publishing setup, Mega 4, Atari Laserprinter, Megafile and software, for under $4,000, there was an audible gasp. The president then added 'This is half the cost of just an Apple LaserWriter.' Everyone seemed amazed at the price of the Stacy4, with 40Meg hard disk."

After the meeting, Bob said the Macintosh people came to him and tried out some of their software on the Stacy, and it all ran with no problems. He said that made him feel gratified, and he hopes to tell David Small as soon as he gets back to Sunnyvale.

On Sunday, Bob Brodie met with Atari enthusiasts. The meeting was a more modest and simple one, but Bob made himself just as much a hit with the Atari owners as he did with the Macintosh. He demonstrated the Stacy and the new MegaFile 44, a removable cartridge hard drive where each cartridge holds 44Megs of data.

He tried showing off the STe's improved color capability with a European demo on a large color monitor, but the demo didn't seem to want to work as it had on the regular Atari color monitor. However, the stero sound on the STe was very easy to demonstrate.

He also showed off the Portfolio, saying he didn't understand the appeal of the "palm-top" at first, since he's first and foremost an Atari Enthusiast. He jokingly said when he heard the Portfolio was being considered being produced with 512K memory, he asked when GEM would be put in.

The appeal of the Portfolio isn't really a mystery, he said. The majority of computers in the US are IBM/MS-DOS machines, and there is a need in the computer market for what the Portfolio has to offer MS-DOS users. The reason DOS 2.11 is used in the Portfolio, is because later versions had self-modifying code, and when they tried to write to ROM...problems!

Bob talked about the "Power of Advertizing" article written by Tim Holt of the ST Club of El Paso (see the Jan. '90 issue of AIM). He said the premise of Tim's argument was a little off. Bob said the Portfolio isn't selling as good as it is simply because of advertizing.

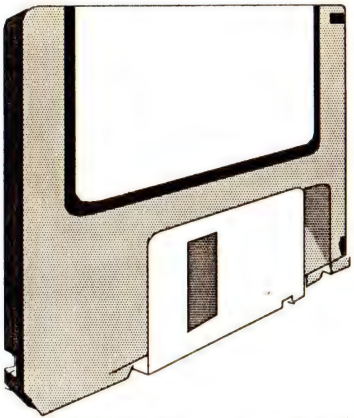
The Amiga ads at Christmas, he told the group, were projected by Commodore to increase Amiga sales by 38 percent to justify the expense. The Amiga sales figures for that period turned out to only increase by 10 percent. So advertizing alone isn't the answer, he summarized.

As far as Atari's advertizing, Bob said in April, a 520STfm package called the PowerPack or Advantage will be "test marketed" in the Los Angeles area. In that area, there will be advertizing, such as there is now in New York for the Lynx. The Lynx is soon to be distributed nation-wide by others than Sears, and once this happens, Bob said we should be seeing Lynx ads across the country. He showed the current Lynx ad, and had the Lynx going so people could hear the sound quality (the screen is hard to show a large gathering).

Bob fielded many questions about the overall state of Atari once he was finished demonstrating. Questions focused on what Atari was doing to support users and dealers. Bob's answer was Atari is slowly making changes, which he is comfortable with. He thought changes were being made by the simple fact Atari is being "taken over" by Atari enthusiasts, rather than people who only used an Atari computer at work.

One of the last questions to Bob at the Sunday meeting was, "Why has it taken so long to get someone like you at Atari?" Bob said he was very flattered by the quesion.

[Ed.Note: Bob finished his Michigan visit by going to Grand Rapids and STING and ending at MACE in Southfield. Clubs can contact him at (408) 745-2052 or Bob-Brodie on GEnie and 70007,3240 on CIS to arrange visits to their area.]



AIM Disk of the Month

All files on this disk are self-extracting LZH archives. To use these programs, simply copy the files on this disk to individual floppies with plenty of free space (or a hard drive) and double-click the files. The files will then automatically unarc themselves into the actual runnable programs.

Readers can purchase this disk by subscribing o the AIM Disk of the Month, contacting one of the AIM participating clubs or by sending $6/disk to Unicorn Publications, 3487 Braeburn Circle, Ann Arbor, MI 48108. Please specify the March 1990 disk when ordering.

ANDURIL.TOS—A German PD game similar to Bubble Ghost. MONO ONLY.

BELLUM.TOS—A Space Invaders type game from the UK with excellent graphics and sound. Fast and furious joystick action! Lowe rez color only.

BIGSCR.TOS—This nifty little program has been out for awhile, but a lot of people have been asking for this one. BigScreen creates a virtual screen in memory (such as 1280x960) and maps the normal screen into it as a 'window'—you can then scroll around on a "big" desktop. Requires TOS 1.2 or higher.

BLOCKADE.TOS—Alien Blockade is a Qix clone from Europe and features background pictures that reveal themselves as you play. Low rez color ONLY.

DICTNARY.TOS—Diction is a spell checker program that uses a dictionary constructed from your personal text files. Allows simple text file editing. Shareware. Runs in medium or high rez.

GEMINI.TOS—Gemini, a replacement desktop from Germany. Shareware. Features include placement of icons on the desktop, recoverable trashcan (get files back after deleting them), built-in command line interpreter (CLI) and MORE! Comes with a Clipboard accessory and a PD version of GDOS! Requires at least one Meg of memory and TOS 1.2 or higher.

GOUP.TOS—Imported from Germany, this LodeRunner-type game allows 1-4 players and has a built-in screen editor for creating your own levels. Mouse or joystick. Monochrome ONLY.

HOSPITAL.TOS—A collection of programs put together in the UK for dealing with viruses. Includes a memory resident anti-virus program, anti-virus checkers and utility programs. Works on all STs and has full docs.

INVADERS.TOS—This is a good version of the classic Space Invaders from Germany. MONO ONLY.

OH_CRAPS.TOS—This is a full-fledged, graphic simulation of Craps, Vegas and Atlantic City style. If you're trying out a new betting system, or learning the game in preparation for a gambling junket, or you just want to play craps, this game is for you. Low rez color ONLY.

POLICE.TOS—This great little desk accessory can really get on someone's nerves...so put it on your friend's ST and watch him/her go nuts! About every 30 seconds, you'll hear the distant sounds of a police siren and a police car drives across the bottom of the screen. MONO ONLY.

QLOCK.TOS—Quick Lock allows you to write protect floppy disk drives and hard disk partitions individually, to prevent accidental or intentional erasure of files. It also allows you to READ PROTECT a drive, preventing unauthorized users from accessing hard disk partitions or copying files to floppy while you're not looking. Password protection allows authorized users to access the protected drives. The program will protect your drives even if the computer is rebooted. Docs included. Another great program from Branch Always Software.

QUICKTOS.TOS—Ever had problems with a program not running on the latest version of TOS? Tired of having to boot old disk versions of TOS from floppy? QUICK TOS allows you to copy the disk versions of TOS to your hard disk, and run them from the hard disk. Go from TOS 1.4 (or TOS 1.2 or TOS 1.6) to TOS 1.0 in 2 seconds! Also works with the disk versions of TOS 1.4. Freeware from Branch Always Software.

ROULETTE.TOS—This is a roulette simulation that gives you the feeling that you're really there. It follows Vegas and Atlantic city rules. A stat screen will help you if you're trying to nail down a system. Let me know like it. Low rez color ONLY.

RT_MOVE.TOS—This program enables you to move files on the Desktop in TOS 1.4 by holding down the right mouse button instead of the control key.

SALVAGE.TOS—Salvage assists in recovering text files from floppy disks when the FAT tables or Directory on the disk has been trashed. The program scans all the sectors on the floppy disk and displays the first 70 characters stored in each sector. ASCII files can be recognized and the parts recombined into a legitimate file with very little effort on your part.

SEQUENCE.TOS—A 16 track MIDI Sequencer. Works in both color and monochrome, with features galore and full docs. Shareware.

ULTRA.TOS—This program will "ARC" complete disks into a single file. Great for those demo disks with "Hidden" directories that can't be accessed or copied by TOS, such as some of the great demos from Germany.

WHATIS36.TOS—WHATIS 3.6 recognizes 59 types of files: ARCs, LHarcs, PRGs, pics, animations, etc...no more "what kind of file is this?" problems! Runs as a PRG or an ACC (just rename the file) on any ST in any rez. Written by CompuServe sysop Bill Aycock.

The Atari Boosters League East (ABLE) is one of the more persistent Atari users clubs, meeting monthly with enthusiasts since the summer of 1981. ABLE provides user support for all Atari computers except the Portfolio and PC line. The purpose of ABLE is to advance the knowledge of the membership through mutual education and the interchange of ideas.

General meetings are held in the Palm Magnolia Room at the Orlando Public Library, 101 East Central Blvd., on the last Sunday of each month from 1:30 to 4:30 P.M. ST SIG special interest meetings take place in Room 134 at the Bush Science Center on the Rollins College campus on the second Wednesday of each month from 7 to 9:30 P.M. Ad hoc meetings are scheduled as needed to present speakers, conduct special workshops, provide tutorial seminars and for parties. We assist members in service and software problems, as well as arrange group purchases and discounts.

Information is disseminated to members through our newsletter, the ABLE Atari Information Digest (ABLE AID). A package of twelve selected previous issues of ABLE AID highlighting the "super eight" computers is available for $10 ($5 for members). In 1990, ABLE began participating with a consortium of Atari User Groups in helping produce the Atari Interface Magazine, a quality monthly publication with obvious broader scope and greater depth of the issues. There is still a place for local ABLE AID information and our local authors will have an opportunity for national exposure.

ABLE maintains a hardcopy library for members of all public information released concerning their computers by Atari, as well as complete files of most Atari relevant magazines, such as Antic, ANALOG, Atari Connection, Creative Computing, COMPUTE!, ROM, Atari Explorer, ST Applications, STart, ST-Log, ST Informer, ST World, MAM/AIM, ST X-Press, Shareware Connection, Atari DTP, Current Notes, ACE, MACE and PHOENIX.

We have also established an ABLE Program Library of User Software (ABLE PLUS), consisting of several thousand files for the super eight and sweet sixteen computers. This library contains public domain programs contributed by ABLE members, as well as other computer clubs and users, to allow the sharing of user-written software. A computer specific listing is available to non-members for $3 and disks are available to non-members for $6 each.

ABLE maintains a telecommunication service for members.

ABLE accepts written correspondence at P.O. Box 1172, Winter Park, FL 32790, while membership inquiries are handled by Hadley Nelson, President, (407) 671-0317 or Milton Eager, Treasurer, (407) 834-0581. Annual dues are $12.

And Now for Something Completely Different: A Stream of Consciousness About the Computerless Meeting of the Atari Computer Club of Denver

by good ol' Chet (who wasn't there, so this is heresay)

OK, so I was an hour late. (I now have a Tuesday night class!) I stayed in the background to hear what the chatter was about. Joe McWilliams, our Exec Director ("Exec Director" is an old Latin phrase meaning "Gullible Enough to Take the Job"), had passed out some information about *The Revolution* and its idea about using rubber stamps all over the place. Votes for the club sponsoring these rubber stamps went soundly against, though interest was high about the cost of making a stamp of the club logo. (I've since priced the cost of a stamp of club logo. Around $8 + tax.) Now, why wasn't there a computer? All eyes turned to (ulp!) good ol' Chet. Hadn't he told Paul NOT to bring Paul's misty old 1200XL, that he would bring the XEGS? Yes, he had. The rest of the meeting concerned tarring and feathering. Gosh, what excitement! Don't miss the March meeting and our Swap Meet! Since Chet will be late for IT too (That Darned Class!), let's see what trouble he can get into!

STIGS AND STONES for February Heresay and Lies about the ST Interest Group and Groupies

by Chet ("Nope! Wasn't there either!") Cox

Having just come out of some minor surgery, I didn't go to the STIG in February. Just as well; it was a week too early. Seems the Hampden Library had something Really Important scheduled on our regular night, so we had to go a week early.

To add to the gloom of the meeting (Everyone was SO SAD because I wasn't there!), Ed spoke at length about PC Ditto II. PCDII just plain doesn't work unless your name is Avant-Garde Systems. The rumor is that, since no two STs are alike, some minor difference somewhere in some ungodly chip causes a timeout for no particular reason. An upgrade/fix is either in the works, or out and about as you read this. Bottom line: members will not touch until the STIG gets a chance to try it out.

Ed says that the Universal Item Selector III is better, bigger, and runs nicely on TOS 1.4, though it works fine with any old TOS. The demo went over pretty big, as did Ultima V and Federation. Let me guess -- Joe Ronda demonstrated the two games, right?

Rumor time: Discussion was made of the new Atari "removable hard disk." Anyone seen it yet?

Now for the final punchline: there was no computer at the STIG either! Ed was running late, and hadn't the time to pack everything -- so he didn't. All this was being run on a "virtual computer," if you can *imagine* such a thing. Hey, WE did!

Starfleet February Meeting Minutes Feb 9, 1990-Arvada

Officers Present: Guenther, Robique

The meeting was brought to order at 7:25 pm in the banquet room at Denny's on Wadsworth. Between 5 and 20 members, officers, guests, and waitresses were present. Esteemed Newsletter Functionary Mike McCutcheon raised the first official topic of discussion by asking if everyone was happy with the delivery of Atari Interface Magazine. While everyone seemed pleased with the Magazine itself, only one of the members present had received his copy prior to the meeting. Several alternatives were discussed with no option being a clear cut favorite. Among the frontrunners were:

1] Poll the members of all the Club's branches to determine if any would prefer hand delivery of the magazine at the meetings. If a significant group was established, perhaps that many magazines could be shipped to Mike from the publishers for a "personal delivery." 2] Change the meeting time of the Starfleet branch. The new time would be published in AIM as "Next Friday" and would depend upon when one received his magazine. This idea needs some work. 3] Have AIM itself advance the cover date by one month thus assuring timely delivery but old news for everyone. 4] Bitch.5] Do nothing.

After the food hiatus the meeting resumed with a demo by new prez Chris Guenther. Longstanding members may remember Chris' version of "Wheel of Fortune," first written in BASIC. (Available in the Club Library.) What Chris had this night was a new version of the title screen written in ACTION. Members oohed and ahhed as the two screens were compared. Consensus opinion was that the ACTION version was "twice as fast." Thus ended the demo segment of the February Starfleet meeting.

"Small Discussion Groups" was the next item on the agenda. Members examined favorite topics with like-minded partners.

At that point it was noticed that CJ Bender, alias Ensign Crusher, was AWOL. Loud cheering and fireworks could be heard as the meeting broke up and the assemblage dispersed into the night.

A.C.C.T.

Atari Computer Club of Toledo is an independent user group founded in 1980. A.C.C.T. is the only Atari user group in the NW Ohio/SE Michigan area that provides help and support for and from both 8-bit and 16-bit computer users.

Club members receive, as part of their dues, Atari Interface Magazine and access to the 8-bit and ST public domain software libraries. Disks are $2/8-bit and $3/ST, non-members may purchase disks at a slightly higher cost.

A.C.C.T. meets on the second Monday of the month from 7-9 pm at Bassett's Health Foods, 3301 West Central Avenue (Westgate Shopping Center), Toledo, Ohio. 8-BIT SIG (yes, I said 8-bit) held monthly at the home of Jim Herzberg. Dates and times announced at meeting. ST SIG held monthly at the home of David & Brenda Micka. Dates and times announced at meeting.

A.C.C.T. may be contacted at 6107 Greenwycke Lane, Monroe, MI 48161, by calling Dave Micka at 313-241-1157 or Michael Justice at 419-242-7797 or via Fantasy Island BBS.

President:	David Micka	313-241-1157
VP & 8-Bit Librarian:	Michael Justice	419-242-7797
Secretary:	Sharon Hill	419-423-2135
Treasurer:	Rose Taylor	
ST Librarian:	Brenda Micka	313-241-1157
Fantasy Island BBS (3/12/2400)		419-691-6459

Greetings all from my temporary home in Napanee, Ontario, Canada. During my absence Mike has been doing an outstanding job in his capacity as V.P..

Although metting attendance has been down, the core membership has been keeping things together and running fairly smoothly. It was decided, at theFebruary meeting, the club would participate in the spring ComputerFestival to be held in April. Again we will have three tables set up with various systemsto demo the ST and 8-bit. Club promotion will have to be a big priority this spring if we hope to keep this club alive through 1990.

Calling all 8-bit system users... Our club was founded by and for 8-bit computer users and I know that there are still many of you out there. If anyone knows of these people please invite them to our meeting for we need their inputto keep the club moving and growing. As for the ST side we have members who still have very limited knowledge on all the capabilities of this machine and this is why we need input from the membership on what you want at our monthly meetings for they have degeneratedto simply social gatherings without direction, I see now why our former president became so frustrated with the club's performance in the last year she held that position.

I have tried to put forth some ideas on how to bring the club back to life but have come up with very poor response from the majority of the membership. Unfortunatly my job has kept me away for the past few months and so I must rely on my backup team to get the ball rolling. You all are getting this magazine so I know you are benefitting from this idea, so howabout some effort back to the club? A good time to show your support is coming up in April. I hope more than the usual 4 or 5 will help out. I am going to askthe club membership to change the table location at the spring show so we can better represent our club without getting crowded out around the front door.We will have better planning for this show, which will include scheduled demonstrations of more than just games and a more organized set-up of the systems including magazines, prices and availability of systems from the stores we visit the most often.

Thanks again to my wife Brenda and my V.P. Mike for the help in my absence. See you at the March meeting!!!!!!

FOR SALE
* Hybrid Arts Sympte-Track MIDI-sequencing softwarewith Sympte-Sync box__ used $300.
* Hybrid Arts DX-DROID librian__ used $40.
Jim Bergen (503)382-4554

ATARI FEDERATION

Presidential Proclamations by Phil Rominger

If you happened to miss Februaries meeting, you really missed a good one. And if you're planning on sitting at home during next months meeting, you may be missing the opportunity of a life time. The Club will be raffling/auctioning off two copies of Soft Logic's Page Stream. This is a Desk Top Publishing program, that is really outstanding and very easy to use. All if will cost you to get one of the two copies is a few bucks (a fraction of the original cost), and a small written review of the program to be placed in the newsletter. We will be covering several subjects that will be of interest to all members. One of these projects is the implementation of a club consignment table. As all of you know Jim Wooding had one at his store and it was very popular. If we can get this project off the ground, I see it as a means for the club to make a little money and for all of you to get or sell software and equipment. I don't want you to make a decision now, but keep it in mind and let me know what you think at the meeting.

I want to take this opportunity to thank one of our officers for all the hard work that he has done this month. Herb Kanner has been doing all the ground work for the Page Stream give away, and has worked many hours making sure that it all comes off without a hitch. Herb, also spent alot of time on the phone in the process of repossessing our 8-bit library. Thanks Herb.

Finally, to all of you 8-bit users out there. We have a new 8-bit librarian, so at the next meeting stop off and thank Theodore Tausch. He didn't hesitate to answer the call, when volunteers were requested for this job. I'm looking forward to seeing all of you at the March meeting - Happy Computing.

Secretary's Report Brian Pendergrass

Topics which were discussed at the 5 FEB 90 meeting were:The Stacy is no longer (at least at the moment) considered a laptop. The batteries don't last very long. Mega 2s are back ordered, and have been for a few months. Atari is currently shipping Mega 4 machines instead of the backordered Mega 2s. Speaking of back orders, Atari monochrome monitors are also back ordered. A shipment of 400 monitors is reportedly in customs as I type.

PC Ditto II is finally being shipped! But it also has a high failure rate. They were apparently getting so many calls and letter that they weren't answering anyone. The problem has to do with the revision of your particular computer. Revision D is the one that works, all others will probably experience problems. The problem has to do with timing and they are working on a software fix.

Now for some good news. Two Atari shows are scheduled for the coming months; TheWorld of Atari show April 6, 7, 8, in Anaheim. Also the AtariFest in Glendale will be September 15 & 16.

Computer Connection is now out of business. But Commstar, located in the Food 4 Less shopping center - Santa Maria, will be increasing their stock of ST software. They had always carried a few pieces of software but didn't have too much, not wanting to compete with Computer Connection. So drop in and voice your desire for more ST stuff, and buy something occassionally too.

Gus Maio donated another certificate for a free pizza from Dominos Pizza and an ST soccer game to be raffled off. The pizza was won by Herb Kanner. Only 3 tickets were sold for the game so it was held over to be raffled another day. Thanks again Gus.

Bob Ribbortone demonstrated PageStream, a new Desk Top Publisher. It looks pretty good. It has a couple of unique features as well as excellent print quality with a 9 pin printer. Speaking of PageStream, the club has received 2 copies of PageStream from the publisher. One copy will be raffled, auctioned (or something) off at the March meeting and the second copy will 'somethinged' off at the April meeting. So make sure you show up at these (and all) meetings to ensure your chance of obtaining this excellent program.

This month's ST disk of the month: EASYTEXT - a public domain DTP; IFFCONV - converts IFF pix to other modes

BACKGAMMON - need I say more? STARSTRUCK - a screen saver program with fireworks; ATARI DEMO - an old 520 ST demo; FLEXISORT - a sorting program

Please welcome two new members to the club; Margaret Swanson and Dan Liston.

Newsletter Notes by Jerry Sullivan

This will be our second month as a Participating Club with Unicorn Publications. As you have undoubtedly noticed AIM arrives to your door after the club meeting for that month. So if you have any announcements that you wish passed on to the general membership proir to a meeting be sure you submitt your article/announcement two months in advance before the 17th of the month.

As a reminder the next two club meeting will be held on MARCH 5th and APRIL 2nd, same time same place, Vandenberg Federal Credit Union the Village branch at 7:00 P.M. see you there.

Birmingham Atari Computer Enthusiasts

The Birmingham Atari Computer Enthusiasts of Birmingham, Alabama meets at the Vestavia Hills Library downstairs at 7:00 p.m. the second Monday of each month. Membership dues are yearly $20 for a regular membership,and $35 for a professional level membership.

Mark Bodenhausen	President
James Gilreath	Vice President
Brenda Bodenhausen	Secretary
Steve Yates	Treasurer

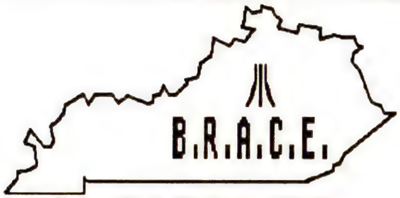
For membership information, contact Steve Yates, 1005 Candy Mountain Road, Birmingham, Alabama 35216.

Our BBS is at (205) 833-5012. This is both a voice and data line. To access the BBS, press 1 after the first ring. For voice, press 2. After 6 rings, 2 is automatically selected. The Atari oriented BBS supports both ASCII and ATASCII, 300/1200/2400 baud 24 hrs. On-line storage is 20 Meg, with 19 file areas for up and downloading, on-line games, books, articles, ads, magazines, E-Mail, F-Mail and other information.

In the meeting on February 12, a total of 19 members and guests were present, including one of the local dealers. The inclusion of AIM magazine in the yearly benefits was voted upon by the membership, and was overwhelmingly approved. The subscriptions should begin with the March issue and will run until December. This will be supplemented by inserts and newsletters from the club. A column of names and telephone numbers for expertise in getting help for a number of programs will be included in the newsletter. These experts can be called upon to help out those persons who are unable to get through to a customer support line in a particular program. Information for the IEEE Fair in Huntsville (which will include Atari, IBM, and Mac products), along with a schedule for the events for each of the days (February 16 and 17th), was also presented. There was a lot of interest in attending, and it was suggested that the members go Friday if possible to avoid large crowds.

A presentation of Universal Item Selector III was given. Its features and improvements over UIS II were shown.

The next meetings will be on March 12 and April 9 at 7:00 at the Vestavia Hills Library, downstairs. Demos will include desktop publishing programs and document processors for both the 8-bit and ST. AtariWriter 80 with the XEP-80, Newsroom, WordFlair, Atari's entry into the document processing field, Pagestream, Calamus, and Publisher ST are all scheduled for the next series of meetings. Strengths and weaknesses of each will be compared.



Bluegrass Region Atari Computer Enthusiasts

President	Hal Nason	(606) 269-8989
Vice President	Greg Parsons	
Secretary	Chris Dotson	
Treasurer	Vacant	
Librarian	Chris Dotson	
BBS Sysop	Rick Bradfield	

B.R.A.C.E. (Bluegrass Region Atari Computer Enthusiasts) meets the third Sunday of each month from 1 - 4 PM. The site of the meeting is undetermined at this time. The officers will be in contact with you in the future to advise you of the meeting site. Current membership dues are $15 per year for an individual membership, $20 per year for a family membership and $10 per year for an associate membership. (An associate membership includes receiving the monthly newsletter, but excludes the use of the library.) Members of B.R.A.C.E. have extra downloading privileges on The Abyss BBS (606) 223-2782.

BRAG ST

Buffalo Region Atari Group for ST's

BRAG ST was founded in 1987 to serve Atari ST owners in the Western New York area. General Membership Meetings are held on the third Thursday of the month at Erie Community College North Campus, Room S-105 in the Student Center. Setup begins at 7:00 PM; Meeting starts 7:30 PM. The Board of Directors meet on the the first Tuesday of the month at the Your Host Restaurant, Harlem at Sheridan at 7:30 PM. All are welcome to attend. Piracy will not be tolerated at any BRAG ST function.

BRAG ST, PO Box 1035, Buffalo, New York, 14225

Chairman	Mark Pierro	(716) 691-7844
Vice Chairman	Ken Malark	(716) 683-1272
Finances	Gerry Genson	(716) 877-1328
Records	Joe Rogozinski	(716) 877-8378
Disk Librarian	Carl Barron	(716) 885-4325
Public Relations	Harvel Hontz	(716) 689-8074
Graphics	Dick Kersting	(716) 839-0494

From the Chairman: BRAG ST joins the AIM family! We hope the membership approves of this new format to get the best news, reviews and insight as to what's going on in the world of Atari.

Annual Auction: This month the annual auction will be held in the Coffee Shop next to our regular meeting place, which should give us some more room this year to sell goods. Bring a friend and your unwanted Atari computer software or hardware and LOTS of cash -- there will be plenty of items for everyone.

April Events: On Sunday, April 1st (no foolin'), the second Canadian Atari Users Convention will be held in the Airport Hilton Hotel, Toronto Airport Strip, 5875 Airport Road, Mississauga, Ontario from 10 AM to 6 PM. For more info call (416) 425-5357. Details and maps will be available at the March meeting. Next, on April 28th, Atari's User Group Coordinator, Bob Brodie, will be visiting Western New York. Atari enthusiasts from Buffalo, Rochester and Syracuse will be converging on the campus of the Rochester Institute of Technology for what should shape up to be an interesting afternoon. There is still time to reserve your seat on the bus chartered for the event. The cost is estimated to be $10 per person. Please send in your check to the PO Box or bring it to the March 15th meeting. Please note that the deadline for reservations is April 3rd -- if we do not get enough members to sign up by then, your money will be refunded (and you'll have to drive there yourself!). Oh yes, don't forget our regular meeting on April 19th!

Proposed By Law Change: Article #13 currently reads: Annual dues for individual members shall be fifteen dollars, with a family membership available for twenty-five dollars. The proposed change would be: Annual dues for individuals and families shall be twenty dollars. The proposed change, if passed, would take effect July, 1990. See you at the Auction!

CACE

Cascades Atari Computer Enthusiasts

Cascades Atari Computer Enthusiasts is the Atari Club in and around the Jackson County area. The Main purpose of the club is to help inform new users and to promote the use of the Atari Computer in the community.

President	Brent Fisher	(517) 764-4599
Vice-President	Tim Hotchkiss	522-8912
Secretary	Joe Cripps	782-0199
Treasurer	Craig Schaff	787-3970

The CACE BBS is run by the club and is open to anyone with a modem. The number to call is (517) 787-4011. The current membership dues are $14.80 per year, and are payable at any of the CACE monthly meetings, or by mail to the PO Box. Club membership includes access to the entire club software and publication libraries, along with a monthly published newsletter.

Any written communication with CACE should be sent to PO Box 6161, Jackson, MI 49204. Our meetings are held on the second Saturday of the month from 1 pm to approx. 4 pm at Boos Center.

Fishin' Around by Brent Fisher

Welcome to yet another installment of my ramblings and missives.

We had our first meeting in the Boo's center in about two years. I have to admit it is nice to be back in Loomis Park. And just in case some of you haven't heard, we are now meeting every second *Saturday,* in the Boo's Center in Loomis Park. We are still starting around 1:00 pm. So come on out and check us out. And while I'm on the subject the next meeting will take place on Saturday March 10th. So don't say that I didn't warn you. Of course if you don't get your AIM until after the meeting, ok maybe I didn't warn you. So just in case you don't get this until late, the April meeting will be on Saturday, April 14th.

The great news department reports that the C.A.C.E. BBS is back up and running at 517-787-4011. We are now running under BBS Express! Professional. We have downloading for 8-bit, ST and Zmag/ZNET. So take some time and give us a call. The 300 baud connection problem has now been fixed, and we hope to see you all on-line soon.

Yesterday (as I write this), Bob Brodie from Atari, was in Ann Arbor to talk about Atari's new products. He showed the new game system, the LYNX, the Portfolio, STacy 4, and the new STE. Everyone there had an opportunity to use the new stuff, and I have to admit that I was impressed with what I saw. I have no doubts whatsoever that the LYNX will be an extremely popular item. The graphics on that thing would put some coin-op arcade machines to shame. Needless to say I did my best to make sure that the demonstration unit was in entirely working condition. I took a few minutes away from the LYNX to have a close look at the Portfolio also. It really is very tiny. If any of you have a VHS VCR at home, just take a look at one of the tapes and you'll see just how big the little computer actually is. The biggest thing that caught my attention is just how much software that Atari has packaged into the Portfolio. Now I know that some of you are saying just what is an STE. Well this is Atari's much improved (in the sound department, at least as far as I could hear) ST. Bob ran a demo that had the best sound that I have ever heard produced on a personal computer.

If you would like a bit more in-depth review of the brief mention of products that I have made, I'm certain that Bill and Pattie have an excellent article somewhere else in this issue.

One final thing that I should mention, is that Atari produced software should be available once again. I'm talking about such long lost gems as Atari Planetarium and AtariWriter+. So if your dealer doesn't have them in stock, have him call Atari or check your favorite mail order house, or I suppose that you could call customer relations yourself.

Well I hope to catch you all at the next meeting, until then have a great month.

Central Connecticut Computer Club

The Central Connecticut Computer Club is the oldest, still operational Atari club in the state. Conceived in December of 1980, and operational in January, 1981, the CCCC continues to serve the Atari community. New blood is welcomed, and of course, old hands are always welcomed back.

Meetings of the CCCC are on the third Wednesday of each month. The meets kick off at 7:30 and usually include presentation or demos of various hardware or software items. The meetings are held at Eastern Computer Video, 1207 Meriden-Waterbury Turnpike, Milldale, CT 06467.

Prospective members may call Rich Scheidel (203) 589-9035 or 589-3738. Failing that, call Tim Brandt, (203) 283-0500 or writeC-CCC, 127 Pinnacle, Bristol, CT 06010.

Dues are $25 per year, $30 for family plan. Includes Voting membership, newsletter, access to Club library (8bit and ST), access to club magazine library, discounts on computer and video supplies at Eastern Computer-Video, and access to the CLub message base at Ultra Project BBS.

COAC

Central Oregon Atari Club

- Dedicated to Central Oregon Atari Users and Enthusiasts Since 1986 -

President	Norman Moore	(503) 447-3598
ST-VP	Bob Kanski	(503) 548-8201
8-Bit VP	Marc Hitson	(503) 648-0513
Treasurer/Editor	Glenn Dulin	(503) 382-3956
Secretary	Nancy Kanski	(503) 548-8201

Address: Central Oregon Atari Club, PO Box 6824, Bend, OR 97708

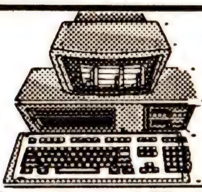
Membership dues are $1/month and $1/year for each additional family member. We meet every second Saturday of the month at 5:00 PM at the Ann Rita Conference Center, which lies just in front of the St. Charles Hospital on Neff Road in Bend.

Members, please keep an eye on your mailling label that comes with your AIM magazine. On your label you will find the expiration date of your membership. Be sure to renew your membership when you can or you may be left without an AIM in your life. A month early would be best to insure that you get your copy of AIM and keep an ongoing membership.

Did everyone have a good time at the PIZZA PARTY!? As of this writing it hasn't happened yet, but next month we will report more on this and who won the Video Key.

I hope everyone is getting a copy of the AIM PD disk because there is some good stuff on there. If you didn't, then ask around at the meetings and we'll get you a copy. We are basicly only going to make copies as needed. We will receive a disk each month so be sure to come to the meetings and pick one up. By the way, don't just rely on everyone else to bring a computer. Although we have had very little trouble with this, it's not organized as to who brings a computer each time. So if it happens there isn't one for you to use, you should have brought yours.

Remember...WE DO NOT ALLOW PIRACY AT OUR MEETINGS!



DUST
DOVER USERS OF STS

Dover Users of STs (DUST), PO Box 545, Camden-Wyoming, DE 19934.

FACCS
First Atari Computer Club of Spokane

President	Tim Osborne	509-624-1917

Newsletter Editor	Merry Iverson	509-253-4733

We currently own and maintain a 24-hour Bulletin Board System (BBS), open to everyone with a 300, 1200, or 2400 baud modem, called the Atari Zone. To enter the Atari Zone call 509-326-5741.

Since we currently have renewal dates scattered throughout the year, please check your card for your current expiration date. Remember, once your membership expires we are no longer able to send you your AIM Newsletter or allow you to remain at the F.A.C.C.S. level on the Atari Zone. To prevent any interruption in your F.A.C.C.S. services please renew by the expiration date on your card.

F.A.C.C.S. Secretary's Report

Well, February kicks off our Skippers Coupon fund drive. For each coupon sold, the club will receive one dollar, and with a little effort we should make enough to get ourselves out of the red. Remember to turn in your money and unsold tickets at the March eighth meeting! (If you got this before the March meeting...if not, get in touch with me or Ed Hicks.)

In other news, we have our hard drive back for the Atari Zone, so we will be able to get some files up, just as soon as we figure out what its other problem is. The SysOp suspects the ribbon cable has bitten the dust, but he is undertaking a complete raid on the system to make sure he's taken care of all the bugs. Meanwhile, the board continues to run on RamDisk. Our thanks to everyone who contributed to the repair fund, especially Mary Crider, who has been given an honorary year's membership on the board.

If you missed the last meeting, you missed comparisons of Tetris for the ST and Tetrix, a Shareware version for the 8-bit, and the Atari Planetarium for the ST. Planetarium will be back next month, along with the 8-bit version. Tim has also recently acquired Diamond, and Textpro Plus version 4.5, which will be the March disk of the month.

There's been an increased interest recently in 8-bit Atari computers in the area. Anyone knowing of any 8-bit hardware or software for sale, please contact any F.A.C.C.S. officer or tell us about it at the meeting. John Cooper has suggested we get together with other computer clubs in the area, no matter what type, and hold a combined auction a few months down the line. This would be another project for ICE, our F.A.C.C.S. inspired multi-computer users group! By the way, the next ICE pamphlet will be coming out March 1st in all local computer stores, so be sure to look for it. We have added several more clubs and a LOT more BBS numbers since the first issue came out. See you all at the next meeting.

Nancy Prevost, Secretary

From the Desk of Your Editor

Since we have moved up our due date for articles, there has been a terrible shortage in the articles being turned in for publication. I would like to take this time to encourage our members and officers to try to start submitting these articles once again. As you know, these articles can be on anything you are working with...whether it is on the troubles you are having or how you solved these problems. Others may be able to help you or learn from you overcoming your obstacles. Once again, we can't encourage you enough to submit any article you might come up with or have rambling around in your head.

In the next few months we are hoping to do some comparison programs running the same program side by side on the ST and the 130XE. These includes programs like Planetarium and Tetris, along with a couple others. We are not showing one machine is better than the other, but it shows the abilities of the authors. Many programs on both machines are very similar and use beautiful graphics that only their author could imagine and, even more importantly, put into programs.

This month's Demo on the Classic Computer is rumored to be the Diamond Cartridge.

If we can find someone with a working PC DITTO II, it's rumored that's what the ST Demo will be.

As many of you have already noticed, the AIM magazine does not get here before our monthly meeting. This is due to the Post Office delivery and not with us or AIM. AIM is mailed out the first of every month. I know we do not receive ours until after the 20th of the month. Maybe if we have enough people complain to the Postal Service they will start delivering within the 10 day period which they are supposed to. Then we would have our newsletter before most of our meetings.

Don't forget to sell and turn in your Skipper coupons along with the monies earned by the end of March. Hope to see everyone at our next meeting.

Merry Iverson

GKAUG GREATER KALAMAZOO ATARI USERS GROUP

GKAUG meets once a month by invitation only as time permits. Membership is through the MACE organization for those who want the AIM magazine and other benefits.

President:	Frank Fellheimer	(616) 657-6106
Archiver:	Dave Oldenburg	
Librarian:	Bill Berner	
2nd System/GKAUG BBS		(616) 385-2448

We run a 130XE using BBS EXPRESS! PRO Node #197

I was able to schedule a meeting on Sunday, 11 Feburary 90, and I was really surprised as to the events that managed to develop.

I had three calls from people that haven't been to meetings in about 2-3 years and wanted to attend. Nice guy that I am, I invited them to join us. Then only one of them showed up.

But, the meeting.... It started at about 10:00 AM and lasted until about 6:00 PM. We did a lot.

Started off with a file from TextPro that was written on a 1200XL. You must remember to turn off the key click or most of the letters will appear in inverse...a problem if you don't have Version 4.0 to change them back to normal characters. We didn't, because our updated Version of TextPro didn't come until about 2:00 PM in the afternoon. We spent about 2 hours doing global changes to convert it all back. It worked. We were so happy, until we found out Version 4.0 would do the whole thing, like fast!

We talked about getting together to make some more Lode Runner Screens of our own. We have about 20 already but they are fun to make and even more fun to see someone else try to get though one of your own screen. That will probably be one of our projects for next month.

Everyone got the grand tour of my library shelves, which are basically complete. I will soon start on the walls. Eventually, this will be my computer room and will give us a larger area to "work (play)" in.

Until next month: Frank Fellheimer

GRASS

GRAND
RAPIDS
ATARI
SYSTEMS
SUPPORTERS

GRASS meets the first Wednesday of every month at the Wyoming Public Library, 3350 Michael S.W.. Doors open at 6:30, meeting starts at 7:00pm. Dues are $22.00/yr. including AIM. Bring in one PD software disk and get 2 blank disks for your time.

President's Monthly

I am pleased to report that the new Back to Basics demos seem to be a big success. The DOS 2.5 double feature at the February meeting had something new for just about everyone, from new users to those who have been computing with their Ataris for years.

The March demo feature will be Sparta-DOS for those who have it but have not had the chance to read the manual yet. Both 1.x and the newer 3.x versions will be shown, with instructions on how the get from the master disk to something you can boot and use everyday. Some of the utilities will be explained so you can use Sparta-DOS as your main disk-operating system, like so many of us have done.

In upcoming months we'll do the same for AtariWriter, Textpro, and any other applications or utility packages that the membership want. I will start a poll from the membership, and the titles with the most interest will get done as soon as possible.

Remember, March is dues month, if you did not come to the meeting, be sure to contact George Nosky about getting them paid so you do not miss a single issue of AIM.

Till next month, Tim

G.T.A.U.G.

Golden Triangle Atari Users Group

Greater Triangle Atari Users Group
c/o Joe Bryant, 2508 San Jacinto, Beaumont, TX 77701

HACE

The Houston Atari Computer Enthusiasts meet on the fourth Wednesday of the month, 6:45pm at the Health Economics Corporation, 2400 West Loop South, in Houston, Texas. The club supports all Atari computers from the 400 to the Mega4.

Membership is $22 per year, and gives full access to our BBS (713) 458-9923, access to our disk, magazine and newsletter libraries, a subscription to AIM, and our local news journal UPDATE ATARI. There are also other benefits, such as store discounts, door prizes, workshops, telephone help when you have problems, and much more! For more information, please contact one of our officers or drop us a line!

HACE, P.O.Box 460212, Houston, TX 77056

President: Bill Kithas 713-855-0815
Vice President: John Hauser 713-458-0595
Secretary: Bob Leeper 713-665-3229
Treasurer: Jim Salmon 713-879-8119
Newsletter Editor: Tracy Webber 713-981-5343

Notes from the President

Members! What do you think about AIM? The HACE board made a wise decision when they adopted AIM. To see HACE as part of a national magazine is good for Houston. The articles, news, and advertisements in AIM are good for HACE members. Tell your friends about AIM and HACE and let's each try to bring in a new or renewed member.

The board has voted to reduce the price of P.D. Disks to $2.00! 8-Bitters, this is an excellent time to review the library and buy the disks that interest you. All of you ST enthusiasts can get a copy of the AIM P.D. Disk for $4.00. Read about its contents in AIM. This disk is an outstanding addition to anyone's library.

Everyone picked up a copy of "Meeting Dates and Programs" at the February meeting. Topics have been chosen thru July. Members, give your ideas for a meeting topic to one of the board members and have a voice in your club. February's topic is Communications and John Hauser will cover File Transfers, Bill Tart will cover D-Term, and Alvin Carley will cover The VT100. Since Tracy is going on an international trip in March we have moved the Light & Sound Extravaganza to April and in March HACE will have Arcade Game Demos and contests with Prizes. Speaking of Prizes, HACE will have two DOOR PRIZES at each of our meetings. In February, we will GIVE AWAY a New ST arcade style Street Fighting Game. For the 8-Bitters, we will GIVE AWAY a package of three Golden Oldies. Of course, they are arcade-type games in the theme of our next meeting.

HACE's Magazine and Literature Library will be at our next meeting. This is made possible because of the work of Louis De Luca. Thanks Lou! Check out that copy of Analog you have always wanted to read -- the disks are in the Disk Library also -- what a good deal! The HACE meetings are really a resource for beginners and pros alike. Members, bring a friend and let's enjoy our Ataris. See you all at the meeting.

BAK

JACS

Jersey Atari Computer Society, P.O. Box 710, Clementon, New Jersey 08021. JACS BBS: (609) 346-1224

President	Mike Hopkins	227-9058
ST Vice President	Maureen Kelly	428-9381
Treasurer	Forrest Blood	877-3579
Recording Sec'y	Gary Mickus	767-1933
Membership Chair	Al Guretse	596-7567

The Jersey Atari Computer Society (JACS) provides a forum through which members may further their understanding and enjoyment of all Atari computers, through the exchange of ideas and information with other users.

JACS holds two meetings per month at the Camden County Library, across from the Echelon Mall in Voorhees, New Jersey. The executive meeting, where all the planning for the club takes place, is held in the 2nd floor meeting room from 7-9 PM (meeting dates vary from month to month). The regular JACS meeting is usually held on the third Tuesday of each month, in the 3rd floor meeting room from 7-9 PM. The regular monthly meeting includes topics of interest for users of all Atari 8-bit (400/800 & XL/XE) and 16/32-bit (ST/Mega) computers.

Membership dues are calculated at $2.00 per month prorated through the coming July, when the entire club comes up for renewal. August, 1989 - July, 1990 dues are $25. Spouses and children may be included under one membership fee. Attendance at our monthly meeting is free for all members. Guests may attend up to 2 meetings at no charge.

JACS dues help pay for the printing and mailing of our monthly newsletter, BETWEEN BYTES, monthly room rent, electricity and phone (for the BBS), door prizes, refreshments (Christmas Party) and the purchase and maintenance of JACS equipment. As a JACS member, you'll receive a subscription to our newsletter and AIM, full access to our 24-hour bulletin board and access to our growing libraries of public domain software for the all Atari computers. Our disk libraries currently include over 200 disks, available for $3 each (member price). JACS ST library now includes the AIM Disk of the Month.

You are welcome to attend a JACS meeting as our guest. Once you've become a member, you're encouraged to become an active participant in the group. It's the only way to have fun.

Layton ACE of Utah

The Layton Atari Computer Enthusiasts (L.A.C.E.) membership cost $20 per year. Privileges include the AIM Monthly Magazine, access to the 8-Bit and ST club librarios, monthly meetings, help and friendship. If you are presently not a LACE Club member and wish to join contact the one of following persons or write to LACE, c/o Irwin Brooks, 3897 So. 2275 W., Roy, UT 84067-3515.

Irwin Brooks,	President/ST Librarian	(801)731-1516
Richard Clark,	Vice President	(801)825-5823
Ken Karchner,	Secretary/Treasurer	(801)776-8015
Lonnie Allen,	8-Bit Librarian	(801)392-4450

The L.A.C.E. Club Meets in the basement of the Clearfield Library every second Wednesday of the month at 7:00 p.m.

Mark your calendars for the next two meetings.

March 14, 1990 & April 11, 1990

LACE President's Column—520ST Upgrade Saga Continued

As of the date of this writing, February 16, I have been contacted by only two people wishing the instructions for the 520ST two (2) meg upgrade. I realize that the AIM magazine has only been out for a couple of days and that the mail wouldn't get here that quickly. So I'm reminding you: If you want me to take the time and write up the instructions for the 2Meg 520ST Upgrade then you need to drop me a line at the following address: Irwin Brooks, 3897 So. 2275 W., Roy, Utah, 84067-3515

To be honest with you, I actually began the writeup a couple of weeks ago. I'm now on page eight and I estimate that it is half done. However, it probably will not be published in any magazines since this mod has a limited application to only a few users. I presently plan on sending out copies of the text file with photographs of my 520 moded. Therefore, it is imparative that you respond if you need these instructions.

LACE Minutes

The February 13th LACE meeting was called a day early. I apologise to all who missed it for one reason or another. I did try to contact each one and at least leave a message.

At the February meeting we had both an 8-bit and ST demonstrations. Richard Clark demonstrated the club's own 3-inch dual disk drive for the 8-bit computers. These jewels were released a number of years ago before the 3.5 inch drives were standardized.

I rushed to put together a Blitz cable about an hour prior to the meeting. I had all the parts on hand but I had to disassemble a drive cable to do it. Then when I got it all put together it didn't work. I finally ended up ohming out each and every wire in both cables. As it turned out, there were two wires in one of the cables that were color coded exactly the same. Strangest thing that I've seen. Anyway, I got it working and used it at the club meeting to copy the January AIM disk.

Upcoming demonstrations will include; PC Speed or PC Ditto II for the Mega/ST line and Diamond OS (ST Junior) for the Atari 8-Bit line.

If other demos or information is of interest to you then speak up. This is your club. We want to share and serve. But to do that we have to KNOW! Let us help your desires. Then, don't miss out. Come to the meetings. I'm always glad I do, so will you be.

Irwin L. Brooks, LACE Club President, February 16, 1990

MACE

Michigan Atari Computer Enthusiasts receive, as part of their dues, Atari Interface Magazine. Members are also entitled to purchase disks from the 8bit and ST public domain software libraries. 8bit disks are $3 and ST disks are $4 each, and if you buy three disks from either library, you can choose a 4th disk absolutely FREE! Non-Members may purchase disks at a slightly higher rate. Mail order is also available.

For a catalog of current disks in our libraries, send $2 for either an ST or 8bit catalog to MACE, PO Box 2785, Southfield, MI 48037. MACE can also be contacted throught Ed Hanson, (313) 675-0044 or Bob Retelle (313) 483-7358. MACE meets on the Third Tuesday of each month at 7:30 at the Southfield Civic Center at 10-1/2 Mile and Evergreen Roads in Southfield, MI.

MID-OHIO ATARI USER GROUP

Mid-Ohio Atari User Group, Post Office Box 134, Ontario, OH 44862.

The Mid-Ohio Atari User Group supports all models of Atari computers. We meet at A&B Computers, located in the West Park Shopping Center on Park Avenue West in Mansfield. The meetings are the third Saturday of each month, from 7:00pm until 9:00pm. Demonstrations are welcomed, and pirating is expressly forbidden.

M.A.U.G. is a participating club in the Atari Interface Magazine group. As such, members receive an issue of A.I.M. every month for no extra charge. Club dues are $7.50 per year for all members.

The club maintains a disk library for both the 8-bit and ST line of computers. There is also a special M.A.U.G. section for members on the DataQue Support BBS, for email and file downloads. The number of the board is (419) 529-5197.

Middle Georgia Atari Users Group

M.G.A.U.G.

The Middle GA Atari Users Group is the sole Atari Club in the Middle Georgia area. We are composed of 60 members of which approx. half are ST users. Club president Pete Miller can be reached by phone at 912-922-5666. The MGAUG address is 115 Feagin Mill Rd., Warner Robins, GA 31088. MGAUG meets the second Sunday of each month at 2 PM at the Warner Robins Library. Annual dues are $5 with the newsletter optional. Use of the club library is free to all paid members.

February Meeting

We had a good turn out for the February meeting. The meeting took place an hour earlier (1 pm) because I have been having to work some overtime on the weekends lately. Bob Blackshear brought his 1040ST along with my 520ST so that we could have two computers. We are still looking for more volunteers to bring their computers and to rotate that responsibility a little better. Most members have brought their computers at least once and some several times. However there are some members that I would like to see bring their computers that have not done so as of yet.

For those of us that may have been waiting for a monochrome monitor for awhile Atari has finally shipped a supply to dealers. There still seems to be a shortage of these great monitors and in some cases it is slowing up sales of computer systems. RUMOR is that Atari is working on a smaller version of the LYNX that will sell for about $99. Not too much to go on but it will not have the screen flip feature that is on the $149 unit. Also there is a rumor going around that EPYX has closed its doors - so there is some speculation as to who will make cartridges for the LYNX. By the way the smaller version WILL have a color screen although maybe smaller. The STE is selling well overseas as most of you have heard. Always a big question is compatibility -- word is that there is no problem with POWER type programs (databases, word processors, etc.) but that some arcade games will not run. I do not find this very surprising, and you shouldn't by now either as most of you are very familiar with computer and disk drive upgrades and the problems that go with them. Still no official word as to when it will be available in the U.S.

COULD THIS HAPPEN TO YOU? Jimmy, one of our members, has a little problem that started well before Christmas. Jim tried to install the E-Z Ram upgrade into his ST and when he booted his system up it was BOMB city. After he removed his upgrade he still had a big row of Bombs. Well, Jim decided to send his computer off to a dealer in Calif. for repair...a dealer that is known to advertise in several ST magazines. The dealer guaranteed a five day turnaround in computers sent in for repair. Well, Jim waited and waited and no computer -- so he called. The dealer informed him that he was waiting for a motherboard from Atari...sounds a little strange to me...that is what Jim told me at the DECEMBER meeting. Well, it is now Feb. 11 and still no computer, the dealer told him that his store had been broken into during the Christmas holidays and the computer was stolen. The dealer promised to send Jim a NEW 1040ST as a replacement (Jim sent them a 520ST), but Jim hasn't seen anything yet. My advice to Jim was to notify the Postmaster in that there are laws about Mail Fraud. Next month I'll give you an update on Jim's computer mail problem.

This will be a good topic at the next meeting -- Ordering Through the Mail -- What to Know, What to Ask when You Order, and Mail Order and The Law and What You Can Do to Protect Yourself. Here in Middle Ga., we have NO dealers at all within 175 miles, so we must be extremely careful of who we do business with. If you have any questions or if you don't know who is dependable, then give me a call and I have a list of dealers who have been proven to be fast and reliable. Don't just grab a name out of a magazine if you don't have to. This is the kind of information the club specializes in.

The HIGHLIGHT of the club meeting was a hardware/software sale by Howard O'Berg. Howard is leaving us and taking up a job opportunity in Texas. Howard was selling all of his software and hardware at bargain prices. How about a 1040ST with color monitor for $300! A Supra 1200 Baud modem with software for $40. A Navarone clock cart. for $10 and several software titles for $3 ea. If you missed the meeting and missed these deals, then I'm sorry for you. I bought the clock cart. and several games. Howard left the meeting with nothing in his hands -- not surprisingly, he sold everything that he brought to the meeting. By the way, I am selling my Avatex 1200HC modem for $50 with ST Talk Pro. thrown in, if you know anyone that is interested -- finally upgrading to 2400 Baud.

Well if I don't close, Bill and Pattie are going to get on to me for being so long winded. How about this great AIM magazine, does it get better every month or what? THANK YOU, THANK YOU, THANK YOU, Bill and Pattie. I hope the magazine is growing and going great for you. The April meeting will be on the 8th at the Warner Robins Library -- hope to see you there!

FOR SALE

Star Trek: The Rebel Universe (ST)	$ 15.00 obo
Autoduel (ST)	$ 10.00 obo
Outcast (ST)	$ 10.00 obo
Lands of Havoc (ST)	$ 10.00 obo

Computer Enthusiasts

President	Bill Zimmerman
Vice Pres/Treasurer	Pete Killian
ST Librarian	Damien Jones
8-Bit Librarian	Bill Zimmerman

The PREZ Says Well, hello there everybody. Here we are firmly into the new year and anxiously awaiting our first newsletter. And, guess what, if you're reading this article you've either received your copy or you're reading someone else's copy. Incidentally, if you have read our newsletter article(s) you'll note that we finally took the plunge and began our new combined effort with Atari Interface Magazine (AIM).

This magazine, relatively speaking, has as much (if not more) worthwhile information in it as most of the Atari-related magazines of the past and present. In addition to all of this, we get to read up on what other Atari users--border to border and coast to coast--are doing in their user's groups and what their thoughts and ideas are on the world of Atari products.

We were pleased as punch to have Tom Lombardo visit us during the 14 Feb 90 meeting to demonstrate the BBS called Community Link that US West has put together along with software for users of IBM, Macintosh, and Apple computer systems. Currently, the only software they have is for these three lines of computers. However, with enough interest they (US West) might very well develop or pay someone else to develop the software for other computers such as Atari and Commodore (one developer has promised them a Commodore version for over a year now).

Finally, if you want to try out their BBS they are willing to let you use one of their computer terminals free for two months. After that, the cost for the use of the terminal is roughly $8.00 per month. The cost for using the BBS depends on which selection you make on the menu. Before you use a particular service, it will let you know on-screen how much, per minute, it will cost you to use that part. The only parts of the BBS that are currently free are the main menu and the Omaha World Herald. If you want further information on Community Link, call Tom Lombardo at 422-7766. He'll set you up if you want to try their system.

Next, let's talk about what to do with some of the money we have stashed away for a rainy day. We discussed the possibility of buying some hardware so that we could set up a BBS of our own. Pete said he'd be willing to let the club have one of his single-sided drives as a start. Now we only have to determine what else to buy, where or from whom to buy it, and who would run the BBS once we purchased all of the necessary equipment to get started. We have somewhere around $500 in our checking account and if you all keep your eyes peeled for some opportunistic purchases we should be able to get this show on the road before too long.

Yet another important item that was discussed was the cost of our 8-bit and 16-bit software. Pete brought a flier and passed it around. However, for any of you that didn't get a chance to see it, here's what it said:ST Disks - $3 for Double Sided, $2 for Single Sided and 8-Bit Disks - $1.50 for Double Sided, $1 for Single Sided. *Prices **double** for non-members.* (The above-mentioned disks are, of course, all public Domain software and data, in case you hadn't guessed)

Now for the last but all important information concerning the Computer Expo '90, an Adopt-A-School project sponsored by McMillan Math and Computer Center and US West. It's scheduled for Thursday, March 29, 1990, at McMillan, 3802 Redick Avenue, from 8:00 a.m. to 4:00 p.m. The theme is Education in the Information Age and the Expo will include such things as: programming contests, exhibit areas, workshops, and hands-on activities.

We solicit the help of each and every one of you to join us to make this Expo a big hit for all Atari enthusiasts. Pete has a lot more of the particulars on this and he discussed some of them at the meeting. Therefore, if you want further information, I suggest you contact Pete personally.

Membership to PACE is $30.00 per year or $9.00 per quarter. General meetings are held at 6:30pm on the third Sunday of every month. In the event of a holiday, a new date will be chosen and will be posted within the pages of this newsletter and on local Bulletin Boards. Membership includes a monthly newsletter, monthly meeting, FREE Disk-of-the-Month, access to our BBS, FREE printer ribbon re-inking, and FREE copying priveleges to our VAST collection of 8/16 bit Public Domain programs. Ports A.C.E. is an alliance of families with a mutual interest in the Atari Computer and is an independent, non-profit organization. PACE hardware assets: 130XE, 1050 Drive, MacInker and a Supra 300 baud modem. Any written correspondence should be addressed directly to Ports A.C.E., Tracy Hendershot, 4835 Crosley Avenue, Duluth, MN 55804.

From the President...

We narrowly avoided a disaster last month! I routinely call Tom Meierotto to confirm the availability of the meeting room, only to find out he was going to be out of town the day of our meeting. I then made a few phone calls and sent some postcards to our out-of-town members informing them that the meeting will be postponed until February 25. Checks and balances...

Speaking of checks and balances, that's exactly what our demo for the Feb. meeting was. John demo'ed the latest, greatest version of Phasar (4.0) to the members and explained in great detail the business end of keeping track of your finances. Many members watched with great anticipation since they were in the market for such software, and Phasar does, indeed, fit the bill.

We have a good supply of both 5.25" and 3.5" blank generic DS/DD disks for you to purchase. We sell these at cost plus a few cents. It gives members the convenience of buying blanks in small quantities and not having to "buy in bulk."

We had nomination of officers and it appears that there will be little change for the coming year. The club almost runs itself now and the "work" is very minimal. If we had over 100 members, then it would be a different story!

A little more discussion about taking the summer off, meetings for April & May occurring on "holidays," resulted in the possibility of having one BIG BASH the first week of May. More about this next month...

I've decided to drop the clubs' "monetarily" supporting Micro Simulations. Do the names Leo Whittenberg, Dennis Neil, Larry Bushnell, Neil Nathan, etc., ring a bell? These are members who for years requested access to Micro Simulations...and never called. If you ask me, that's a waste of money. It's too easy, when offered a service at no cost to you, to accept and never use the service. Traffic on the PACE conference is virtually nonexistent, sooo...I have arranged to have the regular membership to the BBS ($20.00) cut in half to $10.00 for PACE members who want access. From now on, if you dig deep, pay the fee when your current time expires, never call, nobody will care!

Portfolio & Lynx are stripping inventories, FAX, STE selling well in Canada, rumors of an "Atari Revolution", make 1990 an interesting year! See you at the next meeting on Sunday, March 18th, 6:30pm, Wisconsin Dept of Transportation Bldg.

- Hybrid Arts DX-Droid Librian...... used $40
- Hybrid Arts Simpte-Track MIDI sequencing software with Simpte-Sync Box .... used $300

Club Minutes for Feb. 10, 1990 - by Jim Keho

The meeting was called to order at 10am with about 30 members and visitors in attendance. We had a reading of the previous month's minutes. Then John Steiner reported we have $877 in the club's treasury, not counting income from this meeting.

We had a discussion about becoming a legal non-profit corporation. The cost of filing with the State was estimated at $150-$200. A motion from the floor tabled this discussion until a later time.

Richard Covert told us of his continuing efforts to get Bob Brodie (Atari's User Group Co-ordinator) to visit our club. Due to some scheduling conflicts (and Bob moving), Bob won't be able to come until the May 12th meeting. We'll try to make this a joint meeting between SEVAC, NWPAC and the Tucson club so we can have a good attendance for Bob.

Ways to increase the club's membership was brought up (again!) with a suggestion of putting ads in Computer Shopper (that are free), making up some handout sheets (that members can pick up at each meeting and pass out at their work, school or whatever) and working with the local computer stores.

Lloyd Pulley (PHAST Times editor) brought to the members attention the need for more local articles for PHAST Times. He threatened to leave 4 pages blank in the next issue if he didn't get more local articles. Folks can mail him articles at the address on the PHAST Times newsletter, upload articles to ST Base in area #15, (just call the article FORLLOYD, FORPHAST or something like that) or bring them to the meetings on a floppy disk (the club will return your disk). He'd like the articles in either ASCII or 1st Word/WordWriter format with no formatting (i.e. tabs, centering). If there are graphics to be included, he can use .IMG, Degas or Neo formats.

Lance Summers demoed the new VideoKey that we received from Practical Solutions (our first product from their ACE support club). The VideoKey has audio and video outputs and allows you to connect your ST up to a TV or composite monitor without having a modulator.

10:50 -BREAK-

The meeting came back to order at 11:00 am. There was a drawing for the free door prize, 4 disks containing High-rez graphics, some of which was printed in the Feb. 1990 PHAST Times newsletter. These 4 disks are also available for $7.50.

Brien King then demoed his new Overscan modification. It does require TOS 1.2/1.4 to work. It was quite impressive. Brien promised a couple of articles for PHAST Times describing how to install it.

Dave Thorson then showed us his new desk utility program called RUNNER that he wrote in GFA Basic (3.07). It's a shareware ($10 donation) program that has many of the features of HotWire. It's available in the club library or on ST Base BBS. Dave also did a demo of the game Powerdrome.

The meeting adjourned at 12:10pm. The next meeting will be on March 10th, at 10am.

P3Atari Computer Enthusiasts (P3ACE)

Serving the Colorado Springs, Colorado ATARI community since 1982. PO Box 17779, Colorado Springs, CO 80935

RACC
ROCKFORD ATARI COMPUTER CLUB

WE'RE NOT JUST PLAYING GAMES ANYMORE!

We meet at Rock Valley College, the third Saturday of each month. Meetings start at 9am, and usually run untill noon. We are a support group, dedicated to helping each other learn and enjoy both ATARI 8-BIT and ST/MEGA computers. Our meetings are open to everyone. Address is RACC c/o Andy Learner 3902 15 Avenue 1 Rockford, IL 61108 CAMILLE 2000 BBS 815-397-5327

ANDY LEARNER	President	815-397-5316
MARK KUNKEL	ST VP	874-5546
JAKE OLBRICH	8-Bit VP	332-5303
ROGER CREEDY	Secretary	877-3769
THOM LOFTHOUSE	Treasurer	654-1863
DAVE ZOLMIERSKI	8BIT Librarian	654-0247

We have some very exciting events coming up in the next couple of months. First, Saturday MARCH, 31 is the local Ham-Fest and Computer Fair. This event draws quite a few people from all over the region, and has been turning into more of a computer show, with more discount computer vendors showing up each time. I got a bargain 20 MEG hard drive for pennies on the dollar.

This next event, I will try to get us tables in a common area, with local vendors Xanth and Randee's Music, so we can show the *"power without the price"* of our machines all in one spot. Although last event, local APPLE and IBM type clubs were invited, only the other club and RACC had displays. We demonstrated the MEGA 4 with GCR and Laser printer, two other ST systems with different applications, three 8-bit systems, one with games, one with our BBS and one with a MIDI setup. The other clubs display paled by our examples!

Moving right along, our next event is something we have been wanting to have for some time now. The LCACE Atari club, in conjunction with MILATARI, are sponsoring the Midwest Atari SwapFest '90, to be held at the Day's Inn of Gurnee Illinois. The event will take place Sunday, April 22 from 10:30 AM to 4 PM. Tickets are available from Andy Learner for $2 advance, or will be $3 at the door. One dollar of each ticket purchased from us goes into our treasury, so if you are planning to attend, please buy your tickets from us. Bob Brodie, Atari User Group Liaison, will be attending and promises to bring "Whatever I can get my hands on."

George Luhman, Dave Zolmierski and Andy Learner have formed the committee to design a logo for our club and have it silk screened on T-SHIRTS. We also plan to make available two different size logos, one for say a T-Shirt pocket, and the other larger size for fronts of shirts and backs of jackets. You may bring in your own jacket or shirt to be screened for $5.00 or buy one of the shirts from the club for $12.50. If you attend either of the previously mentioned events, please support us and wear club colors!

Rushmore Atari Computer Enthusiasts (RACE)

3512 Lawrence Dr. Rapid City,
SD 57701 (605) 348-6331

The Rushmore Atari Computer Enthusiasts is a nonprofit organization of Atari computer owners not affiliated with Atari Corp. Meetings are held on the third Saturday of each month, 2pm, at the Westminster Presbyterian Church. Annual dues are $12 for basic membership and $15 for membership and newsletter. RACE offers the Black Hills Atari owner hardware and software support and the largest library of public domain Atari software in the state of South Dakota.

NO PIRACY WILL BE TOLERATED AT ANY RACE FUNCTION!

President	Rick Burton	(605)-642-5353
V. President	Gregg Anderson	(605)-348-6331
Secretary	Mike Douglass	
Treasurer	Mike Randall	
NL Editor	Mike Harbison	
ST Librarian	Mark Wolf	(605)-923-2841
XE Librarian	Ken Kayle	(605)-343-7289

President's Particulars

It is a relief to know that we will be able to retain Gregg and Mark W. at least for a while yet. The military doesn't always see the need to co-operate with RACE's need for good members and officers for some odd reason.

Plans for our MIDI show are coming together. It's nice to see the enthusiastic reaction of our new location. Some teamwork will be needed to man a booth for a few hours.

Welcome aboard to our new young member, Joey! There's plenty of room at RACE for beginners to the old-time hackers.

See you RACE drivers Sat. the 17th at the meeting...Rick Burton

SEVAC

SEVAC Seconds by Marc Dyer

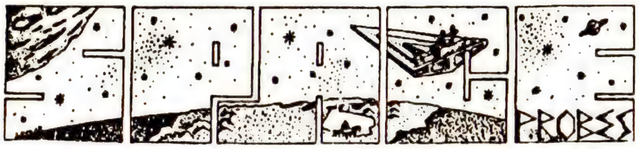
Well, this is our second month with the AIM organization. I hope you enjoy the magazine as much as I do. AIM magazine was the major topic discussed as the business portion of the meeting. All members present received their AIM magazine prior to the meeting with the exception of one who had moved to a new address. This is a first. "Nybbles and Bytes" never seemed to make it before the meeting despite the fact that it traveled approximately 1800 miles less. Great job!

The club's treasury still is approximately $1400. There were no new additions to the 8bit library and Mike McKittrick did not attend the meeting with the ST library. Next month we'll have the last two months of the AIM disk plus the Disk of the Month with some tax spreadsheets. Congratulations to Glen Gieske the winner of Pagestream and John Zbyszinski the winner of Regent Word II. We hope to have more raffles for club members in the future, but you can't win if you don't attend!

The February's meeting focused on monitor displays for the ST computer. It looks like the RGB cable for the JVC projector is finally correct. Tim Barr's NEC Multisync 3D monitor display was very good connected with Tim's home brew cable/converter. Tim has a little 'tweaking' to do to remove the ghosting effect, however, this is the best high resolution display I've seen on a multisync monitor to date.

The March 17th meeting will feature an in depth demonstration of FONTZ by Neocept, OPUS(a shareware spreadsheet), and a special interest group meeting following the general session for Pagestream.

The April 21st meeting will be the annual SEVAC swap meet. Trade or sell your original software and hardware. See you there!



Meeting NoticesCombined Club Meetings: January 15, 1990 (7:30 to 9:00 PM) at the Camp Hill Shopping Mall Community Room. This date is different from that listed in the December newsletter.

Future Meetings: March 19, 1990 (7:30 - 9:00 PM) April 16, 1990 (7:30 - 9:00 PM) May 21, 1990 (7:30 - 9:00 PM) June 18, 1990 (7:30 - 9:00 PM) July 16, 1990 (7:30 - 9:00 PM)

All meetings will be held at the Camp Hill Shopping Mall Community Room until further notice. Currently all dates are set for the 3rd Monday of the month.

View from the Bridge by Rich Deen STARDATE: 020690

Greetings! The Board has been working on some improvements for the club. In an effort to keep club members informed, I have been keeping a notebook of all club correspondence (including the Board Minutes). This "Correspondence Notebook" will be available at all regular meetings for your viewing. In this light, we will be covering highlights of the minutes in the insert and you will be able to see everything at the meeting.

The April meeting theme will be featuring music related programs for both 8 bit and ST systems. To go along with this, we have decided to auction off the Tweety Board stereo board (for ST/MEGA computers) by Sealed Bid. So if you're interested be sure to show up. If you can't make it but are still interested, give John Slade or myself a call to see about submitting a bid.

The Board has initiated a new policy to increase donations to our Raffle Table. For every item you donate, we will increase your memebership subscription by one month. This does not include blank disks. As many of you may already be aware we have begun Fund Raising. Come to a meeting for more information.

The ST STarter Pak is now ready. This is a four disk set containing four disks (double sided) packed with many files, including: boot programs, utilities, formatting programs, desk accessories, games, information files, and plenty more. Cost is $12.00 for SPACE members ($15.00 for non-members, including shipping and handling). A special offer exists for single sided drive owners consisting of the same material on eight single sided disks. It costs $17.00 for SPACE members (and $20.00 for non-members including shipping and handling). If you are interested in receiving a printout of all files send $1.00 to the club address listed above.

Also, I would like to try and get a handle on all the property which S.P.A.C.E. owns. If you have something that belongs to S.P.A.C.E. please submit a list of it to me by June 1, 1990. We will be comparing this to our current list.

President	Claudette Tishcler	226-5644
Vice-Pres	Gary	521-2855
Treasurer	Kathi Koenig	892-0881

The ST Atari North Coast Enthusiasts (STANCE) is an independent, not for profit Atari computer user group and is not affiliated with Atari Corporation, or any of its affiliates, in any way.

$12.00 per Year with a one time sign up fee of $13.00.

STANCE club meetings are held every third Monday of each and every month at B & G Electronics, (located at 15729 Madison Ave., Lakewood, Ohio 44107) starting at 7:15PM

ST CLUB EL PASO

The ST Club of El Paso is the only Atari ST and Mega user group in the El Paso area. The ST Club has proven to be a benefit not only to new users, but also to the "old hacks" of computing.

We now meet twice a month at the Richard Burges Library, 9300 Diana. The first meeting of the month is always the second Saturday of the month, at 12:30pm. The second meeting of the month is held on the last Thursday of each month at 7:00pm. Meetings feature demoes of the latest ST software, as well as help for the those that might be having problems with their computers.

Membership in the ST Club of El Paso includes a year subscription to the magazine you are holding in your hands, discounts on software at Jenkins' Computer Store, and access to one of the largest public domain libraries in the nation. We also offer technical help, and we sometimes have a party or two when we run out of computer things to talk about. Voting membership is $20 a year, Sponsored and Newsletter only memberships are $15 a year.

To become a member of the ST Club of El Paso, call 915-821-2048, or write the ST Club of El Paso at 10953 Yogi Berra, El Paso, Texas 79934.

President	Tim Holt	915-821-2048
Vice Pres	Morris Miller	594-1906
Sec't/Tres	Joann Anderson	751-2710
Editor	Paul Stampfli	821-4861
Librarian	Norm Bates	593-6234

Local BBS's that support the ST Club ST El Paso BBS 751-7837 Data Retention Center 821-0006

From the President

February had a really interesting meeting. The hot topic of conversation was about the club getting a BBS. Skip Ford offered part of his BBS, the Data Retention Center, for club use, and we could make it an official ST Club BBS area. I, and a few others, wished for the club to get an entirely separate BBS, dedicate entirely to the ST computer. The debate got rather interesting, as several members voiced opinions. Many members stated they would get a modem, if the club had a BBS. Norm Bates stated rather eloquently that we should try Skip's offer, because it was more economical, and since not all members of the club have modems, we should not spend club money on something only a few could use.

My train of thought is the BBS would be mainly for club members, and the Disk of the Month and our library would be online. This would require a fully dedicated SysOp, and Skip indicated he preferred to remain a "hands off" type sysop with his board.

Perhaps we can resolve this debate at the next meeting. I really enjoyed the banter, and to you new members, we rarely get into conversation so deeply. Bob Pack made an appearance at the meeting, and it was good to see him up and about after his recent illness. We picked up two new members: David Poehlein, and Paul Dixon, both of El Paso. Welcome to our club.

The club voted to *not* change it's name, although a great name was submitted by Steven Bruck: Atari Computer Club of El Paso, Texas, or ACCEPT. I liked that idea, but members voted to keep the ST Club of El Paso. What a bunch of conservatives...

Mark Davis attempted the first coup attempt in club history by shooting me with a rubber band during one of my BBS speeches. Since we never did get a constitution for the club, had I been killed by the rubber band, Mark would now be your leader. Luckily, Mark can't aim worth a turd, so I am still around. I will ask the club treasurer to purchase a rubber band proof vest for any of my next club appearances.

In a desperate attempt to keep all our options open, Skip Ford won the door prize, which was Word Up. (Not really, he won it legit...I promise.)

April will have the best of public domain, with Norm Bates as moderator, and of course the club will continue to meet on the last Thursday of each month as well as our regular meeting.

Until next month, Viva El Revolution!

Tim

TACE

Tinker Ace of Oklahoma

Tinker ACE of Oklahoma meets the first Saturday of each month at 1 PM (12:30 set-up time) in the Moore Public Library, 225 S. Howard, just off of SW 4th and I-35 in Moore. TACE can be contacted at 104 E. Northrup, Midwest City, OK 72110 or at the TACE BBS (405) 755-9561, 24 hrs., 3/12/2400 baud, running Oasis 4.3 software with over 60megs online storage. ST & 8bit support. Dues: Full - $20, Correspondence - $15. Dues are prorated at $1.25/month for correspondence membership and $1.66/month for full membership.

President/VP	Greg Ray	(405) 964-3765
Sec/Treasurer	Stephen Moffitt	(405) 732-8449
Librarian	Chris Hamilton	
BBS Sysop	Rick Spencer	
Technical Advisor	Ron Hamilton	(405) 387-5649

State of the T.A.C.E. by G.L. Ray, T.A.C.E. President

It's the middle of January when the President makes his State of the Union Address, so I thought I would do my part and write a State of the T.A.C.E. article.

Last June, when I took over as the T.A.C.E. President, our club was not in very good shape. We had two main problems...dissension within the club membership and an indebtedness to Puget Sound Magazine of over $120. We have worked hard as a group to both solidify our club financially, as well as to resolve any differences between club members.

I believe that both problems were related to the same cause...club money being spent without club approval. Our past President and club BBS Sysop, Michael Beard, had a tendancy to do things on his own, without club approval. He got things done...but maybe not what the club wanted done. Mike's primary interest was the club BBS, which had a tendency to need frequent repairs, as well as frequent upgrading of club equipment...all on Mike's own initiative, without a club vote. Club dues, which should have been going to pay for our monthly magazine bills, were being diverted to fund the BBS needs, and we were getting in debt to P-Sound. The club membership, as well as fellow officers, were unaware of our dilemma until the May meeting when Mike announced he was not running for President or Sysop and finally told us of our indebtedness.

I say all of this not to tear down Mike's leadership, but to point out one very important fact about any club or organization...the officers only have the authority the club has authorized to them. I, as T.A.C.E. President, have no more right to dictate club decisions than any other member.

At the first club meeting after assuming the office of President, we made two decissions. Number one, no club money would ever be spent without prior club approval. And number two, the Treasurer will make a report of the club's financial status at every meeting. We have adhered to that. We also did a membership survey to determine the priorities of club members. What we found was the Club meetings were the number one priority, followed closely by the BBS. The magazine came in third, with Club Disks in fourth. First place was only separated from fourth place by five points. As you can see, all of our club functions are important to our membership, and we can't put one priority over another without club approval. We have to seek the will of the people.

The membership as a whole has worked diligently to restore our treasury to a plus balance, instead of a minus. We have had bake sales at meetings, software donations sold at meetings with the proceeds going into the club treasury, and disk of the month sales. We did away with our Club post office box (about $30 per year), and we are now paying each member's magazine subscriptions up front for the entire year as soon as they join. Our treasurer, Stephen Moffit worked very hard, paying a little each month, and has paid off our indebtedness to P-Sound, and reported last month that we now are debt free with a balance of over $20 (Not much, but we are in the black).

We virtually have no expenses. BBS Sysop Rick Spencer pays for the phone line himself. The mail is sent either to Ron Hamilton's address, or my own. We pay each member's magazine subscription in advance as they join up. Club disks for disks of the month have been donated. We are really working together to make this club work, and I appreciate everyone's efforts.

At the close of last year we were kicking around ideas that could maybe help us strengthen our club. One suggestion was to merge our club with the Atari Computer Club of Oklahoma City (ACCOKC). I contacted their president, Fred Jones, and we discussed the idea, with his promise to present it to their officers at their next officer's meeting. ACCOKC is an 8-Bit only club, many of their members of which used to be T.A.C.E. members. When I contacted the ACCOKC president to follow up on our discussion, he said their officers did not want anything to do with our BBS, or with AIM magazine, but we were welcome to join their club...they always welcomed new members. To me, as well as to our membership, this would not be a merger. A merger would combine the good points of both clubs to form a stronger organization, and serve everyone better. Their attitude was more or less fold up T.A.C.E. and join us. Well, no thanks...we like our BBS, and we like our monthly magazines, and many of us have put too much time, sweat, and money into T.A.C.E. just to close up shop and forget it.

So where do we go in the future? Forward! We have a good base on which to build, so let's get on with it. How can individual's help? Attend club meetings...make your ideas and views known...purchase the club disk of the month...submit articles to AIM magazine...get involved...and enjoy your Atari friends and the computers they use.

Thanks once again for your support,

Tri-city Atari Group

The Tri-City Atari Users Group meets the last Saturday before the 18th of the month, at 9 am at the Rudy Zauel Memorial Library, on the corner of Center and Shattuck in Saginaw Township. Upcoming meetings are March 17th, and April 14th, 1990. Officers:

President	Steve Volker	865-9035
ST Librarian/Tech Advisor	LeRoy Valley	686-6796
Treasurer/Secretary	Marty Schmidt	792-6029
8Bit Librarian	Ted Beauchamp	686-8872

Club dues are still only $20, which provides support for both the 8-bit and ST, and full access to the club's PD library, along with a year's subscription to Atari Interface Magazine. Check your mailing label, if you need to renew (or haven't joined us yet!), DO IT NOW!

First Up... Before I get going on the things that happened and are happening this month, I've got a new 'slant' for you. The meeting was really fun this time. I'm not suggesting that usually it isn't or that there was that much more going on this time, I'm just saying it was *fun!* The turnout was good, no scares about Atari's demise were brought up, noone had any big complaints about anything, everyone was in a good, happy mood, and...I had fun!

I've been standing behind the podium for about nine months now, and have often had a number of different concerns when up there. I've sometimes sat and pondered my responsibilities as an Atari club president, or agonized over whether or not I was living up to the level of abilities of previous presidents. I have even got it in my head once or twice that I determined the survival of the club by my efforts and attendance. I have also stood there smiling when I was very aware that I was not filling the shoes of my predecessors adequately, and felt like never coming back.

Well, I didn't think any of those things today. I just sat and listened and watched. I made no effort to sway or instigate anything. I barely added anything at all, and you know what...everything still happened!! We really have a great group!!

What You Missed... There really was an awful lot going on at this meeting, starting with a raffle for PageStream 1.8! As part the amazing support we have received from Soft-Logik, we were able to award this fine, premier DTP package to Mr. Lucky himself, Wayne Fenior! (Where does this guy get his luck?)

As part of the normal business part of the meeting, LeRoy came up with a surprising request/proposal! As the ST librarian, LeRoy suggested that we **lower** the cost of the Disk of the Month to $3 for double-sided, ($2 for single-sided-still available by special request). As unexpected as it might be, the majority of the members voted to accept the discount, after an amendment to offer the disks at a special 2 for $5 rate.

Perhaps the most expedient way to describe the demos at this meeting would be to list the things not demonstrated. I will nonetheless endeavor to be complete. At power-up, LeRoy began by telling us about his newest alteration to his MegaST 'du Valley', the Mega-Click keys by BEST Technologies. As we listened excitedly to the IBM-like "CLICK!" sounds emanating from his keyboard, LeRoy went on to explain how easy it is to desolder the old and pop in and resolder the new, in a matter of a few, short minutes. The key clickers come in packages of 30 for about $65. A few minutes computation should point out to you that at least three bags are necessary to do the whole keyboard, bringing the total cost to nearly $200.00, so the next question asked would be *is it worth it!* The apparent answer is *yes!!*

Actually, regardless of what was being shown, it was a treat to watch LeRoy's machine work anyway. With the Turbo 16 board installed, working with the Blitter, and being assisted by TurboST version N.R.Y. (Not Released Yet), that sucker was *fast!!* Then came the real surprise!! *Supercharger!!* The IBM emulator from Talon Technology, Inc.

Not yet even released in the United States, it was up and running here at our little ST group. And it was VERY FAST! (4.2 on the Norton scale.) It works on 520s, 1040s, Megas, STEs and STACYs, and has no specific memory requirements. It plugs into the DMA port so there is no need to open your computer (you can daisy-chain it off your hard drive), has a mouse driver, supports true Hercules monochrome and CGA, leaves COM2 for serial devices like your modem and is 100% compatible with MS-DOS programs, and actually may make your hard drive faster!! Uses your resident RAM, has HOT keys to switch between ST and PC programs, (without rebooting), and.... Hey, this is some emulator! Retail lists at $399.00. There are a few problems with it though, like no backslash key, (not mapped), and no joystick driver. Also, there is a reset required with some programs, and at the initial boot. But still...

By the way, we have picked up at least one new member every meeting since the first of the year! On the 8-bit scene, the 8-bit users have doubled in the last few months, lots of exciting stuff going on. Sargon II was demoed today, a fine chess program. Looked nice, though MOVE commands are a bit laborious through the keyboard.

There were three chess programs demonstrated on the ST, Psion Chess, Chessmaster 2000 and BattleChess. Each had it's strength and weaknesses. Psion Chess was by far the best 'player', being human-like in its approach, Chessmaster 2000 has 3D display, a large number of options, and the computer talks!, and BattleChess is, well, BattleChess, with life-like movement and sounds and entertainment fight scenes. All three were unique and worth checking out.

What You Shouldn't Miss... Next time, we have a *logo contest!!* AIM has express an interest in having us spice up our club logo a bit (go figger?), and a couple of us around here had discussed just such a thing anyway, so we are holding a contest, open to all members, to submit ideas in nearly any medium, that we could use in revamping our name and/or LOGO. The prize is two free Disk of the Month offerings of your choice. Also next month, a combination demo and comparison test between PageStream 1.8 and Calamus. Yea!!

On Another Note... Check out our Disk of the Month #59. Also, look for a report of our meeting with Bob Brodie, the new Atari UG coordinator, who will be in Ann Arbor tomorrow.

Equipment Volunteers For Next Month... LeRoy Valley and Wayne Fenior will be bringing it all for the ST. Ted Beauchamp has the 8-bit stuff.

UNYACE
Upper NY Atari Computer Enthusiasts

The Upstate New York Atari Computer Enthusiasts (U.N.Y.A.C.E.) meet monthly at the New York State Electric and Gas building, on Old Vestal Road in Vestal, New York. Meetings are from 7 to 9 PM in the Auditorium. The next meeting date is March 12th.

U.N.Y.A.C.E. had optional dues of $8 per year. Monthly meetings are informal and open to all who are interested in Atari microcomputers.

Contact C. Todd Krissel, President, at (607) 729-4303 or call the Cygnus BBS at (607) 729-5506 (9600 baud, 24 hrs/day) for more information.

WAUG!

The February meeting of WAUG was held on Tuesday, 2/13. President Craig Harvey temporarily yielded the floor to visiting ex-president Jon Brode who blessed us with his memorable opening line from his prior reign. Craig then restored calm and order by announcing the meeting topic and distributing a survey to find the members' preferences regarding future meeting topics.

Craig then reminded members of a special meeting to be held on Sunday, 2/18, where guest speaker Bob Brodie of Atari Corp. would be demonstrating STacy and Spectre GCR, an STe, and the Lynx portable game machine.

Member Dan Cable took us on a "tour" of his PC Speed IBM emulator, showing us how he configured the system (not an easy trick, since we were looking at a mono monitor), although he noted he has not ever successfully made the mouse work as he thought he should be able to do.

Guest Mark Beaudoin then demonstrated his Spectre GCR Macintosh emulator, which was connected to the same computer that contained PC Speed (a VERY versatile ST!). Mark contrasted the GCR's "ease of removal" to the permanent installation of PC Speed, which may or may not be important as future upgrades could easily include hardware as well as software replacement. Mark reports that disk access is noticeably faster with TOS 1.4 installed, and, to his surprise, got to give us an unexpected demonstration of how the Future Systems GTS-100 disk drives do not work with this system. (Sorry, Mark! But you know what they say about how if your disk drives don't work you should always check your Cable?)

Craig announced he would be travelling to Toronto on April 1 and suggested the possibility of a car caravan or other transportation if the members are interested. Presumably this conversation will be aired again at the March meeting.

ST Librarian Russ Crum distributed/sold copies of the monthly AIM disk (which is very well received!) Russ announced a "subscription rate" for persons who pay in advance to receive the AIM DOM for a full year.

Where else but WAUG could you find a person winning the PageStream package who doesn't even own an ST??? Congratulations to David Brzezinski! Additional congrats to Jim Shillington, who won the Celebrity Cookbook. Jim may not find out about this until he reads it in AIM, since he left the meeting early!

The next meeting will be held on Tuesday, 3/13. We will be discussing SpartaDOS and, hopefully, reviewing some of the current UNIX/multi-tasking/networking systems that have been making their way into the ST arena.

Fleet Street Publisher 3.0

Leaping into the future of Desktop Publishing!

Fleet Street Publisher 3.0™ takes a giant leap into the future! Easily, the most powerful desktop publishing application available for the Atari ST, ***Fleet Street Publisher 3.0,*** is designed to produce high quality printed material without spending a fortune.

Fleet Street Publisher 3.0 is the only Desktop Publishing program to fully utilize the power of UltraScript™. Enjoy the flexibility of using any of the fonts created by Imagen®, the leader in font technology. This font technology is built right into ***Fleet Street Publisher 3.0***, via a unique Font Scaling Module, providing the kind of output for your screen and printer you've only dreamed about! Enjoy crisp detail in your pages without spending thousands of dollars on a PostScript™ printer. You can even get quality output from inexpensive Dot-Matrix printers.

Of course, don't overlook the fact that ***Fleet Street Publisher 3.0*** can produce PostScript files. These files can then be typeset on a Linotronic™ Typesetting machine at upto 2540 dpi. Just send your files via modem, or take your floppy disk to a nearby Service Bureau for extremely high quality typeset pages.

Fleet Street Publisher 3.0 enables you to:

Lay out pages, in different sizes and with multiple columns, using Master Page layouts.

Enter and manipulate text in a variety of type styles and sizes. Add graphics and illustrations, then size them to fit your publications' needs.

Create newsletters, price lists, parts catalogs, publicity handouts, even complete books or magazines quickly and easily. Add variety and appeal to bulletins and circulars.

Powerful user interface. Power users will encounter convenient macros, while less confident users will find full menu support for all functions.

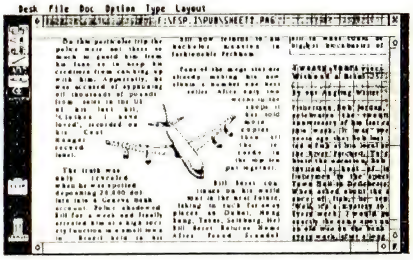
MichTron®

576 S. Telegraph, Pontiac, MI 48053
Orders and Information (313) 334-5700

New Features

Fleet Street Publisher 3.0 gives you:

- The ability to create multiple page documents (upto 99,999 pages with suitable disk storage), with automatic generation of headers and footers, from master pages.
- Automatic page numbering.
- Automatic kerning of text.
- A Repeat feature that is included for multiple duplication of text, effects, and graphics.
- A Search and Replace function for text and text attributes.
- The ability to flow text around any object or shape quickly and easily.



- The ability to import Object-oriented drawings, such as GEM™ Metafiles.
- Drawing tools that permit creation of a variety of lines and shapes.
- Text and graphics that are easily imported from most popular Word Processors.
- Vertical justification of text, also known as "carding".
- A spell checker with a dictionary of 120,000 words.
- Intelligent use of hyphens in your text with the new Hyphenation Exception Dictionary.
- Graphics that import directly from art programs.
- Printer drivers available for the Atari SLM804™, PostScript, HP™ and Epson™ printers, and all printers compatible with any of these.

"The ingenuity of ST programmers simply amazes me at times, and this is definitely one of them."

Bill Rayl
Atari Interface Magazine
December 89 Issue

.ACCess! is the First and ONLY GEM WINDOW based Command Line Interperter Desk Accessory available for the Atari ST. It supports most of the standard MS-DOS and Unix commands as well as batch processing functions. *.ACCess!* contains commands to perform most disk operations such as displaying directories, copying, moving, renaming, deleteing files. Other commands include the creating and displaying of text files, formatting disks, displaying/setting file attributes, and the displaying/ setting of time and date. All in all *.ACCess!* contains nearly 40 commands, 22 programming functions and 12 control flow batch processing keywords! Several versions of *.ACCess!* are supplied including Desk Accessory, TOS, TTP and special AUTO folder version.

AIM Disk of the Month
April

All files on this disk are self-extracting LZH archives. Simply copy these files to floppies with plenty of free space (or a hard drive) and double-click the files to extract.

Readers can purchase this disk by subscribing to the AIM Disk of the Month, contacting one of the AIM participating clubs or by sending $6/disk (DS) or $7/disk (SS) to Unicorn Publications, 3487 Braeburn Circle, Ann Arbor, MI 48108. Please specify the April 1990 disk when ordering.

BLKTIGER.TOS—BLACK TIGER is a hack 'n' slash arcade game demo from the UK with levels to master, things to climb and monsters to kill. LOW rez only, joystick required. Awesome!

BOGGLE.TOS—GEM-based boggle-type word game for one player. Multiple play options, load/save your own dictionaries.

BOOTMKER.TOS—Turns any GEM-based program into an autobooting file which can be run from the AUTO folder. Normally, only TOS-based programs can be run from the AUTO folder. With Boot Maker, you can have your ST automatically boot your word processor (or other GEM program) at start-up.

CDIAL.TOS—Cyber-Dialer is a dial-directory and smart-dialer in one. You can enter up to 40 BBS numbers per directory, click on the ones you wish to call, and Cyber-Dialer will ram-dial them and alert you when connected. Supports Hayes and non-Hayes modems.

CHEKBOOK.TOS—Chekbook tallys your checking account's total balance, daily balance, what the bank thinks you have, and the last date when the bank's balance was the same as the real balance. Allows you to print your checking list and has some powerful search functions.

CSLEEVE.TOS—The first software release from Sledge Hammer H&S (See articles in April '88 MAM, April '89 and April '90 AIM for info on Sledge Hammer). This is a cassette sleeve printer for organizing your cassette library. Don't worry...it won't blow up your machine!

DOUBLER.TOS—Convert single sided disks to double sided disks without copying files back and forth! Only one double-sided drive required and runs on any ST. Doubler formats the back of your SS disks and reorganizes the data, saving you the hassle!

F40DEM.TOS—Graphics/sound demo from Europe showing a Ferrari F40 with scrolling text and rotating Ferrari symbols reflecting in a pool, all from a *very* small program.

GILGALAD.TOS—Graphic adventure game from Germany with 244 rooms, built-in help and high score menu. MONO only.

ICONDESK.TOS—ICONDESK allows you to assign unique icons to up to 256 files or groups of files. Works in all resolutions, but configuration PRGs run in MONO only. Comes with one set of very good icons. Another great program from Germany!

KPT_DEMO.TOS—Working demo of Kidpainter, a unique graphics design program your budding artist or mathematician (aged 5-11) will LOVE! A PUZZLE MAKER option turns your child's drawings into onscreen puzzles. The SAVE and PRINT options in this demo are disabled. A kidprg by D.A. Brumleve. COLOR ONLY.

PAPACNT.TOS - Paperless Accountant is an easy-to-use home accounting program that outputs all graphs/reports to screen only. The program will manage savings, checking and charge accounts, incorporating various types of graphs and expense categories. Great for balancing the budget!

PBMCHESS.TOS—Play-by-Modem Chess for both color and monochrome systems. Nice, clean graphics. Send messages back and forth while playing!

PROPRINT.TOS—Pro-Print prints your text files in two column newspaper style with very tiny letters, so you can get four times more text on each page without much speed-loss. Works with Epson-compatibles.

QST2DEMO.TOS—Quick ST II Demo. Two of the 5 utilities in the new Quick ST II Screen Utilities by Branch Always Software. Fully working except the configuration cannot be saved to disk and the program runs a little slower than the real product. Runs on any Atari ST, Mega or STe.

SENTINEL.TOS—Write Error Sentinel watches over disk operations and informs you if there is a "disk full" error. Useful for ARC602.TTP and FLASH.PRG (when saving from a DO file) and some other programs because without SENTINEL you will not be informed of the error. Uses less than 1K of memory! Program by John Eidsvoog.

SMARTDAT.TOS—Set the system date once in the morning...SmartDate remembers, even after shutting off your ST! Every time you boot up, SmartDate will set the correct system date! Color or mono.

VAULT.TOS—The best PD hard drive backup and restore utility available on the ST. Runs on any ST, can back up files too large to fit on one disk, does full or incremental backups, has built-in help and lots more!

Atari Interface Magazine is a monthly publication that also serves as an official newsletter of several independent Atari user groups and is not affiliated with Atari Corp. in any way. ATARI BULLETIN BOARD

by Bill & Pattie Rayl

In a press conference this month, Atari announced it is now shipping the Lynx game machine with a detachable keyboard and battery-powered disk drive. According to our sources, plans are in the works to allow the disk drive to connect to the Portfolio as well. Suggested retail for the new "Lynx Computer," including disk drive, is $299.

Dealers, who have been unable to purchase Atari 520ST and 1040ST computers since mid-December of last year, are now having problems getting Megas as well. In order to help ease the backlog of computer orders from dealers, Atari has begun shipping the new "Lynx Computer" to dealers as replacement for Mega 2 and Mega 4 orders "at no additional charge."

Atari Computer's newest president, Meade Ames-Kline, has reportedly disappeared amidst a cloud of suspicion. Ames-Kline is the former president of the Koala Springs Beverage Co., maker of a "trendy soft drink popular in California."

Apparently, investigation into the recent Perrier scare led detectives hired by the Perrier Co. directly to Ames-Kline. Detective Sgt. B. Leavit stated, "It seems Mr. Ames-Kline, whose company was a competitor with Perrier, sent a letter to the president of Perrier just days before the scare. Then, Mr. Ames-Kline rather suddenly left Koala to take a job at, of all places, a game machine company. Sounds pretty suspicious to me."

We called Atari to find out more, and after numerous transfers, we finally reached someone who knew something about this.

The janitor who cleaned Ames-Kline's office the night before he disappeared informed us that, although he wasn't sure, he thought Ames-Kline could be found somewhere in the Caribbean. When asked why, he stated, "Well, when he left that night, he was wearing Bermuda shorts and a khaki shirt. Plus, there were all these Caribbean cruise brochures in his wastebasket.

Following closely on the heels of the recent layoff of reportedly between 10 and 15 percent of its U.S. workforce, Atari has announced the shutdown of all its factories. An Atari spokesperson attributed the shutdowns to "the fact that we have no products right now. We will open the factories again once we have products to sell. Until then, we're just wasting a lot of money on electricity and salaries."

Atari has also reportedly developed a 512K version of the new STe. Originally, the STe was to be marketed only in a 1Meg version, using SIMM modules and allowing for easy user expansion. Due to market surveys conducted in Borneo and Kuala Lumpur, Atari has come to the conclusion that the average computer user would be better served by a 520STe.

In order to produce these new machines, Atari has developed a new technique called "SIMM Splitting." The engineer we spoke with explained the process as "basically taking a 1Meg SIMM module and chopping it into two equal size pieces, thereby making two 512K SIMM modules. This way, we can make twice as many 520STe machines as we could make 1040STe computers."

We contacted former Atari employee Sig Hartmann to get his views on the subject. "Ya, I hear about dat," Hartmann said. "Dey gonna sell jillions of dose to dem guys out dare, specially to dem usahgroup guys."

Developer News

Due to numerous problems with pc-ditto II, Avant-Garde has been furiously working on changes to the product they believe will revolutionize the Atari market.

Attempts to reduce the size of the hardware upgrade were unsuccessful. In a surprising move, Avant-Garde decided to make the IBM emulator *even bigger!*

Dubbed pc-ditto III, this new emulator works by having you plug your ST into it, similar to plugging a card into a real IBM. A source at Avant-Garde said, "With ditto III, there is no need to open your ST. You just open the flip-top on the ditto III case, slip in your ST, case and all, and you're ready to go!" This new upgrade has the added benefit of looking exactly like a real IBM from the outside.

Tom Harker, president of ICD has announced a special two-for-one sale on their popular FA*ST hard drives and FA*ST Tape Backup systems, in honor of his recently becoming a father of twins. The press release announcing the sale quotes Harker as saying, "I've got two babies, and I'm so happy that I think everyone should have two of these babies, too!"

Online News

Z*Net Online and CPU Report

(formerly Z*Magazine/ST*Zmagazine and ST Report) have merged back into a single publication, Z*Net Report. Publishers Ron Kovacs and Ralph Mariano, thought by some to be bitter enemies after a falling out last year, are back together once again. Z*Net Report, dubbed "The Original Weekly 16/32 Bit ATARI NEWS FIRST Online Magazine," is available on most online services and many local bulletin board systems and promises to be filled with exclusive reports on everything of interest to Atari users everywhere.

User Group News

A new movement, entitled The Atari Armageddon, has been started by the Middle East Atari Terrorists user group based "somewhere in Libya." A spokesperson for the group, who would not give us his name, said this movement was begun due to dissatisfaction with the Atari Revolution begun by Artisan Software. The Armageddon Handbook, which refers to The Revolution as "a wimpy little nothing of a plan," lists weekly guerrilla activities that are "guaranteed to make an impact, if not in the computer community, then at least in someone's body." Upcoming activities include "Blow Up Apple Dealerships and Blame It on IBM Week" and "Take Sam Tramiel Hostage Day."

And, if you believed a word of this, we hear Commodore has an opening as President! *April Fools!*

The Ultimate Accelerator and Other Unique Items ☢ A 1990 Product Update from Sledge Hammer Hardware & Software

Sledge Hammer
(Michigan Atari Group Not Usually Mentioned)

Before I tell you about our new products, I'd like update you as to what's been happening here at Sledge Hammer Hardware & Software over the past year.

Cable-B-Gone Connectors

The market for our Cable-B-Gone (CBG) units (April '88 issue of the Michigan Atari Magazine) never materialized. *[Ed: Cables-B-Gone are small nuclear powered wireless connectors for your powering Atari peripherals]*

We have since licensed the idea to Practical Solutions. They approached us with an idea of developing a cordless mouse. They have a silly notion if they remove the nuclear power packs to make the units safer (nonsense) and use infra-red instead of our transponders to keep the FCC off their back, they'd have a hot selling product. I don't think it'll work. (I still don't know why the FCC was so picky about us using 1MHz of the 6MHz space allotted for channel 3.)

In order to develop our new products, we have discontinued building the CBGs. There may still be some CBGs left in the market place. We had a warehouse full of our Beta (test) version. Most of these had unstable nuclear power packs. I've heard an Amiga distributor is now in possession of these remaining CBGs. Our contact, Leonard T., was very enthusiastic about making the arrangements.

Anti-Pirate Devices

As you may have heard by now, one of our Nuclear Powered Anti-Pirate Devices (April '89 issue of AIM) nailed at least a few scum-sucking pirates. The sleezeballs bought it in San Francisco last October. The media reported the event as an earthquake, but here at SH H&S we know better. *[Ed: The Anti-Piracy Device released a nuclear explosion whenever it detected a software theft operation.]*

New Sledge Hammer Products

For 1990 we're planning to introduce three new products:

- MagnumMon—A bulletproof monitor.
- Hammer Drive—A very unique disk drive.
- Sledgerator—The Ultimate Accelerator.

MagnumMon

This is my personal pet project for 1990. I hate those wimpy light guns used by the computer games. I like using my .44 Magnum when I'm shooting someone. A real gun adds so much more realism and action to the game.

Our current model can withstand an assault from just about any handgun. A future model should be able to ward off bazookas and heat seeking missiles. It's not only cheaper than buying a new monitor every week, but when using real guns on a bulletproof screen, the players get a good workout dodging ricocheting bullet fragments.

Hammer Drive

Since increasing speed seems to be this year's fad, we thought we'd jump on the bandwagon. R&D came up with a great idea. If an audio cassette player can play both the left and right channels at the same time, why can't we develop a head to can read or write 80 tracks at a time. That's just what we've done.

Each drive has two of these 80-track heads...one for each side of the disk. This enables the drive to read or write an entire disk in one revolution. Another disk revolution is required if write verify is turned on—can you believe it?

I know some of you are asking how we handle such a large data flow. Each Hammer Drive has an onboard CPU plus over 1Meg of memory and attaches to the DMA port. Backing up floppies is a breeze. The source disk is read into the onboard memory. Replace the source disk with the destination disk and the disk is written to from memory.

Because this copy method gives exact duplicates, its able to copy copy-protected disks. I can hear all the software developers groaning. Don't worry. We are installing one of our Nuclear Powered Anti-Pirate Devices in every unit.

Sledgerator (rhymes with Accelerator)

We are currently working on the ultimate hardware accelerator. We've exclusively licensed the flux capacitor from Doc. Emmett Brown. The flux capacitor will allow operations to happen instantly on the ST by making it possible for you and/or the computer to move through time.

Since we are still working on the first prototype, all I can do is walk you through a typical computing session using Sledgerator (I hate companies who provide extensive details about their vaporware). As an example, let's say you have finally decided to backup that hard disk to floppies.

1. Start the backup process just as you've always dreaded. Make note of the time.
2. Determine how much time completing the backup will take.
3. The Sledgerator will now transport you (not your computer) forward in time. Since time travel is instantaneous, you will find yourself sitting in front of your computer with your hard drive backed up.
4. Confirm the operation was successful.
5. Now, tell the Sledgerator what time you started the backup (from step 1).

The Sledgerator will now transport you and your computer in its current state back to the time you began making your backup. You have just backed up your hard drive instantly. The current time will be the exact moment you started making your backup.

Troubles with Sledgerator

We have three major problems to overcome before we can market the Sledgerator. The first problem, but it should be the easiest to solve, is its size. It's too big. Currently, it's about the size of a DeLorean.

Duplication of the user is a problem if the flux capacitor malfunctions. Fireball XL5 (one of our R&D engineers) is feverishly working on the problem. First, I have to tell you a little story about how he got his name. He's called Fireball because he has single-handedly caused the largest, most visually spectacular explosions we've ever seen here at SH H&S. XL5 is his serial number. We had a major malfunction with one of our flux capacitors. We now have so many Fireballs on staff we had to assign them serial numbers.

The last problem has turned out to be the most difficult to solve. The building containing the Sledgerator, computer and user must be travelling at 88mph. Actually the problem is with the local police. We don't have any problem getting the building up to 88mph.

Well, that wraps up our plans for 1990. *April Fools!*

Trust Us...We Know what We're Doing!

BEST ELECTRONICS

ST/Mega

First shown at the World of Atari show in Anaheim our **New ST/Mega Compatible Mouse $49.95**

The very **Best** mouse cleaning kit we have seen, it's so good it has an U.S. Patent on it!

"The 360 Cleaner" $16.95

Hard drive builders and Megafile 30 owners, check out our new low price on 3 ft molded hard drive cable male to male **$15**

6 ft ST **Monitor cable** male to male **$19**

Happy Discovery Cartridge Option 1 upgrade kit, clock, 3rd+4th drive circuitry **$27**

Right Angle ST 40 pin connector **$4**

ST/Mega CX22 **Trackball/mouse $24**

Back in stock! with 1987 pricing 6ft Disk drive cables $15 ea. 25" Disk drive cable $12

520ST Owners thinking about selling your computer to upgrade? Make that computer look like a new computer with a new 520ST case set. Reg $40 **Sale $29**

Mega Owners! Need a longer keyboard cable? Try our new cable that is 5"-7" longer in its coiled form. $12 ea.

Goldstar **ST Monitor** TH901 Thermistor $8

Xformer Cable The Xformer Cable allows Atari 8 bit peripherals to be used on ST/Mega systems and data transfer from 8 bit to ST. Xformer software and Documentation not included $19

How Do You Spell Relief? B-O-B B-R-O-D-I-E

Steve Volker (TAG)

> For this relief much thanks: 'tis bitter cold, And I am sick at heart. —Hamlet,1,1

"Hello! Hello! Is anyone out there! Can you hear me?!"

Of course you can! With the help of great magazines like AIM and on-line telecommunication environs like GEnie, we—the Atari end user—do have a voice. A "soap box" if you will, to express our deep excitement and disappointments involving the evolution and marketing of our computer of choice.

Changes in the Air

Until recently though, only a select few of the myriad of voices "crying in the wilderness," could be heard by Atari. I believe this has changed now, in the person of Robert Brodie.

OK—I admit it! Anyone who fills a table with a 4Meg STe, a 4Meg Stacy with 40Meg hard drive (running one of *my* pictures!), the diminutive but powerful Portfolio and the amazing, colorful and *fun* hand-held Lynx, and then says please feel free to use any of them, has already made a life-long friend!! But it was what he had to say and how he said it that's really got me "believin."

I was one of the lucky (and smart) ones, who showed up to see "Mr. User Group" in the Anderson Room at the Student Union at the University of Michigan last month. I was not dissappointed.

I was however proud, excited, confused, elated, tense, pensive and verbal during the next few hours as Bob talked about upcoming events and answered some very difficult and deserving questions.

In the upcoming month, I'm sure you're going to hear and read reviews and comments about how well the Stacy emulates the Mac, how it shoots holes in the overpriced Macintosh portable (all true). You'll hear the undercurrent on the dazzling little Lynx that really does have great graphics, a full color three-and-a-half inch screen with dyn-o-mite animation and sound (also all true). People will be talking all about the new STe and its multi-faceted improvements and the like. So I think I'll leave that up to those better suited to do that, my focus is leading somewhere else.

Lines of Communication

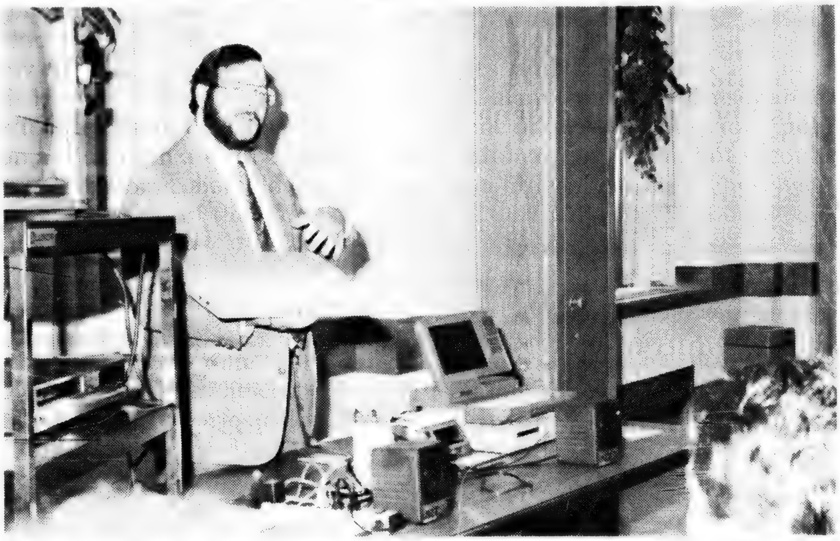
This event was not the first time I talked to Mr. Brodie. The first was one night last year, after finally getting enough control over my doubts and frustrations about Atari to call up the new User Group Coordinator and register our club.

Atari is Listening!

I spoke to others in that chair in the past and was fully prepared for the textbook version of how-to-pretend-to-be-interested-when-you're-really-not, as I waited to get a few words in edgewise. This was not what happened. What did I hear from Atari's User Group Coordinator? I "heard" Robert Brodie...*listening!*

I've spoken to Bob a number of times since then, about the ST, about new products, about Atari in general, sometimes about topics completely unrelated to computers. I like to hear that he was a User Group president himself before Atari; I like it when he talks about his own ST at home and expresses some of his frustrations about the scheme of things.

I also like to hear he doesn't always agree with or condone everything that Atari has done. I especially like the thought that Atari hears these things too—from one of them and one of us.



People Are Talking About DC UTILITIES

"The wizards at Double Click Software have decided to bombard us with several top notch utilities at once in their first commercial software venture, and are these programs ever good!"
— ST ZMAG

"Squish loads and decompresses programs faster than a standard ST would take just to load the same program full-size."
— COMPUTER SHOPPER

"In keeping with the spirit of pushing the ST and its programs to the limit or past the envelope..."
— ST REPORT

"You won't want to be without this superb utiltiy disk and it's a steal at the price DC is asking."
— ST PLUG

only $29.95

DC SQUISH Save valuable disk space! Compress executable programs and desk accessories up to 1/3 their original size! And your programs stay executable! Makes programs load faster too!

DC DESKEY 2.0 Make any GEM program 'Expert Friendly.' Assign keystrokes to GEM drop down menus in any GEM program! Over 2000 possible key combinations!

DC XTRACT A super fast, pure assembly desk accessory that allows you to xtract, test, or list the contents of any ARC file. DC XTRACT is 4X faster than ARC.TTP, only 12K in size, and always ready when you need it!

DC RAMIT The FASTEST RAMdisk bar none! Allows you to make the RAMdisk look just like a floppy! Save the contents of the RAMdisk to one file, for quick loading of the same files! MUCH MORE!

DC DSKORG Make your DESKTOP.INF file an executable program! Change desktop windows, icons, the complete desktop layout quickly and easily by double clicking one program.

DC SEA Create programs from ARC files! That's right! DC SEA (self extracting ARC) allows you to make a program that will extract or list its own ARC contents.

All programs are 100% pure assembly language

A Silent Revolution

Tim Holt (STE-EP)

As I write this article, I really do not know how well the Atari Revolution is doing. I hope it is doing well. I have even got my little "Join the Revolution" stamp. (If you see some dollar bills with "Join the Revolution: Use Atari Computers" stamped on them, I did it.) Although the Revolution is a downright noble cause, it has its drawbacks.

First of all, writing to the Tramiels is sorta like trying to move the proverbial mountain. If you haven't guessed by now that the Gang of Three doesn't give a lot of thought to us U.S. users, then you haven't been paying attention. Smell the coffee Bubba; they are in it to make a buck. What the U.S. provides is pocket change.

Secondly, the Revolution appears to many to be like trying to stop a hemorrhage with a band-aid. It is a nice try, but it doesn't do much good. The damage has already been done, and calling 20/20 won't do much good simply because the folks in Sunnyvale (What a misnamed place if ever there was one!) do not give a hoot what users think. (See reason #1)

Thirdly, the main focus of the Revolution is terribly misdirected. Roseanne Barr doesn't give a flying flip if her family wins a computer. Have you seen that show? The computer would end up as a doorstop, or worse yet, Roseanne might sit on it. (In the process, a palmtop ST would be born.) The Revolution needs to go to only one place: *where the money is.* That is why I wrote this short essay.

The Atari Revolution will only succeed when we make some *economic* impact, somewhere. All the letters in the world won't do as much good as the sight of money lost. Think about it. If you were a businessman, what would make you think more: A few hundred letters from a bunch of computer fanatics (and that is what we are folks, don't try to deny it) or the loss of a few thousand dollars in sales? Well, I think the latter. May I offer the following as a *co*-Revolutionary proposal?

Let us target some software company. (Just for no other reason than I have a current catalog, I will use Brøderbund as an example, although *any* software company will do.) I know that they make a nifty program called "If It Moves, Shoot It!" I also know that, from the catalog, it only is made for the IBM and Amiga line of computers. What if three thousand of us sent Brøderbund checks made out, all for $29.95, for this product, *but only if it were for the Atari ST?* This would have several effects:

1. The company would see there is a market they have missed.
2. If the company had any brains, they would see that they were losing a hell of a lot of money. In this case, close to ten thousand dollars in lost sales. (The more checks sent, the more money they would be losing.)
3. The company would consider the ST community the next time they came out with a new product.
4. They would actually *lose money* because they would have to spend man hours refunding our checks, since they did not have the item we wished to order.

And that, my friends, is where this revolution would take off. If we could benignly cause companies to lose money, simply because they didn't carry ST software—hit them in the pocket book—then we would make our mark. Let me give you another example.

Suppose Company X sold a grammar checker for its popular word processor for the IBM, but not for the ST. Suppose this grammar checker sold for $300. If this company received 5,000 checks, all made out for $300, but *only for the ST version* of the program, this company would see rather quickly they just lost 1.5 million dollars in sales. *Plus,* they had to refund the checks, using office personnel, so in effect, they lost *even more* than the $1.5 million. I think they would get the picture rather quickly.

What would this cost the ST user? Just the cost of a stamp, and a little letter writing. You would not lose the money on the check, because the company did not have the item you ordered. They would have to refund your money, so you lose *nothing.*

What do you get out of the deal? Well, ever see a program on IBM or MAC or Amiga that really looked nice, only to find out it was never made for the ST? If enough checks are written, I bet money you would see that program finally written for the ST.

The time has come for us to stop goofing around. To hell with Atari if they ignore us. They sold the computer; that is all they wanted to do anyhow. The time has come to hit the software companies where it hurts the most: in their cash flow!

Fund Raising with the Atari 8-bit

G.L. Ray (TACE)

Have you ever needed an easy fund raising activity for your club, church group or school organization? Something that is both fun and profitable? Something you could do on your computer?

Small Scale Fund Raising

Well, here is a suggestion that will fit just about any small scale fund raising need. Of course, if your computer club all banded together utilizing several people and several computers, you could make this project about as big as you like.

My R.A. group at church (a mission organization for boys) needed about $100 to purchase some award vests for each member. As I began to ponder the possibilities, I remembered how popular my label maker program had been at the Halloween Carnival the past two years.

I had set up one of my Atari 130XE's, along with a printer and a box of form feed labels, and printed fun stickers for the kids. I used the Printshop Label Maker program from the April '87 issue of Antic magazine, and I made up a disk of selected Printshop icons. But I probably made as many labels for the moms and dads as I did for the kids. So, I thought perhaps we could sell Printshop labels and make the money we needed.

I decided on two main formats: return address labels for Christmas cards and to & from labels for Christmas presents. I made up a disk of Christmas-related icons, as well as an assortment of fancy capital letters which could be used as first or last name monograms. I figured some people might not want Christmas labels, but they might purchase monogrammed address labels for the year round.

I used the Printshop icon printer from the SPACE Printshop utilities disk to print out examples of all the graphics available. Then I printed out some sample labels, picturing the various fonts and graphics, as well as suggested layouts.

I then assembled all of these together on construction paper, and had them laminated to protect them. I made one for each boy in the group to use to sell from. Finally, I made up an order form using Printshop's letterhead feature and my word processor. I had a bunch of copies made, and we were ready for business.

We charged $1 for 50 labels, and most people ordered at least one with a Christmas motif and another with letter monograms. We even had one man order 500 labels for his business letters.

How much did we make? Well, the cost for 50 labels was less than 10 cents. Of course I used up some printer ribbon, and I had a little wear and tear on my printer. But, all in all, we made at least 80 cents profit on each set of labels sold at $1. Now that's a pretty good profit margin, if you ask me.

We made over 50% more than we needed to make, and we plan to repeat the project again in the spring. After all, 50 labels won't last forever. And the customers were delighted with the labels. They liked them for the appearance, and also for the fact that they were self-adhesive (No Lick'Em To Stick'Em).

If you would like to utilize this project for your fund raising needs, but you do not have the above mentioned programs, they may all be purchased from your local Atari User Group or through our club library at a cost of $3 per double sided disk (includes postage).

The list of disks are as follows: Printshop Label Maker & Utilities, SPACE Printshop Utilities, Printshop Icon Disks (send a Self-addressed, stamped envelope for printouts). Please send your requests to:

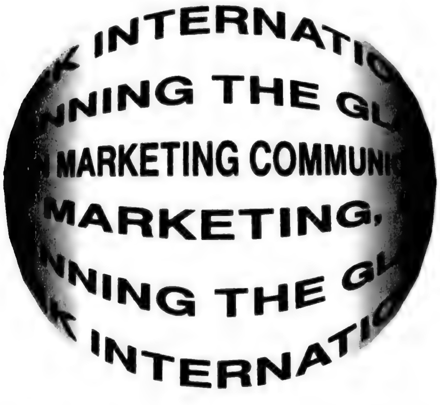
CALAMUS OUTLINE® ART

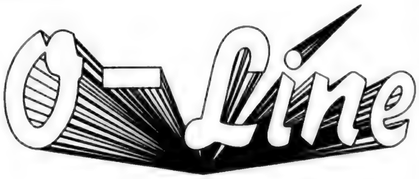
OUTLINE ART is a vector- oriented, graphic generation tool. Multiply your creativity through the many functions which you will find in this program.

OUTLINE ART supplements the CALAMUS DTP system with a great number of new functions and effects. A extract from the extensive list of functions include:

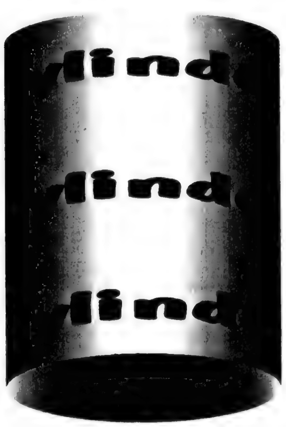
- A user interface, quite similar to that of CALAMUS.
- Complete Vector Graphics Editor for lines, Bezier curves, control paths etc..
- Capabilities to generate freely-definable raster areas.
- Creation of rayed objects, ie; from a font to a central point.

- Nearly unlimited possibilities for the manipulation of text, characters and text attributes such as:
  - rastered, transparent, outlined, rotated, stretched, compressed and cursive styles...
  - circular text and text along a freely-defined vector path...
  - projection of raster areas and text on vector outlines...
  - conversion of text into vector objects...
  - kerning functions...
  - Functions can be freely combined and applied to all CALAMUS fonts.





ISD MARKETING
ISD MARKETING ISD MARKETING ISD MARKETING
ISD MARKETING



- Integrated, fully programable calculator with a pre-defined and extendible library of transformations such as:
  - shift, rotate, mirror, enlarge/ shrink, project onto a sphere (globe, cylinder, cone), etc..
  - An intelligent clipboard and copy functions, allowing the automatic generation of transformation sequences.
  - loading and saving in .CVG format (CALAMUS Vector Graphic), making possible the integration into and optimal printing through CALAMUS on all supported output devices in all resolutions.

Now included!
Convert 2X,
our new Conversion program CVG (Calamus Vector Graphic) to EPS (Encapsulated Postscript) or PS (Postscript) file format.

Note : DynaCADD, our complete 2D and true 3D Computer Aided Design and Drafting Package, allows the importation of Calamus Vector Graphic format, (CVG). Which can then be output through all output options supported by DynaCADD, ie: CAMM-1, Plotters etc,... An excellent solution for the Sign Making Industry.

Calamus Outline Art has a suggested retail price of US $289.95.

For more information or to place your order, contact your local Atari Dealer or contact us directly at: ISD Marketing, Inc., 2651 John Street, Unit #3, Markham, Ontario, Canada, L3R 2W5, Tel: (416) 479–1880, Fax: (416) 479–1882

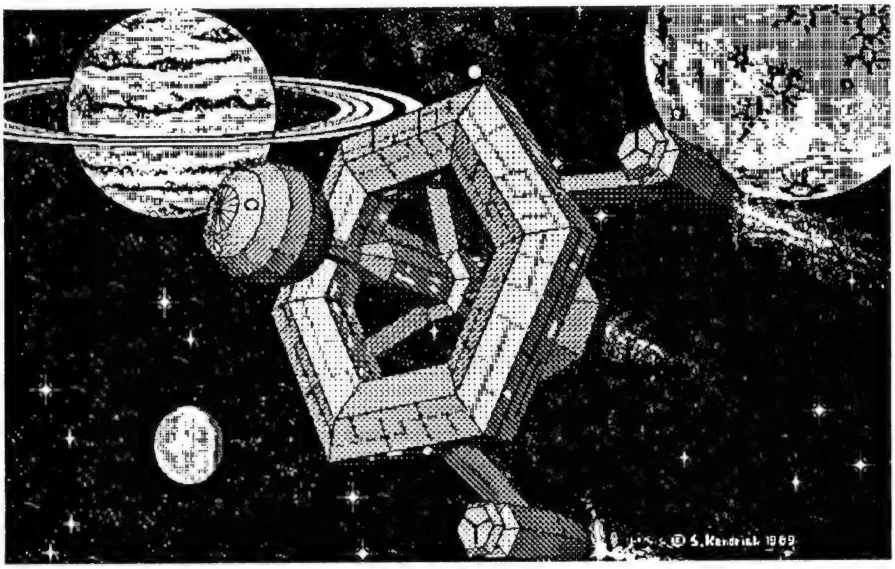
THE COMPUTER GUIDE TO THE SOLAR SYSTEM

WHATS GOING ON OUTSIDE YOUR NEIGHBORHOOD

Gordon Totty (MACE)



Some facts about the solar system for you:

- It's bigger than a bread box.
- Actually, it's bigger than both of us.
- It's cold out there.
- There are a lot of hot spots.
- Solar heating is used extensively.
- Hang around it long enough and you could get "mooned."

Since that about exhausts my intellectual stores, you might want to take a look at The Computer Guide to the Solar System (CGSS) from WinterTech. It will surely carry you further than I could in your quest for knowledge about our cosmic neighborhood.

Before we get started, you should know you can run this on your Mega, 1040 or 520ST with color monitor, one or two disk drives, or one disk drive and a hard disk. CGSS can be run with the blitter chip, but it may speed up some of the animations too much to enjoy them.

The program comes in a 1Meg version and a 512K version. Both versions are identical, but the 1Meg version is faster as a result of less frequent disk accesses. This review is based on a 1Meg version, running on my blitterless 1040ST. Now, let's learn some stuff about the big picture.

The Solar System

From CGSS you can learn of a place where sulfuric acid rains from the sky. (No, not eastern Canada and northeastern United States, but somewhere far away where you haven't been and don't want to go because you can't get lobster there.) Learn where fountains of gases hotter than acetylene torches stretch for distances greater than that between our earth and moon. Learn of gases heavier than lead!

An Excellent Educational Program too!

Learn, learn, learn...because this is educational software. As such, it deserves a lot of praise, and WinterTech a lot of encouragement for trying to improve the inventory of educational software.

For, in my opinion, educational uses of computers are not living up to the initial promise. Whether we are consumers, parents or teachers, we should be demanding better educational software. I believe there is still a lot of progress to be made in the educational arena. (End of mini-editorial. Back to the review.)

There is a "ton" of information in this program.

Let's glance at the categories of information available on just the sun.

A Sample of Information

Point and click on "Structure," and you may then select corona (where, I learned, the second law of thermodynamics is routinely defied), chromosphere, photosphere, convective zone, radiative zone or core. Each of these gives you an opportunity to learn more than you might imagine. You might also learn more about solar wind and rotation.

From the Size and Mass selection, I was able to learn that the sun contains 99.86% of all the matter in the solar system. Of course, for most of us, 99.86% of all that matters occurs on Earth. (Corny, but I couldn't resist.)

Nuclear Cycle contained information on the Proton-Proton Cycle. It was described and then simulated in motion. This cycle converts over four million tons of matter into energy each second.

Sunspots, prominences, and solar flares are explained under Solar Phenomena.

Life Cycle was particularly interesting to me and my son, who has just entered the sixth grade. We were able to watch a computer simulation of the formation of the sun. Then, we sat powerless as it grew and gobbled up Mercury, Venus, and Earth. (Hang around for 30 million years or so and see it happen in "real time.")

Under the Data selection, the unit area solar radiative output was shown: 6,000 kilowatts per square foot. Amazing, eh? The program allows you to show data in standard U.S. or metric units of measure.

A similar wealth of detail is also provided for Earth, our Moon, each of the other planets and the phenomenon we call gravity (a very serious matter influence). You will be given the opportunity to break eggs all around the solar system. Success will vary.

I learned that I would weigh 4,614 pounds on the sun, but only 28 pounds on the moon. So, tell me, how much do I weigh on Earth? If you know, maybe you don't need CGSS in your software library. I suspect, however, that if you do know you are still going to be tempted to buy CGSS because it teaches about a subject that you obviously find interesting.

Which brings me to a point I want to make. I listed a little of the information and most of the categories about the Sun above for a purpose. From this you should be able to decide for yourselves if this is the kind of stuff that turns on your mental muscle. If not, you can stop here and read the next thrilling article in Atari Interface Magazine. If so, read on.

Documenting the Solar System

The documentation with CGSS is clear, well written and nicely presented. The entire program, however, is mouse driven, intuitive and very easy to follow. So, the documentation is almost unnecessary.

I disagree with one of the points made in the documentation. From page 1-1, "...we will soon achieve the means for large numbers of persons to travel beyond the Earth's influence.... Probably our own children, and almost certainly our children's children, will have the opportunity to actually set foot on other worlds!" Oh, yeah? At what cost? I suspect that scientific and technological feasibility will exist (perhaps already does, depending on how you define it), but that economic feasibility is a long, long way off.

Well, let us forgive the author's enthusiasm. She/he is very excited about the solar system, and it shows in various statements in the documentation. Cynical old me! I'll settle for mega-strides in utilization of computers for education in the next generation. Moons, Mars, and stars can wait. CGSS can help fill the gap while we wait.

CGSS was written in compiled GFA BASIC, version 2.02 from GFA Systemtechnik. The folks at WinterTech have no other titles for us at the moment and are working to convert CGSS to other platforms. For a pleasant change, the big blues, imitation blues, apples, fat macs and commodores can wait while the Atarians enjoy!

CGSS is not copy protected. You may back up the disks, but you should use an "extended formatter" (a program to format to 400K per disk side). Lacking this, you may "File Copy" from the CGSS disks to two disks formatted as double-sided (720K).

Now, let's turn to educational software. What should it do? How does CGSS stack up?

A Word about Educational Software

Educational software should be interesting, of course. This requirement is shared with any educational media—books, lectures, dialogues, slides, movies, etc. You have to decide whether or not the subject is interesting to you; your reviewer can't do that for you. My son and I both found this program to be very interesting, but the solar system and I go back to "One Two Three...INFINITY" by George Gamow.

It should be interactive, and it should illustrate complex phenomena. Any teacher or good student understands the interactive requirement. Give and take; keep me awake! Help me to involve my mind, not just my eyes and ears. Let me, the student, influence the course of study. If I am bored with the sun, let me opt to study the moon or distant planets.

The illustration of complex phenomena is, to me at least, the area where the computer can shine in education. Have you ever read about, or listened to, an explanation of how the earth spins on its axis, tilted with respect to a plane through the sun, as it travels in an ellipse around the sun? And how the moon revolves around the earth at the same time? And the sun is moving through space bringing along all these other bodies in motion with it? Not to mention that the galaxy is spinning like a big wheel? You have? OK, which end was up?

While your head is spinning in contemplation of all this motion, bring in a discussion of seasons, days, years, tides, gravity, etc.

A computer can illustrate the earth in motion around the sun, while the moon is in motion around the earth. Even a kid can, in actually seeing this, begin to grasp it finally after long-winded explanations might have failed to impart the knowledge. Something about pictures and thousands of words comes to mind, eh? Well, if one static picture is worth one thousand words, how many words is a dynamic, moving, interactive presentation worth? A picture that you can rerun as many times as you want, stop and start at any point, speed up or slow down!

I tried to explain some of the above once with a tennis ball earth and a flashlight sun. Computers hadn't come home yet. What a feeble attempt, compared to the best parts of CGSS!

CGSS doesn't do all of the things I mentioned above, but it does many of them and rather well. To me, an amateur and uncredentialed educator (a mere 45 minutes a week of practice) and owner of over 60 educational programs, CGSS is a significant step ahead. I have program after program of so-called educational software representing nothing more than "read and drill" practice. They are about as exciting as a dull book, and no more interactive.

It's a shame, because lots of kids love computers and society could capitalize on this fascination with the technology to instill knowledge. But, kids are no dummies. Exciting programs (many of the games) capture interest much easier than boring programs (most educational titles, in my experience) even if neither is very interactive. Once the child makes the comparison for herself, forget about trying to raise the level of interest in many educational titles.

Well, enough of my rambling on about educational software. I have been thinking about it, with a sense of disappointment, for a long time and appreciate the opportunity in this review to get it off my chest. Hope you didn't mind.

To wrap up, CGSS is a significant step ahead in illustrating some complex phenomena and raising the level of interaction. Praise be to WinterTech, my eleven-year-old likes it!

But I would be unfair to you readers not to note also that CGSS needs more interaction and more dynamic graphic presentations. It includes a LOT of reading, something I find is best done with an old technology thing called a book. This is because, with a book, it can be done in any room, any chair or bed, in almost any position, and it uses less electricity. You can even do it outside. Reading, that is, in case I lost your attention back a few lines.

ATARI 8-BIT POWER
ALPHA SYSTEMS is constantly innovating to provide more power for your 8-bit Ataris

NEW HACK BACK Special OFFER
The Alpha Systems HACK PACK contains all our finest products for making Back-up copies, Analyzing, Understanding and Protecting your Atari programs. Atari Software Protection Techniques Vol I & II
These Book and Disk packages detail the most advanced copy protection methods in use today They guide you through the methods used to create the protection as well as the copying techniques to get around them. They include information on Phreaking • Hacking • On-line security • Black boxes • Self-destructing programs • Pirate bulletin board systems • Logic bombs • New piracy laws • Hardware data keys • Weak sectoring (Phantom, Fuzzy and unstable sectors) • Overfilled tracks • CRC errors • Bank Select cartridges and MUCH, MUCH MORE. The disks include automatic program protectors, Protection Scanners, directory hiding and more.
BOOK I and DISK I **$24.95**
BOOK II (Advanced protection) and DISK II **$24.95**
Special Offer, Order both sets for Only **$39.95**

CHIPMUNK
Automatic Disk Back-Up System. Make perfectly running unprotected back-up copies of hundreds of the most popular Atari programs. Chipmunk's sophisticated programming Automatically finds and **REMOVES copy protection** from most Atari programs. Back-up even heavily protected programs with ease. Finally, a back-up system that needs no special hardware or skills.
(If you need a full list of what Chipmunk copies, call or write for our free catalog) **$34.95**

Scanalyzer Automatically scan & analyze commercial programs. Unlock programming secrets and learn from the masters **$29.95**
Impersonator Cartridge to Disk back up system. Create running back-up copies of any cartridge (up to 16K) **$29.95**

NEW **CHEAT**
Get more from your games with CHEAT Tired of spending days trying to beat a game? Tired of getting stuck just when you need another life? Cheat is an innovative new product that gives you the chance you need to beat your favorite games. Cheat works with hundreds of Atari games to give you unlimited lives or power. End the frustration and get hours more enjoyment from your games (Call or write Alpha Systems for our free catalog with a full list of the programs that work with Cheat) **ONLY $24.95**

BASIC TURBOCHARGER
NOW for the first time a BASIC programmer can get the power, flexibility and incredible speed of machine language BASIC TURBOCHARGER is a **book and disk package** that contains over 150 ready to use machine language routines Complete instructions show how to add them to your own BASIC programs to get these features and more: • Smooth Scrolling • Player/Missile control • Load & Save Picture files • Sorting and Searching • Special Effects Graphics • Incredible Speed • Much, Much More • Over 150 programs You've heard of the power of Assembler, now harness it for your own needs. **$24.95**

NEW **PARROT II**
An All New Parrot sound digitizer for your Atari Parrot II is a sophisticated new hardware device that plugs into your joystick port. Parrot II has two inputs, One for a microphone and one for a powered source such as a tape player, radio or Compact Disk
The Powerful Parrot II software lets you record sounds into your computer and play them back on any Atari Parrot II turns your computers keyboard into a musical instrument with nine different sounds covering three octaves each The sounds can be anything, a dogs bark, a piano, a complete drum set, a symphony or your own voice.
Parrot II lets you modify the sounds on a graphic display to create brand new sounds and special effects Best of all, the sounds and voices can be put into your own programs that can be used on any standard Atari. Explore the world of digital sound and music. ONLY **$59.95**
Pre-Recorded Sound Disk More pre-recorded sounds for Parrot **$4.95**
PARROT II Demo Disk (Does not require Parrot to run) **$5.00**

NEW **POP-N-ROCKER** a fast paced, multi-player trivia game that mixes questions with real songs (digitized with Parrot). Be the first to identify the songs and answer the music trivia questions. *Pop-N-Rocker* comes with three data disks and lets you add new questions so it will never get old. You can use a Parrot Sound digitizer to add new songs too! Use any kind of music from Rock to Classical to Nursery Rhymes. A new concept in entertainment and a perfect add-on for Parrot. **$24.95**

COMPUTEREYES & MAGNIPRINT II +
Turn your computer into a digital portrait studio This complete package lets you **capture, save & print** digital images from your **Video Camera, VCR or TV**. COMPUTEREYES hardware plugs directly into your joystick ports for easy use Print your picture on a 6 foot poster. **$119.95**

GIANT WALL SIZED POSTERS.

ComputerEyes camera system
Comes complete with everything above, plus a black and white video camera and connecting cable. **$329.95**
Graphics 9 Software – Add a new dimension to your COMPUTEREYES pictures – captures images in 16 shades of grey **$12.00**

Magniprint II +
Easily the most powerful print program available today Print graphics from almost any format in hundreds of shapes, sizes, and shades Supports **color printing** and lets you create **giant posters**. Magniprint II + lets you stretch and squeeze, invert, add text, adjust shading and much more Works with EPSON, NEC, Citoh, Panasonic, Gemini, Star, XMM801, and compatible printers (850 interface or equivalent required) **$24.95**

Graphics Transformer
Now you can combine the most powerful features of all your graphics programs Create print shop icons from a Koala pad picture, from a photo digitized with ComputerEyes, or any picture file Graphics Transformer lets you **Shrink, Enlarge and Merge** pictures for unequaled flexibility **$22.95**

YOUR ATARI COMES ALIVE
SAVE MONEY Finally an alternative to buying expensive computer add-ons Your Atari Comes Alive shows you how to **built them yourself.** This 'How-To' **book and disk package** gives you complete step by step instructions and programs needed to built and control these exciting devices and MORE • Light Pen • Light & Motor Controllers •Alarm Systems • Voice Recognition • Environmental Sensors •Data Decoders • More than 150 pages **Your Atari Comes Alive** **$24.95**

The Game Is Afoot!

Steve Volker (TAG)

"Put the revolver over here!"

"I want to be Colonel Mustard!"

"Make sure you shuffle the cards enough!"

"I *already* know who did it!"

Sound familiar? To all those who have fallen under the spell of the Who-Dun-It board game CLUE, by Parker Brothers, I'm sure it brings back countless memories of the group gathered around the kitchen table on a quiet, Sunday afternoon. Or laying next to a half-eaten pizza on the living room rug, the sound on the TV turned off, while a slew of amateur sleuths try to out-manuveur and out-guess everyone else and be the first to answer the question..."Who killed Mr. Body?" Well, listen up group... have I got news for you!!

Thanks to Waddington Games, LTD. of Birmingham, England, Parker Brothers, U.S.A. and Virgin Mastertronic Ltd, in association with Dalali Software LTD., *CLUE: Master Detective* has come to the world of computers. Oh, don't worry...nothing of the fun and excitement was lost along the way.

What? You say the title is wrong?! Your board game didn't say Master Detective on it! (You're right! Very perceptive of you! No wonder you're so good at the game!!) That's because this is the very newest version of Clue, with more rooms, more suspects and more weapons!

You might hear accusations like..."Sgt. Gray did it with the Horseshoe in the Gazebo!" And there are more secret passages to whisk you from one out-of-the-way room to another. All this serves only to add more suspense (and more *notes!!*) to the game.

For those of you who have never played the board game Clue before (all five of you), here briefly is what it's about: A very devious fellow by the name of Mr. Body has invited each of the poor souls he's been blackmailing to his home for dinner. (Or is this in the *movie?!*) Sometime early in the evening, Mr. Body gets introduced to the afterlife, and everyone is suspect.

The game involves each character, in turn, asking questions of one another and making unfounded accusations until enough people have been forced to "come clean" to clear themselves that the truth becomes obvious, and the greatest of all detectives smoothly reenacts the crime in front of his dissappointed, jealous peers. (Well that's the way I play it!!) To the winner goes the spoils.

In this version though, there are a few things added that can make it all even *more* interesting. The first is you get to watch and hear the crime committed! Also, the computer does all the rolling of the dice, so those #&%$+~@*# so 'n sos, who roll a six or doubles every time they touch the board, are on equal terms with the rest of us.

Oh, did I mention the *computer* plays one or more of the characters! And there's no way to sneak a peek at its notes.

All movement is done with the mouse; Clue: Master Detective is neatly controlled within the GEM convention. The program comes on one single-sided disk, auto starts on boot-up and lends itself easily to the making of a work disk.

The graphics are sharp and cute, and look nice on both a color monitor or television. (No it won't run in high rez.) I've seen it on a couple of different computers, and it looks really good on all of them. (But of course, it looks best on ours.)

In case you missed all the expletives like great, exciting and fun, I really liked the game in both the magnetic and "folding" formats. And even better, so did my kids and my wife!! It serves well for hours of good, wholesome fun, and gives the poor TV a rest!!

You know, with games like Clue: Master Detective, J.R.R Tolkien's War In Middle Earth, the two-player game Double Dragon and the up and coming Risk, Monopoly and Scrabble—all distributed by the same company—I've got to say it, Virgin Mastertronics sure knows how to play games!

The Russians Are Coming!
A Comparison

Jim & Nancy Prevost (FACCS)

Each fall, our Atari club sponsors a Computer Fair at a local shopping mall. This fair presents an opportunity for all the different clubs in our area to showcase their computers and software. Most of the users, as well as the general public, find the different options interesting to compare.

The hit of last fall's show was a Russian game that seemed to be available for every computer type except the Atari 8-bit!

Tetris, invented by Alexis Pelitzov and written by 18-year-old Vadim Gorisimov, was first released in the U.S. for Atari ST computers.

In Tetris, several shapes made out of square blocks must each be maneuvered and rotated to try to fit them into the rows of blocks below. Although the concept is quite simple, the variables made the game quite challenging, and it always seemed to draw a crowd.

The only problem 8-bit users had with the game was that no version had been released for their computers yet! Actually, a *very* simple version, called "Red Squares" had already been written, appearing in the July 1989 issue of Antic.

This program, however, was not exactly what you could call a "good translation." The graphics were so simple, they could have appeared on the screen of a Commodore VIC-20. With a resolution of only 20 by 24, it seemed the game was over before you started!

Just two months ago, however, the long wait was finally over. Darryl Yong of Sacramento, CA, has produced a Shareware version of the game for the 8-bit, called "Tetrix." We demonstrated this version at our last club meeting, and the ST users who spent a bit for their Tetris disks were very impressed, to say the least. Although Tetrix lacks the fine background graphics of the commercial ST version and the wider variety of options, the key elements of the game are all there.

Differences and Similarities

The background has been mentioned briefly, but to expand on that, Tetris has fine graphics pictures both during the opening and on the actual playing screen, while Tetrix has none. The blocks in Tetris appear in full color, while those in Tetrix have only artifacted color outlines for those using color televisions. The ST version has the option of background music which can be turned on and off, while the 8-bit version has only a few game sound effects.

Both versions allow the player to set speed, but Tetris has the additional option of allowing you to start with different layers of blocks already on the screen (height) to make the game more challenging. Both allow you to pause the game and will show the next shape if the player wishes.

Both show the current level, the score and the score by lines onscreen, but with Tetris these are options that can be turned on or off at will. Tetris also has several options not found in Tetrix, like windows containing a help menu and statistics, "name" of each piece and continuous and advanced modes. As far as those key elements mentioned, though, the versions are basically the same.

The blocks can be moved from side to side or rotated using either the keyboard or joystick, they can be dropped straight down for bonus points, and with practice, they can even be slipped into holes partially covered by other blocks. The sizes of the pits and the blocks seem to be the same in both versions. Tetris saves the top scores, and Tetrix saves the top three.

All in all, Tetrix is one of the best Shareware programs to come out for the 8-bit this year, and if you haven't tried it yet, you are missing out on a great game. Darryl Yong deserves our thanks and our support through a small donation, and we hope that he continues to write interesting software for Atari 8-bit computers.

Things did not always go smoothly in the early days of the development of the laser printer

Nightmare on Lawrence St.
Or Backups? I Don't Need No Stinking Backups!

Gregg Anderson (RACE)

Well, it finally happened to me. After two years harping to others on the importance of keeping a current backup of their hard drive, my system went down and took over 40 Megabytes of data with it.

No problem, you say? Just reformat and load in your last backup, you say? After all, you've been around long enough to know how important backing up your hard disk is. You're always telling us to do it, so you must be doing it yourself. Right?

Wrong!!! In the famous tradition of "do as I say, not as I do," I kept delaying my backup. After all, it takes hours and hours to do a floppy backup of a 40 meg hard disk and I just didn't have the time. I was too far behind on my articles and had a bunch of fonts to modify before I could take the time for a backup. So off I went, working on four different articles, modifying *lots* of fonts for LaserBrain, beta testing some new utilities, and generally staying pretty busy.

Then about two weeks ago, I finally got around to installing a new hardware modification I'd been promising myself for months. It was just a simple 'plug in' job and my ST had a similar unit installed a few months ago for a review (and removed after finishing the article).

The upgrade seemed to be working all right so I pressed on and hit the old WordWriter ST again. All was going great until I tried to print something and found the text was out of sequence. Since the screen display looked normal, I re-saved the file and printed it again.

This time everything looked ok, until I read the file and found the system had somehow deleted a paragraph and substituted a paragraph from a totally different article. Now, I may be a little slow from time to time but even I'm bright enough to see I had a problem here. I decided to re-boot and start over—bad choice!

From that moment on my system no longer accessed the hard drive. In fact, it couldn't even tell a hard drive was connected. After sitting on the panic button for a while, I finally decided to bite the bullet and reformat the disk.

That was when I remembered how out of date my backup was. ARG!!! All the articles I'd been working on, all the fonts I'd modified, *everything* I had done was gone and would have to be recreated from scratch. After kicking myself repeatedly, I limped over to the computer and got started.

I reformatted and partitioned the beast and everything seemed all right. Until it scrambled itself again half way through the reload, that is. At this point I removed the upgrade (at the suggestion of the manufacturer) and started over. This time everything worked and has continued to work without so much as a hiccup from the drive.

So what happened? As near as we can tell something in the modification imposed a load on the disk controller, the DMA/MMU chips, or on the 8 Mhz clock that wasn't there before. Somehow this allowed WordWriter to partially overwrite the disk's directory and File Allocation Tables (FATs).

This shouldn't have happened and is the only such incident the company knows about (they want to borrow my system and find out exactly what happened to keep it from happening again; this outfit cares about its product and customers). So don't let my disaster keep you from upgrading your ST, but do learn from my biggest mistake.

Me admit to making a mistake? As much as it hurts to admit it, I'm afraid so. *I didn't have a current back up of my hard disk!!!!* By trying to save a few hours of time I lost more than three months worth of hard work, quite a few dollars in phone calls, and at least two inches off my hairline.

Always do a complete backup before starting any type of modification to your system. Even if you know for a fact what you're doing can't possibly cause problems with your hard disk, *back it up first!*

If you can't afford a dedicated backup utility like Seymour-Radix's VCR tape backup, then look into The Vault. The Vault is available on this month's AIM Disk of the Month, or for download on all the major on-line services, and does a fine job of backing up to floppy disks any hard disk out there. The Vault is fairly quick, for floppy backup, and will even work smoothly in only a 512K machine.

It all boils down to this; Save yourself a LOT of excess worry, unplanned work, heartache, and maybe even some money. If you've not backed up your hard disk lately, DO IT NOW! And enjoy a little peace of mind.

I'm a bit sadder and balder, but definately wiser!

1050 MECHANISM

Factory fresh TANDON mechs. make difficult repairs a snap. Units are complete with Head, Stepper, Spindle motor, belt etc. Just plug in, no difficult alignments or adjustments required. $47.50

POWER PACKS

Exact replacement transformer for 800/400, 1050 810, 1200XL, 850, and XF551 units. Part #CO17945. $14.50

XL/XE SUPPLY

Power Pak for 800XL,600XL 130XE, 65XE & XE Game. $25.00

KEYBOARDS

New and complete subassembly.
Easy internal replacement.

130XE/65XE	$35.00
800	$40.00
800XL	$29.50
400	$12.50

XL 40 PIN LSI CHIP SET

A Complete set of 40 Pin Large Scale Integrated Circuits for your 800XL, 600XL or 1200XL computer. Great for quick repairs! Set contains one each of the following: CPU, GTIA, ANTIC, PIA AND POKEY. $16.95

800 4 PIECE BOARD SET

Includes Main Board, Power Supply Assembly, CPU Module and 10K Revision B Operating System Module. All boards are new, tested and complete with all components. $28.50

800/400 MODULES

NEW PARTS COMPLETE WITH IC'S

• CX853 16K RAM Module	$9.50
• 800/400 CPU with GTIA	$8.75
• 800 10K "B" OS MODULE	$8.75
• 800 POWER BOARD	$14.50
• 400 POWER BOARD	$9.50

Public Domain Corner

Marty Saletta (BRAG ST)

One of the strongest features of the Atari ST is the operating system, GEM. With its ease of use (due mostly to the mouse), even a person who has never used a computer can start to feel comfortable almost immediately. And with many other computers using some sort of mouse, the transition from the ST to the Amiga or Macintosh is almost like driving another type of car: everything is pretty much the same.

But, there are people who prefer a CLI (Command-Line Interface) operating system such as MS-DOS or Unix. Both of these are very popular, with MS- DOS being the operating system of choice for IBM and Unix among the higher-end computers, such as those from DEC or NeXT (although NeXT uses a mouse also.)

The major problem with those (and most CLI's) is the number of commands a user must memorize. For experienced computer users this is rather easy, but for the new user this can be a difficult process.

Despite the problems, a CLI is a desired interface for many computer users because of its power. For the Atari ST there are a few CLI's (commercial and public domain), but one of the best is the public domain Gulam.

Gulam (pronounced Goo-laam) is designed to give all the features of the GEM Desktop plus many others from an environment that resembles csh of Unix 4.xBSD. To use Gulam, click on GULAM.PRG from the desktop, or place it in an auto folder (it may also be necessary to have a program like Startgem.PRG in the AUTO folder.).

Gulam starts by looking for a batch file called GULAM.G, which is very similar to a .login file on Unix systems. GULAM.G contains Gulam commands, both internal and external. This lets the user customize Gulam for personal use—set baud rate or other internal variables, change the default prompt, or even print a welcome message.

Gulam uses many commands found in Unix (and its compatibles), plus some that are required for the ST. Besides these commands, there are also ways to add others. Some of the commands used frequently include: ls (get a listing of the current directory), cd (change directory), cp (copy a file to another directory or disk), mkdir (make a sub-directory or folder), df (shows the free space on a specified disk), and cat (print a text file to the screen).

Some of the commands Gulam has that are not easily duplicated on the desktop include: grep (look for a string in a text file), date (print or set the date from the ST's clock), mv (similar to cp, except mv deletes the file from the source disk), du (shows the disk usage, in kilobytes, of all the subdirectories on a disk with a total at the bottom), a history command (user can define the size of the buffer) and alias.

Alias allows the user to define small "abbreviations" to longer commands to reduce typing the same thing every time. For example, if you delete the contents of three sub-directories called lngname1, lngname2, lngname3 on drive C: frequently, instead of typing rm C:lngname1/*.* C:lngname2/*.* C:lngname3/*.* every time you wanted to do the deleting, define an alias by typing alias clean rm C:lngname1/*.* C:lngname2/*.* C:lngname3/*.*

Now every time a delete was necessary, just type "clean" at Gulam's prompt. By placing this alias in your GULAM.G file, "clean" will always be defined each time Gulam runs, along with any other aliases you may have.

Gulam also has a built-in editor, ue, which is a version of microEmacs, the powerful text editor used on Unix systems. Since I use 1st Word, I made that my default editor by using the alias and gem commands like this:

```
alias 1st gem B:1st_word.prg
```

When I type 1st from Gulam's prompt, Gulam automatically runs 1ST_WORD.PRG from drive B:. The "gem" command is needed to tell Gulam that 1st Word is a GEM-Based program and not a TOS program. Gulam includes a simple terminal program and commands to send and receive files via the Xmodem protocol.

A complete list of all of Gulam's commands, internal variables, and examples are included in Gulam's manual. This manual is one of the better ones for a public domain program, but it could get a little technical for those who do not have much experience with shells.

Earlier in the article I mentioned it is possible to add more commands to Gulam. This is done through Gulam's hash table. Each command Gulam uses that is not built-in must be stored on disk (floppy, hard or RAM). It is also necessary to tell Gulam where to look for the additional commands by setting the "path" system variable (Unix also uses this feature). This variable is used by the rehash command which looks for all the executable files (those with extensions of .PRG, .TOS, .TTP, or .G) from the directories specified in the path variable. An example from my GULAM.G is: set path d:\utils

When I type something into Gulam which is not one of the built-in commands, Gulam looks in drive D:'s utils folder. If found, it executes the command; if it is not there, Gulam reports an error saying "command not found." Some of the commands I store in my D:UTILS folder are from the Unix Toolkit by Andrew Smith and Steve Ashcroft.

Those two programmers wrote many of the Unix utilities (4.2 BSD compatible) for the ST and released them in the public domain, complete with the manual pages describing every ST/Unix command and its options. The commands they include are:

> Written by Andrew Smith:cat, chmod, clear, cp, crypt, date, df, du, echo, file, find,grep, invert, ls, mkdir, mv, pwd, rm, rmdir, sh (bourne shell), size, sleep, test, touch, wc
> Written by Steve Ashcroft:basename, cal, cb, cmp, comm, expand, expr, head, look, make, od,pr, reverse, sort, strings, tail, tr, tsort, unexpand, uniq

The complete C source code (fully documented) can be purchased for $40 from the authors, who will send it on (2) 500K disks or (1) 1 meg disk.

Since many of these commands are included with Gulam, there is no need to use them with that shell.

"... and when did you start feeling threatened by mini-computers?"

Knight Force from Titus for the ST

Bob Retelle (MACE)

Knight Force is one of those games with almost everything going for it.

It's got a terrific box, with one of those great color paintings of a brave knight battling a huge red dragon and full color screen shots from several different computer systems on the back.

It's got one of those story lines that just makes you want to jump in and play. (The evil sorcerer, Red-Sabbath has kidnapped the beautiful Princess Tanya, and you, the Knight of Thunder, must travel through time to do battle with the sorcerer's clones and save the Princess.)

It has two disks, a reply card to join the "TITUS Challenge Club," a manual that tells how to play the game on a Macintosh keyboard (as well as the IBM/PC/XT/AT/PS Amiga and ST) and a nifty piece of 1/2 inch thick foam rubber (the size of the box) that I'm sure there must be hundreds of uses for.

Also, according to the box, *"Fast Action And Ultimate Gameplay Combined With The Brain Storming Strategy Of A Mega Adventure, Make Knight Force The Unprecedented Creation In The History Of Computer Games."* Wow! Move over Dungeon Master!

Unfortunately, among all that paraphenalia and glowing rhetoric, they somehow forgot to include a game in the package.

Sigh...well, let me tell you about the game's premise anyway. You, the Knight of Thunder must choose one of five "Time Gates" to travel to different time zones and battle the minions of Red-Sabbath. The zones are Prehistoric, Versailles, New York City, The Future, and The Mystical.

Each zone is populated by creatures controlled by the evil sorcerer, as well as a clone of the sorcerer himself. One of the creatures in each time zone is holding an amulet of power which will help you defeat the clones, although it might not be the proper amulet for that particular time zone.

Eventually you'll kill all the clones and have to battle Red-Sabbath himself to save the Princess. Sounds good so far, right? The graphics are actually very good. The backgrounds for the different time zones are well done, and the creatures aren't bad, although the animation is a little on the slim side. The sound, what there is of it, is good too. The problems appear when you actually start playing the game.

This is one of those pseudo-gore "hack and slash" games (like the ones where you kill an opponent and a little troll comes out and drags the bloody body away).

Although your blows don't appear to do any damage while you are hitting a creature with your

sword, the monster crumples into a bloody heap once you've killed it. Should you be defeated, or run out of time, you too fall down into a gory pile of bloody bones.

Some Serious Faults

The real problem with this game is that there is very little for you to do. All five time zones are virtually the same, just with different graphics.

In the Prehistoric era, the backgrounds are appropriately "Rain Forest" looking, and the only monster is a Cro-Magnon man. In Versailles, you get a French city with urchins and hangmen. In New York, you get a tugboat on the docks and gang leaders and an octopus...and so on...but the action in all the zones is essentially the same.

For the most part, the battles consist of your holding down the fire button, while pointing the joystick at the monster. As long as you get in the first whack, your sword will keep them away from you, and you'll hardly ever get hit. Of course, there's a "Magical Bird" that drones back and forth from screen to screen. Its purpose is to transport you back to the opening scene to choose a different time zone, but it also serves to knock your Knight on his armor-plated butt (with a suitable resounding crash) which allows the monsters to jump all over you. If you're not just standing there whacking the monster to death (without really doing anything other than holding down the fire button), you're getting knocked down over and over. Not a whole lot of playability here, folks.

Each time zone also consists of only three screens or so, not including the essentially similar "Castle of Doom," so there's not a whole lot of "Adventuring" here either. There IS however, a lot of the "Bang, You're Dead" kind of situations that people who play these kinds of games seem to love so well.

Jump over a waterfall and the edge you land on crumbles, you fall into the water, game over. Next time you jump twice, and the bird knocks you into the water, game over. Duck the bird and walk *past* the fire in the cave and you burn up, game over. Jump over the fire and the floor opens under you, game over. No clues that any of this is going to happen, just "Bang, You're Dead," and you have to start over from the beginning. (I didn't play very far into Barbarian either, for just this reason.)

Actually, this may be the game designer's way of making the game last more than 15 minutes—by making you start over a lot.

Oh, yes...there are magical amulets you have to find in each time zone, but none of them seemed to make any difference, no matter which time zone I went to. You just keep killing monsters until the amulet's icon appears on your dashboard. Ummm...yes, I did say "dashboard."

Your Knight has a dashboard (well, I guess maybe it's the time machine's dashboard, the instructions aren't awfully specific) that looks like something out of the 8-bit game "The Eidolon," or the old "Time Machine" movie. It contains readouts of your score, health, monster's health and time remaining.

As poor as the game was, I ran into several other annoying problems to make things worse. At one point, with plenty of time left, I suddenly got a "Game Over, Out of Time" message. Then there was the time my Knight went into "autopilot" while fighting one of the sorcerer's clones, and nothing I did with the joystick had any effect (none of the keys on the keyboard worked either, so I just had to reboot).

One esthetic problem I noticed was that the High Score table was in such a dark green color against the black background that it was awfully hard to read. Lastly, the line of bombs across the screen didn't do much to improve the game when it happened.

If you like nice graphics, but you're not particularly into playing games, then maybe the $39.95 for Knight Force wouldn't be too bad, but if you're looking for a good, playable game...keep looking.

I'm afraid the beautiful Princess Tanya is just going to have to fend for herself!

NEED SPEED?

RELY ON TURBO ST!

Turbo ST turns your Atari ST into a speed demon. Check out **Turbo ST** at your local dealer or download our free demo from your favorite bulletin board.

Upgrades to version 1.8 are only $5 with your original disk. For more information, call (407) 657-4611, or write to SofTrek, P.O. Box 5257, Winter Park, FL 32793.

For 520ST, 1040ST, 520STfm and MEGA

MEMORY:

Expand your St's memory to ONE Megabyte, TWO and ONE-HALF Megabytes or even FOUR Megabytes with tech-specialities plug-in memory modules. All memory boards fit under the R/F shield. The CPU is completely available for any future enhancements (blitter, coprocessors, PC-emulators, speedup kits etc.). No soldering is required.

520ST modules use 256K DRAMs for upgrades to 1 MB and 1 Megabit DIPs for 2-1/2 and 4 MB upgrades. All boards are fully socketed and the expandable boards can be configured for either 256K or 1 Mb chips. This means that you can start by upgrading your 520 to one Megabyte and later move up to either 2.5 or even 4 Megabytes--the maximum for any ST, even the Mega! Installation is completely solder-free. Comes with detailed illustrated instructions and a one (1) year limited warranty.

expandable boards:

520A	Socketed, no RAM	$129.
520B	1 MB, socketed	$179.
520C	2.5 MB, socketed	$297.
520D	4MB	$465.

Blitter Upgrade:

520STfm/1040, new motherboard, Installed	$ 99.
Combined with TOS 1.4, Installed	$199.

Upgrade your 1040ST or 520STfm just as easily!

Send us your 520STfm and we will upgrade it to ONE Megabyte by installing a second bank of memory, easily removable in case you want to upgrade again. Complete with installation for only $149 plus shipping.

Or install one of our 1040 (fits 520STfm too) memory boards and upgrade your ST to 2-1/2 or even 4 Megabytes. There are nowadays four (4) different versions of the 1040/520 motherboards around. If you bought your ST less than 2 years ago, you need to check your machine, detailed info in our catalog.

Version "0" fits all 'old style" 1040/520 with 6 ROM chips under the power supply. Limited space above the 1040 mother board prohibits the use of conventional sockets in one bank. Optional "ZERO Height" sockets allow you to have this bank socketed too, so you can plug in or exchange 1 Mbit chips. The "ZERO-Height" socket kit is also available separately so you can install it at any time!

1040A	1 Bank sockets, no RAM	$110.
1040B	Fully socketed, no RAM	$149.
1040C	2.5 MB + 1 bank sockets	$317.
1040D	4 MB, 32 1 Mb DRAM installed	$485.

Version "1" fits all 1040/520 with the memory chips under the power supply. Available room prohibited the use of "DIP" packaged chips. The main board is only 6.4" x 2.9" and needs "ZIP" packaged 1 Mb x 1 DRAM. It fits in the area under the power supply with the shield installed and stays 0.5" away from the CPU to allow attachment of other upgrades. More details in our catalog!

1040B1A	1 bank socketed, no RAM	$149.
1040B1	Completely socketed, no RAM	$189.
1040C1	2.5MB, no sockets	$297.
1040C1A	2MB installed, 2nd bank socketed	$317.
1040D1	4 MB installed	$495.

Upgrades for version "2" and "3" of the 1040/520 motherboard also available! Prices same as above.

All upgrades can be equipped with a Clock Option on the Memory Board, comes with software, only $30.
Stand-alone CLOCK, please specify 520/1040 and your version of the motherboard $38.

EXPANDABLE Hard Drive Kits

come complete with software and all parts needed to get the system operational, 1 year ltd. warranty. There are right now three different case styles available:

1. Tower Type, 10" wide x 6.8" high x 15" deep, if sitting on your desk with monitor on top , with full SCSI interface and 'DMA-through'

-150 W PC power supply w/fan

-room for up to 5 half height hard drives or combination full/half height

-mounts on floor, under desk or on desktop

-can power up 520ST and external floppy drives.

-optional delay circuit for CPU allows fully automatic power-up!

T0S	No Drive, install your own emb. SCSI drive	$265.
T0	No Drive, MFM controller	$299.
T0R	No Drive, RLL controller	$475.

Complete with drive mechanism:

10 MB	$485.	20 MB	$565.	30 MB	$695.
40 MB	$745	64 MB	$795	85 MB	$895.

2. Monitor Style, 13.25" wide (same as MEGA) x 15" deep x 3.8" high with single port host adapter

-ready for up to three 1/2 ht or 1 each full/half ht. hard/tape/floppy drives

-55 W power supply with 115V fan

-can be placed under monitor or at side of your desk

M0S	No Drive, install your own emb. SCSI drive	$179.
M0	No Drive, MFM controller	$295.
M0R	No Drive, RLL controller	$365.

Complete with drive mechanism:

10 MB	$395.	20 MB	*$395.	30 MB	$545.
40 MB	$685.	49 MB	*$625.	64 MB	$795.
85 MB	*$795.				

3. Desktop Style, 4.5" wide x 6" high x 13" deep with single port host adapter

-ready for 2 1/2 height or 1 full height drive

-55 W power supply

-optional fan available (add $18)

D0S	No Drive, install your own emb. SCSI drive	$149.
D0	No Drive, MFM controller	$279.
D0R	No Drive, RLL controller	$349.

10 MB	$355.	20 MB	*$369.	30 MB	$525.
40 MB	$695	49 MB	*$595.	64 MB	$725.
85 MB	*$745.				

ATARI MEGAFILE:

Replace the 20 MB drive in your MEGAFILE 20 with a 42 MB 40 ms autoparking drive. Comes with a 1 year warranty on the drive mechanism. Exchange price including installation with your drive in good condition: $260., $369. outright.

Gain 65 MB of high speed (22ms av., 5 ms track to track) storage. Exchange with installation: $360., outright $449.

SUPRA 20/30 and ASTRA 20 MB:

Upgrade to 49 MB high speed storage with auto parking, 500 K/s transfer rate. With installation and transfer of your existing files: $379.

Host adapter cards are separately available and come with software and DMA cable or additionally with case and 6' round shielded SCSI cable with embedded power supply lines. Prices after the "/" are for version with case and cable. 1 port $79/119 full SCSI $119/159

CPU CASES:

Upgrade 520/1040 to the MEGA standard.

- Separate CPU and keyboard, gain space for three each 3.5"/5.25" floppy, hard or tape drives in two separate drive bays. Full height drives will also fit.
- A 150 W power supply with fan provides power for all possible combinations and keeps everything cool
- Reset button on keyboard
- A delay circuit allows fully automatic HD power-up.
- Monitor can be switched on/off with CPU, using an optional cable.
- Our kit uses a steel case 18" wide x 12" deep x 8" high, easily strong enough to support a high resolution monitor.
- The original keyboard gets a low profile enclosure, 18.7" wide x 7" deep x 2" high, consisting of a metal bottom part and the modified plastic top of the original case, supplied as exchange or you do the modification your self. The kit comes preassembled and installs without soldering. All mounting kits, wire harnesses and connectors to modify a standard machine are included.

Complete kit, please specify your machine type $295

OPTIONS:

Hard Drive kits for the CPU case consist of host adapter/controller with support bracket if necessary, DC harness and control cabling and might also be used with customer supplied case/power supplies. Kits with controller cards come with connections to two 5.25" drives. Kits for embedded SCSI drives come with one SCSI connector. Additional connectors $8. installed.

C0S	No Drive, install your own emb. SCSI drive	$99.
C0	No Drive, MFM controller	
C0R	No Drive, RLL controller	$299.

20 MB	*$295.	30 MB	$465.	40 MB	$595.
49 MB	*$525.	64 MB	$725.	85 MB	*$685.

Cable sets to connect additional 3.5"/5.25" floppies also available, please see catalog.

KEYBOARD KITS:

We noticed quite a lot of interest for our keyboard parts used in the CPU CASE. Keyboard kits consisting of metal bottom case, connecting cable with reset and modified plastic tops on an exchange basis are available separately for $69., please specify your machine type.

Space limitations don't allow a more detailed descriptions. For complete 24 page catalog contact:

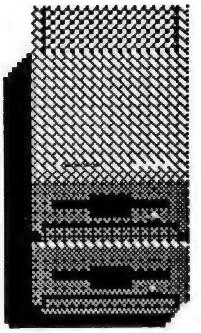
IN YOUR DRIVE # 28



Good Ol' Chet (ACC.D)

It's a smorgasbord for 800/XL/XE users this time. ST owners can skip the column, if they wish, but speaking as an XL/XE user—*it's about time!* STella is a little bit jealous, but Mnemosyne has been hungry for fresh food for a while now and is ready to dig in.

Frogs and Tanks

Ultrabasic, Inc. enters the uncrowded Atari pool with five decent packages. The first, SuperFrogs, betrays its BASIC origins with "sticky" movement of the player (a frog) and the merely-adequate graphics.

Play action is nothing to brag about either. It consists of running your frog through mazes, tracks, races, or what-have-you while avoiding mines, "nasty trees" (nasty trees?), "nasty grass" and opposing frogs run by the computer. Your frog may or may not have superpowers, such as an energy beam of sorts, to destroy or inhibit the obstacles or competing frogs. And your superfrog is invulnerable to everything except nasty trees. Still, it gets slowed down when opposing frogs shoot it, and when it gets slowed down often enough, it acts as if it died.

The documentation is a bit sketchy and falls into the trap of being "cutesy" with calling the program's main operating routines "the Creator." (Or perhaps they were referring to the programmer?) And the claim of "over 10,000 variations" is true enough, if you really consider changing minor features as creating whole new games. Different playfields, 1 or 2 player options, these I can see, but calling Day and Night versions, handicapping options or options for "nasty" or normal trees seems like minor variations rather than "7 different exciting games" (package blurb) to me. They are *nice* options (especially the handicaps!), but I'd call it one game with lots of options—not several games with options.

SuperFrogs is the sort of game you'd expect to find on an Antic disk or cost no more than $20. Since it's priced at $10, I'll rate it an A—just short of an A+. It's really nice to see a product's price based on its value, rather than any requirement of the distribution system.

Track Stack, a name which tells you nothing about the program, is Ultrabasic's second offering. Without using fancy DOSes such as SpartaDOS or TopDOS, it allows you to put "up to 15 machine language programs" on one disk. The actual number you fit depends on the size of the programs, and whether you used DOS 2.0 or 2.5, single or "enhanced" density.

Then, when next you boot that disk, you have a nice menu, and you just hit a key to run the program you wish. Well, fine and dandy, but we've had menu programs in the Atari community for a long time. This one, however, shrinks the size of the program on the disk without losing any of it.

Strangely enough, you have to duplicate the original disk, then shrink all those machine language programs directly *to* the Track Stack disk.

The manual doesn't make this quite clear, and I wasted some time trying to put them on a regular DOS 2.0 disk. It's a nice little utility.

SpartaDOS or WarpDOS owners will prefer the automenus available through those programs, but Track Stack is a mere $10. For the casual Atarian, this is a superior buy.

With SuperFrogs Funspeller, those @#*&! frogs return—but wait! There is a difference. Rather than just jumping (jerkily—we're still in BASIC) around and shooting other frogs or going through mazes, we're grabbing letters and using them to spell words. Aha! Education! And how obvious, how juvenile! This will be a boring drill game.

Three hours later, my nine-year old daughter and I were still playing. Yes, the movement is jerky. Yes, the play action is obvious. But just like a corny old Frank Capra movie, it succeeds in its intent.

Since it permits us to add more spelling words (it comes with 800), I input all of Crystal's homework spelling words. She finds this type of study *much* more fun; she "studies" longer—and her spelling grades improved significantly.

It has similar variations as Superfrogs did, and it's the same low $10. If you have a child in your home, buy this right now.

Tank Math is similar to SuperFrogs Funspeller, but for math drills. Again, it's a corny premise: a math problem appears on the screen; if you type the correct answer, a tank blows the problem away, etc.

Again, it works—it keeps the kid "studying" and the kid does learn. Blocky graphics, jerky movement, dumb sound—none of it matters, because it works perfectly well as it is. It ain't broke, so don't fix it. Buy it at $10 because an Apple owner would gladly pay $30 for it.

Ultrabasic's only other (known) product is RC Track Organizer Timer and Log (TOTAL). I haven't seen it, nor could I properly review it without RC cars, tracks, or whatever. (I still have one of my old Hot Wheels, but I doubt that qualifies.) It advertises as a database for race data, membership (?) data, mailing labels, and a custom version includes auto lap detectors and slot car tracks. Way too complicated for me, but everything under the sun for folks with the RC or slot car hobby. This one is $50.

Spinning Wheels Got to Go 'Round

Changing Patterns is one of those oddities that set your mind a-puzzling. Of what real use could an almost-random art program be? Why use numbers, telling your Atari the top size, side size, column and row size, shapes, perspectives, etc.? Perhaps it would be a nice diversion, but of what practical use..etc?

And again, I'm made to eat my words. Yes, it's brain bubblegum on the screen, good for only staring at (like the aquarium)—but the designs can be stopped and printed to printer easily. Added to stationery, ads, etc.—they're real eye-catchers. Stewart Software's press release is spotted with these designs, and the press releases force you to notice them. When I've left the pages lying about at the office, they've commanded the attention of every one who came into my office.

If watching fish relaxes you, Changing Patterns will put you in a coma. Conversely, when put on paper, the patterns become dynamic and more colorful (in black and white, yet!). Since it supports every printer I could think of (Epsonish, Star, Gemini—how few things support my old Gemini 10x!, NEC, CITOH...), this should go on your shelf right next to Print Shop.

A nice touch: this hypnotic spirograph is being sold at $29 as an introductory price, lower than its retail of $49. And Stewart Software has quickly updated it even as I typed this—so expectations are high for quality support.

Programming without the Programming

AVUE is not the sound I make when I sneeze; it is the Analog Visual Utility Environment, a series of programs hiding under one name. AVUE's Pather program—the actual language interpreter—concerns itself more with graphics and sound than with number crunching.

It includes a tracing (?) program called Tracy (which doesn't seem to work) and a listed program called UFORMS.MAK. Tracy we'll dismiss until it either works on my XL or gets fixed. UFORMS seems to create macros for frequently-typed commands, command lines, or "abbreviated PATHER formats."

The speed of graphics updates in Pather is incredible! The manual, a very nice and big three-ring binder with tabs by the way, claims 7000% faster than BASIC. I've not completely tested it, but it must be awfully close. One test changes the color of a byte onscreen every time the internal clock ticks by. Under Pather, the color never got to change.

An audio patch cord (joystick female port on one end, alligator clips on the other) is included, with some VERY sketchy directions on how to use it. The possibilities include having the graphics change via external sound, or just hooking up to nonregulation devices. How about that old idea of hooking your Atari to a stationary bicycle and playing Pole Position? Possible with AVUE.

It's true that you don't have to know how to program to work in AVUE. On the other hand, not knowing programming makes it difficult to choose a topic or goal, and then developing a way to get there. Just saying "I want to do a skiing game" won't help you determine all you need to do within the computer to make a ski game.

But on the *other* hand, AVUE certainly makes it easier than before. More on AVUE in the future—this is one program I can't leave alone!

AVUE has no price tag on my review copy. But you can write EXIT Software, and include $3 for their entire catalog.

EXIT

Which brings us to another close. Blizzards and extra work at the job (Yeah, we're having *another* inspection, why did I re-enlist?) have kept me tied up.

Despite that, we're putting together more game rooms for a local SF/TV/everything convention (StarFest) which includes the Atari Room. If you're in Denver on 23-25 March (in the past as you read this, so you'll need to time warp), we hope we saw you in the Empire or Midi Maze tourneys, or just playing around with the 8-bits or STs which were left free during the tourneys. Some Dungeon Master and Chaos Strikes Back on the STs and various cartridges and such on the 8-bits should keep everyone busy.

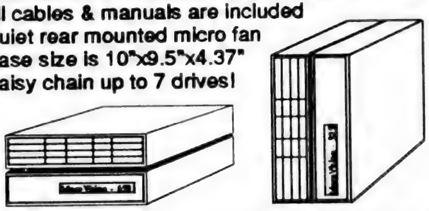
Immediately following StarFest and the inspection, I'm going to sleep for a month. Wake me up when it's time for another IYD. (Arf, arf, arf!) Jeep!

MV325 and MV650

A Price/Performance *Breakthrough*

Average Atari ST Hard Drive...$12 per megabyte
MV325 and MV650 HD kits...$4 to $6 per megabyte

- **Industry proven Maxtor mechanisms & ICD H/A**
- **External SCSI + address and write protect switch**
- **All cables & manuals are included**
- **Quiet rear mounted micro fan**
- **Case size is 10"x9.5"x4.37"**
- **Daisy chain up to 7 drives!**



The MV325/650 offers a full 325/650 Megabytes of storage, an average access time of 16ms...a transfer rate in excess of 1,000,000 bytes/sec...complete Spectre compatability...the enclosure provides an attractive match for MEGA/ST and ATARI peripherals...Ideal for large MIDI & DTP installations Pre-formatted..tested..just plug together and run!!

Punch it.

SPEED LIMIT 8MHz

For the ATARI 520ST, 1040ST, MEGA and STACY.
Step a generation ahead with **TURBO16** by Fast Technology. The **TURBO16** accelerator can move your ST into high gear. Upgrade your ST and achieve *up to double the speed* in some applications.

Take Your ST Past Its Limits.
TURBO16 will *dramatically* increase your desktop performance. Complex illustrating and page layout is no longer a *drag, click and wait*. **TURBO16** will increase your ST's speed from 8MHz to a *blazing* 16MHz. A state-of-the-art 16MHz processor and 32k high-speed cache memory add the power that lets you *soar*. **TURBO16** is fully compatible with standard ST software, including *Spectre 128* and *pc-ditto*, and **TURBO16** makes games *fly*. **TURBO16** has a far greater effect on productivity than a hard disk, and at **$299 suggested list**, a far lesser effect on your wallet.

Easy To Install, Easy To Use.
TURBO16's installation requires only the removal and replacement of your ST's 8MHz 68000 chip, and connection to the ST's MMU chip 16MHz clock. That's it! The low profile package will not interfere with other upgrades, and **TURBO16**'s special features optimize your ST's operations. **TURBO16**'s speed can be controlled by way of an optional, dealer-supplied hardware switch, auto folder program or desk accessory. Take full advantage of your ST's power with **TURBO16**. See your Atari dealer today, or contact Fast Technology.

TURBO16 is a trademark of Fast Technology. **Atari** is a registered trademark and **ST**, **520ST**, **1040ST**, **MEGA** and **STACY** are trademarks of Atari Corp. **Spectre 128** is a trademark of Gadgets by Small, Inc. **pc-ditto** is a trademark of Avant-Garde Systems.

H.P. Lovecraft on the ST

THE HOUND
OF
SHADOW

Steve Volker (TAG)

"My name is Dr. Savin Mcloulk. I am a novelist. I am presently living in London at a pleasant little flat on Greek street, near Soho. I am a chemist, a jack-of-all-trades, a dabbler in Archaeology, the Classics and the Occult. I served two years in the Great War; I am thirty-five years old, and...well...*I am deathly afraid for my life!!*

"So many things have happened of late I scarcely know where to start. There was the seance and the body on Dean Street, so horribly mangled and torn....

"At first I thought it was Matthew; he had the mark; he knew the lore, but then came the visits by that woman and the death threats on John's life...and just who could have possibly gotten upstairs to sketch the pentagram in the attic dust?

"Hours were spent pouring over archaic tomes of unspeakable and barely readable passages of daemonic rites and dire myths. I had thought the trip to Suffolks would bear some fruit, but the churches were rebuilt, names were changed...how could the ruined castle have come into the picture? Anyway, there was so much to consider: the writings of the Vicar of St. Pancras, the fiend Barguest, journals of Gascoigne, the puzzling bits of Steganography, Miranda, Von Junzts, and—oh gods!—the nameless cult!!

"Now I lay in wait, knowing I have no chance of evading my fate. Reviewing, remembering, crushing each miniscule piece of memory to eke out any relevant fact—known but ignored, unconsidered or misunderstood. Have I looked close enough at those closest to me? Have I asked the right questions of the myriad of players in this macabre play?

"And what of the unconnected thoughts that have plagued me over the last few nights? That the truth is staring me in the face, that I have missed some major clue, that I...WAIT!!

"That's it! The place by the side of the road, that cursory visit—those smiling faces. How could I have been so blind, I.... No. No! *Not now!* Not when I've gotten so close! *Not when I know the truth!!* The truth behind it all is...."

A Mystery Unsolved

That letter was found among the effects of Dr. Savin Mcloulk in his 2nd story flat, on September 15, 1921, after a frantic call from his neighbor Mrs. Bastable.

Also found with the note, was a software package entitled The Hound of Shadow, created by Eldritch Games, Ltd. and distributed in the U.S. by Electronic Arts (with no little inspiration from H.P. Lovecraft's Call of Cthulhu).

The game comes on three single-sided disks, requires a color monitor or TV and 512K of memory. It has no hard copy protection on the disks, using an almost amusing "enter the key word from the manual" protection technique and uses an enticing user interface tool called Timeline, which is the closest thing to true role-playing I have seen yet on *any* computer. It comes with a 23-page manual which is both adequate *and* essential *and* captivating.

You truly feel yourself drawn into the make-believe surroundings of this magnificently ensorcelled "on-line play." You are only vaguely aware that you are a player, not just a character, within the enfolding tale. You *never* feel in control! You will either win...*or die.*

Though we have found ample evidence of foul play in this man's room and confirmed the existence of most of the people spoken of in his final journal, we can find no trace of Dr. Mcloulk himself.

I await the return of my assistant Trelcker even now, hoping for new clues to unravel this mystery, but he is unusually late in his arrival. I will write more later.

Yours Dutifully,
Lieutenant Alain Cork
Inspector, Scotland Yard
September 21, 1921

A Dim Penchant, the game afoot/ the rhyme of precious reason shook/ the gleam of genius-fractured mirror/ when both the truth and crime appear. —Mcloulk

IS THERE A TACTICIAN IN YOU? PART 4

Tim Feenstra (GRASS)

The command car tops the hill, and you look out over the valley below. Six hundred yards out, you see a platoon of PZ-IIIJ medium tanks, but only two are still moving. The other three have taken hits and have been abandoned by their crews.

The infantry around the destroyed tanks is dug in and fighting just to survive. Through the smoke to the right, you see several more burning tanks and some infantry launching close range attacks on the Russian T34/76 tanks already moving between the smoking armor. To the left, four operational PZ-IIIL tanks have taken refuge in a woods, along with several infantry platoons waiting for the T34's to get within point blank range.

Your initial assault has failed and the Russians have begun a counterattack against your beleagured units. All along a front no more than a 1000 yards away, T34/76 and KV-1 tanks lumber in your direction, surrounded by at least 3 full companies of infantry. The only hope is the reserves coming up from the rear. Between the shell bursts, the sound of tanks approaching from the rear increase and you turn to see 10 big PZ-IVH tanks climbing the backside of the hill. Behind them follow five SG-IIIG tank destroyers and several platoons of infantry in halftracks. As the tanks top the hill and rumble by around you, their 75mm guns fire and several of the Russian tanks explode.

This is tactical combat on the Russian front in '42 or '43 with platoon size units of the Soviet Guard Army and the German Panzer Army.

Tactical combat requires a complete understanding of your weapon types and the most effective use of them to destroy the force opposing you. From the scenario above, you should already have figured out that the German PZ-IIIL and PZ-IIIJ tanks were not up to a confrontation with the Soviet T34/76 and KV-1 tanks, their only chance being to wait until the larger Russian tanks closed to point blank range where their smaller guns might then be able to penetrate the armor.

What this leads us to is a series of platoon level, tactical combat simulations from Strategic Simulations Inc. Two of the games are available for the Atari 8bit, and they are Kampfgruppe, the eastern front from 1941 to 1945, and Mech Brigade, modern armored warfare between NATO and Warsaw Pact forces.

Kampfgruppe

The German invason of Russia in 1941 was perhaps the downfall of the Third Reich, but that isn't the subject here. Kampfgruppe is a small unit construction set for battles fought between the Axis and Soviet armies from the invasion in 1941 to the German surrender in 1945.

The map hexs are 200 yards accross and the map is 60x60 or 60x30, depending on the type of battle selected. You can set up assaults, rear guard actions or meeting engagements. Either side may be played by the computer, and the construction features allow the creation of custom maps. Forces may be anything you want from one or two platoons to an entire brigade or battalion or even more. Of course, the game runs slower the more units that are involved, because movement and combat occur together during the action phase.

On the German side, you can choose from a dozen different tanks including the Tiger, King Tiger, and the Panther. There are also several tank destroyers, and some self-propelled artillery, armored cars, anti-tank guns, and trucks and halftracks to move your foot units. Russian arms include more than a dozen tanks, seven assault guns and tank destroyers, as well as the infantry weapons included automatically with foot units.

When starting a new game, the computer will ask a few questions about the year, size and type of battle. You then have a number of points with which to buy unit formations for the battle. When buying units, the computer will adjust the contents to that of the year you choose, leaving out vehicles that were introduced later.

You can alter the vehicle type during the deployment phase to get exactly what you want. If you prefer, the computer will generate a random map, with or without a river, and then choose the appropriate forces for each side, adding the uncertainty of what you will face that is just one part of the fog of war.

Mech Brigade

If you would prefer to command some NATO forces, perhaps to defend against a Soviet invasion of Germany in 1992, then this game will fill the bill. The set-up and unit sizes are exactly like Kampfgruppe, but the weapons represent modern armored units that would slug it out in the early stages of an invasion of Europe by the Soviets.

As the NATO commander, your forces could include British, West German or American units, including the new M1 Abrams and Leopard 2 tanks, anti-tank guided missiles, high tech anti-aircraft systems and, of course, helicopters—the Cobra, Apache and the German PAH-2.

Warsaw Pact weapons include the new T-80 tank, anti-tank missiles, SAM launchers and the Soviet Hind-D helicopter. There are sufficient older weapons to produce a realistic battle back to the mid-to-late 60's, and enough new equipment to create scenarios well into the 90's where the helos are the tankers worst enemy, and can ruin a crew's whole day.

Playing the Games

Your force will be divided into company-sized formations, each with its own headquarters, as well as the main headquarters unit. These HQ units are required to get the command chain to work without undue delay. They should only be risked in battle as a last resort, for if they are lost, all units in their formation may not respond to any future orders and may even leave the battlefield on their own. Command control is one of the prime features of this series, and will play a large part in your ability to win or even survive. If you lose your main HQ unit, you might as well turn the computer off, for it will quickly take advantage of your units' lack of leadership.

Each turn here covers two minutes of realtime action, where units will attempt to carry out the orders given to them in the orders phase. You issue movement objectives and can assign priority targets or let your units pick the best target for themselves. Facing and speed are also set, as well as loading and unloading infantry and non-mobile gun units. Line of sight to the enemy units will allow them to become visable to you when they fire or move into sight of one of your units.

One at a time, you pick up your units, check ammo supply, command control, objective and facing, issue new objectives (which will take time because of the time lag for the orders to get through their HQ to them), order bombardments, facing, set each unit's range—from one to the maximum of the weapon—and select targets, if you need their firepower elsewhere and they have a line of sight to the target area. All commands are selected from an order menu displayed below the map in the text area, and the cursor is used to select targets, movement objectives and to get information about sighted enemy units.

All orders will have some sort of delay except for the facing command, the information of sighted units and, depending on the level of command, the range to their HQ and the disruption suffered by the unit. A

Quick Tools vol. 1

Utility Pack For the Atari ST -- for only $19.95

Quick Tools is a package of many powerful and memory efficient utilities for the Atari ST, Mega ST, and Atari STe computers. It includes a command line interpreter, smart file viewer, fast file finder, desktop editor, hard disk partition protector, custom control panel, speed benchmarker, real time status display, VT52 emulator, label maker with mail merge, program compressor, text screen dumper, and more!

Each Quick Tool can be installed to run as either a desk accessory or as a normal desktop application, for maximum versatility. Quick Tools even has its own unique way of getting around the 6 desk accessory limit. Quick Manager is a window that sits on the ST's desktop and has its own built-in desk accessory menu for installing the other Quick Tools. Quick Manager uses only 15K of memory, and only loads the accessories into memory when they are selected. Quick Manager with all of the Quick Tools installed uses less than 60K of memory!

Quick Manager also displays time, date, free RAM, and TOS version, allows for instant access to the file selector, has 16 desk accessory slots, and can be called from the desktop or any GEM program. **Quick CLI** makes complex file manipulations easy. Copy, rename, and delete files whenever you're in a bind. **Quick Env** edits environment variables. **Quick View II** is the ultimate replacement for the desktop's Show Print Cancel function. Just double click on any desktop file and Quick View II displays it in its native format. Text files display as text. Graphics files display as graphics. Even ARCed files display their contents. **Quick Find II** searches for any file on the hard disk, fast! **Quick Inf II** edits hard to change desktop parameters. **Quick Label II** prints mailing labels and disk labels, with text effects. And much more!

Quick Tools costs only $19.95. We accept checks, money orders, and VISA card orders. Add $3 for shipping. Phone orders: 519-570-4340. Write for more information. Demo available on Compuserve and Genie. Also available: **Quick ST II** Software Screen Accelerator. $19.95 + $3.

SOME LIKE IT... HOT!

The CodeHeads announce:

HOT WIRE + MAXI FILE

- "When the START editorial staff first saw HotWire, our collective reaction was 'Wow!'"
- By far the **fastest, easiest way to run programs** on the Atari ST ..from a floppy disk or from a hard drive!
- Build menus for all your most commonly-used programs. Load new menus with a single keypress or mouse click!
- New **Ledger** function records time spent in programs of your choice.
- **Passwords** may be used to restrict unauthorized access to certain programs.
- New **on-screen clock**, appears in the programs that you choose
- Unlike other shells, HotWire works correctly with all programs, just like the GEM desktop.
- A **seamless interface** offers direct access to MultiDesk and MaxiFile

- Full-featured file-handling utility lets you **move/copy/delete/rename/touch/lock/hide** any combination of files and/or folders.
- Runs as a desk accessory or as a program in any resolution
- Incorporates **every** file/disk feature of the GEM desktop plus much more
- Intelligent **disk copying** routines.
- **Rename folders** - Print directory listings.
- Store **comments** about any file/folder.
- Unique and intuitive user interface designed for easy, speedy operation.
- **Customizable** for your style of use
- **Keyboard equivalents** for all operations.
- Quickly select from up to 20 of your most-used paths
- Even runs programs and loads documents.

Here's what our users are saying about HotWire and MaxiFile:
"The HotWire/MaxiFile combo has **changed the way I use my ST**."
"I haven't used the standard GEM desktop in weeks."
"Without HotWire and MaxiFile I'd be totally lost on the ST."
"...a tribute to **assembly excellence**." - "MaxiFile is **a wonder**!"
"HotWire and MaxiFile really 'beat up on the competition'!!"
"...you'll need to package it in asbestos because it is too **hot**."
"**AWESOME!**" - "Super!" - "a veritable software gem!"

HotWire Plus (includes MaxiFile)	$59.95
MaxiFile	$34.95
HotWire	$39.95
G+Plus - a replacement for Atari GDOS	$34.95
MultiDesk - load unlimited desk accessories	$29.95
CodeHead Utilities - a collection of useful programs	$34.95
MIDIMax - a powerful MIDI tool for performers	$49.95

Phone: (213) 386-5735. Visa, Mastercard, AmEx accepted. Shipping charge: US $2, Canada $3, Europe $5. CA residents add 6.5% sales tax.

CodeHead Software

Los Angeles, CA 90004

bombardment called in by a formation subunit may take as long as 3 to 5 times the number of turns that would pass if the order was given while an HQ unit was the current unit during the orders phase. Canceling orders also takes time. It is wise to move units around with short deliberate moves to avoid the extra delay of cancelling a long movement order that would send them into an enemy zone.

Effective War Game Strategy

Playing defense, it is best to place units in cover terrain and set all range limits to hit the enemy at the same time from more than one direction, if possible. Open terrain is deadly when the enemy has the range to clobber you as you cross, and even hilltops can be leveled by a few well-placed artillery rounds.

Offense is best conducted from cover as much as possible, even though you will have to traverse open terrain to get to the objective hex, which is usually set around the center of the map. Meeting engagements, where both sides are in a mobile state, can be the most fun. These are very challenging as they allow you the chance to flank the unprepared opposition if you sight his main force early enough to get some hidden units around behind him without running into a group he is trying to flank you with. It is always trouble to let your infantry come under heavy fire while they are still loaded in their carriers. And, once unloaded, they are too slow for flanking, which means you need to conserve some of your armor for any flanking as well as a reserve to fill in those holes caused by destroyed or retreating units.

An understanding of your units, their strengths and weaknesses, will help to know which units to use for which tactics, and when to sit and wait, or when to push ahead into the enemy's line. It will also help to know what you are up against, but that should be unknown until you find them, and sometimes that is too late!

These two games are perhaps the best tactical level simulations available for any computer, and are also the best known. Kampfgruppe was the first game entered into the Hall of Fame of a widely published strategy magazine, Computer Gaming World, which also published some historical scenarios for use with it.

For those who are not ready to play General yet, this is your chance to try Captain or Major first, as well as to learn the basics of small unit combat for the past 45 to 50 years, the age of blitzkrieg, the lighting wars. I highly recommend these two; they are among the few that get regular playing time by most of my fellow gamers and myself.

Good luck

Hard Disk Systems to Fit Every Budget

- All systems are complete and ready to use, included at *no extra cost* are clock/calendar and cooling blower(s)
- All ABCO Hard Disk Systems Are Fully Expandable (you are *not* limited to two drives only!) All cables and connectors installed
- Rugged Seagate Hard Disk Mechanisms!
- ICD Host Adapters Used Exclusively
- OMTI High Speed Controllers

32mb #SG32238	519.00
42mb #SG44710	619.00
51mb #SGN4951	619.00
65mb #SG60101	679.00
80mb #SGN 296	719.00
100mb #SG84011D	939.00

Listed above are a sampling of the systems available. Prices also reflect various cabinet/power supply configurations (over 60 configurations are available) All Units: Average Access Time: 24ms to 34m. Larger units are available (special order only). All units compatible with Magic Sac, PC-ditto/II and Spectre/GCR.

Quantity & User Group Discounts Available!

Removable Media Devices (44mb) Syquest 555

- Syquest 44MB Removable media drive
- ICD ST Host Adapter

THE BASICS OF BASIC

Rick Burton (RACE)

Now that we have seen fine "graphic illustrations" of the great COLOR/SETCOLOR connection, it's time to move on further into the color dimension by use of the POKE command. First, a quick review of some of the territory covered.

SETCOLOR is followed by three numbers separated by commas. These control register number, color and brightness. COLOR can access these registers. Among other things, these registers control the main components of graphics: text, background and border.

Back to the present with some new info to digest. The POKE command will access, *and change the value in,* various memory locations in your trusty 8-bit!

"What does that mean to me?" you ask. Many things your Atari does can be changed automatically. Colors and brightnesses can be POKEd into SETCOLOR registers. Here is a brief equivalence chart:

SETCOLOR 1—COLOR 2—POKE 709 (controls text)
SETCOLOR 2—COLOR 3—POKE 710 (controls background)
SETCOLOR 4—COLOR 0—POKE 712 (controls border)

Now, for the tricky part. POKE is followed by two numbers, separated by commas. The first is the memory location (as seen in chart above) and the second is the value to be inserted at that location. Time for another equivalence chart relating color numbers to their POKE values:

0-gray—POKE 0
1-light orange—POKE 16
2-orange—POKE 32
3-red orange—POKE 48
4-pink—POKE 64
5-violet—POKE 80
6-blue violet—POKE 96
7-blue—POKE 112
8-blue—POKE 128
9-light blue—POKE 144
10-blue green—POKE 160
11-green blue—POKE 176
12-green—POKE 192
13-yellow green—POKE 208
14-orange green—POKE 224
15-light orange—POKE 240

Had enough technobabble yet? Hang in there, we're almost done!

This number in the previous chart will be the second number in the actual POKE command. Notice that color number multiplied by 16 is the POKE equivalent.

Each POKE number in the chart will produce the corresponding color in lowest brightness. Increase that number by twos to increase brightness. Brightness will increase until the value for the next color is reached. <WHEW!!>

And now for a "graphic illustration" of these colorful concepts. Let's type:

```
10 PRINT "}":POKE 755,0
20 FOR X=0 TO 254 STEP 2
30 POSITION 18,11
40 PRINT X
50 POKE 709,X
60 POKE 710,254-X
70 POKE 712,X
80 FOR DE=0 TO 200:NEXT
  DE
90 NEXT X
100 END
```

Line 10: Clears the screen and erases the cursor. The character in quotes is typed by pressing ESC and then pressing CLEAR while holding down CONTROL. Some 8-bit machines require 752 to follow POKE.

Line 20: Starts the "X" FOR-NEXT loop, counting by twos.

Line 30: Positions printing to the screen.

Line 40: Prints the variable value X to the screen.

Line 50: Manipulates text with value X.

Line 60: Manipulates background with a "reverse" value X. (254-X)

Line 70: Manipulates border with value X.

Line 80: A delay loop to slow your speedy 8-bit down.

Line 90: Closes the "X" FOR-NEXT loop.

Line 100: The end.

As you run this demo, you see a "graphic illustration" of text and border stepping through each color value while the background moves in reverse through the spectrum. The number on the screen is the value itself. Next month we'll continue to put punch in those pixels. 'Til then...

"NOW THAT IT CAN COMMUNICATE WITH OTHER COMPUTERS, IT SAYS IT DOESN'T WANT TO COMMUNICATE WITH US."

Dear Glenn
Or Get Out The Pepto

Glenn Dulin (COAC)

What we are about to bring to you in this revisiting of some old stuff from the past is, I would consider (although you might not), highly informative and educational. What we have here is some do's-n-don't's from the COAC newsletter archives featuring the Dear Glenn column. So, hold on to your stomach.

Dear Glenn: Have you noticed articles discussing some programs where the author will give the abbreviation "WYSIWYG," and then they proceed to explain that it means What-You-See-Is-What-You-Get?" Why do you writers do that? Where is the brevity? I've seen only one article that used the abbreviation more than once. Some of them will even tell you how to pronounce it. They say it's "Wa-See-Wig." Oh, gee! Give us a break!

Sincerely,
"BBAA" (Bothered-By-Ambiguous-Abbreviations)

Dear "double B double A": Yes "YAROB" but "GOOMFBILDITWIDI" (Sa-Goomph-build-a-twidy). Which means (You-Are-Right-On-Bro but, Get-Out-Of-My-Face-Because-I-Like-Doing-It-The-Way-I-Do-It). For, such is the way of computerese, BBAA.

Respectfully,
"IGBM" (I-Gotta-Be-Me)

Dear Glenn: I have a question. I'm a musician with my own studio and I went ahead and plugged my ST into a 220v socket, but all I get now when I boot my computer is a dialog box saying TOS error #35,000,000. What's wrong?

Dear Smoked: Just to let the readers know what's going on; now I haven't tried this myself, but there is a theory going around that if 110v gives 8mHz CPU speed then 220v should yield 16mHz.

I think your problem is quite obvious. You must have booted your system with a virus infected UWASADUMMI disk format. This is a format commonly used by travel agents on the east side of Istanbul and by neophyte computerized musicians of Central Oregon. Of course because of the viral damage there is no way now of telling how fast your CPU is running.

Dear Glenn: A few months ago I requested your advice regarding the use of my computer in the shower. Some of my best ideas occur while showering. So you suggested wrapping my system in Saran Wrap to keep out the soap.

During a recent shower, I was surprised and appalled when I saw blue and red sparks flashing like wild fireworks from my system. Although I suffered minor burns and lost my eyebrows from the flame, from which I have recovered, my main problem now is to remove the melted plastic wrap from my CPU. *What went wrong?!!*

Signed,
Plastic Problem

Dear Plastic Problem: Well, first of all, you obviously didn't follow my instructions properly; I said "Renolds Wrap."

Another reason for your problem may be that you booted a disk with the deadly Libyan musicians formatted disk dubbed the Standard Trace Utility Package Interface Device; or S.T.U.P.I.D for short.

This is the format that may have recently caused problems for Bill Rubertus, our resident musician, when he plugged in his 8 meg TOS 6.66 into a 220 volt outlet.

He too has recovered, by the way, and can now walk pretty normal. Did he happen to give you any of his disks? Are you still friends after your car accident?

It has also come to my attention that there is a very mean and nasty mutated virus that causes the very same symptoms as you described. This virus is now spreading through the computer systems of the Iranian defense department.

As for your plastic problem; I have been told by others who have had this very same problem, that if you immerse your CPU first in liquid nitrogen, then in diesel oil, the stuff will come right off.

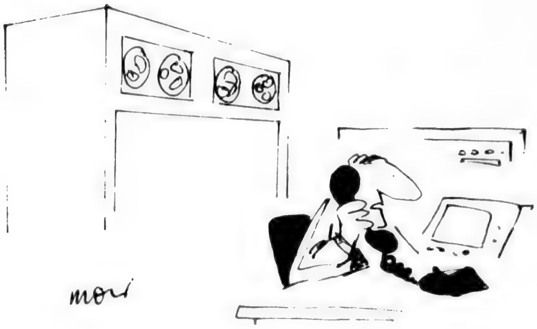
Dear Glenn: I have a 1050 drive that just keeps spinning and spinning with the busy light on and never boots up. Can you tell me what's wrong?

Dear Spinner: Is it plugged into your computer? Did you turn your computer on? It may be that the drive lost the belt.

Just in case, take the drive apart and look. If it is a bad belt, look at the name of the drive because there are two different mechanisms used for the 1050, the Tandon and the World Storage. Call Best Electronics and tell them which you need.

But, I think that it's very obvious. You must have gotten an infected disk from Bill Rubertus, who, since the car accident and his encounter with a 220v socket, has been acting strangely. As you may have heard, he was infected with the UWASADUMMI format and hasn't been the same since.

As a footnote: the car accident happened at lunch hour when Bill Rubertus and Mike Viegas, hurrying to take advantage of a special at Denny's, both tried to park at the same time in the same handicap space. At that time, of course, neither was handicapped. After the accident though, they became legally eligible to use the space. As for the theory of 220v doubling CPU speed; it wasn't me, despite the rumors, um...honest. Really!



"Frankly, Mrs. Pilkins, it'll be a lot easier for you to pay the $27,300 telephone bill than it will for us to find the mistake."

For Your Budding Artist or Mathematician!

MY STORY

PAGE I

Kidpublisher *Professional* (for ages 5–11)

- publish your own booklets!
- four built-in font styles
- extensive drawing program

Kidpainter (for ages 5–11)

- print your pictures and designs
- create and play onscreen puzzles
- mirroring, "rubber stamp", many challenging and fun surprises!

Super Kidgrid (for ages 3–11)

- print color-by-number pictures
- 1, 5, or 10 pictures in memory, automatically loaded from disk
- develops creative thinking skills

COLOR MONITOR REQUIRED.
PRINT FUNCTIONS IN THESE PROGRAMS REQUIRE A PRINTER WHICH ACCEPTS AN ST SCREEN DUMP.

Discover maximum driving pleasure with Alpha Systems products. Software and hardware known for high marks in gutsy technology, understandable documentation and, yes, super, low prices.

Get more mileage out of your ST. Choose Alpha Systems. Ultra performance — now and to grow on.

ST PROTECTION TECHNIQUES (Book/Disk Set)

NOW SHIPPING!

Everything you always wanted to know about protection schemes and state-of-the-art in copy protection.

Includes software disk with *Automatic Program Protector*. Lets you create custom disk formats and check them automatically. Learn how to specify password requirements, disk checks, and set limits on number of program runs.

Also contains reviews of popular ST back-up programs and detailed explanation of ST disks and drives.

Only $39.95

NEW!

BACK TRAK UNLEASHES DOUBLE-SIDED DISK DRIVES

New *Back Trak* software gives ST users more -- for less.

Double-sided drives are now standard equipment on all ST computers, but software companies continue to churn out programs on single-sided disks. For those of you with double-sided disk drives, it means wasting 50% of your disk's capacity! With blank disks costing up to $5 each, you waste dollars every time you buy a program or make a back-up!

Back Trak allows access to backside of single-sided disks, **doubling your storage capacity**. Use newfound space for files, saved games, even boot (self-loading) programs. *Back Trak* lets you boot off front or backside of disk. And, allows booting from drive A or B. (Booting from drive B proves invaluable if your internal drive ever breaks down.)

Fully compatible with copy protection programs like *ST Copy*, *Copy II ST* and *ProCopy*, *Back Trak* even lets you put protected programs on the backside of your disk. For example, save games on backside of *Dungeon Master* — then switch back and forth instantly without swapping disks. Or, save a two-disk set on a single disk.

Every time you use *Back Trak*, you save time and money. And, you'll see less wear and tear on drive heads as you utilize your double-sided drive's full potential.

With this pure software program, there are no special connectors to fool with. No cables to cut.

Only $29.95

SWITCH/BACK MAKES YOU A SWITCH HITTER

You'll wonder how you ever got along without it!

Switch/Back lets you load two or more programs into your ST and switch between them with lightning speed. Works with games, business programs, utilities, compilers, you name it. Although only one program is running at a time, the other is available instantly. A press of the button returns you right where you left off! Ideal for word processing and customer service applications.

Gaming feature lets you save almost any game, then continue playing. If you get into trouble, just switch back to where you were, as many times as you like! Instant replay!

What's more, *Switch/Back* lets you save many **protected** programs as standard TOS files to be stored together on disks, compressed, or even run off a hard disk.

SWITCH BACK

"Switch/Back has saved me time and money and proven to be an excellent tool for practical as well as entertainment applications."
Judith Chang
ST World, August 1988

"Alpha Systems has done it again. Another great product!"
LeRoy Valley
ST Informer, August 1988

Switch/Back combination hardware/software package requires at least 1 meg of RAM (or a Megadisk or Polydisk cartridge). Hardware plugs into printer port for easy use. It's transparent to any printer activity. Just plug it in — leave it in.

Only $69.95

NEW! JAM MASTER

Amateurs and professionals — turn any inexpensive MIDI keyboard into a full-featured digital sampling synthesizer and four-track recording studio! You'll be jamming in no time with complete record and playback capability.

Jam Master requires a cartridge-based sound digitizer for output such as *Digisound Professional*, and any MIDI compatible keyboard. Create your own sounds with any ST digitizer. Or, experiment with 50 prerecorded sounds, from drums to violins.

Jam Master is packed with powerful features like full keyboard mapping. Assign your keyboard to as many as **32 different sounds**, any number of octaves. Play chords up to four keys at a time. Even blend four completely different sounds.

Advanced recording studio feature records music as you play. Record two, three, up to four tracks, and play back together. You'll be a one-man band! Complete *Beat Box* drum patterns (playout of up to four digitized sounds at once) can be added as a single voice, and played along with three more sound tracks! Adds a full drum accompaniment to your recordings.

This first-of-its-kind program actually lets your ST play back in real time. Record an expert pianist, play back and watch your keys go to work as your ST transforms into a player piano. It's fun and fascinating!

A real-time, fine-tune feature allows total pitch control. Lets you tune-up with the band. 40K sampling rate capability offers superior quality. (The faster the sampling speed, the higher the sound quality.)

TECHNICAL SPECIFICATIONS

- Plays four-voice polyphonic digital sound
- Incorporates *Beat Box* drum tracks as one sound
- Supports sampling rates up to 40K
- Supports looping and decay
- Keyboard mapping up to 32 different samples
- Built-in four track sequencer
- Unlimited note range changes
- Frequency fine-tuning
- Compatible with all ST computers
- Requires: cartridge-based digitizer for output and any MIDI compatible keyboard

Limited-Time
Special Introductory Price
Only $49.95 (List Price $69.95)

Digisound

A blast and a half! Complete with special effects like echo, reverse, squeeze, looping, pitch manipulation, mixing, fade in/out, and envelope control. Oscilloscope mode and waveform editing features mean you're in control. Cut and paste features let you prepare speeches and sound effects like a pro.

Compatible with any MIDI keyboard. Even turns your Atari ST keyboard into a musical synthesizer. Each key plays a different pitch. Just press keys to make a sound. It's that easy.

"The Cadillac of ST sound digitizers. If you plan any serious sampling and sampling editing, go with Digisound."

Jim Pierson-Perry
START, July 1989

"All the nice little touches are there to make it a joy to use for years to come. I'm in love with the product."

LeRoy Valley
ST Informer, June 1988

DIGISOUND PROFESSIONAL — The high-fidelity sound system used by professionals.

Provides two input jacks (one for unpowered source, i.e., microphone or turntable, and one for powered source, i.e., tape player or TV). Allows playback through monitor, stereo, external amplifier or headphones. Input and output gain controls accommodate any kind of equipment. Special logarithmic sampling gives wider dynamic range with less distortion.

Only $149.95

DIGISOUND ST — Offers one input jack.

Accepts input from cassette player, TV, stereo, VCR, amplifier or powered microphone. Sound can be played back through monitor speaker (color or monochrome). Digisound was used to create the voice commands in *Chessmaster 2000*.

Only $89.95

Beat Box — NOW AVAILABLE!

You and *Beat Box* will make awesome rhythms together from waltz to rock, rap to jazz, whatever your preference. **No musical knowledge required!**

Polyphonic drum machine software comes with over 35 prerecorded digitized sounds including drumbeat, cymbals, human voices, computer voices, synthesizers, bass guitar and more.

Create your own drum and musical patterns in **four** voices. (They said it couldn't be done!) Combine and arrange up to 30 different patterns to create an entire rhythmic composition! An ideal accompaniment for musicians. *Beat Box* provides you with your own custom drummer for the price of a metronome!

Beat Box contains a public domain player program so you can share your musical masterpieces with friends.

No need for special equipment. Sound is played through monitor, amplifier or stereo. Also compatible with all ST sound digitizer cartridges, including *Digisound Professional.*

"Very impressive. Even with all four sounds at once, playback sound quality is superb."

Dave Edwards
START, December 1989

"I recommend Beat Box to anyone interested in exploring the area of drum or pattern sequencing of sample sounds or anyone interested in exploring their musical talents."

Tom Tjarnberg
ST World, June 1989

Limited-Time
Special Introductory Price
Only $29.95 (List Price $39.95)

DIGITAL MUSIC PRO SYSTEM

Complete package for capturing, manipulating and performing with digital sounds and music. Includes *Jam Master*, *Digisound Professional* and *Beat Box*. (Requires a MIDI keyboard.)

Only $199.95

POWERPRINT II

NEW FEATURES:

- NOW SUPPORTS SPECTRUM PICTURES
- THREE POWERFUL WAYS TO PRINT ".IMG" FILES

Create picture-perfect banners, posters, wall-size business graphs and more! *PowerPrint II* makes it easy, with unequaled clarity and resolution.

Zoom option lets you blow up small portion of image. Mirroring is great for T-shirt iron-ons. You can also reverse shades in printed image so blacks become whites and vice-versa just like a photo negative. Image can be rotated 90° to print up and down or across the page.

Print 16 shades for incredible detail. Selective shading allows you to print multi-color pictures by printing one color at a time with color ribbons.

"PowerPrint works perfectly. A must for your program library."

Donna Wesolowski
ST Informer, May 1988

PowerPrint II lets you capture and print almost any ST screen. Works with *Star, NEC, Citoh, Gemini, EPSON, XM8048* and compatible printers.

Only $39.95

DIGISPEC

Get a feeling of creative power with the ultimate in computer video digitizing. Simply capture an image with your *Color ComputerEyes* and color video camera (or VCR, video disk, etc.). Then run *Digispec*. Watch your picture develop into a spectacular image of up to **512 different colors!**

Low resolution brings out detail in backgrounds and faces for highest quality image possible. Clarity is unsurpassed. Shading feature uses technique called dithering to create and display images in up to **24,389 simulated colors!**

Only $39.95

PROFESSIONAL VIDEO SYSTEM

Everything you need to capture full-color video images and print them with professional quality on your ST. Comes complete with *Color ComputerEyes*, *PowerPrint II* and *Digispec*.

Only $249.95

COLOR COMPUTEREYES™

Capture your picture, or your favorite star's, with the first and only full-color video digitizer for the ST!

Color ComputerEyes uses any standard video input — video camera, VCR or video disk. Works in all ST resolutions. Low resolution provides 16-shade black & white or full-color pictures. Features automatic calibration of contrast, brightness and white balance.

"A major breakthrough in video digitizers for the ST."

LeRoy Valley
ST Informer, August 1988

Pictures can be used with *PowerPrint II, Degas, Neochrome* and others. Plugs into cartridge port for easy setup.

Only $199.95

The Atari Boosters League East (ABLE) is one of the more persistent Atari users clubs, meeting monthly with enthusiasts since the summer of 1981. ABLE provides user support for all Atari computers except the Portfolio and PC line. The purpose of ABLE is to advance the knowledge of the membership through mutual education and the interchange of ideas.

General meetings are held in the Palm Magnolia Room at the Orlando Public Library, 101 East Central Blvd., on the last Sunday of each month from 1:30 to 4:30 P.M. ST SIG special interest meetings take place in Room 134 at the Bush Science Center on the Rollins College campus on the second Wednesday of each month from 7 to 9:30 P.M. Ad hoc meetings are scheduled as needed to present speakers, conduct special workshops, provide tutorial seminars and for parties. We assist members in service and software problems, as well as arrange group purchases and discounts.

Information is disseminated to members through our newsletter, the ABLE Atari Information Digest (ABLE AID). A package of twelve selected previous issues of ABLE AID higlighting the "super eight" computers is available for $10 ($5 for members). In 1990, ABLE began participating with a consortium of Atari User Groups in helping produce the Atari Interface Magazine, a quality monthly publication with obvious broader scope and greater depth of the issues. There is still a place for local ABLE AID information and our local authors will have an opportunity for national exposure.

ABLE maintains a hardcopy library for members of all public information released concerning their computers by Atari, as well as complete files of most Atari relevant magazines, such as Antic, ANALOG, Atari Connection, Creative Computing, COMPUTE!, ROM, Atari Explorer, ST Applications, STart, ST-Log, ST Informer, ST World, MAM/AIM, ST X-Press, Shareware Connection, Atari DTP, Current Notes, ACE, MACE and PHOENIX.

We have also established an ABLE Program Library of User Software (ABLE PLUS), consisting of several thousand files for the super eight and sweet sixteen computers. This library contains public domain programs contributed by ABLE members, as well as other computer clubs and users, to allow the sharing of user-written software. A computer specific listing is available to non-members for $3 and disks are available to non-members for $6 each.

ABLE maintains a telecommunication service for members.

ABLE accepts written correspondence at P.O. Box 1172, Winter Park, FL 32790, while membership inquiries are handled by Hadley Nelson, President, (407) 671-0317 or Milton Eager, Treasurer, (407) 834-0581. Annual dues are $12.

Now We Know! by Chet (Brrrrr!) Cox

A few months ago, we asked "What if the Atari Computer Club of Denver had a meeting and nobody came?" All it took was the worst blizzard in four years for us to find out. We called everyone who had kept their phone numbers updated in our roster and cancelled the meeting. Good thing too, all the roads were closed.

If you didn't get called, UPDATE YOUR LOCATOR INFORMATION RIGHT NOW! Call Mike or Guy at the numbers listed above. (Paul's is wrong; I have to fix the DeGas picture Real Soon Now to correct that.) Or come to the meeting and tell them in person. That is...if it don't snow again.

PS -- Swap Meet in May. Pass it on!

STigs And STones for March, Predictions and Loathing in Them There Hills by Chet (Jean Dixon) Cox

Since deadline looms before the meeting, we'll just cover what we absolutely positively maybe know will be covered at the meeting. Ed, you could use these notes as your talking paper format! (If I print 'em and get 'em to you before the meeting, heh!)

PC Ditto II, a demonstration and talk about how Avant-Garde supposedly fixed the problems with PCDII. Yeah, we'll believe it when we see it. (Hey, guys! Ed test burns these type of things ALL THE TIME! Send him or me anything if you'd like to know BEFORE IT'S RELEASED whether it works on ALL STs or not.)

Joe Ronda will demo dozens of expensive games and make everyone envious.

Ed will solicit more STs for the StarFest Gaming Deck. Please. More STuff. If it don't snow, of course.

Starfleet Meeting Minutes March 9, 1990

Officers present: Guenther, Oughton

Well, Starfleet users group continues to have problems with our meeting place. Dennys ran a dinner special that coincided with our meeting night. Their business picked up and we couldn't meet there this month. They looked for our phone number, but said they had lost it. The first person we talked to said "No, you can't have your meeting here." Then, we talked to another manager, and she said "Just wait and after we clear a table for you you can go ahead." After we waited about an hour the first person returned and repeated his statement. We then decided to leave.

The meeting reconvened at my house. As some of the members had not eaten, they stopped to get something to eat on the way. While we waited for their arrival, C.J. informed us that he has to give up being librarian. Chris Guenther took over both the hard copy and software libraries. I demonstrated some programs I had writen in PILOT. This lead to a full blown demonstration of the PILOT language. It is in some cases very easy to learn, but to use the full power of the ATARI, very advanced and complex code needs to be written. Its greatest feature is the match command. This command will match a string anywhere in another string without using loops or other ways of incrementating through the string. This lead to the discussion of the Atari Demo packs I bought from Atari while still owned by Warner Brothers. These packs included the PILOT external specification, programming examples in LOGO and BASIC, and procedures to copy some programs from tape to disk. I only have the BASIC and PILOT demo packs though.

Mike then demonstrated BOBterm, but as my wife was on the phone, we couldn't really connect to a BBS. BOBTERM is a program much like Amodem 7.5 or 850 Express. The big difference between it and Amodem is Bobterm is written in assembly instead of BASIC. BOBTERM was written by Bob Puff, the same fellow who wrote MYDOS, and other Atari programs. It has many features including many types of transfer protocals. It also has a very large buffer for uploads and downloads. Since the meeting started late, that was all we had time to do. Some members copied BOBTERM, as we broke up.

A.C.C.T.

Atari Computer Club of Toledo club members receive, as part of their dues, Atari Interface Magazine and access to the 8-bit and ST public domain software libraries. Disks are $2/8-bit and $3/ST, non-members may purchase disks at a slightly higher cost.

A.C.C.T. meets on the second Monday of the month from 7-9 pm at Bassett's Health Foods, 3301 West Central Avenue (Westgate Shopping Center), Toledo, Ohio. 8-BIT SIG (yes, I said 8-bit) held monthly at the home of Jim Herzberg. Dates and times announced at meeting. ST SIG held monthly at the home of David & Brenda Micka. Dates and times announced at meeting.

A.C.C.T. may be contacted at 6107 Greenwycke Lane, Monroe, MI 48161, by calling Dave Micka at 313-241-1157 or Michael Justice at 419-242-7797 or via Fantasy Island BBS.

President:	David Micka	313-241-1157
VP & 8-Bit Librarian:	Michael Justice	419-242-7797
Secretary:	Sharon Hill	419-423-2135
Treasurer:	Rose Taylor	
ST Librarian:	Brenda Micka	313-241-1157
Fantasy Island BBS (3/12/2400)		419-691-6459

ACCT will be conducting a series of lectures, open to the public, covering some of the history of the original 8-bits with hints to the more technical aspects that made it such a versatile general purpose computer. Some physical demonstrations will be used to highlight the more complex ideas discussed to illustrate the transformation of the what-was-then to what-is-now. The first lecture is to be May 14, circa 7:30 pm. This will be a lecture on the history of the Atari based on the general theory of computers.

The guest speaker for May studied electronics at Owens Technical College, electrical engineering at Clark State Community College and engineering physics at Wright State University, with hobbies that include building custom computers and cartoon watching.

ATARI FEDERATION

Secretary's Report by Brian Pendergrass

News discussed at the 5 March 1990 meeting: The World of Atari Show is scheduled for April 7 & 8 in Aneheim.// Spectre GCR has a new software upgrade and now works with Prodigy. Dave Small is working on a 68030/ST adapter, you should be able to see it at the World of Atari Show.// DC Desk, a NeoDesk look alike, should be released this month.// MiniScribe has filed for bankruptcy and may be moving out of the U.S.// Word-Up version 3 will soon be going to beta testing.// NeoDesk sent out newsletters to registered owners advertising version 2.05 which is smaller, faster and allows the use of special desk accessories.// Quick ST version 2.0 has been released, at a bargain for $19.95, which speeds up your ST much like Turbo ST (only cheaper).

The excitement for the evening was the auctioning of one of the two copies of PageStream the club received. The reserve price was $50, but that didn't really matter. It went to Jerry Sullivan for $90. The other copy was to be raffled off next month or when 50 $1 tickets had been sold. 51 tickets were sold so the drawing was held during this meeting. And the winner was...John Powell.

The ST demo was of the latest version of 'VKILLER', a public domain virus killer, and was given by Bob Ribortone.

Some members didn't receive their copy of the AIM newsletter. If you were one of them notify Herb Kanner, he will request replacement copies. Also, in February issue of A.I.M., my article was cut about to half of its original content and the president's article did not appear at all. We were told this was not intentional. So if you are reading this it wasn't cut out and you also received your copy of the April issue.

Birmingham Atari Computer Enthusiasts

The Birmingham Atari Computer Enthusiasts of Birmingham, Alabama meets at the Vestavia Hills Library downstairs at 7:00 p.m. the second Monday of each month. Membership dues are $20 for a regular membership,and $35 for a professional level membership.

Mark Bodenhausen	President
James Gilreath	Vice President
Brenda Bodenhausen	Secretary
Steve Yates	Treasurer

For membership information, contact Steve Yates, 1005 Candy Mountain Road, Birmingham, Alabama 35216.

Our BBS is at (205) 833-5012. This is both a voice and data line. To access the BBS, press 1 after the first ring. For voice, press 2. After 6 rings, 2 is automatically selected.

The meeting on March 12 had a total of 21 members and guests present. We had some new faces as well as some old ones. A new member to the club was Dr. Tom Nielson. Welcome to the club!

Tom Moore demonstrated the Spectre GCR using his Atari MEGA 4 ST and Laser printer, showing the ability to also convert a Macintosh Word Processor file to an Atari Postscript file using Transverter for UltraScript and the SLM804. Thanks again Tom...

Dennis Evans was appointed Committee Chairman to head up the club's first annual Yard Sale. All members are requested to call Dennis or contact him through the club BBS to pledge your items. We will be needing a few users to help us set up the sale and help transporting the items. Contact "D" on the BBS if you can help us.

The clubs mid-year outing was brought up for consideration, with suggestions being offered about locations and possible types of food. We will be looking for a chairman at the next meeting so please try to attend!

The club is considering appointing an 8-bit Vice-President to head up the demonstrations and to assist the President in the normal clubs activities. All nominations for the position will be accepted at the next meeting and voted on.

Tom Moore has donated a very sizeable amount of new and used ST software to the club, and Douglas Childs has also donated some used 8-bit software. Some of the software will be auctioned off at a later date, with some very promising prices. Anyone wishing to donate items for the auction may contact Steve Yates (AKA Gizmo) at 854-0698 or 853-1933. All proceeds will be added to the clubs treasury. Our next meetings will be on April 9th and May 14th...make plans to attend! Support Your Local Atari Club!!

B.R.A.C.E.

Bluegrass Region Atari Computer Enthusiasts

President	Hal Nason	(606) 269-8989
Vice President	Greg Parsons	
Secretary	Chris Dotson	
Treasurer	Vacant	
Librarian	Chris Dotson	
BBS Sysop	Rick Bradfield	

B.R.A.C.E. (Bluegrass Region Atari Computer Enthusiasts) meets the third Sunday of each month from 1 - 4 PM. The site of the meeting is undetermined at this time. The officers will be in contact with you in the future to advise you of the meeting site. Current membership dues are $15 per year for an individual membership, $20 per year for a family membership and $10 per year for an associate membership. (An associate membership includes receiving the monthly newsletter, but excludes the use of the library.) Members of B.R.A.C.E. have extra downloading privileges on The Abyss BBS (606) 223-2782.

BRAG ST

Buffalo Region Atari Group for ST's

BRAG ST was founded in 1987 to serve Atari ST owners in the Western New York area. General Membership Meetings are held on the third Thursday of the month at Erie Community College North Campus, Room S-105 in the Student Center. Setup begins at 7:00 PM; Meeting starts 7:30 PM. The Board of Directors meet on the the first Tuesday of the month at the Your Host Restaurant, Harlem at Sheridan at 7:30 PM. All are welcome to attend. Piracy will not be tolerated at any BRAG ST function.

BRAG ST, PO Box 1035, Buffalo, New York, 14225

Chairman	Mark Pierro	(716) 691-7844
Vice Chairman	Ken Malark	(716) 683-1272
Finances	Gerry Genson	(716) 877-1328
Records	Joe Rogozinski	(716) 877-8378
Disk Librarian	Carl Barron	(716) 885-4325
Public Relations	Harvel Hontz	(716) 689-8074
Graphics	Dick Kersting	(716) 839-0494

Minutes of the February & March BRAG ST Meeting

Our meeting in February had 3 great demoes: Carl Barron gave us the second in his series on the Cyber Software from Antic. This month it was Cyber Control. Carl gave his usual fine job explaining a very complicated program in a short time. Next up was Dick Kersting with a demonstration of Epyx's Sub Battle Simulator. Dick showed us the game's look and feel, and we actually saw a battleship sunk! During our break, we raffled off a copy of Marble Madness and $15 worth of free time on CompuServe. As luck would have it, our two newest members (signed them up that night) won the prizes! We then concluded the meeting with an excellent demo of Timework's DataManager ST database program presented by Joe Rogozinski.

Our March Meeting was our annual auction, and as usual, it was a great success. Over $1,000 worth of software and hardware was sold, with plenty of bargains to be had. One small note, however -- if anyone finds a copy of ST Star Raider's that doesn't belong to them, please bring it to the April meeting so we can get it to it's rightful owner. Thanks in advance.

Upcoming Events: Our April 19th meeting will feature Part 3 of Carl Barron's Cyber Series with Cyber Sculpt, a 3D modeling program. Then we'll have Populus, a "popular" game where you get a chance to create your own kind of world. After the demo, the game will be raffled off. Next will be a presentation of the games and utilities on the disk of the month. And of course, we'll be taking care of club business -- We need a volunteer for the Board of Directors and to vote on some Constitution and By Law Changes.

On Saturday, April 28th beginning at 1 PM, Bob Brodie, Atari Corporation's User Group Coordinator, will be making his first visit to the Western New York Area. He will be speaking at the Webb Auditorium at the Rochester Institute of Technology. Come and ask Bob about Atari, see the STACY, PORTFOLIO, LYNX and other great products.

Activity on the BACKSCATTER BBS is starting to pickup now that members are aware of the password for the message base. The password is necessary since we share the BBS with IBM'ers -- in this way, we have our own "personal" area to conduct club business. Because we don't want to exclude any ST'ers in our club or around the country from leaving messages, we're printing the password here for all to see (those IBM'ers won't be getting this anyway!). The password is BOAST (and the BBS number is 716-684-3978).

Remember, if you are having trouble with a particular program, bring it to the meeting -- there will be someone who can help you out. After all, that's one of the reasons you joined a user group, right?

CACE

Cascades Atari Computer Enthusiasts

Fishin' Around by Brent Fisher It is time once more to let everyone know about the doings of the Atari world here in Jackson, Michigan. More than likely this will be a bit on the short side, but here goes anyway. The most important news to tell is that the CACE BBS now has a new phone number. And the number is (drum roll please) 517-764-4047. I would like to extend my apologies to those of you who tried calling the old number and found it inactive, but we should not have any problems with the new number. Well none other than the occasional power failure. Other than those things should be running smoothly. So yes, passwords and everything else is still intact. Hey, why don't you all give us a call and see what you think of the board, at least those of you who have never seem it before.

In the other news department, our next meeting will take place Saturday, April 14th at 1 pm in the Boo's Center in Loomis Park in lovely Jackson City. I'd like to see you all at the meeting.

Central Connecticut Computer Club

Oops....it's April, huh? I missed a month there. Sorry, I hope it won't happen again. Guess that deadline just snuck by me (OW! Wife says snuck isn't a proper word, dang, that hurt!). Well, onward.

Some of our membership have said they don't like my "doom and gloom" attitude about Atari's business practices. OK...I agree. I'm getting tired of banging my head against the wall for nothing anyhow. So I'm gonna state here an' now, "No more tirades against Mother Atari." I'm going to comment only on the good things they do and say. (No matter how short this becomes). Just kidding guys...hey! OW! Awrite...dang, can't take a joke, eh?

Well guys, we got some decision making to do here...be at the meetings. We're deciding who's going to be receiving and doing reviews for the club and uploading completed articles to AIM. You will gain instant glory and fame or in my case, notoriety.

Also!! We want to discuss contacting STARR, FACE, and STATUS and inviting them to our Gribnif demo, tentatively set for the May meeting. Remember that!! Spread the word. We had originally intended to make this a "road trip," but after talking to Rich at Gribnif, it's better that they come here, has to do with space and all....i.e. not enough room at Gribnif.

Finally made it down to Computers Etc. in Fairfield, CT. After listening to others describe this place, along with recommendations from Darlah, it was time to do a road trip (I like those, heh). Of course, I got off at the wrong exit, but had no trouble backtracking up King's Highway, grand home of everything for the modern Yuppie. Wheeled on in at 425 and proceeded to eyeball the place. I was impressed with the size, appearance, and Atari-ness of their facility. (OW! That is too, a word! Lemme alone.) Atari banners and several Atari workstations were setup. I also noticed their cash register system is controlled by a 1040 and two ICD setups, one a FA-ST drive the other a tape drive (syquest style?). I brought my Mega 2 in for a drive checkup, had some bootup problems. They ran a diagnostic on the drive and then the entire machine all within an hour, and it went home with me. Try that anywhere else! Ah yes, I was impressed. I asked them when they are going to move to Bristol...I wish!

You like those British Atari mags? They have them as well as domestic mags, whoever is left, that is. No, Pattie, they don't have AIM. Lean on them, will ya? Their address is 425 King's Highway, Fairfield, CT. Phone number is (203)336-3100.

CDACE

Capital District ATARI Computer Enthusiasts

Who We Are: Capital District Atari Computer Enthusiasts (CDACE) is located in Albany, NY and serves the tri-city capital region. Meetings are currently held on the third Tuesday for the XE group and the last Tuesday for the ST group at the Computer Cellar, Westgate Plaza, Albany, NY. Meetings begin at 7 PM with the libraries available starting at 6:30 PM. Dues are currently $20 per year for each family. This includes a subscription to AIM, our monthly newsletter and our BBS. Membership is not required to visit a meeting.

Messages from the Board: The Executive Board accepted a proposal made at the meeting of January 30, 1990 to make available a subscription to Atari Interface Magazine to each member from their annual dues. Part of the proposal requires a news budget of four double sided pages for the newsletter. A cut in asset funding is also necessitated and will be made up by raffles and other income.

The Executive Board accepted a proposal made at the meeting of January 30, 1990 to reduce the price of ST-based public domain disks to $2. The XE-based library continues to remain free to all members.

By motion to the general membership, the meeting dates for the club will be changed to the third Wednesday of each month for the XE group and the last Wednesday of each month for the ST group. This change will be effective with the April meetings. The meeting dates will be April 18 and April 25, respectively.

The ST Vice-President has submitted his resignation effective immediately to pursue his business and other interests. We wish to thank Steve Kendrick for his efforts as a member and officer. Accordingly, the Executive Board has acted under the by-laws of the club and selected a new ST Vice President who shall serve until the next elections in September. His name will be presented in the next club newsletter.

News from the Meetings: The ST group is conducting a raffle of a Pagestream 1.8 package donated by Soft-Logik to the club. Tickets are available from Steve Garee at the meetings for the price of $2 each. This continues an excellent support effort by manufacturers of the user group movement. Thank you, Practical Solutions, Regent Software, Soft-Logik, and the many others who make available special offers. This does not take away from our local sponsor, the Computer Cellar. They make available free meeting space, refreshments, advertising support, and giveaways.

Demonstrations at the last meeting were Magniwriter, an ST-Writer for those people visually impaired who need larger type: Public Painter, a German public domain offering for mono users that includes the basic paint functions and an interesting block bending function; and a mailing list program written in compiled dBMAN(TM) language especially for the club's labeling requirements, it allows different functions to each user from the same original database.

The XE group has been reviewing the best of the past. Fort Apocalypse was the reviewed game. It was agreed that the game still carries its age well. The action and arcade skills are the same or better than some of the current Nintendo(TM) games.

We also regret the passing of the Analog mags and the Computer Shopper coverage of the Atari XE, but understand it in the midst of the non-support of manufacturers. It has been suggested that the club could become a storehouse or archive of 8-bit material for the time when the machine support completely dries up. Single machine licenses remain the biggest stumbling blocks to the wide usage of unsupported or discontinued software.

Commentary: We, as a user group, disdain the piracy of copyrighted software, because it destroys the incentive of support and renewal of software. However, the copyright laws as currently enforced have become a two-edged sword in the software world. The analogy I usually use is of a person who owns a bright, shiny, well-used and functioning toaster when bread is no longer made.

Please, software authors, consider the lifetime of your properties and put your products out to the freeware or shareware pasture on a regular basis when the items no longer sell. You will rarely lose sales, because the cost-benefit ratio can be tipped to the side of a new hardware purchase at a very low point. If I had to pay $40 for a word processor for a $40.00 computer, I would seriously consider the benefits of a new computer.

COAC

Central Oregon Atari Club

Dedicated to Central Oregon Atari Users and Enthusiasts Since 1986

President	Norman Moore	(503) 447-3598
ST-VP	Bob Kanski	(503) 548-8201
8-Bit VP	Marc Hitson	(503) 648-0513
Treasurer/Editor	Glenn Dulin	(503) 382-3956
Secretary	Nancy Kanski	(503) 548-8201

Address: Central Oregon Atari Club, PO Box 6824, Bend, OR 97708

Membership dues are $1/month and $1/year for each additional family member. We meet every second Saturday of the month at 5:00 PM at the Ann Rita Conference Center, which lies just in front of the St. Charles Hospital on Neff Road in Bend.

Well, did we have pizza or what? Another great time stuffing our faces. Good stuff.

We raffled off the Video Key. Although I bought ten tickets, Rich Haynes, who only bought one, managed to take away the prise. Congradulations. We hope to have the cordless mouse in our possession soon. Gretchen Hitson won the Antic Magazine and disk. Congradulations Gretchen. See you all next month.

We currently own and maintain a 24-hour Bulletin Board System (BBS), open to everyone with a 300, 1200, or 2400 baud modem, called the Atari Zone. To enter the Atari Zone call 509-326-5741.

Since we currently have renewal dates scattered throughout the year, please check your card for your current expiration date. Remember, once your membership expires we are no longer able to send you your AIM Newsletter or allow you to remain at the F.A.C.C.S. level on the Atari Zone. To prevent any interruption in your F.A.C.C.S. services please renew by the expiration date on your card.

GKAUG GREATER KALAMAZOO ATARI USERS GROUP

I was unable to schedule a meetining for March so far, but I think I will be able to do it towards the end of the month. Dave Bryant and myself took a look at an 810 disk drive for a friend of an ex-member... why do they still continue to expect service when they are no longer supporting our activities?? No problem for us anyway. It's always good for us to do a good deed.

The drive's symptoms were that it had no power indications although the power supply was putting out the proper voltage. After about 20 minutes... we found oxidized pins on pin 1 & 2 of J-106 creating a extremely high resistance, resulting in a very low voltage (like about 0.6). We cleaned the pins with contact cleaner and worked out the female connector end with a resistor lead (pushing it through the connector several times with contact cleaner on it), re-assembled and it worked like a champ.

Let me know if you want to join us. My number is(616) 657-6106. Until Next Time, Frank

GRASS GRAND RAPIDS ATARI SYSTEMS SUPPORTERS

GRASS meets the first Wednesday of every month at the Wyoming Public Library, 3350 Michael S.W.. Doors open at 6:30, meeting starts at 7:00pm. Dues are $22.00/yr. including AIM. Bring in one PD software disk and get 2 blank disks for your time.

President's Monthly: 18 March 1990

Well we have finally found a system for the monthly meetings. Marek Kulikowiec has offered one of his computers and a drive at a very good price. This should save some of us the trouble of dismantling our own equipment at home and bringing them to the meetings.

In case you missed the March meeting, remember that dues are now due, payable at the meeting or they may be sent to George Nosky. If you don't get them paid you will not receive your monthly issues of AIM.

Happy computering, Tim

G.T.A.U.G.

JACS

Jersey Atari Computer Society, P.O. Box 710, Clementon, New Jersey 08021. JACS BBS: (609) 346-1224

President	Mike Hopkins	227-9058
ST Vice President	Maureen Kelly	428-9381
Treasurer	Forrest Blood	877-3579
Recording Sec'y	Gary Mickus	767-1933
Membership Chair	Al Guretse	596-7567

The Jersey Atari Computer Society (JACS) provides a forum through which members may further their understanding and enjoyment of all Atari computers, through the exchange of ideas and information with other users.

JACS holds two meetings per month at the Camden County Library, across from the Echelon Mall in Voorhees, New Jersey. The executive meeting, where all the planning for the club takes place, is held in the 2nd floor meeting room from 7-9 PM (meeting dates vary from month to month). The regular JACS meeting is usually held on the third Tuesday of each month, in the 3rd floor meeting room from 7-9 PM. The regular monthly meeting includes topics of interest for users of all Atari 8-bit (400/800 & XL/XE) and 16/32-bit (ST/Mega) computers.

Membership dues are calculated at $2.00 per month prorated through the coming July, when the entire club comes up for renewal. August, 1989 - July, 1990 dues are $25. Spouses and children may be included under one membership fee. Attendance at our monthly meeting is free for all members. Guests may attend up to 2 meetings at no charge.

JACS dues help pay for the printing and mailing of our monthly newsletter, BETWEEN BYTES, monthly room rent, electricity and phone (for the BBS), door prizes, refreshments (Christmas Party) and the purchase and maintenance of JACS equipment. As a JACS member, you'll receive a subscription to our newsletter and AIM, full access to our 24-hour bulletin board and access to our growing libraries of public domain software for the all Atari computers. Our disk libraries currently include over 200 disks, available for $3 each (member price). JACS ST library now includes the AIM Disk of the Month.

You are welcome to attend a JACS meeting as our guest. Once you've become a member, you're encouraged to become an active participant in the group. It's the only way to have fun.

Layton ACE of Utah

The Layton Atari Computer Enthusiasts (L.A.C.E.) membership cost $20 per year. Privileges include the AIM Monthly Magazine, access to the 8-Bit and ST club libraries, monthly meetings, help and friendship. If you are presently not a LACE Club member and wish to join contact the one of following persons or write to LACE, c/o Irwin Brooks, 3897 So. 2275 W., Roy, UT 84067-3515.

Irwin Brooks,	President/ST Librarian	(801)731-1516
Richard Clark,	Vice President	(801)825-5823
Ken Karchner,	Secretary/Treasurer	(801)776-8015
Lonnie Allen,	8-Bit Librarian	(801)392-4450

The L.A.C.E. Club Meets in the basement of the Clearfield Library every second Wednesday of the month at 7:00 p.m.

Mark your calendars for the next two meetings.

March 14, 1990 & April 11, 1990

Hard Disk Drive Lessons Learned

These last few months have really been a trial for me and my hard drive. I really have grown dependent on it, far more than I would have thought. The fact is that I have been having some phantom troubles that seemed to be intermittent. My disk would be very dependable for weeks on end. Then all of a sudden it would crash. All I had to do was to reformat the disk then it would work fine again. Very Strange indeed.

Well, this went on for a few months, but the length of time between failures seemed to be getting shorter. By mid January, I couldn't depend on it working even the next time I rebooted. I finally decided that I had to do something to fix this problem. I checked around and a couple of people told me that the ICDBOOT.SYS version 4.1.8 that I was using could very well have been the cause of all my problems.

Now you've got to understand that I love the stuff that ICD produces. In fact I bought their controller for my hard drive and liked it so much that I bought three more for some drives that I assembled. Plus, I convinced friends and everyone else talking about a hard drive to make sure that the controller was an ICD controller. So, I couldn't quite believe that the same software that I had been using for three months was slowly causing my hard disk problems to get worse. After all, everybody knows that software doesn't break; or does it?

Well anyway, I decided that since I had an older version of the ICDBOOT.SYS it wouldn't hurt to use it for a while and see. I did and it didn't. By that I mean, I used it but the problems still existed. By this time, my wife was ready to shoot me or get a divorce since I was spending so much time with my computer trying to get to the root of this problem.

I finally called it quits and disassembled my hard drive having resigned to the fact that I would have to send it in for repair. A call to NEC revealed that all their hard drives come with a full one year warranty. And wonder of wonders, my receipt showed that since I bought it in August 1989 I had lots of time left. I took it into a local computer store for the shipment back to repair.

Yesterday I got it back and installed. You see, I have been extremely limited in everything that I do on my computer since I'm so dependant on my hard disk. And spoiled, man, I found out that I am so spoiled that without my hard disk I didn't even want to turn on my computer.

Lessons Learned #1: I now know the value of a good set of backup disks. Mine were a hodge-podge of disks with scattered files in no certain order but at least TOS readable (fortunately).

Lessons Learned #2: I sure learned that you can't just put your head in the sand and expect the world to come knocking at your door to tell you that your version of software is out dated. My version of the boot program had been replaced about 2 weeks after I downloaded it since it was suspected of causing problems.

Lessons Learned #3: I also learned (and already knew) that a GOOD company will stand behind their products. Warranty and service work is hopefully never needed, but it sure is nice to have it when you do need it.

Irwin L. Brooks

P.S. I still recommend the ICD host adapter as the ONLY choice for the Atari ST computers. And, NEC makes some fine products that come with the finest service I think in the industry! And, by all means, backup your hard disk without delay!!

Next meetings are: April 11 and May 9, 1990

LBACE

The Long Beach Atari Computer Enthusiasts meet on the second Sunday of the month at 6:00 pm. Meetings are held at Mercury Savings and Loan on the corner of Long Beach Blvd. and Carson in the city of Long Beach.

President	Richard Hull	(213) 422-1055
Vice-president	John Saunders	863-2582
Secretary	Lee Curtis	423-2758
Treasurer	Greg Dukowski	498-9461
LBACE BBS		498-8824

Club dues are $20 annually. The club supports both the 8bit and ST. Members have access to the club's PD library and BBS and receive a year's subscription to Atari Interface Magazine.

At the February meeting we had demos of Risk by Leisure Genius, the Migraph hand scanner and Touch-Up, and were treated by a couple of selections from Phantom Of The Opera and Carousel on Lee Curtis' synthesizer.

Richard Hull Demoed Risk. Risk is a great board game conversion of the classic game. Both the American and United Kingdom versions of the game are supported. The program is flawed, however, with a couple of bugs. One, you can not save a game, and two, if you are playing with a neutral player in the two person version, occasionally, the opponent just converts the neutral player to his color and attacks you with the neutral player's armies. Fortunately the latter situation hardly ever happens and Leisure Genius when contacted say they will be fixing the bugs.

Dennis Carter demoed the Migraph hand scanner. This little device is great for desk top publishing. Just scan any image from newspapers or other sources and incorporate them into you own documents. I've ordered the Datel hand scanner and as soon as it arrives we will be comparing the two scanners at a future meeting.

Lee Curtis brought his synthesizer and played a couple of selections for us. I regret to inform our members that Lee has just sold his house and will be moving out of state in a couple of months. In my opinion, Lee has been the cornerstone of the club and will be missed by all. I just hope that we can find someone who is willing to take over his many duties. Lee, we all wish you well and much luck on your move to Oregon.

The club has finally established a BBS. There has been some controversy over the use of real names or handles on the BBS. When the BBS was established, the club officers voted to use real names only, as we felt that as club members we use real names and should use the same on the BBS. We also felt that using real names would emphasize the fact that the board is PD only and piracy would not be tolerated. One member has contested the use of real names, saying that he has been using his handle on BBSes since 1982 and he doesn't want to change. So at the next meeting we will have a vote of the general membership to finalize the policy.

Our next meeting is April 9. This is the same weekend as the World of Atari at Disneyland so we should have lots of things to discuss. See you all then.

Richard Hull

M.A.C.E. MICHIGAN-ATARI-COMPUTER-ENTHUSIASTS

MACE

Michigan Atari Computer Enthusiasts receive, as part of their dues, Atari Interface Magazine. Members are also entitled to purchase disks from the 8bit and ST public domain software libraries. 8bit disks are $3 and ST disks are $4 each, and if you buy three disks from either library, you can choose a 4th disk absolutely FREE! Non-Members may purchase disks at a slightly higher rate. Mail order is also available.

For a catalog of current disks in our libraries, send $2 for either an ST or 8bit catalog to MACE, PO Box 2785, Southfield, MI 48037. MACE can also be contacted throught Ed Hanson, (313) 675-0044 or Bob Retelle (313) 483-7358. MACE meets on the Third Tuesday of each month at 7:30 at the Southfield Civic Center at 10-1/2 Mile and Evergreen Roads in Southfield, MI.

Febuary MACE Meeting Minutes

The Febuary meeting of MACE got under way at 7:50pm. Next up came what everybody had been waiting for...Bob Brodie, Atari's User Group Coordinator payed us a visit and brought lots of new products to show off. First, Mr. Brodie demonstrated the new Lynx color hand-held game machine and then ran a videotape copy of (GASP) a REAL commercial for this new game machine, which Mr. Brodie said was already running in New York and would soon be shown on some of the major networks (Watch for it!!). Following this, he gave a quick demo of Atari's new Portfolio Pocket Computer. A demo of the Megafile 44 removable hard disk drive was next, followed by the Stacy 4 machine (Which was using the Spectre GCR emulator).

Then came the biggie...members of MACE got their first look at the new Atari 4160STe computer. This machine boasts full stereo sound and more colors than the older model STs and possesed a few other interesting features. A River Raid-like game was then demoed on the new machine which looked and sounded fantastic, but then Mr. Brodie informed the members that Atari had for some reason decided not to release this program (RATS!!).

Bob then talked about several items of interest including the SIMM memory cards and answered questions about Atari's new products. The meeting ended at 9:30pm, but a handfull of members stayed and got some hands-on experience with the new machines.

MID-OHIO ATARI USER GROUP

Mid-Ohio Atari User Group, Post Office Box 134, Ontario, OH 44862.

The Mid-Ohio Atari User Group supports all models of Atari computers. We meet at A&B Computers, located in the West Park Shopping Center on Park Avenue West in Mansfield. The meetings are the third Saturday of each month, from 7:00pm until 9:00pm. Demonstrations are welcomed, and pirating is expressly forbidden.

M.A.U.G. is a participating club in the Atari Interface Magazine group. As such, members receive an issue of A.I.M. every month for no extra charge. Club dues are $7.50 per year for all members.

The club maintains a disk library for both the 8-bit and ST line of computers. There is also a special M.A.U.G. section for members on the DataQue Support BBS, for email and file downloads. The number of the board is (419) 529-5197.

Middle Georgia M.G.A.U.G. Atari Users Group

The Middle GA Atari Users Group is the sole Atari Club in the Middle Georgia area. We are composed of 60 members of which approx. half are ST users. Club president Pete Miller can be reached by phone at 912-922-5666. The MGAUG address is 115 Feagin Mill Rd., Warner Robins, GA 31088. MGAUG meets the second Sunday of each month at 2 PM at the Warner Robins Library. Annual dues are $5 with the newsletter optional. Use of the club library is free to all paid members.

March Meeting: The March meeting started at a new time of 1PM at the Warner Robins Library. Some members were a little late arriving in that they didn't get the word on the change of time until late Sunday morning. It was decided at the meeting that from now on we will meet at 1PM. That way we will not encroach so much on any Sunday afternoon activities that you may have planned. Also I would like to add a special note of the new phone number for the Pres. (Yours truly), so be sure to make a note in your phone book.

In the continuing saga with member Jimmy Howe trying to get his computer the story goes on. Jimmy has now gotten him a lawyer and has sent a letter to the store that has his computer to demand restitution.

Two local dealers that had plans of maybe carrying the ST have now backed out until Atari can get its act together. One dealer stated that his ST software sales had dropped off significantly so he was holding off on purchasing any ST's. He was excited about the debut of the Stacy.

The other prospective dealer said that Atari's relationship with dealers wasn't very good right now but if things improve then he could still make the decision to market the ST. Personally I don't think that Atari will ever get it together, the whole thing just reminds me too much of the old 8-Bit days and how it wasn't marketed. In the mean time if you know of someone looking for an ST then J&R Music is selling the 520STFM for only $299, give me a call for details.

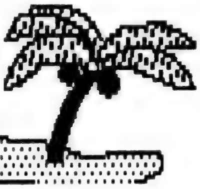
The highlight of the meeting was a new import from overseas called Fighter Bomber. I purchased this game on a Recent trip to Atlanta at Tevex for $41 and it was well worth the price. The game features 7 different aircraft that you can fly as well as 7 different aircraft for you to fly against. The graphics are great with a great amount of detail in the views of the aircraft and your targets. FB is kind of like a souped up version of F-15 Strike Eagle with more attention payed to the game than to being a simulator.

The game is very forgiving in that it is easy to make landings and even features a mid-air refueling phase for extra long missions. Add in the ability to make your own missions and save them to disk and you have a great game that you will enjoy for a long time. About the hardest part of the game is that you might run into enemy fighters while out on a bombing run.

They are very persistent and they will even try to ram you, so you really have to try to stay away from them. The enemy fighters appear to be very nimble and are hard to shoot down, save your sidewinders for a good shot -- you only have two and you better use them wisely on long missions. Don't worry if you get shot down though because it does not erase your pilot from the disk and you can replay the scenario with no penalty. Of all the simulators that I've see lately this is a definite MUST for you to purchase.

Don't forget that the next meeting will be on MAY 13 at the Library. I hope to see you there!

O-ACEs



General Meeting: Wed., April 11, 7:30 pm, La Vista Rec Center, FOCUS Meeting: Wed., April 25, 7:30 pm, La Vista Rec Center. Our next FOCUS topic has not yet been decided, so now is the time to speak up if you have a favorite area you want us to cover -- even if you want us to repeat a subject we already did.

By the time you read this, the Computer Expo should have already happened. I hope all of you got a chance to come out and see what we (and others) are doing. This show has been a hit for Omaha junior high schools for several years now.

I have included a sample announcement I have used on several of the local BBSes to announce. Please put a similar one up on any that you frequent (if you do not already see it there) -- ask to have it as a bulletin rather than just a message if the sysop allows it.

"Have you got an Atari computer? Would you like to meet others who do? Do you want to know more about how to use your Atari? Have you come up with a special way to use your machine (or want to know about such special uses? THEN YOU OUGHT TO BE WITH O-ACES!

O-ACEs is a non-profit group interested in helping each other get more out of their Atari computers. We are NOT affiliated with Atari Corp. or any other commercial organization -- we are there for YOU! We cover BOTH 8-bit (including the 400/800, XL, XE, and XEGS series) AND 16-bit (ST series) Atari computers. We meet twice each month (except November and December). WHEN: 2nd and LAST Wednesday each month, Doors open by 7:30 pm. WHERE: La Vista Recreation Center, 8116 Parkview Blvd, (just off 84th Street, south of Food-4-Less and east of 84th at the light)

Call 592-5427, for more info on O-ACEs!

PORTS ATARI P.A.C.E. COMPUTER ENTHUSIASTS

Membership to PACE is $30.00 per year or $9.00 per quarter. General meetings are held at 6:30pm on the third Sunday of every month. In the event of a holiday, a new date will be chosen and will be posted within the pages of this newsletter and on local Bulletin Boards. Membership includes a monthly newsletter, monthly meeting, FREE Disk-of-the-Month, access to our BBS, FREE printer ribbon re-inking, and FREE copying priveleges to our VAST collection of 8/16 bit Public Domain programs. Ports A.C.E. is an alliance of families with a mutual interest in the Atari Computer and is an independent, non-profit organization. PACE hardware assets: 130XE, 1050 Drive, MacInker and a Supra 300 baud modem. Any written correspondence should be addressed directly to Ports A.C.E., Tracy Hendershot, 4835 Crosley Avenue, Duluth, MN 55804.

From the President...

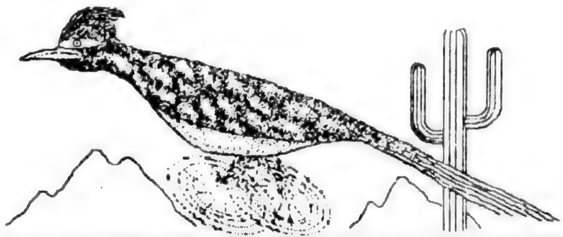
Spring has finally arrived in the Twin Ports! You still have time to put the finishing touches on your .IMG files, reconcile your databases and go through your tutorials. There's work to be done OUTSIDE this summer, so get your indoor chores completed soon.

The Ports Atari Computer Enthusiasts is now entering its 6th year as an Atari User Group. Congratulations to those who have been with the club since PACE's start, March 1985!

There's an awful lot going on in the Atari world this month. Maybe some of it will trickle into the Port Cities. We do have all of the major chain retailers in our area, but yet to see any of the new products locally.

A few of news bits I have run across this past month: The "old man" (Jack Tramiel; semi-retired) is back at the helm of Atari. It seems that the company has not been performing up to the Jack's expectations, and some internal disputes needed to be resolved. Welcome back Mr. Tramiel! *520 & 1040 ST's are out of production, being replaced by the STE. *There's a new ST magazine coming out called ST Journal. It will be sent to about 10,000 ST users. This one will be patterned more like PC magazines and not like the common tabloids. *A new ST Emulator for use on the AMIGA is floating around BBS's across the country! Yes, it's true but details are sketchy at the moment, but I'm sure we'll hear more about it. My advice to them: Just go out and buy an STE!!! *New color monitors for the STE made by SONY. Picture quality is reported to be first rate. There is a speaker on each side of the monitor. Since there is a three voice sound chip in the ST, two voices will come out one side, and one will come out the other. Stereo/PCM sound will be heard with the STE. The sound is reported to sound "spectacular!"

That's all for this month. Remember, NO PACE meeting in April due to the Easter holidays, and the May meeting will be held on Sunday, May 20th, at 6:30 in the Wisconsin DOT Bldg. Come to the meetings to pick up your AIM Disk of the Month! Hope to see everyone there. Long Live Atari!



PHAST - Phoenix Area ST

The PHAST monthly meetings are held on the second Saturday of each month at 8640 N. 19th Ave., Phoenix, Arizona from 10am to 12pm.

The Prez Sez by Rick Reaser

This is going to be a short column this month to make up for last month's long one. Rather then going through the Revolution! item in the column, we have put them onto Vector Space(719) 687-1838. We also have the ST disk in the library, for those of you that want to read it that way.

By the time you read this, Steven Leser will have his BBS up and running on an Atari 1040ST, with 20M hard disk, give it a try at (719)-591-4620. It will be limited to 1200 baud until Steve gets a faster modem. It will be running on StarNet software, which Steve tells us, has just been released to public domain. It will have many SIG areas for Atari 8bits, STs, and other brands of personal computers.

The Club has purchased subscriptions to both PSAN and Current Notes. We will bring these two high quality "User Group" magazines to the club meetings each month. Remember that we also will have the AIM Disk of the Month available as well.

For those of you that haven't read about it in the computer rags, Atari is getting bigger and bigger into the music world with MIDI. In fact, Mick Fleetwood and Donnie Osmond manned the Atari booth at the (not so recent by the time you read this) NAMM convention. If we could only get that kind of support for my 8-bit. [Note: Hybrid Arts MIDITRACK III provides a very good MIDI connection for the 130XE. With a $100 Casio keyboard and a little work anyone can make good music.]

At the February ST meeting, Dave had an interesting Flintstones game running and a not so interesting (I am told) discussion of new fantasy adventure games. Of course, the March 8-bit meeting was snowed out, except for yours truly.

The April ST meeting will Feature new desktop publishing demos, to include Pagestream and Word Flair. The May 8-bit will feature my new Diamond Graphic Operating System and Drawing program in all its glory. Special Note: The May 8-bit meeting will be at Dave Koster's house, 6145 Hayseed, in beautiful downtown Stetson Hills.

That's all for now. See you at the next meeting.

RACC
ROCKFORD ATARI COMPUTER CLUB

WE'RE NOT JUST PLAYING GAMES ANYMORE!

We meet at Rock Valley College, the third Saturday of each month. Meeting time 9 to noon. We support the Super 8 and Sweet Sixteen Atari computers, the Atari company, and our fellow Atari owners. Support is also provided through BBS Camille 815-397-5327 @ 300, 1200, and 2400 baud. Our meetings include coffee and rolls, for refreshment; business events, and demonstrations of new and interesting equipment and programs.

President	Andy Learner	815-397-5316
8 Bit VP	H. Jake Olbrich	332-5303
16 Bit VP	Mark Kunkel	874-5546
Secretary	Roger Creedy	877-3769
Treasurer	Thom Lofthouse	654-1863

From the PREZ:

I for one was really glad to see someone respond to JAKE's article. Even though Lloyd Pulley re-read the article "several times", it seems that he actually did get Jake's point. The main difference between the two gents (IN MY OPINION) is that nowhere in in his article, did JAKE do any "ATARI bashing", on the contrary, he is on loyal 8 BITTER, true to his OLE 800.

I did like your further explanation of the terms LLOYD. I edited Jake's article in the first place, and it took me several screenings to figure out the gist as well. BUT HEY! If you re-read something in a quest to understand, hasn't the author done his job? Me thinks so!

I am really looking forward to the upcoming multi-user ATARI SWAPFEST. We will be actively supporting the first annual "Midwest Atari Swapfest", held this year at the Days INN in Gurnee, Illinois on April 22nd. Bob Brodie from Atari, and Dorothy Brumluve of noted programming fame will be there as well.

Bob is going up to the Milwaukee (MILATARI) meeting the day before, and then we are having an "OFFICERS PIZZA", with him that night in GURNEE. This little MINI-FEST, is just a first attempt to get all our local groups together in one event. We tried to have an ATARI-FEST, a couple of years ago, but it just never came off. We are a participating club, however, LCACE is really doing all the major work. My kudos Larry Grazus, Mike Brown, Steve Kostelnik, and Chairman - JOHN SCHULTZ!

We are completing our T shirt logo and will have them at the meeting. Price is still only $12.50.

G'data, Andy

8Bit Questions & Answers?

Is anyone interested in using their Atari 800 or XL in monitoring their home energy use in real-time? Or does anyone use their computer to read the signals going to the their cars computer for engine diagnosis? Or is anyone interested in doing so? Do we have any mechanics in ATARILAND? Would anyone like to know just how much electricity a clothes dryer uses? Or more precisely, not what Commonwealth Edison says it costs, but how much your unit uses, when you use it, how you use it, and in the real-time of your using it? Not 30 days after the event when all you can do is pay the bill. Contact our BBS or call the 8bit VP.

If Jerry Falkenhan of Atari APX fame for his programs on FAMILY CASH FLOW reads this, I want to talk to you. If anyone knows of his whereabouts, please let me know. Again call the CAMILLE BBS or the 8bit VP.

Thanks JAKE.

P.S.==> Our club recently had the opportunity to assist in the transfer of of 200 disks Double Density Data Perfect file (1) only, to an If Brand Machine. Thanks to Leo at LJK for his support. No, it doesn't work that way either. And special thanks to Carolyn Cushman at ANTIC for her sincere efforts, and Charles Cherry, for returning my call and trying to be helpful. Look for an article in Aim on how we got the job done.

Thank God for OMNIMON.

Where have all the good guys gone? David Young and Bill Wilkenson. Gone from Atari, everyone. Long time passing. Long time ago.

Rushmore Atari Computer Enthusiasts
(RACE)
3512 Lawrence Dr. Rapid City,
SD 57701 (605) 348-6331

The Rushmore Atari Computer Enthusiasts is a nonprofit organization of Atari computer owners not affiliated with Atari Corp. Meetings are held on the third Saturday of each month, 2pm, at the Westminster Presbyterian Church. Annual dues are $12 for basic membership and $15 for membership and newsletter. RACE offers the Black Hills Atari owner hardware and software support and the largest library of public domain Atari software in the state of South Dakota.

NO PIRACY WILL BE TOLERATED AT ANY RACE FUNCTION!

President	Rick Burton	(605)-642-5353
V. President	Gregg Anderson	(605)-348-6331
Secretary	Mike Douglass	
Treasurer	Mike Randall	
NL Editor	Mike Harbison	
ST Librarian	Mark Wolf	(605)-923-2841
XE Librarian	Ken Kayle	(605)-343-7289

President's Particulars: I want to welcome another new member to the ranks of RACE. Viron is a serious MIDI user and purchased his ST for its built-in MIDI features. Let's promote RACE and invite new people to our meetings. Tell someone who is thinking about buying a computer about Atari. Show a user of another brand Atari's advantages. Spread the word so more will discover power without the price. April -- the meeting will be on Sat. 21st. May -- the meeting will be Sat. 19th.

The August meeting will at Mark W.'s house so a modem demo can be done. See all you race drivers at the meeting!

March RACE Minutes by Rick Burton & Gregg Anderson

As usual the meeting kicked off late, around 2:20 as usual. We began with Old Business. The MIDI Software list is pretty much finished and ready to turn in to Westmore Music for the proposed MIDI show at the Rushmore Mall. Rich Burton will contact F.A.C.E. and try to find out why we've not heard back from them on the Disk Exchange program.

Under New Business we have: Gregg Anderson has contacted Bob Brodie at Atari in hopes of getting a usable video tape/computer animation to use in a proposed TV advertisement for the club. Bob said he'd call Gregg back if he found something we could use. It was brought up that the club begin advertising again in the local newspaper (Rapid City Journal). This will be rather expensive but if it increases our membership, it may be worth it.

Every member of RACE has been encouraged to create an 8 X 11 flyer to advertise RACE in the local area. The flyer should be attention getting, simple and direct. Next month, the inputs will be reviewed by the membership and final selections for posters to use will be made.

It was suggested that a free membership be offered to prospective members during the MIDI show at Westmore Music. It was also suggested that we gather extra copies of AIM and have them ready to distribute during the show.

REMEMBER: The August meeting will be held at Mark Wolf's new house. It will be Modems and Telecommunications.

March Demos: 8-Bit: Ken Kayl brought his system and demoed a number of PD games as well as an impressive (legal) copy program. 16-Bit: Gregg Anderson brought in several of RACE's PD monochrome games and demoed them, as well as some European game demos from his various English magazines.

Planned April Demos: 8-Bit: Planned are additional demos and instructions in the use of the Atari 8-bit system for new users. 16-Bit: Planned are some introductory lessons in programming in the C language.

8-Bit Library Corner: by Ken Kayl Welcome to Rushmore Atari Computer Enthusiasts (RACE) 8-bit library. What will we offer this month? Let's first review RACE's Disk #47.

KARMIC CAVERNS which is a one player game where you must travel through a cave avoiding the nasties and touch the base to score. BACK TRACK is a Pacman type game where you avoid the monsters and eat dots to score. STAR CRYSTALS has star particles dropping on you which you must avoid. To gain extra points you need to catch the $ (dollar sign). DREADED ADVENTURE you have fallen into your Atari computer and must escape. This is a text adventure. PIRATE COVE is a 2 player game where you attempt to get the skulls to fall into your pot at the bottom.

On 47B we have: RAINSTORM acid rain is falling and you must avoid the rain drops. PARALAX is a arcade type game in which you attempt to avoid being shot by four space craft, while you attempt to touch 16 dots on the screen. TRIAD is a Tic Tac Doe type game except to place your X's or O's you need to win at a arcade type shoot'em up. BUMPBALL is pinball type game. You control the ball on its journey attempting to get it to land in the high points positions. MOONBASE has you rocketing through space avoiding asteroids. BAJABUG is a Baja Buggy type game.

On disk 66A is THE WIZARD this is a text adventure creator or editor. With this you can create your own text adventure.

On 66B is the text adventure THE WORLD OF DUNE. In Dune you are Paul Atreides.

These and the entire 8-bit library will be at the April meeting. Cost is $2 for members and $3 for nonmembers.

SEVAC

South East Valley Atari Connection meets the third Saturday of each month at 10 AM at 3234 S. Fair Ln. (Eaton Business Park, just off of 48th Street and Southern), Tempe, Arizona. Yearly membership is $12.00. Membership includes reduced prices on PD ST and 8-bit libraries and monthly newsletter. Club officers are:

President:	Tim Barr	(602)821-1200
Vice Pres:	Marc Dyer	(602)897-0314
Treasurer:	Lee Whiteside	(602)962-9415
Secretary:	Blaine Nelson	(602)969-1949
Disk Lib.	Mike McKittrick	(602)982-9065
Publication Lib.	Walt Schultz	(602)897-7098

SEVAC Seconds -- Thanks to Marc for filling in during my absence. And thanks to the other officers for graciously allowing me the chore, um I mean honor, of preparing the minutes of the March meeting for AIM.

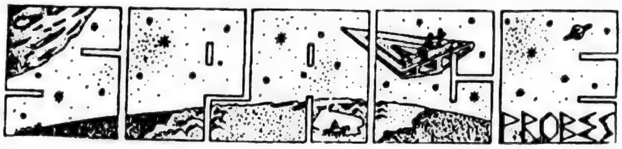
The club treasurer reports $1450 on hand. We have had several renewals due to the high quality of AIM magazine. Some of us received our March issue just the day before the meeting. AIM has informed us that a new printer should result in more timely mailing. The current AIM disk is available in the club library.

Our Pres demoed OPUS Ver. 2.2, a $15 shareware spreadsheet. OPUS allows up to 255 columns by 999 rows, fast calculation, and spline curve graphs. GDOS is required (not included) to support graphs. Commands are not Lotus compatible and macros are not supported, but registered users receive ver. 2.3 which allows loading and saving .WKS or .WK1 files.

FONTZ! by Neocept was demoed by John Rojewski. This program creates or edits GDOS bit mapped fonts. MacIntosh or Amiga fonts may also be loaded and converted to GDOS format. FONTZ! lists for $35 and looks to be a good value for owners of GDOS programs such as Easy Draw or Timeworks DTP.

The new Pagestream SIG met following the general meeting. The hot topic was how to best set up pages for an 8.5 x 5.5 manual printed in landscape mode on 8.5 x 11 paper. We are excited by this opportunity to pool our knowledge and learn how to wring the most from this complex program.

Come to our April 21st meeting for the annual SEVAC swap meet.



Meeting NoticesCombined Club Meetings: January 15, 1990 (7:30 to 9:00 PM) at the Camp Hill Shopping Mall Community Room. This date is different from that listed in the December newsletter.

Future Meetings: March 19, 1990 (7:30 - 9:00 PM) April 16, 1990 (7:30 - 9:00 PM) May 21, 1990 (7:30 - 9:00 PM) June 18, 1990 (7:30 - 9:00 PM) July 16, 1990 (7:30 - 9:00 PM)

All meetings will be held at the Camp Hill Shopping Mall Community Room until further notice. Currently all dates are set for the 3rd Monday of the month.

The ST Atari North Coast Enthusiasts (STANCE) is an independent, not for profit Atari computer user group and is not affiliated with Atari Corporation, or any of its affiliates, in any way.

$12.00 per Year with a one time sign up fee of $13.00.

STANCE club meetings are held every third Monday of each and every month at B & G Electronics, (located at 15729 Madison Ave., Lakewood, Ohio 44107) starting at 7:15PM

ST CLUB EL PASO

The ST Enthusiasts of El Paso is the only Atari ST and Mega user group in the El Paso area. The Club has proven to be a benefit not only to new users, but also to the "old hacks" of computing.

We now meet twice a month at the Richard Burges Library, 9300 Diana. The first meeting of the month is always the second Saturday of the month, at 12:30pm. The second meeting of the month is held on the last Thursday of each month at 7:00pm. Meetings feature demoes of the latest ST software, as well as help for the those that might be having problems with their computers.

Membership in the STE-EP includes a year subscription to the magazine you are holding in your hands, discounts on software at Jenkins' Computer Store, and access to one of the largest public domain libraries in the nation. We also offer technical help, and we sometimes have a party or two when we run out of computer things to talk about. Voting membership is $20 a year, Sponsored and Newsletter only memberships are $15 a year.

To become a member of the ST Club of El Paso, call 915-821-2048, or write the ST Club of El Paso at 10953 Yogi Berra, El Paso, Texas 79934.

President	Tim Holt	915-821-2048
Vice Pres	Morris Miller	594-1906
Sec't/Tres	Joann Anderson	751-2710
Editor	Paul Stampfli	821-4861
Librarian	Norm Bates	593-6234

Local BBS's that support the ST Club ST El Paso BBS 751-7837 Data Retention Center 821-0006

From the Prez...

STE-EP is coming! The ST Club voted unanimously at the March 10 meeting to create the ST Enthusiasts of El Paso BBS, or STE-EP. If you do not have a modem yet, please make an effort to enter the world of telecommunications today! STE-EP will have the LATEST files online, our entire club library will be available to club members, and eventually, we will get hooked up with other ST users around the country. We are creating this BBS, not to slight Jenkins', who has been great to us, but to compliment STEP. There will even be a message base dedicated to what is new at Jenkins'. Frankly, I am as excited as a schoolboy about STE-EP. I think ALL of the ST Club members will be happy with it. And with 1200 baud modems going for less than $50 these days, there really is no excuse not to join in on the fun! Being a club member, you will have access to all the BBS, and up to 2 hours of time per day! (If you need more, no problem!) The number and the details will be coming in next month's AIM. For you members that live out of town, now you can easily keep in touch with the friends that you left here in El Paso.

The March meeting featured Spectre GCR by Gadgets by Small. Stanley Page gave an excellent demonstration of the GCR, and I think most members went away feeling sorry for the fools that spent thousands on a Macintosh. Thank you Stanley.

We also agreed again to participate in AmigoCon. For you new members, AmigoCon is a science fiction convention held yearly in El Paso. This year's AmigoCon will be held the last week of April, and we will be there showing those folks what a real computer is. If you would like to volunteer some of your time, please call me, and I will give you the details.

James Foote won the doorprize: Rocket Ranger. Congratulations.

The club needs to form a publicity committee, to tell the area about us. Bill Marquis and Suzy Santos are on this committee, and need your help. Please help if you can.

We finally have a member with a working PC Ditto II, so I believe that there will be a Ditto demo soon.

April meeting: Best of Public Domain.

TACE

Tinker ACE of Oklahoma meets the first Saturday of each month at 1 PM (12:30 set-up time) in the Moore Public Library, 225 S. Howard, just off of SW 4th and I-35 in Moore. TACE can be contacted at 104 E. Northrup, Midwest City, OK 72110 or at the TACE BBS (405) 755-9561, 24 hrs., 3/12/2400 baud, running Oasis 4.3 software with over 60megs online storage. ST & 8bit support. Dues: Full - $20, Correspondence - $15. Dues are prorated at $1.25/month for correspondence membership and $1.66/month for full membership.

President/VP	Greg Ray	(405) 964-3765
Sec/Treasurer	Stephen Moffitt	(405) 732-8449
Librarian	Chris Hamilton	
BBS Sysop	Rick Spencer	
Technical Advisor	Ron Hamilton	(405) 387-5649

TRI-CITY ATARI GROUP

The Tri-City Atari Users Group meets the last Saturday before the 18th of the month, at 9 am at the Rudy Zauel Memorial Library, on the corner of Center and Shattuck in Saginaw Township. Upcoming meetings are March 17th, and April 14th, 1990. Officers:

President	Steve Volker	865-9035
ST Librarian/Tech Advisor	LeRoy Valley	686-6796
Treasurer/Secretary	Marty Schmidt	792-6029
8Bit Librarian	Ted Beauchamp	686-8872

Club dues are still only $20, which provides support for both the 8-bit and ST, and full access to the club's PD library, along with a year's subscription to Atari Interface Magazine. Check your mailing label, if you need to renew (or haven't joined us yet!), DO IT NOW!

First Up

I have a twelve year old daughter who is a real sweetheart, and this weekend we were working together on a project for her Space Exploration class. Her project involved making a model of the Gemini X spacecraft. Duplicating it's slick'n shiny, black 'n white silouette, and reading about the limited seating area and stunted capacities, reminded me of something truly amazing that we take for granted nearly everyday.

In nearly every conceivable way, the computer you have sitting before you on your desk, or gathering dust down the hall in 'johnnie's' bedroom, or entertaining your kids out in the living room, is Science Fiction! Compared to the old, slow, and memory-starved relic that was used some twenty-one years ago to navigate, direct and make possible man's first steps on the moon!!

The advancements that have been achieved in those last twenty years are absolutely astounding! There is hardly any part of life, from the lures dropped down in that cold, crystal clear stream running across your grandfather's 'little acres' up north, to the myriad of synthetic body parts and monitoring machines bent on keeping us alive and younger longer, that are not in some way affected by those little silicon wafers buried deep inside your sleek, humming, 'repetitive' machine. Hmmmmm...

If Gemini X, or Apollo XI astronauts, had had access to computers as powerful as those we 'play' with today.... I wonder if they would have stopped at the moon...

What You Missed... Well just as we promised, there were some in-depth and comprehensive considerations involving the latest versions of our 'favorite' DTP's Pagestream and Calumus. (Favorite to mean we have spent more time reviewing them, then any of the others), and even the demonstrators learned a thing or two about the products this time! Though Calumus is absolutely amazing, PageStream has a few things up its sleeves that only it could do. In fact the only clear winners were the ST users themselves, to have two such fine products written for our machine.

In spite of a fairly enthusiatic crowd last meeting, our Great Logo Contest for 1990 was a bust!! No entries at all were submitted. (Go figger it!) The officers had a few ideas already up their proverbial sleeves, so expect a change in name and design soon.

What You Shouldn't Miss... Next time, we will be venturing into the world of Sound Digitizing! Look for LeRoy at the demo desk again, dazzling us with still another wonderment beyond our imaginations. (Well, time is short...so, so are the club notes.)

On Another Note... Check out the local Atari BBS, Mr. Premium itself!, *Charlie!* This thing has more lines than Carter has liver...well you know. It can be reached at: (517) 793-9186, or 793-1319 or 793-1345 or 793-6136 or 793-6152 or 793-7576, or 793... (sheesh! Just pick one!)

Equipment Volunteers For Next Month... LeRoy and Bob will be bring it all for the ST. Ted has the 8-bit stuff.

UNYACE
Upper NY Atari Computer Enthusiasts

The Upstate New York Atari Computer Enthusiasts (U.N.Y.A.C.E.) meet monthly at the New York State Electric and Gas building, on Old Vestal Road in Vestal, New York. Meetings are from 7 to 9 PM in the Auditorium. The next meeting date is March 12th.

U.N.Y.A.C.E. had optional dues of $8 per year. Monthly meetings are informal and open to all who are interested in Atari microcomputers.

Contact C. Todd Krissel, President, at (607) 729-4303 or call the Cygnus BBS at (607) 729-5506 (9600 baud, 24 hrs/day) for more information.

WAUG!

The Washtenaw Atari Users Group meetings are held every second Tuesday of the month at 7:30 pm in the Michigan Union building on the campus of the University of Michigan on State St. at the corner of S. University in Ann Arbor.

Club dues are $15 per year and provide access to the PD library and subscription to AIM. Meetings feature demos of both 8bit and ST software and hardware. Nonmembers and questions are welcome. Officers can be contacted by calling Craig Harvey at (313) 994-5619 or by BBS at Molin's Den at (313) 420-0407.

The March general meeting of WAUG was held on 3/13 in the Michigan Union on the campus of UofM. The meeting was called to order several times starting first at 7:30pm and continuing through approximately 8pm as stragglers kept strolling in. President Craig Harvey managed to feed tidbits of news from the Atari world (including information on new DRAM availability, new products, and the like...) while the machines were being set up for the feature topics. Craig proudly announced he had been honored for his software programming efforts by receiving 3rd place recognition in the annual ShareWare Review, sponsored by ShareWare Connection, for his Diary desk accessory. Congrats Craig!

The Atari User's Convention, held near Toronto, will take place on Sunday April 1. Craig noted that he will be attending the show to distribute copies of his Diary program, sharing a booth with Bill and Pattie of AIM.

Newsletter Editor David B. announced he will be selling the copy of PageStream that he won in the raffle last month (since he does not own an ST...) and will have further info available upon the return of our Treasurer (Long Lost Dick Selke) as he felt Dick should have equal chance to bid on the package. ("Dick Who???" many people asked!) Apparently all is fair in Love and Software.

Craig announced the upcoming meeting topics: April 10th -- Scanners and Graphics; May 8th -- Derrick Mihocka will personally demonstrate his 8-bit emulator and his Quick ST series; June 12th -- Officer Election/Swap Night.

Member Ken Antkowiak demonstrated the power of ICD with his SpartaDOS X cartridge, installed in tandem with ICD's R-Time 8 clock cart. Ken noted the command line processing seemed difficult at first, but it's well worth using instead of relying on menu-driven systems. This cartridge is amazingly configurable and, when coupled with the ICD Multi I/O board, is a combination hard to beat ANYWHERE in the 8-bit computer world.

Guest Ben Cranston brought copies of P.D./Shareware releases of several systems that emulate UNIX on the ST, showing how he set up and used the system for his own personal computing needs. Ben described the MINIX package, a commercially licensed version of "the real thing," which he has ordered but not yet received. Ben further showed how the UNIX system, in conjunction with the MX2 desk accessory, allows for true multi-tasking on the ST. (And they said it couldn't be done!)

ST Librarian Russ Crum announced a new catalog disk with additional features reflecting the club's new library rental policies and pricing. Russ also announced 2 DOMs, one from AIM and the other containing all the UNIX files that Ben had demonstrated.

Before the meeting adjourned, Craig read an article about Bell Telephone's current push to turn some BBSystems into "business accounts," meaning those BBSs which charge a fee will be required to pay the going rates charged to businesses rather than the currently permitted residential rates. There is apparently a test case in the works against a 16-line system in Grosse Ile and the flurry of information about what is REALLY going on has been clouded with false information.

The next meeting will be held on April 10.

GREAT 8-BIT ATARI PRODUCTS

Graphics Image Scanner, Easy Scan II supports graphics modes 8,9,10,11 and 15. Saves images in standard 62 sector format. Makes banners, flyers, posters and more! Requires XL/XE/XEGS with atleast 128K and Epson graphics capable printer. **$99.95**

Print Shop Drivers
Use your "incompatible" printer with Print Shop and Print Shop Companion! **$14.95 each,** for your choice of the following printers: Atari 1020 printer/plotter, Okimate 10, Epson LQ-500-800 (24-pin compatibles).

Memory Upgrades
Our kits INCLUDE RAM and software! 128K and 192K upgrades are 100% 130XE compatible. 256K and higher upgrades INCLUDE our RAM-Drive Utiltiy Package! **Call for our low kit prices!**

XF35 Kit—720K of Storage!
XF551conversion kit to the 3.5"disks. Includes ROM, adapting cables and complete instructions. (3.5" drive and cage not included.) **$34.95**

Happy Doubler—Includes Free Utility Disk!
Software program Happy 1050 drives to match US Doubler, including skew, drive numbers to D:8! Includes Utilties! **Only: $19.95**

Immitator Controller
Happy 1050 Fast/Slow mode switch, write protect switch, two-color LED monitor. $39.95 IC1050 Controller, works with all 1050s, write protect only. **$29.95**

SIO Switch Box
Control two computers with one peripheral setup, OR, one computer with two peripheral setups! **$49.95** SIO Port Box—Four SIO ports, solves "dead end peripherals. **$39.95**

AND NOW—ST PRODUCTS

BLITTER Upgrade
It's not just for Megas anymore! We will install the BLITTER graphic speed chip in compatible 520STfms and 1040STfms (call about identifying motherboard) for only **$75 plus $5 shipping.** Let us do the work for ease and safety!

ST/Mega Memory Upgrades
Fast turnaround and low prices on memory upgrades. **520ST to 1Meg, $125, 520/1040 to 2.5Meg, $325, 520/1040 to 4Meg, $500. Mega2 to 4Meg, $300.** All ST RAM upgrades include installation, return shipping (USA) and FREE Utiltiy Disk!

TOS1.4 Installed
Let us put the new Atari operating systemin your ST or Mega for only **$125.** (Two or four chip sets.) Includes Utility Disk.

Bomb Fix (Driver Chips)
We can replace those weak 74LS373 drivers that can cause random crashes, especially when using accelorators, MAC & IBM emulators and TOS 1.4. We use the superior 74AS373s and do the work for just **$35.**

Do Two or more and SAVE!
Do any two or more of our upgrades at the same time and you will SAVE with additional discounts! Call for details!

BLITZ Copy Cable—Free Turbo Blitz Software
Make the fastest disk copies known to man with our BLITZ cable. Use two disk drives and even backup many copy-protected disks at lightening speed! Software and cable for only **$34.95.**

Xformer Cable
Using the Xformer Software, now included free, this cable lets you plug an 8-bit disk drive or printer into the ST or Mega! **Only $19.95**

Ordering Information (All US Funds)
Add $4 for S&H (USA/APO/FPO), COD add $3.50 (USA only). Canada/Mexico add $7. Others add $10 for S&H.

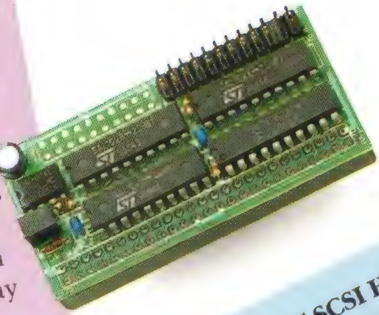
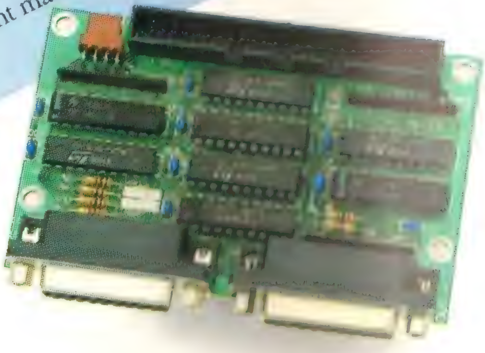
Advantage ST™

Advantage Micro ST™ SCSI Host Adapter - At 1.3 by 2.7 inches, it is the smallest SCSI host adapter commercially available. The Advantage Micro ST is a zero footprint design which makes it the perfect host adapter for internal MEGA needs. The Advantage Micro ST plugs directly into the 50 pin connector of an embedded SCSI drive and powers itself from the SCSI bus. The adjustable power-up delay circuit provides up to one minute of delay before allowing your Mega computer to boot. The Advantage Micro ST kit includes a sturdy mounting bracket for a 3 1/2 inch hard drive mechanism, internal DMA cable, drive power cable, our famous software, and excellent manual: everything you need to install a 3 1/2 inch hard drive inside your MEGA computer.



Advantage ST SCSI Host Adapter - Less than half the size of our original ST Host Adapter, the Advantage ST has all of its features except the clock. Added features include full SCSI command set, parity generation, dual mode DMA daisy chaining, and 48 ma drivers. The Advantage ST includes our unique new Dual-Mode DMA daisy chaining providing both the drivers for standard pass-through operation invented by ICD and full compatibility with devices that use parallel daisy chaining. The Advantage ST kit includes the Advantage ST Host Adapter, 3 foot molded DMA cable, DC power adapter cable, our famous software, and excellent manual.



Advantage Plus ST™ SCSI Host Adapter - With all the features of the Advantage ST plus a real-time clock, this board is the same size as our original ST Host Adapter and it can easily replace your old ICD ST Host Adapter in existing applications. (For replacements: Please specify side or end mounting of the DMA connectors.) The Advantage Plus ST kit includes an Advantage Plus ST Host Adapter, 3 foot molded DMA cable, DC power adapter cable, our famous software, and excellent manual.

From The Reader's Viewpoint

Dear Pattie & Bill,

As editors of an Atari oriented publication, I am sure that you also read many other related periodicals, on the subject. I try to read everything I can get my chubby li'l fingers on as well. I recently bought something I will very loosely call a "magazine" although it looked more like one of those pamphlets you find for free at all-night diners, with local real estate listings in them.

This so called "ST" periodical, has the audacity to infer by its title some kind of "GLOBAL" connection with its fingers on the pulse of the ST community. I am sad to say it was the first time I was truly dissapointed in something printed about, or for, Atari happenings. In reading several of the articles, (multi-pages worth), I found nothing contained in them related to Atari at all! I wasn't sure I was reading a computer magazine even. I had to recheck the cover. Yup, ST WORLD it said! Truly I was surprised they had the nerve to publish the thing!

My point is to give you guys a pat on the back. I look forward to reading your magazine every month, from cover to cover. You may have been one of the stronger influences on me to stay with Atari and move into the ST machine. I think you are doing a SUPER JOB, having more than just a little for every level of Atari user. I have made a notebook of the Atari Writer Plus tutorials you have been running for my 12 year old daughter. She really has taken to the wordprocessor, with their help.

Keep up the good work you guys! You put some other "MAGAZINES" to shame!!

Your Buddy!
Andy Learner, President RACC

Editor's Notes: Was the $25 enough for such glowing praise, Andy? Seriously, we're glad you, and other readers who have expressed similar sentiments, like what we're doing. After all, that's what really counts to us. If you, or any of our other readers, ever have any suggestions on how we might better serve you or improve the magazine, please let us know. We're always willing to listen, especially if it helps us make AIM even better.

As for ST-specific publications, don't give up! Check out ST Informer, 909 NW Starlite Place, Grants Pass, OR 97526. They're a tabloid format, monthly magazine with a cover price of $2.50 US and yearly subscription rate $18 (3rd Class or $27 (1st Class). Also, your local dealer might carry the European ST mags, like ST Format, ST User and ST World (not the same as the one you don't like, Andy!). If these aren't on his shelf, have him contact Pacific Software Supply at (805) 543-1583.

Dear Editor,

I was wondering if you could pass on the word that a possible write-in campaign might just possibly persuade Accolade to port over their excellent football game Fourth and Inches for the Atari 8bit.

Accoldare was the only software developer who even bothered to reply to my numerous letters. The tone of their letter lead me to believe that they would indeed make the effort to release Fourth and Inches if enough interest was shown for it.

One letter won't turn the tide, but if we Atarians get our word processors out and start churning out those letters, thousands might. Anyone interested can write Accolade at 20813 Stevens Creek, Cupertino, CA 95014

Thank you.

David Harris,
Fargo, ND

Atari Interface Magazine is a monthly publication that also serves as an official newsletter of several independent Atari user groups and is not affiliated with Atari Corp. in any way. AIM is published by Unicorn Publications, 3487 Braeburn Circle, Ann Arbor, MI 48108, (313) 973-8825 voice, (313) 973-9137 BBS. A subscription to AIM is included in membership in any participating club or may be obtained directly from Unicorn Publications.

ATARI BULLETIN BOARD

by Bill & Pattie Rayl

The STe has passed FCC with a Class B rating and is expected to be on US dealer shelves by the end of May. With a 4096 color palette, true 8-bit PCM stereo sound and 1Meg of SIMM memory (easily and cheaply upgradable using "Macintosh" SIMM modules), the STe has been selling well in Canada for around $750 US.

Developers have been shipped their Stacy 4s and a few have even shown up on some dealer's shelves. The Stacy release was held up due to a problem with the internal Conner hard drives. Early reports also indicated the Stacy 4 had a very low (15 minute!) battery life. Some developers have reported the Stacys they have received are not "battery ready." [See Developer News for more Stacy battery info!]

CD ROM Drives

The long-awaited CDAR450 CD ROM drives from Atari have also been shipping to developers. The drives were also shown at CeBIT in Germany, World of Atari in Anaheim and the Canadian Atari Users Convention in Toronto.

The CD ROM drives were even *for sale* at the Toronto show. A CD ROM packed with public domain software was being sold at the Toronto show for $50.

Atari Taiwan Under Fire

Atari's Taiwan division has recently come under fire from the Business Software Alliance of Washington, DC. According to BSA, several "unauthorized" copies of Ashton-Tate and Lotus software products were being used on IBM compatibles found at the Taiwan facility.

Atari President Sam Tramiel stated "Atari has a long-standing corporate policy against the copying of software and does not permit unauthorized duplicates of software to be used for corporate functions or any other purpose."

Atari Explorer

Atari Explorer was recently shut down "temporarily" by Atari after editors Betsy Staples and David Ahl printed strongly worded editorials aimed at specific individuals at Atari Corp. Distribution of the "Spring 1990" issue containing the articles was halted. A press release from Atari's Jim Fisher stated this issue will be distributed in the near future and Explorer will be produced inhouse at Atari.

Developer News

In the wake of seemingly all bad news for Atari publications, two new Atari magazines re reportedly on the horizon. ST Jornal, coming from California, will be an "application oriented" magazine for the serious ST user.

From Raleigh, NC, Atari Enthusiast will support Atari 8bit and ST computers. At this writing, neither magazine is yet available.

SuperCharger, the plug-and-go IBM emulator available in the US from Talon Technology, is getting rave reviews from recent owners. The 1Meg version is now available for $449.95 and comes with software allowing use of the internal 1Meg as a RAMdisk while in native ST mode!

It was even recently reported by Atari's John Townsend that SuperCharger works perfectly on the TT. Talon Technology, 243 N. Highway 101, Suite 11, Solano Beach, CA 92075, (619) 792-6511.

Double Click has released their new DC Desktop, an "enhancement" to your current ST desktop. Features include customizable icons, recoverable trashcan, placement of icons on the desktop, combining of related icons in a "cabinet," and much more for only $39.95. Double Click Software, PO Box 741206, Houston, TX 77274, (713) 645-3759.

MAX-10, New for the 8Bit

DataQue Software (maker of the Turbo-816) and MAX Systems have announced a "joining of forces" to produce MAX-10, a powerful system using the X-10 Powerhouse system to control electronic devices (such as lighting control and security systems). MAX-10 will allow for user-written control modules and "artificially intelligent" ability to make decisions based on various inputs.

MAX-10 is first planned to be released for the Atari 8bit—with later versions for the ST, IBM, Commodore 64/128 and Amiga systems.

Exact release dates and prices have not yet been determined. Contact Max Systems, 4005 Manzanita Ave, #6-216, Carmichael, CA 95608, BBS: (916) 331-4722 or DataQue Software, PO Box 134, Ontario, OH 44862, BBS: (419) 529-5197.

ISD has released "The Guide to Calamus Desktop Publishing." This book, which sells for $29.95 to *registered owners* of Calamus only, is a nearly indispensable reference for owners of ISD's popular DTP package. ISD Marketing, 2651 John Street, Unit #3, Markham, Ontario, Canada, L3R 2W5, (416) 479-1880.

Substantial upgrades have been released for Hotwire and MultiDesk from CodeHead Software. Hotwire is one of those "must have" programs, allowing you to add a menu-based environment and single-key execution of your favorite programs via hotkey combinations.

Hotwire 2.0 improvements include full GEM interface, up to eight settable alarms and ability to load specific desk accessories prior to running a program (via MultiDesk). MultiDesk, now also at version 2.0, allows for removal of one or more desk accessories on the fly! Current owners can upgrade for only $7.50 each. Hotwire retails for $39.95 and MultiDesk costs $29.95. CodeHead Software, PO Box 74090, Los Angeles, CA 90004, (213) 386-5735.

Battery Pack for the Stacy

With the Stacy portable just hitting the market, MultiByte has already announced availability of a "portable power case" that overcomes the Stacy's short battery life. The soft carrying case and battery pack all-in-one can, in the standard configuration, keep a Stacy 4 with 40 Meg hard drive running for up to four hours.

The case has room for an attached Spectre GCR and the top zips off for easy use of Stacy *while* still in the case. The case has pockets for books, extra floppies and cables and two battery pockets. Fresh batteries can be inserted with Stacy on, providing potentially unlimited battery power. As their slogan says, MultiByte brings Stacy owners "Power...Without the Plug." Retail $348. Additional four or eight hour battery packs available. MultiByte, 15 Wedgedale Dr., Sterling, VA 22170, (703) 406-9139.

Online News

CompuServe has recently opened the Portfolio Forum for users of Atari's palmtop IBM compatible. To check out the latest Portfolio news, *Go APortfolio.* Sysop John Knight and representatives from Atari Corp. are online in the Forum and ready to help you get the most from your Portfolio.

Finding specific files for downloading from CompuServe's Atari Forums just got easier with the Atari File Finder. Now, users can search simultaneously through the files in the 40+ download areas in *Atariarts, Ataripro, Atariven, Atari8* and *APortfolio.* On CompuServe, *Go Atariff.*

CompuServe also announced the opening of major European access nodes. Now, computer users in many countries have local access to CompuServe at much lower rates than previously available. Not to be outdone, GEnie has announced expanding European availability and opening more 2400 baud nodes.

CeBIT '90

A Report from West Germany

Christian Strasheim and Michael Schütz

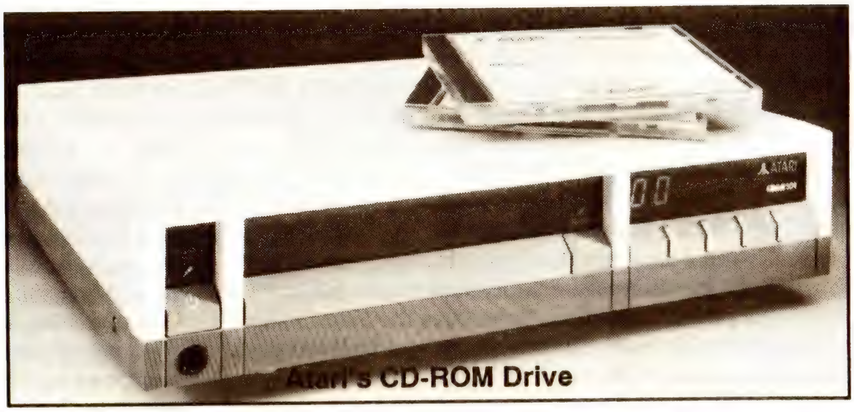
Every year in March, Hannover, West Germany, becomes the computer capital of the world. The leading software and hardware developers present their newest products in 23 exhibit halls at the world's biggest computer show. This year, it was CeBIT time from March 21 to March 28.

In the past years at CeBIT, the Atari booth featured world premier presentations of computers such as the Atari ST, the MEGA ST and, more recently, the TT and PC Portfolio. This year was a little different. Sure, there was one new PC—the ABC 386/40—but that was about the only model considered to be a totally new kid on the block.

About the TT

In the never ending story about the TT public release, Atari officials could be heard saying the TT will hit the stores in November. Where have I heard that before? The model presented at the fair was labeled TT 030-2 and was running ATX—the Atari Unix system—which is supposed to be completely in accordance with the Unix standard Berkeley 5.3.1, including the Berkeley expansions.

Another long-awaited hardware product from Atari is the famous CD-ROM. You could see it at computer fairs in 1988 and 1989; you could also see it at CeBIT '90. But, you still can't buy it.



Atari's CD-ROM Drive

Software for the CD-ROM

At least quality software is now available for this little, still unreachable gem. The Bertelsmann Company has transferred the Cobra retrieval software to the ST. This is a sophisticated piece of software used for PC-CD ROMs that are already available.

Displaying the Portfolio

The Portfolio section of Atari's booth was crowded as usual. Atari showed off the memory expansions that upgrade the little giant up to 640KB. Also demonstrated at the booth was file-transfer between a PC and the Portfolio, connected through the parallel interface.

Also available now is an external disk drive for the Portfolio RAM cards that can be easily connected to a normal PC, making it possible to directly read or write Portfolio RAM cards at the desk of a PC.

Another novelty was the OTP-ROM boards. These "One-Time-Programmable" ROM boards can only be written on once. The wide range of software packages for the Portfolio are supplied mostly on this storage medium.

Networking the ST

After a couple of ST network solutions from third party developers, Atari has now come forward and presented their own Atari-NET that links STs, TTs and PCs together on an ethernet basis.

At their booth, Atari had two networks installed. On one hand, a couple of Mega STs were connected with a UNIX system, and on the other hand "just" some Mega STs were linked together.

In the ST hardware department, the 1040 STe was displayed with running animation/sound demos. The STACY could be seen running MIDI software in the corner of the Atari booth where Music/MIDI software developers like Steinberg were showing off their new tools.

New Third-Party Products

The largest part of the Atari booth was, as usual, occupied by mostly German software and hardware developers demonstrating their new product releases for the ST series.

DMC demonstrated Calamus SL, the color version of their powerful DTP program. Calamus SL now allows color separation, which makes it possible to process color graphics and photos. Subsequently, the films may be sent directly to an exposure device.

The softwarehouse Scilab presented Scigraph SG, a new powerful program that can be used to generate business and presentation graphics. From bars to piecharts, there are many features available in Scigraph with which to graph numeric data. The program, as many of the new ST programs, supports 19" monitors.

CCD again demonstrated their graphical wordprocessor, Tempus Word. This remarkable wordprocessor is supposed to be available in the stores later this year. For the summer, CCD announced Megastar, another new painting/drawing program. What distinguishes Megastar from the mass of already available painting/drawing programs is its flexible user interface, automatic mask generation, possibility of animation and a couple of unusual special functions for creative designers.

3K ComputerBild showed off Retouche Professionel, the digital Reprostudio with numerous features. Scanned or digitized pictures with up to 256 gray shades or colors can be transformed into lithographic films with reprotechnically precise field widths. Virtual memory management enables the simultaneous presentation of up to 10 pictures, each with a maximum memory size of 16 MB. This allows processing even DIN A2 pictures—from the rough fieldsize of 28 up to the high quality fieldsize of 120. Output can be done via Laserprinter or any other postscript-compatible device. Naturally, the pictures can also be transported over to DTP packages for further reproduction. Retouche Profesionel will be available in May for approximately US$700.

Compo presented a new flexible and very fast database. The program is still under development right now and goes under the name IDA. IDA will be compatible with the database Adimens ST. It is five times faster than its predecessor. It allows switching between several data files—even multitasking within the databases. What makes IDA special is its easy expandability through the usage of addable Modula-procedures. The program will be available later this year.

Atari's New 386 IBM Compatible

Another database program being displayed in Hannover was Easybase, a new product from Omikron Software. Easybase runs as a program or as an accessory; it manages the data via dynamic memory management, which increases the speed of the program enormously. An Omikron official stated that 1MB of data will be searched through within a second. The program will be available in May for a little over US$100.

The Frankfurt-basedcompany Eickmann, wellknown in Germany for its low noise and fast ST harddisks, besides demoing some new hard disks also astonished the booth visitors with the Eickmann Noise Reduction Kit for the Atari SLM804 laser printer. Once installed, the annoying sound generated by this piece of Atari hardware is cut down to a minimum.

For the Atari fair in Düsseldorf later this year, TURBO 030 is being expected. This hardware accelerator is based on the Turbo 16 expansion board concept. It will feature a 32 MHz 68030 processor. Also for the fall of 1990, an *internal* 640KB memory expansion for the PC Portfolio was announced.

In the matter of MS-DOS emulators for the ST, Heim Verlag showed PC Speed V4.1. Earlier versions often had troubles accessing some of the low cost hard disks available for the ST. The newest version of this popular emulator now expands the compatibility horizon hard disk-wise. PC Speed could also been seen running in a 1040 STE. The STE version of PC Speed does not require any soldering anymore—it is just a plug-in board.

The first MS-DOS Emulator for the ST based on a 80286 processor was presented by Vortex. The board will be available this summer and the price will be around US$300.

New versions of SCSI host adapters, guaranteeing full support of all SCSI commands, were being displayed by ICD. The Advantage Micro ST is, with a size of 3.3 x 6.9 cm, the smallest SCSI host adaptor for the ST. Much bigger is the Advantage Plus ST, the highend host adaptor with an integrated clock. ICD also has a wide range of hard disks (up to 320 MB) and streamers (tape backup systems), as well as hard disk and streamer combinations to offer.

The Swiss-based company Marvin AG displayed their Paintbox Chili, a combination of a digitizer, a genlock interface and a video board for the ST. In realtime, pictures with up to 65,000 colors can be imported or digitized. Other video signals can be mixed digitally. This way, titles may be generated and text can be send flying over the screen on predefined lanes

An Interview with Alwin Stumpf
Director of Atari Germany

Christian Strasheim

During the CeBIT'90 Atari PD Journal *editor Christian Strasheim had the opportunity to do an interview with the leading man of Atari in Germany, Mr. Alwin Stumpf, director of Atari Computer GmbH. The following are excerpts from this interview: (Keep in mind that figures and availability of products mentioned in this interview relate to the European market—in specific, West Germany.)*

PD Journal: In the past years there were plans at Atari to cut down the huge production line. It was rumoured that, in specific, production of the Mega ST1 models would be stopped. Is this true?

A.Stumpf: That really was the original plan, but we revised it lately. The Mega ST1 right now sells pretty good and we would not be well advised to take it out of our product line at this moment.

PD: How about other products and their sales figures? How well is the Mega ST2 doing?

A.Stumpf: The Mega ST2 is doing as well. It looks as if many people upgrade their systems right now. Last year we sold 30,000 Mega ST2 and Megas ST4 models.

PD: A big matter at Atari is still the TT. Are there also other TT model configurations planned besides the announced 2MB RAM TT 030-2 with its 40 MB hard disk and the color monitor SM194?

A.Stumpf: We will soon present a 19" monochrome monitor, based on the concept of the SM194. The hard disk can be exchanged easily with another—due to the new concept of the TT.

PD: Will there also be TT packages without a harddisk?

A.Stumpf: I won't deny that now.

PD: Considering the history of the TT and the already long list of release dates—how definite is the release date of May 1990 that Atari gave at the CeBIT press conference?

A.Stumpf: We just started to supply software houses and developers. The TTs you see in Hannover are from the first production series.

PD: What are the differences between the TT from Düsseldorf '89 and the TT from Hannover '90?

A.Stumpf: The first TT was not TOS compatible and it was too slow. There were communication problems between the 11 custom chips the TT uses. But now, the computer looks and works as we expect it to do. The documentation is also up to date. So far only as a README Doc on disk, but we will have it shortly printed on paper.

PD: The discussion concerning the TT design has calmed down this year. But the question still stands whether this design will have enough room for expansion boards for the TT. Will there also be a TT in different casing?

A.Stumpf: Yes, at the Atari fair in Düsseldorf this year we will present a better equipped model in a bigger casing that will feature at least 4 VME-slots for normal Euro-size boards and a bigger memory. This will be the so called TTX version of the TT.

PD: When the TT was first announced two years ago it defintily was considered state of the art. Since then, other computer companies like Apple have also developed in that direction and this year at CeBIT we see the MAC IIfx based on a 40 MHz 68030 processor. Does Atari already have construction plans for a faster TT?

A.Stumpf: Sure, but development of a faster TT does not only depend on Atari alone but also on Motorola. When there is a reasonable price for the 68040 then we will have a deal. I think we are, in a way, committed to that line. There are not too many other alternatives. We could switch and go for something in the line of RISC-technology, but that is a totally different world.

PD: Another major topic at the CeBIT press conference was computer sales in the Eastern block countries. Have there already been talks about software distribution in these countries? Atari will place their computers on the DDR market—but what about the software?

A.Stumpf: There are official distribution ways, through Forum, and a lot of stuff has been and will be purchased privately in West Germany and then brought over the now open border. This is similar to the hardware sales. Officially, we sold so far between 2,000 and 3,000 computers in the DDR. But this figure does not say anything. [Ed. Note: DDR = East Germany, in case you didn't know.]

PD: Another interesting market seems to be Poland. The figure of 100,000 Atari Computers being sold there last year speaks for itself.

A.Stumpf: Yes, among these

were 40,000 STs and the other 60,000 were Atari 8-bit computers. We are very strong in Poland. For years, there existed in Poland a so-called unofficial shadow market functioning on the valuta-bases. I believe that we are the leading computer force on the normal, private market in Poland—not in the high-end market. There exist evaluations that we cover about 80 percent of that market.

PD: *How did Atari solve the problem of converting the foreign currencies that always exists when dealing with Eastern block countries?*

A.Stumpf: We only made either straight valuta-deals or so called border-deals. All you need, therefore, is a little time. That way, we sold computers to Bulgaria, to Jugoslavia and even to the USSR.

PD: *What role did the language barrier play? In the DDR that was no problem, but what about the German TOS in Poland? Does a Polish TOS exist?*

A.Stumpf: The main expressions have been translated. I am sure there exists a Polish TOS—it is not an official one and it's just a disk version.

PD: *Let's change the subject and go over to the portable computers Stacy and Portfolio. At the press conference, Sam Tramiel spoke about a portable ST with the size of the Portfolio. Is that more than just a dream?*

A.Stumpf: Plans that go in that direction already existed for a long time. We believe that the handheld market will play a big role in the future. And when we are able to develop such computers on an MS-DOS basis, then it is not such a big deal for us to built similar computers based on an ST or even a TT. But these portable solutions will be a little bigger than the Portfolio size. We are talking here more in DIN A4 size. Computers that will fit in your suitcase, not your pocket—so to speak. The Portfolio is definitely the limit concerning the size topic.

PD: *Mr. Stumpf, we thank you for the interview.*

Don't Be A Solitary Atari.

The largest and longest standing group of Atari® users in the world shares its problems and solutions online every day in CompuServe's Atari Forums. And you can join them.

Find the latest software, like the new desktop publishing program for the ST. Learn how to run Macintosh® and MS-DOS® programs on your Atari. And pick up helpful game tips from experienced players.

Need technical help? Atari personnel and most third-party software and hardware vendors are online every day. You can even provide recommendations as they develop new programs and products. There's no better way to get more out of your Atari.

To join CompuServe, see your computer dealer. To order direct or for more information, call 800 848-8199. In Ohio and Canada, call 614 457-0802. If you're already a member, type GO ATARI at any ! prompt.

World of Atari Anaheim '90

Gary Klugman (SVACE)

I Want My Mega ST

Dave and Sandy Small of Gadgets by Small

The World of Atari is billed as the largest display of Atari products in the US. It was also the Lynx's first official appearance in Southern California.

April 7 was the first day of the two-day event and users were lined up for the 10 A.M. opening. After reading months of Atari bashing online and in print, it was heartening to see something positive.

The show was well organized, the booths were nicely laid out and conferences were offered throughout the show. Atari Corp. occupied the center of the show. Stacys were being used in many of the booths.

Although there was less than 40 exhibitors, I found plenty to see and do for two days, and I could have used more time to see and do more.

Atari was showing the Portfolio, Stacy 4s, the CD ROM drive and the MegaFile 44, their removable media drive.

There was a bank of Lynx hand held video games in constant use.

There were also two preproduction TTs that were carefully watched by Atari personnel. These models were definitely not ready for industrial use, but worked just fine during the show.

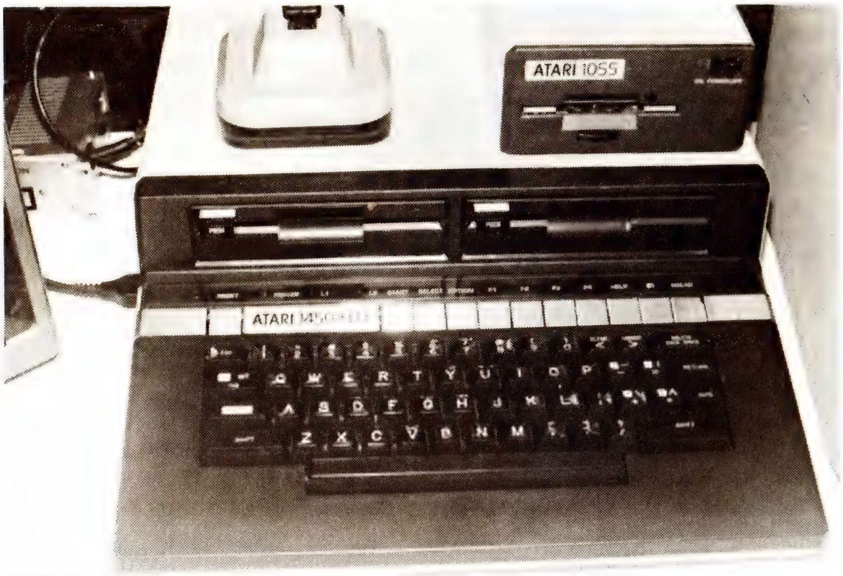
There was also a 4160 STe on display. This is a 4Meg STe and is not expected to be shipped in this country, only 1Meg STes.

None of the Tramiels were evident during the show. Bob Brodie was also unable to attend.

[Ed. Note: Bob Brodie's father-in-law passed away that same weekend.]

The Lynx really is as good as people claim. The display is amazing for a hand-held game. One dealer brought in 24 from a source back East. They were gone by Saturday afternoon.

The people from Atari were open and friendly. They were asked thousands of times when something would be shipped and about Atari's presence in the US. Each time they politely answered with whatever information they



The Atari 1450XLD, complete with 1055 3.5" disk drive

had, which wasn't really very much. To their credit, they made no false promises.

As cautious as they were, they did tell me that the STe would be shipped to this country as a 1040 STe. It will have a Blitter and will be easily upgradable to 4 megs via inexpensive SIMM memory modules. The TOS will be version 1.6, which is not the same as TOS 1.4/Rainbow TOS.

From Left to Right: Ken Badertsher, John Townsend and Cary Gee

The main differences are the ability to use SIMM memory, true stereo sound support and a 4096 color palette. No, you can't put TOS 1.6 in your older ST...it has to be an STe.

The 520 STfm will continue to be shipped to this country with no changes (i.e., it will have no Blitter). No promises as to the TOS version that will be shipped with it. They may use up the older versions they have in stock.

New Products

There was a lot of STuff at the show, so I will try to limit myself to the new things. ICD introduced three new host adaptors. The Advantage Plus ST replaces the older ICD host adapter. It supports full SCSI, generates parity, has 48 milliamp drivers and dual DMA ports. It retails for $135.95.

Elizabeth Shook, who is no longer at Atari, demonstrated and kept watch on one of the TTs being shown at the Anaheim show.

They also introduced the Advantage ST host adapter. It has everything the other adapter has except the clock. It is a lot smaller and retails for $119.95. They also introduced the Advantage Micro. At $109.95 it plugs directly into the SCSI port of any hard drive with an embedded SCSI. This little card is smaller than the back of a 3-1/2 inch hard drive and plugs directly into the back of the drive.

Dorothy Brumleve, sporting a short hairstyle with a Fuji on the back, was marketing her three children's educational programs—Kidpainter, Super Kidgrid and Kidpublisher Professional.

WuzTek, Inc. was showing their new Omnimon monitors that show all three ST resolutions in color or monochrome. They will retail for $349 or $599 depending on whether you want color or monochrome. They also showed a preproduction Infinity 20. With this drive, you can save 20Megs of information on a $20 removable disk. It will have a pass through DMA port and they expect it to retail for $700-$800. It should be available by the fourth quarter of this year.

When asked what GRIBNIF means, President Rick Flashman said it is a secret. Only three users in the last year have gotten it. The only hint he would give is that it has something to do with M*A*S*H*.

Rick was more articulate about what's new with NeoDesk. Since Christmas they have been shipping a recoverable trash can. At the show, Gribnif introduced NeoDesk CLI. CLI is a complete GEM-based command line interpreter accessory. Within a GEM window, you can use both MS-DOS and UNIX like commands. You can automate commands and run batch files. NeoDesk CLI retails for $29.95. Gribnif Software also had a NeoDesk utilities disk and an icon disk for people who want custom icons. These retail for a modest $10 per disk.

CodeHead Software Updates

The CodeHeads have been upgrading Hotwire, and a number of new features to the software were unveiled at the show. You can now automatically load accessories before running a program. Hotwire will track time spent in the programs of your choice. You can have an on-screen clock and up to eight alarms. You can build your own shell programs, display the date and free RAM. Hotwire now has controls for the blitter chip and zoom boxes. The upgrade for current owners is $7.50. If you aren't using their products, you should be. HotWire Plus (includes MaxiFile) retails for $59.95.

Dave Small was a hard person to talk to. It seemed like everyone at the show wanted to talk to him. Of course, the GCR was there and Gadgets by Small introduced their new 68030 upgrade.

Dave gave two seminars to packed rooms at the World of Atari. He talked about everything from his thinning hair to the development and current advancements of GCR and the 68030 board. As he took questions from the crowd, his unique combination of humor and techno-babble kept the audience spell bound. When the Stacy is available to the public, the GCR should be in great demand for it. The GCR will make the Stacy a relatively inexpensive portable Mac.

New 8bit Interest

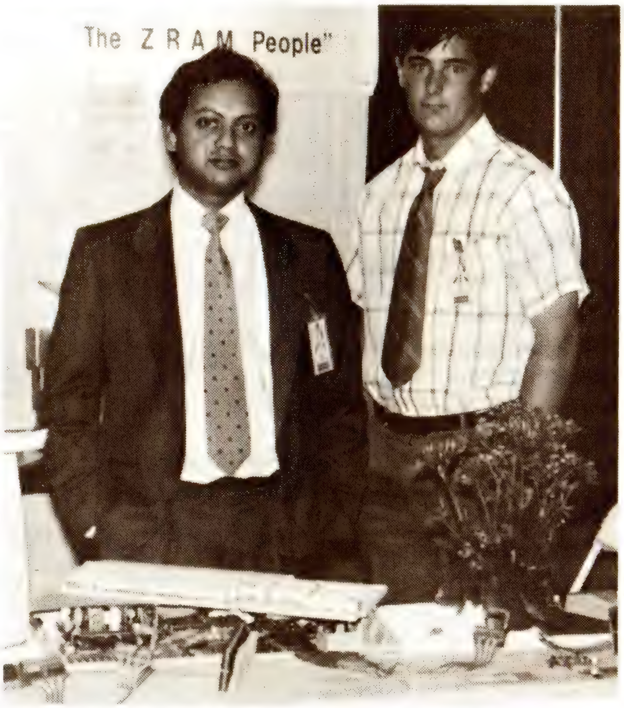
One surprising thing to see at the show was the amount of people walking out with boxes of 8-bit hardware. The people in the Antic/STart booth said they have seven brand new advertisers in the most current issue of Antic. Their 8-bit software market is growing, and they are experiencing growth in the subscriptions of both Antic and STart. Nice to hear, in light of the loss of other Atari magazines.

Developer Conferences

Roland gave MIDI demos throughout the show. Besides Dave Small's conference, there were conferences by Michtron, Gribnif Software, ICD, Atari, Sierra On-Line, ISD Marketing, Fast Technology and Sprokets Computer.

For being *the* national show for Atari computers in the US, World of Atari was not very big relative to comparable shows for other computer systems. But, I left the show feeling renewed enthusiasm for my Atari computers.

I have renewed hope that Atari Corp. will introduce products in the US the public will want. Some of the software developers were careful not to compete for price with the dealers but seemed to be doing well. All the exhibitors I spoke with said the show was at least as good as they expected and some thought it was even better.



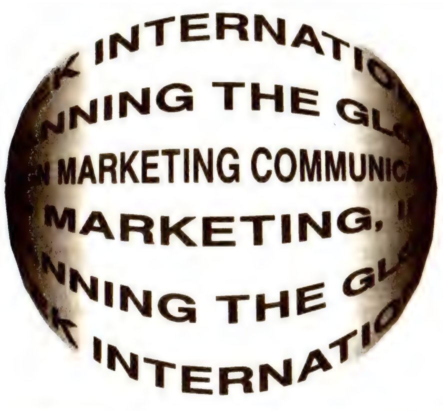
Abu Zubair (ZRAM) and Ron Vessels (right)

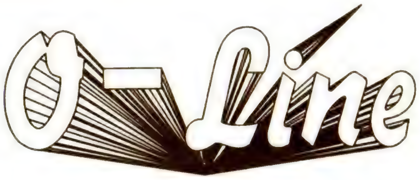
CALAMUS OUTLINE® ART

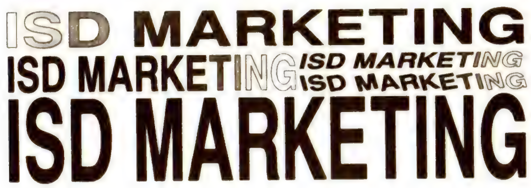
OUTLINE ART is a vector- oriented, graphic generation tool. Multiply your creativity through the many functions which you will find in this program.

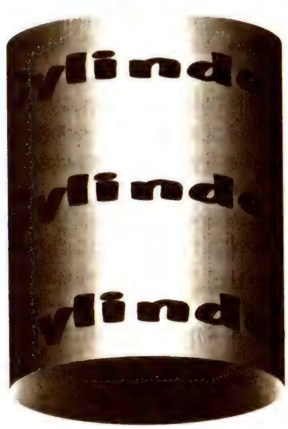
OUTLINE ART supplements the CALAMUS DTP system with a great number of new functions and effects. A extract from the extensive list of functions include:

- A user interface, quite similar to that of CALAMUS.
- Complete Vector Graphics Editor for lines, Bezier curves, control paths etc..
- Capabilities to generate freely-definable raster areas.
- Creation of rayed objects, ie; from a font to a central point.
- Nearly unlimited possibilities for the manipulation of text, characters and text attributes such as:
  - rastered, transparent, outlined, rotated, stretched, compressed and cursive styles...
  - circular text and text along a freely-defined vector path...
  - projection of raster areas and text on vector outlines...
  - conversion of text into vector objects...
  - kerning functions...
  - Functions can be freely combined and applied to all CALAMUS fonts.









- Integrated, fully programable calculator with a pre-defined and extendible library of transformations such as:
  - shift, rotate, mirror, enlarge/ shrink, project onto a sphere (globe, cylinder, cone), etc..
  - An intelligent clipboard and copy functions, allowing the automatic generation of transformation sequences.
  - loading and saving in .CVG format (CALAMUS Vector Graphic), making possible the integration into and optimal printing through CALAMUS on all supported output devices in all resolutions.

Now included!
Convert 2X,
our new Conversion program
CVG (Calamus Vector Graphic)
to EPS (Encapsulated Postscript)
or PS (Postscript) file format.

Note : DynaCADD, our complete 2D and true 3D Computer Aided Design and Drafting Package, allows the importation of Calamus Vector Graphic format, (CVG). Which can then be output through all output options supported by DynaCADD, ie: CAMM-1, Plotters etc,... An excellent solution for the Sign Making Industry.

Calamus Outline Art has a suggested retail price of US $289.95.

For more information or to place your order, contact your local Atari Dealer or contact us directly at: ISD Marketing, Inc.,

CompuFest '90—A Special Report

Stephen Moffit (TACE)

Though TACE did not help sponsor this fine event, I went to it and therefore I am going to report on it anyway. (Note: Some of this information was gleaned from the STiX club newsletter.)

This event was a multiple machine show (pretty much non-IBM type machines) involving the Oklahoma Amiga Computer Enthusiasts, Oklahoma Apple Users Group, and ST Information eXchange. The machines represented include the Macintosh, the Apple//, the Atari ST and the Amiga line of computers.

Many companies were there (not the computer manufacturers—this was to be a user oriented type of event. No "interference" from the various companies was wanted).

Exhibitors included, in alphabetical order: Adaptive Communication Systems (which develops communication devices for the non-speaking), AGI Software, Applied Engineering, Bit 'n' Byte Computer Center (an Apple supporter showing the Laser line of Apple compatible computers). Also present were Double Scorpio Software, Dowling's Computer Center, Eagle Marketing, Encyclopedia Brittanica (showing...well you can guess that one). There was Infol Computers (Atari line supporter), Lan-Tech, Letraset, Metropolitan Computer Services, OACE, OAUG, Oklahoma FidoNet SysOps, OKsoft, Soft-Logik, Software City (a brand new store in Midwest City willing to support the ST on *this* side of town) showing too. Finally, we have STiX, ST Informer, Technical Perspectives, Victory Software, Word Perfect (though I did not see them there when I went Saturday afternoon) and Zip Technology.

Whooo, that is a mouthful. As you can see, we had quite a turn out for a wholly club supported event. The flyers for the event even promised Bob Brodie would be at the STiX booth in the evening! Wowzers!

What was my impression of the show? I liked it—didn't even mind forking over the $2 (us Atari users aren't rich like some of the *other* computer users must be, so $2 is...).

Details on ST Exhibitors

The standard package of Atari promotional flyers was given out. Soft-Logik was demonstrating PageStream 1.8 for the ST and Amiga and was showing it on a Mega ST and Laser printer. Quite impressive.

StiX was driving a synthesizer with their Mega (along with badgering Software City, who was right next to them, into picking up the ST line, which they promised to do) and also running Spectre GCR. The lady doing so was only too happy to tell about the Apple dealer who did not believe the ST's ability to run Macintosh software.

The guy formatted some disks on his machine, took the disk over to the ST and ran the program off the disk...perfectly. I suppose that means the GCR works fine (except for some hardware specific PD software).

News Flash

Big news department! The STe should be available within 2 weeks of this writing (March 18)! This news came from ST Informer.

Infol was unable to quote prices for the STe because they did not know how much they would have to pay for it.

I intend to write further on this just as soon as I can buy the thingy. Infol was hoping to sell the basic unit for under $500 (the 520STe with no monitor).

Gaining Dealers?

Software City hopes to carry ST hardware as well. Can you imagine it? Two companies in Oklahoma City carrying ST hardware? Wowzers.

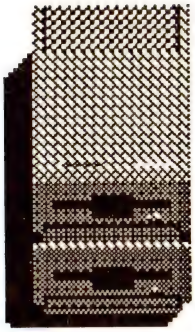
And now, the gleanings from the StiX newsletter. Codehead Software was to be at the StiX booth with a variety of their offerings. Double Click Software was to be offering their new Desktop Alternative—DC Desktop. MegaMax was to make their first journey into the wordprocessing front. ST Informer was there in force as well (already mentioned them, oh well).

Atari (as mentioned) sent Bob Brodie to answer questions (none of which I asked). Dennis Palumbo offered PageStream fonts (found in the Soft-Logik booth).

Finally SofTrek was to release Turbo ST 1.8, the latest release of their product, said to be a significant upgrade from earlier versions.

To Sum Up

Well, I suppose that is it, except to say I really enjoyed going to the show and look forward to next year's event with equal enthusiasm.



IN YOUR DRIVE # 29

Good ol' Chet (ACC.D)

Now that you mention it, 1990 has been a pretty good year for the 8bit Atarians, and not that bad for STarians either.

Yeah, yeah, yeah, we're still upset about the lack of any real publicity from Atari for their ATARI computers. (As opposed to a certain hand-held MS-DOS clone, which is getting lots of publicity, or their hand-held game player—similar story.)

But none of us can really say we're surprised, can we? C'mon, get real—we've never agreed with management at Atari since 1980. We've seen the top machines get the worst publicity, the most ineffective advertising, and have the most adversarial relationships with developers imaginable.

Yet we're still here. These computers are *that good,* the third party material and support is *so good* that we blissfully ignore the fact the manufacturer has *always* washed their hands of us within minutes after we buy the computer.

So the things which we dislike are not new. But the good stuff *is* new, and I wanna talk about that.

Give Me Your Answer, Do

We have sung the praises of Daisy Dot since it was originally a li'l ol' BASIC program. It has grown up to become Daisy Dot III, and what a mature young program it has become!

Roy Goldman's 800/XL/XE program makes it capable for just about *any* dot matrix printer to turn out letter quality (No, I did *not* mean "*near* letter quality.") print. Previous editions of DDot gave us near letter quality but was a bit complicated to use. Since you had to prepare the text in your favorite word processor, the biggest headache was actually formatting the page *exactly* how you wanted DDot to print it, then saving in ASCII format or PRINT-ing to disk.

As DDot used different font spacings, you might or might not get the spacing you'd guesstimated. DDot3 fixes this problem (pretty much) by permitting you to use the regular *saved* copy of your file. So, if you've set up some tabs, you stand a much better than usual chance of those tabs coming right where you wanted them.

DDot3 does not do pictures. Earlier versions did, and that actually proved to be limiting. Since this is *not* a WYSIWYG screen, every paper I printed with pictures got confused—DDot didn't know where the paper started after the picture and neither did I. And since a much better resolution for the fonts now exists, the screen dump was unceremoniously (heh!) dumped.

In a way, I miss it—but I'd only want it back if it worked better than before.

Roy may or may not come up with an easy utility, but he's indicated that pictures can be split into sections, call each section a font character, then piece them together. His graphic logo on the manual is done this way, and he hints that there may be a future utility for converting Print Shop icons into such fonts.

Now *that* would be something to wait for! But don't wait! Get Daisy Dot III now, and add any PD or shareware utilities in the future. *This* is the best print your Atari ever saw.

DAISY DOT III ($25.00)—Roy Goldman, 2440 S Jasmine St., Denver, CO 80222

Atari 8bit only (Hey Roy! Make an ST version!)

More on PageStream

Still haven't had enough time to really get into PageStream 1.8, but I'm convinced I could take a lifetime and *still* not take advantage of *all* its features.

Forget Postscript or any other computer for desktop publishing. PageStream is the real standard for comparison now, and the Macs and IBMs of the world haven't our good fortune. If you own an ST, take advantage of that fact by owning PageStream. I've used other machines and other programs; *This* one is the Cadillac of desktop publishers. (For the record, it speaks Postscript if you really want to.)

On a related note, I do enjoy browsing through the manual, even when I'm not in front of our ST. Been awhile since I found documentation which is easy readin'. Kudos to Mike Loader, a manual writer who knows the value of clear language.

PageStream version 1.8 (varies) Soft-Logik Publishing Corp, PO Box 290071, St Louis, MO 63219

Tempest in a Teacup?

Typhoon Thompson, Brøderbund's first nod to the ST that I know of, has finally dropped to a price I can afford, but I can now see it would have been worth its original price.

It's another "get this treasure

and that treasure, then do something with 'em" type of adventure, but nicely integrated into an animated cartoon of an arcade game.

There you are, three different entertainments in one game: adventure, cartoon, arcade. You'll probably keep losing, due to the number of times you'll be surprised into laughing out loud.

It's a very funny game. The premise isn't funny at all. A child has been kidnapped by some ungodly critters out in the sea. They seem to be ransoming the kid for various trinkets, which you steal from other critters and give to "spirits." Thompson (you) is a reluctant hero. He is, at various opening screens, either slapped into service, kicked, or knocked off a ramp he desperately clings to. To no avail, for you (he/she) find yourself in a powered raft (?) which keeps getting new weapons from those funky spirits.

Oh, don't try to make sense of it! Just laugh aloud at the funny antics you'll get into. Marvel at the clean animation and drawing, which looks better than 80% of the Saturday morning TV cartoon crowd. Kidnap sprites with your bag (Don't get caught in a bubble!) and watch the chief throw a tantrum!

Last year, I had a choice of paying $40 to see the movie [Parents reading this will know that, yes, it costs that much to see a movie whether you A) pay for sitter, or B) pay for the kids' tickets.] or buying Typhoon Thompson. This game is *a lot* funnier than that movie was.

Print Shop for Everybody

Speaking of Brøderbund, who still publishes Print Shop for the Atari 8bit computers but doesn't offer us the specials it offers the IBM or Commodore world nor have they translated it to the ST (but I digress), you might remember there are a few printers which its innovative Print Shop never worked with. Those days are gone. Innovative Concepts (a perfect name if ever I heard one!) offers Print Shop printer drivers for the Epson LQ-500 or 800, the Okimate 10 and the Atari 1020 plotter (Remember it?).

Don't go expecting miracles. Since Print Shop itself is a one-color utility, only one color per printout can be used with the 1020 and only black with the Okimate 10. And since Print Shop only has blocky icons, even the 24-pin LQ printers will have blocky icons. On the other hand, even a different color from black looks really nice at times. It *does* take *all night* to print out a five foot banner on the 1020, it *does* use up that color pen, and it *is* only 3 or 4 inches wide—but it looks really nice. And other 24-pin printers should work with the LQ driver. This adds a new lease on life to the old PS program, since many people are trading up their printers.

Printer Drivers for Print Shop ($14.95 each)—Innovative Concepts, 31172 Shawn Drive, Warren, MI 48093, (313) 293-0730

The More, the Scarier

Midi Maze has been around almost as long as the Atari ST. I may be the final convert to it, but I *still* say it's no real fun with only *one* computer.

If you're not aware of Midi Maze, you're a brand new Atarian. The game pits you, a happy face, against up to 15 other happy faces in a given maze. You shoot them, they shoot you, and there is no plot. Sounds like an incredible waste of a disk, doesn't it?

Here's the gimmick: up to 16 STs can be connected with MIDI cables and up to *16 people* can play head-to-head. No plot needed, no depth required—the interaction between the players has more realism and cut-throat depth than any computer could aspire to. The involvement I observed was more intense than a simple game could explain. So I sat down and tried it...

And I had to be pried away from the joystick. I still can't explain the complete control the game takes of your mind, but I can verify that it does.

PS—an 8bit version is coming out. This would be cheaper and easier to set up, if it doesn't require the addition of a MIDI box. Have patience.

After June 20th, I get to take a rest. I have been working non-stop with StarFest, the inspection at the base, and now I find I'm being sent to Leadership School until June 15th. Which is my explanation of why these things seem so hurried, and why I'm running further behind on my assignments. Matter of fact, I don't even have time to finish this by saying Jee--.

THE REVOLUTION™

Join the national user-based campaign to develop Atari computer sales in the U.S. **The REVOLUTION HANDBOOK** is a ST/MEGA diskette and works on color and mono systems. Unique read/print format... ONLY $6

Official "Join The REVOLUTION..." rubber stamp... NOW ONLY $12

WORD QUEST

WORD QUEST Build professional word search puzzles with your words. Sophisticated word placement routines. Color/Mono... ONLY $29.95

WORD QUEST 2 Build CROSSWORD PUZZLES from any word list. Advanced auto options. Color/Mono... ONLY $29.95

WORD QUEST POWERPACK
WQ & WQ2... ONLY $49.95

WORD QUEST UTILITIES
For Word Quest & Word Quest 2. Includes text extraction, format conversions, and much more!
$19.95

GRAPH MAKER

GRAPH MAKER deluxe graphing system. Make line, bar and pie graphs fast and easy with minimal input. Print DEGAS/NEO files, clip art, many options. Color/Mono... ONLY $59.95

DO RUN RUN STWriter Header/Tab/Extender customizer... ONLY $7

CAPTAIN FIZZ MEETS THE BLASTER-TRONS

Gordon Totty (MACE)

Teamwork, that's the ticket!

Everywhere you turn your attention lately, you probably notice another plea for more teamwork. Your employer wants it. That's what Japanese success was built on, you know.

Your family wants it. If yours is like mine, it can't use another slug or a dictator. Your coach wants it. Otherwise, you will either be off the team or you are very good at what you do. Yes, "Teamwork" is the magic chant for the 90s.

Importance of Cooperation

Captain Fizz Meets the Blaster-Trons from Psyclapse/Psygnosis Ltd. takes you a few years into the future for a training course in teamwork. The instruction you get is simple and pointed: "co-operate or die!" Under conditions like these, the word "teamwork" takes on new meaning, eh?

Captain Fizz is marketed for two players. One person can play it, but the box contains a warning, "this game is impossible to beat on your own." The instruction manual contains a challenge on page 5: "Yes, you can play this game on your own. No, you can't win on your own. Prove us wrong..."

Well, I came. I saw. I couldn't! I pass the challenge to you. Don't let us down.

In Captain Fizz, the British national health service is still active. (Yet another example of a British institution built for the ages.) You have put yourself in an NHS hospital for a routine operation.

You awake on another planet. (Yet another example of bureaucratic incompetence? No, this time it was double-dealing.)

Welcome, my friend, to the Queen's Cloned Highlanders! United we stand!! Our regimental colors, make that "colours," feature blood red, and lots of it.

I must tell you, old chap, that you haven't lived until you've met the Blaster-Trons. Too bad you won't live long after you do meet them. I say, old boy, do be sure to practice a bit of teamwork, like in our preppie days, say what? That's the ticket! Then, you can perish more slowly, but perish indeed you will.

Perish? Perish the thought! What have we here? A bit of a nasty situation. One that makes Dunkirk look like a tea party. It seems that the Starship Icarus (more on Icarus below) is out of control and heading towards the sun. If it gets there, the ship and the entire galaxy will explode. You simply must teleport aboard Icarus and destroy the main computer, which is causing all the trouble. I propose to wait here.

What? Yes, yes, you do need a partner! But I've a game knee, an old war wound, you know. So, on with you! Good luck, and please hurry. I want to live long enough to fully enjoy my declining years, declining real income and certain, slow death.

Peril Awaits!

What awaits you on the starship? Only about a zillion pesky aliens that you have to destroy. Only 22 levels that you have to fight and figure your way through. Only savage and relentless action. Only tons of objects that you have to find and pick up, or you won't progress. And if this isn't enough to challenge you, there's a clock that you are racing against.

That's all. So, please handle this quickly. The destruction of the galaxy would put a shadow over my tea time, and I do so look forward to my tea!

You can do it, can't you? Alas, not alone, I fear. You must have a partner to help you play and make serious progress in this game. The partner is needed for more than additional firepower.

There are strategic dimensions, including distribution of keys and deciding when to fight together and when to fight alone. For the malicious minded among you, be advised that you can kill your own partner with your weapon, so be careful where you aim the bloody thing. It is loaded and dangerous.

If you like to play computer games with a partner, and have two joysticks, this might be the game for you. There may not be another game around that requires two players for success, but this one sure does.

Choosing a Language

The opening screen reveals that Captain Fizz can communicate with you in one of three languages, Francais, Deutsch, and English. I tried all three, and recommend that if you are American you try the English version. It comes the closest to American.

The other two are just gibberish and gobbledygook. Of course, this game is so tough that you might just want to try another language to add to the challenge. It didn't make any significant difference in my results.

Next comes the title screen, with some very lively machine gun music to put you in the proper mood. Actually, the music is nice, but it does feature a snare drum kind of sound very prominently. Sounds like bursts from a Sten gun. You can listen to this as long as you like, perhaps all night. After a while, hit the space bar to get on with things. This is not documented in the instructions, and I hope you can forgive me for giving the secret away. I didn't want anyone to think he/she had just bought a music disk.

After credits, brief instructions, and tommy-rot of that sort, you are thrown into the thick of the mess on level one. Do the job right here, and you will find the emergency lift to level two. Mess up, and you'll never get into or even recognize the lift—even if all the aliens on level one are vaporized. They seem to auto-cremate on being shot, a thoughtful gesture that keeps the rooms and corridors clean. And so it goes, I assume until level 22. My fellow clone and I, Gordie the Gruesome Annihilator, have yet to see level three, owing to a particularly vexing situation that severely taxes our health on level two. I fear that these vexations probably increase rapidly as the levels increase. Pack some aspirin.

What You See

The playing screen is divided into five parts. On the left are two boxes displaying the status of each of the two players. In the center are two boxes, one for each player, in which a scrolling map appears. Your view is top down, or plan view, of a maze of rooms, corridors, and doors. The program tracks both players separately, and you do not need to be in the same area at the same time. When you are, both players appear on both screens, but you control only your own character icon. On the right is a picture of some sort of machinery.

The status boxes report on score, health, armor, damage, charge, credit and cards (but not charge cards or credit cards). There is also a multi-colored bar that changes size. You figure out what all this means, as the directions do not tell you.

The art work is nice, and the objects displayed in the game windows are finely detailed. You may appreciate them even if you can't figure out what they represent.

The machinery display includes three words: exit, switches and mine. It also shows an oscilloscope, or perhaps a neon snake. I couldn't tell which. As far as my partner and I have gone, we could not get into this area. It may turn out to be a view of the computer that is to be destroyed.

If you play the game alone, the status box and the playing area for player two remain inactive. You are distracted somewhat, however, by a constantly flashing message requesting player two to press F2. (Did you notice that two to twain?) Perhaps it is just as well that you continuously get reminded of the folly of going it alone, you macho person.

A Classics Lesson in Classic American

Before we get to the end of this, and I can see the last period approaching, I want to tell you about Icarus. Our English cousins selected that name deliberately, and we colonists would be neglecting our classical roots to ignore it. So, in classic American, here's the story.

Icarus was a Greek dude. His Daddy was Daedalus. The chicks used to look at him and squeal, "Oh, Icky!" This was cruel, because he had a lot of angry, red, bulbous, oozing pimples. But they didn't care. Those babes were bitchin' bitches! "Icky" stuck to him, as a nickname, but not a nice name.

One day he said, "Dad-alus, I've got to blow this pop stand. Can you blow me away?" Dad worked on Crete as one of the original low-bidder contractors. Sometimes he worked for free, just to say he had a job. "Sure, Ick. Lemme see what I can do for ya. I gotta some left over stuff here from da last wax and fedder job at da palace," Daeddy replied. He spoke with an accent because he was a foreigner.

Daed made wings of feathers and attached them to poor, miserable Icky with wax. "See ya, pops! Tell the chicks to watch for my moon in the sky tonight. It will be a special treat just for them." Ick was off.

Too bad he flew too close to the sun, which must have been closer to the earth then, just as it relatively is in the time of Captain Fizz. I hear that he got the first hot wax job. After the wax got molten, he molted. His goose was cooked. He was a dead duck. A poor pigeon. Like a rock he dropped into the Aegean Sea, where he probably became Poseidon, a great pal of Neptune's. Well, you've been sufficiently educated. It's time to summarize.

Your friendly reviewer liked the action and pace, the music, the graphics (good, but not great), the requirement to play with a buddy, the very brief instructions (a rest from reading), and the challenge.

Your nasty reviewer did not like what seems to be a formula game: mazes, puzzles, shoot 'em up, and a clock timing the onset of a disaster. Have you seen many games like that? I'm staring at another even as I write this, but it would be unfair to mention the title before I complete my review of it. There is a trite formula, and it takes extra imagination to create something really different.

Addictiveness is undermined by the need to have a partner available to play, or at least to play seriously. Also, I am not very skilled at these games and lose interest quickly if the challenge is too great for me, which it almost always is.

But gee whiz, Captain Fizz, you do deserve credit for trying to break up the greatest solitaire game in the history of mankind—the affair between a Nerd like me and his microcomputer. My kid liked that. Thanks from both of us. Give us another go at it someday, will you? Jolly good!

Now, where's that last period? Oops! Did I go past it?

1050 MECHANISM

Factory fresh TANDON mechs. make difficult repairs a snap. Units are complete with Head, Stepper, Spindle motor, belt etc. Just plug in, no difficult alignments or adjustments required.

$47.50

POWER PACKS

Exact replacement transformer for 800/400, 1050, 810, 1200XL, 850, and XF551 units. Part #CO17945. $14.50

XL/XE SUPPLY

Power Pak for 800XL, 600XL 130XE, 65XE & XE Game. $25.00

KEYBOARDS

New and complete subassembly. Easy internal replacement.

130XE/65XE	$35.00
800	$40.00
800XL	$29.50
400	$12.50

XL 40 PIN LSI CHIP SET

A Complete set of 40 Pin Large Scale Integrated Circuits for your 800XL, 600XL or 1200XL computer. Great for quick repairs! Set contains one each of the following: CPU, GTIA, ANTIC, PIA AND POKEY. $16.95

800 4 PIECE BOARD SET

Includes Main Board, Power Supply Assembly, CPU Module and 10K Revision B Operating System Module. All boards are new, tested and complete with all components. $28.50

800/400 MODULES

NEW PARTS COMPLETE WITH IC'S

• CX853 16K RAM Module	$9.50
• 800/400 CPU with GTIA	$8.75
• 800 10K "B" OS MODULE	$8.75
• 800 POWER BOARD	$14.50
• 400 POWER BOARD	$9.50

INTEGRATED CIRCUITS

• CO14795	$4.50
• CO14805	$4.50

A-T-A-R-I

Answers Tips and Relevant Information

Paul Alhart (AFED)

This being my first "serious" column since The Atari Federation teamed up with AIM, here is a little background for all my new AIM readers.

A-T-A-R-I is almost three years old now. It pretty much covers whatever I want to talk about with a heavy slant toward the 8bit folk. Your questions and comments, however, are always welcome.

Back about 1984, I bought a 1200XL for my daughter. Having worked several years as an Electronics Technician in the Aerospace industry, I was already well acquainted with the hardware aspects of computers. I was also acquainted with the group down the hall that was known as *programmers*.

In my book, programmers were a strange sort. Sure, they talked funny and their hair was always a mess, but coming to work in T-shirts, faded jeans and shower clogs was too much for me to handle. I made up my mind to *never* become a programmer.

Needless to say, that lasted about a week. After typing in a couple short programs, I was hooked. I wanted to do more. Much more. But working with mainframes all day didn't give me much insight into my Atari. The IBM didn't have Player Missile Graphics. The DEC didn't use Display List Interrupts. What to do? I decided to hit the books.

There has been a lot written for and about the Atari computer, and I have a good percentage of it in my personal library. The writings that helped me the most with getting to know my Atari in those early days were gleaned from Byte magazine.

Byte magazine? Today Byte treats Atari as if it were a four letter word. Not so back in 1981.

Starting in September 1981, Byte ran a 10 part series called "The Atari Tutorial." Many of the tutorials were written by Chris Crawford while he was working at Atari and were based on the now famous Atari book "De Re Atari." The tutorials go much further than De Re Atari did. Besides being much easier to understand by the novice, each tutorial gives practical examples laced with simple type in programs in both Basic and Assembly.

For anyone new to Atari, or you seasoned Hacks wanting to know even more about what makes your Atari tick, these writings are a *must have.* Check out your local library to see if they have back issues of Byte. It will be worth the effort.

NOTE: For all my local readers. The Air Force-run Tech Library in building 7015 here on Vandenberg AFB has all these issues and more on microfilm. You can get a hard copy of these articles just for the asking.

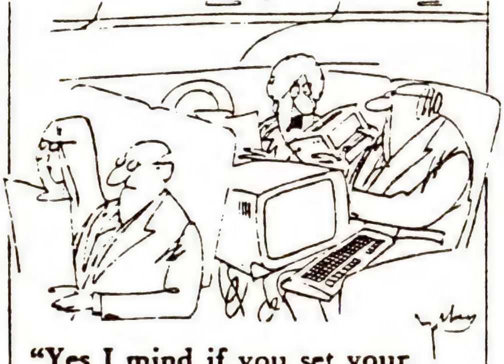
Following is a list of the tutorials and other articles of interest published in Byte magazine in the early 80s.

- September, 1981—Part 1: The Display List
- October, 1981—Part 2: Graphics Indirection
- November, 1981—Part 3: Player-Missile Graphics
- December, 1981—Part 4: Display-List Interrupts
- January, 1982—Part 5: Scrolling
- February, 1892—Part 6: Atari BASIC
- March, 1982—Part 7: Sound
- April, 1982—Part 8: Generating Sound with Software
- May, 1982—Part 9: Even More Color
- June, 1982—Part 10: Ergonomics

Also check out:

- January, 1980—Indirect Addressing for the 6502
- January, 1981—An Introduction to Atari Graphics
- November, 1982—Computer Animation with Color Registers

If you know of other obscure writings that you feel the rest of us Atarians should know about, let me know and I will pass the word in a future column of A-T-A-R-I. Paul Alhart, 524 N. Zee St., Lompoc, CA 93436



"Yes I mind if you set your printer on my lap! . . . "

IS YOUR COMPUTER OBSOLETE?

Robert C. Arp, Jr.

There's a new kid on the block. And from what I hear, he's surprised a few people—some unpleasantly. The Atari ST line has been expanded to include the letter 'e', as in STe. Then, there's all those TOSes to consider. What's a user to do?

There's talk of upgrades, trade-ins and add-ons; compatibility, user support and developer support; applications that no longer run, games that can't be played and upgrades that don't function. What's happening? Is the news good, or is it bad?

An interpretation of the significance of occurring events depends on your perspective. Let me tell you about mine. In the first place, were it not for Atari's ST line, I would not have a personal computer yet. When I decided to purchase, I looked at everything available (with a mini and mainframe computer background) and concluded that, not only was the ST the only computer powerful enough to be considered, but it was also the least expensive.

I marveled at this situation, because it so nearly paralleled one that had existed when I was a young engineer with a fresh BSEE in my hand (and little else).

At that time, most integrated circuits—and some transistors—were prohibitively expensive. The dilemma was this: I desperately needed the experience of using such products, but I could not afford to purchase them. With the experience, I could earn enough money for the products.

There came a day when someone told me about a new company in Santa Clara. Some of its products did not seem to be as reliable as those of the more established giants of the industry, and the documentation for some of its products seemed worse than none at all. But, the cost was such that a young engineer could obtain their power without the price. (Sorry about that.)

The name of that company, and the fact I soon went to work there, is not important. But the parallel of its position in the semiconductor industry and Atari's position in the computer industry is.

That company managed to drive the price of semiconductors and integrated circuits low enough so that cost was described in cents instead of tens of dollars; likewise, Atari has managed to put powerful computers in the hands of customers for hundreds of dollars instead of thousands.

If you think compatibility and new product introductions are an issue today, imagine when semiconductor products were being introduced daily. An equipment manufacturer would no sooner finish its printed circuit board design only to discover that most of the semiconductors for the board were already obsolete.

Looking back today, who suggests semiconductor manufacturers should not have feverishly designed and redesigned products with no consideration for those that were being obsoleted? When both Intel and Motorola decided to produce 16bit CPUs, Intel decided to make their new designs compatible with the older 8bit models, while Motorola chose to disregard such considerations. Which company do you think acted incorrectly?

As I interpret current events, I do so with this history of experience. I can sympathize with consumers who discover they have purchased a product which is not as suitable as another might be. I had my 1040ST a short time when I realized a MEGA ST2 was what I should have purchased. Just days later, I corrected the assumption by moving to a MEGA ST4.

But, had Atari chosen not to expand its line—if they had not taken chances and moved ahead—my options would have been fewer, and my search for the most appropriate PC would have been stymied. For that reason, I view the introduction of newer models as opportunities for others to satisfy their own quests.

As for me, I am satisfied for the time being; therefore, I need not rush out to buy the latest gizmo. My advice is to consider your satisfaction with what you have. If the machine you now have seems to be holding you back, then try to move ahead with the new product; take a chance, rather than brood.

The costs Atari users must bear are not significant enough to warrant unhappiness. If a choice seems wrong, it's easy enough to rectify. It's not as though we were investing the thousands of dollars required for an Apple or an IBM. We can afford to experiment.

And I wouldn't worry about support for existing STs. Many programmers, myself included, are just getting ready to release software. My MEGA is very current as far as I'm concerned. How about you? Is your computer obsolete?

SOME LIKE IT... HOT!

The CodeHeads announce:

HOT WIRE + MAXI FILE

- "When the START editorial staff first saw HotWire, our collective reaction was 'Wow!'"
- By far the **fastest, easiest way to run programs** on the Atari ST from a floppy disk **or** from a hard drive!
- Build menus for all your most commonly-used programs. Load new menus with a single keypress or mouse click!
- **New Ledger** function records time spent in programs of your choice
- **Passwords** may be used to restrict unauthorized access to certain programs
- **New on-screen clock**, appears in the programs that you choose
- Unlike other shells, HotWire works correctly with all programs, just like the GEM desktop.
- A **seamless interface** offers direct access to MultiDesk and MaxiFile
- Full-featured file-handling utility lets you **move/copy/delete/rename/touch/lock/hide** any combination of files and/or folders.
- Runs as a desk accessory **or as a program** in any resolution
- Incorporates **every** file/disk feature of the GEM desktop plus much more
- Intelligent **disk copying** routines
- **Rename folders** - Print directory listings
- Store **comments** about any file/folder.
- Unique and intuitive user interface designed for easy, speedy operation.
- **Customizable** for your style of use
- **Keyboard equivalents** for all operations.
- Quickly select from up to 20 of your most-used paths.
- Even runs programs and loads documents.

Here's what our users are saying about HotWire and MaxiFile:

"The HotWire/MaxiFile combo has **changed the way I use my ST**."
"I haven't used the standard GEM desktop in weeks."
"Without HotWire and MaxiFile I'd be totally lost on the ST."
"...a tribute to **assembly excellence**." - "MaxiFile is a **wonder**!"
"HotWire and MaxiFile really 'beat up on the competition'!"
"...you'll need to package it in asbestos because it is too **hot**."
"**AWESOME!**" - "Super!" - "a veritable software gem!"

Quick Tools vol. 1

Utility Pack For the Atari ST -- for only $19.95

Quick Tools is a package of many powerful and memory efficient utilities for the Atari ST, Mega ST, and Atari STe computers. It includes a command line interpreter, smart file viewer, fast file finder, desktop editor, hard disk partition protector, custom control panel, speed benchmarker, real time status display, VT52 emulator, label maker with mail merge, program compressor, text screen dumper, and more!

Each Quick Tool can be installed to run as either a desk accessory or as a normal desktop application, for maximum versatility. Quick Tools even has its own unique way of getting around the 6 desk accessory limit. Quick Manager is a window that sits on the ST's desktop and has its own built-in desk accessory menu for installing the other Quick Tools. Quick Manager uses only 15K of memory, and only loads the accessories into memory when they are selected. Quick Manager with all of the Quick Tools installed uses less than 60K of memory!

Quick Manager also displays time, date, free RAM, and TOS version, allows for instant access to the file selector, has 16 desk accessory slots, and can be called from the desktop or any GEM program. **Quick CLI** makes complex file manipulations easy. Copy, rename, and delete files whenever you're in a bind. **Quick Env** edits environment variables. **Quick View II** is the ultimate replacement for the desktop's Show Print Cancel function. Just double click on any desktop file and Quick View II displays it in its native format. Text files display as text. Graphics files display as graphics. Even ARCed files display their contents. **Quick Find II** searches for any file on the hard disk, fast! **Quick Inf II** edits hard to change desktop parameters. **Quick Label II** prints mailing labels and disk labels, with text effects. And much more!

Quick Tools costs only $19.95. We accept checks, money orders, and VISA card orders. Add $3 for shipping. Phone orders: 519-570-4340. Write for more information. Demo available on Compuserve and Genie. Also available: **Quick ST II Software Screen Accelerator.** $19.95 + $3.

ATARI 8-BIT POWER

ALPHA SYSTEMS is constantly innovating to provide more power for your 8-bit Ataris

NEW **HACK BACK**
Special OFFER

The Alpha Systems HACK PACK contains all our finest products for making Back-up copies, Analyzing, Understanding and Protecting your Atari programs. It comes complete with Atari Protection Techniques (Book and Disk I), Advanced Protection Techniques (Book and Disk II), The Chipmunk, The Scanalyzer, The Impersonator and Disk Pack 1000. Worth over $150. Get them all for the special price of **Just $99.95**

Atari Software Protection Techniques Vol I & II

These Book and Disk packages detail the most advanced copy protection methods in use today. They guide you through the methods used to create the protection as well as the copying techniques to get around them. They include information on Phreaking • Hacking • On-line security • Black boxes • Self-destructing programs • Pirate bulletin board systems • Logic bombs • New piracy laws • Hardware data keys • Weak sectoring (Phantom, Fuzzy and unstable sectors) • Overfilled tracks • CRC errors • Bank Select cartridges and MUCH, MUCH MORE. The disks include automatic program protectors, Protection Scanners, directory hiding and more

BOOK I and DISK I	**$24.95**
BOOK II (Advanced protection) and DISK II	**$24.95**
Special Offer, Order both sets for Only	**$39.95**

CHIPMUNK

Automatic Disk Back-Up System. Make perfectly running unprotected back-up copies of hundreds of the most popular Atari programs. Chipmunk's sophisticated programming Automatically finds and **REMOVES copy protection** from most Atari programs. Back-up even heavily protected programs with ease. Finally, a back-up system that needs no special hardware or skills.
(If you need a full list of what Chipmunk copies, call or write for our free catalog) **$34.95**

Scanalyzer Automatically scan & analyze commercial programs. Unlock programming secrets and learn from the masters **$29.95**

Impersonator Cartridge to Disk back up system. Create running back-up copies of any cartridge (up to 16K) **$29.95**

NEW **CHEAT**

Get more from your games with CHEAT. Tired of spending days trying to beat a game? Tired of getting stuck just when you need another life? Cheat is an innovative new product that gives you the chance you need to beat your favorite games. Cheat works with hundreds of Atari games to give you unlimited lives or power. End the frustration and get hours more enjoyment from your games. (Call or write Alpha Systems for our free catalog with a full list of the programs that work with Cheat) **ONLY $24.95**

BASIC TURBOCHARGER

NOW for the first time a BASIC programmer can get the power, flexibility and incredible speed of machine language. BASIC TURBOCHARGER is a **book and disk package** that contains over 150 ready to use machine language routines. Complete instructions show how to add them to your own BASIC programs to get these features and more: • Smooth Scrolling • Player/Missile control • Load & Save Picture files • Sorting and Searching • Special Effects Graphics • Incredible Speed • Much, Much More • Over 150 programs. You've heard of the power of Assembler, now harness it for your own needs **$24.95**

NEW **PARROT II**

An All New Parrot sound digitizer for your Atari. Parrot II is a sophisticated new hardware device that plugs into your joystick port. Parrot II has two inputs. One for a microphone and one for a powered source such as a tape player, radio or Compact Disk

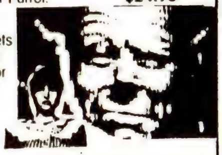
The Powerful Parrot II software lets you record sounds into your computer and play them back on any Atari. Parrot II turns your computers keyboard into a musical instrument with nine different sounds covering three octaves each. The sounds can be anything, a dogs bark, a piano, a complete drum set, a symphony or your own voice.

Parrot II lets you modify the sounds on a graphic display to create brand new sounds and special effects. Best of all, the sounds and voices can be put into your own programs that can be used on any standard Atari. Explore the world of digital sound and music. ONLY **$59.95**

Pre-Recorded Sound Disk More pre-recorded sounds for Parrot	**$4.95**
PARROT II Demo Disk (Does not require Parrot to run)	**$5.00**

NEW **POP-N-ROCKER** a fast paced, multi-player trivia game that mixes questions with real songs (digitized with Parrot). Be the first to identify the songs and answer the music trivia questions. *Pop-N-Rocker* comes with three data disks and lets you add new questions so it will never get old. You can use a Parrot Sound digitizer to add new songs too! Use any kind of music from Rock to Classical to Nursery Rhymes. A new concept in entertainment and a perfect add-on for Parrot. **$24.95**

COMPUTEREYES & MAGNIPRINT II +



GIANT WALL SIZED POSTERS.

Turn your computer into a digital portrait studio. This complete package lets you **capture, save & print** digital images from your **Video Camera, VCR or TV.** COMPUTEREYES hardware plugs directly into your joystick ports for easy use. Print your picture on a 6 foot poster **$119.95**

ComputerEyes camera system
Comes complete with everything above, plus a black and white video camera and connecting cable **$329.95**

Graphics 9 Software Add a new dimension to your COMPUTEREYES pictures captures images in 16 shades of grey **$12.00**

Magniprint II +
Easily the most powerful print program available today. Print graphics from almost any format in hundreds of shapes, sizes, and shades. Supports **color printing** and lets you create **giant posters.** Magniprint II + lets you stretch and squeeze, invert, add text, adjust shading and much more. Works with EPSON, NEC, Citoh, Panasonic, Gemini, Star, XMM801, and compatible printers (850 interface or equivalent required) **$24.95**

Graphics Transformer
Now you can combine the most powerful features of all your graphics programs. Create print shop icons from a Koala pad picture, from a photo digitized with ComputerEyes, or any picture file. Graphics Transformer lets you **Shrink, Enlarge and Merge** pictures for unequaled flexibility **$22.95**

YOUR ATARI COMES ALIVE

SAVE MONEY. Finally an alternative to buying expensive computer add-ons. Your Atari Comes Alive shows you how to **built them yourself.** This 'How-To' **book and disk package** gives you complete step by step instructions and programs needed to built and control these exciting devices and MORE • Light Pen • Light & Motor Controllers •Alarm Systems • Voice Recognition • Environmental Sensors •Data Decoders • More than 150 pages **Your Atari Comes Alive** **$24.95**

The Right Brain

Paul D. Stampfli (STE-EP)

Well, hello again. I don't know if I'm going to get this up in time to make the April issue or not. If I don't, I'm sorry. I know for some of you that's like your boss apologizing for giving you a vacation! But, I hope at least a few of you enjoy these ramblings of mine. And, possibly a small percentage of you actually understand them.

The reason my article is late is because I've been learning to shoe. No, not working at a shoe shop, although the guy that's teaching me has a shop for shoeing...I'm learning to shoe my horses. I say just mine 'cause I figured out fast this is too hard to do for a living.

I find it a marvel of our times that I can one minute be learning a skill as old as man, nearly, and the next minute be writing about it on a space-age computing device. The computer is a lot smarter, but it can't thrill me like the old mare on a short run or a quick hop. But she can't help me with word processing. I get a charge out of both.

Now before somebody says "Just another rich %#$@&^* blowing his own horn," I need to say I'm *not* rich. I drive a '74 pickup and live in a mobile home way out in the hard desert. I support two kids, an ex-wife, ten dogs, two birds, two horses and assorted cats.

No, I'm not rich, but I put my income into what I enjoy; which brings up the subject of Bulletin Boards.

These guys, Sysops (for System Operators), aren't, usually, rich either. They have just made the decision to put their money into what they like. Most are fairly serious users who have a long history of long distance "modeming" and an even longer history of computer use. They enjoy it. And it's to these people I would like to express my deepest appreciation.

Some of you users out there have got this thing all wrong. You seem to think that sysops need you to upload software and leave messages and mail. Wrong-o, sport.

It's not the sysops who need us. They have all the PD stuff they could ever use, and I doubt many ever go to the trouble to un-ARC most of those files to even see if they run. Most, as far as I can tell, seldom read the messages on their boards and almost never read E-mail, other than what is specifically addressed to them. No, they don't need us...we need them.

I have seen so many boards go "off the air" because users thought the sysops needed them, and worse, thought the sysops would take unlimited abuse. For example, I know of people who have two, three and even four "alter identities" they use to get more time on the boards. Probably so they can monopolize them. Or so they can get all the files they want in a hurry without having to give the boards anything. Or so they can be as hurtful as they like in their messages and still have access if one "identity" is refused access.

There are others who think it is "sport" to try to break into a system and trash files or try to induce a hardware crash to permanently damage the system. Users trade IDs, trash files, upload virus-laden software, call the sysop names, make threats and other things.

No, I wouldn't be a sysop for all the tea in China.

I know it's a two-way street. There are boards out there whose sole purpose for existence is to spread pirated software.

So where is this conversation going? Not too far, really. I just wanted to say *"Thank You"* to all the Skip Fords (Data Retention Center), who operate a board for no other reason than to have a good time with friends and spread the word computers can be more than work and drudgery.

And to all the Mark Godfreys (Sky is the Limit), who have special "themes" to their boards. Mark is a quadriplegic—his board is specifically designed for easy use by the handicapped. Mark works hard to keep this board in tip-top condition and always succeeds.

And to all the Rick Reynolds (ST El Paso, STEP), who run boards for commercial concerns (Jenkins Computers) and who don't come off sounding like a commercial. For that matter, Jenkins doesn't give you a pitch at all.

My Grandaddy used to say education was *expensive,* no matter how or where you got it. So to all those sysops out there, I thank you from the bottom of my heart for the education. I've learned a lot, and I've had a wonderful time with you all.

So, when a board changes policy, or when a new one opens up, remember to read the rules and live by them. And always, always, always remember to say "Thank you."

It's their system, and without them that expensive modem of yours would just be another paperweight.

So Ya Wanna be a SysOp?

Observations by the Former Sysop of Gizmo's Atari BBS

Gizmo

Currently Residing at Happy Meadows Sanitarium

So ya wanna be a SysOp? Maybe you should know a few things first, though. Let me see, what were the most fun things I ever encountered? How much can you start a BBS on? What are the best BBS programs?

Getting Started

Let's start with the basics. First of all, you need to purchase that *super* system to run this BBS with. Let's assume you already have the computer, disk drive and monitor, but you need that monster hard drive all those files will live on and a modem to send them with.

After much soul searching, you decide to splurge and buy it...after a quick trip to the Loan Officer. He/she looks you in the eye and sez "Hey, You ain't gonna do anything *perverted* with this money are you...like *spend* it?"

You call the El Cheapo mail order house (which, by the way, is in Mexico), and order the system. Then you wait...wait...wait...as you nearly die from exposure to the elements waiting for UPS.

Suddenly, you get your system in the mail (Odd...you don't recall asking for 9th class mail). Oh well, all is well, as you have it in your possesion now, and *no one can stop you!*

Now you have a computer, monitor, disk drive, hard drive, modem and *no BBS program!*

There are many BBS programs available for the 8bit and a decent number for the ST, and selecting the right one is like taking a trip on the Starship Enterprise...exploring strange new worlds, etc.

Let's beam down to the land of the 8bit BBS! You have F.O.R.E.M., BBCS (lots of versions that, as I recall, were all crashable by sneezing while in the same galaxy with them), BBS Express (regular and Pro!), Carina BBS, AMIS, Supra BBS, B.O.S.S., BBS 1.0 and 2.0 (and possibly more), OASIS...and the list goes on...and on. So, using that analytical mind of yours, you compare price, features, the pretty colors on the package. Easy choice!

Aha! What? You find the BBS program you want isn't compatible with your current version of DOS? Time to get the best (remember, this is for the 8bit systems). You order SpartaDos and wait another week for the varmit to arrive. (Meanwhile, you have told your friends you are starting a BBS, and they are constantly calling and asking *"Is it up yet?"*).

Time to move on...SpartaDos arrives! Hokay. Now it's time to actually work on that BBS...customizing the menus, setting up mail areas, calling Tokyo to get the latest version of the ever popular online game "Godzilla Wars," creating your logon screens, etc., etc., etc.

Up and Running!?

A couple months after you've started, it's time to *beta* test the beast. You call some guys and say "Hey! I just want you to call and look around the BBS and see how it does. OK?"

They call...and it never fails... they spend 3 hours downloading your test DL files! (Get *off*, you crumb!) It's 4 AM and you want to get some sleep, so you (Ooooops!) test the hangup feature.

By now, you're being verbally threatened by your Mom/Dad/Fiancee/Girlfriend/Dog for being on that $#!% computer for two solid months and not doing anything else!

Attack of the BBS

"Things will change now," you say to yourself, "cause I'm done! It's all self-sufficient!" (Little do you realize you have created a monster that resembles a junkyard in your computer room but is, in reality, the Frankenstein monster!).

Waking up one night, you see someone has *crashed* the system. Arrrgghh. Wait! You see, through the haze in the room, an *outline* of a supernatural being! It's a ghost! He's the scum responsible for all these crashes! You can barely make out the figure, and you suddenly realize who it is. Odd..that guy was wasted years ago on TV. What was the guy's name? Gofer? Goner?

Shortly, you remember who he is and finally understand why *all* SysOps are a little crazy...because a little known fact about BBS programs is that *each and every one* has a ghost and his name is *Gomer!* He's responsible for the lost user IDs, deleted messages, missing UL credits (heh heh), scrambled files and just about *everything* else that can go wrong! See? It's not my fault, it was *him!*

Wait! Stop! I don't *want* to go to the padded room yet! Aaarrgh!

Next issue, read Gizmo's next article: Why SysOps Are...or, 1001 Ways to Perform a Self-Lobotomy with a Rubber Herring.

BEST ELECTRONICS
New Product Release

ST/MEGA Compatible Mouse

Features:

- Opto-Mechanical Design for Maximum User Sensitivity
- Ergonomical Design For Optimum User Comfort
- High Resolution Photo tracking of 200 Pulses per inch
- Replaceable Teflon wear pads (feet)
- Teflon rollers on the steel photo optic interrupter shafts for maximum smooth operation and ease of maintenance/cleaning
- FCC certified to comply within the limits for a Class B computing device
- Full ST/MEGA owner support with replacement parts
- Compatible with 8-bit GEM operating systems
- Model CBM1 Mouse - Suggested retail of $49.95

Now you have a second choice for mice you can use on your Atari ST/Mega* computer system! You will find because of its unique shape The Best Mouse can be used for many hours of uninterrupted computing work with little or no fatigue. Most Atari owners who have used The Best Mouse agree, they would not switch back. See your local Atari dealer for your free TEST RIDE of this new premium mouse today or contact:

Atari Writer+ VIII

For Those Who Don't Want to Read the Book

Jimmy Boyce (CACE)

Well gang, let's look at what we have covered to date.

We talked about the MAIN MENU and most of what it is about. The text screen was covered to a fair thee well.

Then, there are the error messages you can receive that are not in the book...such as STRING TOO LONG. This thing will drive you nuts... well, it drove me nuts. It sometimes occurs when you type a string of letters, numbers and/or spaces for a long length without a carriage return, but this doesn't happen very often. (Wouldn't you know I just tried it in order to give you some idea of how many bytes were required, and it would not work!)

Usually this happens when I am trying to put a graph together on AW+. I get STRING TOO LONG when I use [OPTION][P] to see what the graph looks like before I print it. Another way to keep this from happening to you is to make sure that you end your file with a [RETURN].

Of course you remember that, when you get stuck and all else fails, striking the good ole [ESC] key at least gets you back to the MAIN MENU.

Setting Paragraphs

Then there is the bit about setting up for paragraph indentation. You forgot? OK, here it is by the keystrokes: [ESC] = main menu, [G] = global format, [I] = paragraph indentation, type in the number for the amount of spaces you wish to have for your paragraph indentation. Next, [RETURN] and [ESC], which gets you back to the MAIN MENU. Then, you can strike [E] or [BREAK] to get back to your typing of the next great novel (since the first one didn't pan out).

Now, when you wish to indent for a paragraph, all you do is hold down the [CONTROL] key and strike the letter [P]. It will look like a funny P on the screen and will not print out, but it will leave the required number of spaces for the indentation.

Moving On

I think we have edited this thing from one end to the other. Remember, when you are deleting something that it is not lost. You can retrieve it by pressing [SHIFT] and [INSERT]. For you folks with two disk drives and for those of you who put write protect override switches on your drives—remember where the disk is at that you wish to format. *You could wipe out your program disk!!!*

Another little thing to remember whenever you save a file in ASCII ([CONTROL] [S])...leave out all of your printer control commands. Usually, the main reason for saving in ASCII is to send it to a different type of computer via modem. All those control characters mess up the file for the recipient of your hard work, and then they have to get rid of the gobbledygook you sent them.

On headers, footers and page numbering, all I can say is that some printers do it and some don't. I have no vague notion why. The same logic applies to subscripts and superscripts and the book's directions for using them. Some printers do 'em and some don't, and that is why they are in the type font section of your custom printer driver.

What about chaining files? I cannot remember if I covered that or not but here goes: Let's say you have several small files (chapters) you want to print as one long file (the great American novel).

At the end of each small file, type in the following (in capital letters): [CONTROL][V] D1:FILENAME [RETURN], where D1 equals the drive and FILENAME equals the name of the next file to be printed. This way, you control what sequence those short files will be printed in.

PAGE EJECT is another handy item. [CONTROL][E] [RETURN] will end a page and continue printing on the next page.

TAB SETTING is a nice function, especially for writing columns of things, like numbers. Pressing the [TAB] key moves the cursor from arrow to arrow (those little pointy things in the lower screen). Look at what happens when you depress and hold the [CONTROL] key and then tap the [TAB] key. All the little arrows went away, and a message (TABS CLEARED) was displayed until you stroked the next key.

Now you have no tabs set, and when you next happen to strike the [TAB] key, it blows away all your work. Naah, just kidding...it just repeats the "tabs cleared" message.

At this point, all the arrows are gone and you will want to set up your own tabs. Just place the cursor where you want a tab to be and hold down the [SELECT] key and strike the [TAB] key. You will notice an arrow has appeared in the bottom screen, and the message TAB SET is displayed. Continue doing this to set other tabs.

Suppose you goofed, and one arrow is not where you wished after placing several tab settings. Erase them all and start over? Phooey on that idea...try this instead: move the cursor over the offending tab arrow, hold down the [START] key and hit the [TAB] key. The offending arrow is erased, but the rest of the arrows remain. This operation will not affect your text if the cursor is placed on a letter.

Folks, I am going to let you down when it comes to the section on SECTION HEADINGS <pg 42>. I have never used it. I have tried it, but it makes no sense.

Printing a Letter Going to Different People

On to better things...FORM PRINTING <pg 43>. This is a handy thing for people that want to send a form letter for whatever reason. Let's say you want to send a letter to several publishers to get your novel published. Let's face it...to delete and type in a new name and address each time you want to send that letter would be a massive pain in certain lower regions of the anatomy.

So, wherever that address is to appear, type in [OPTION][INSERT]. At this point, a little box with a bent down pointing arrow in it will appear on the screen. When you start printing your letter to your several publishers, AW+ will stop at that command and wait for you to type in that line and hit [RETURN]. If you have several lines to type in, as most addresses have, enter the [OPTION][INSERT] command for each line and hit [RETURN] after typing each line.

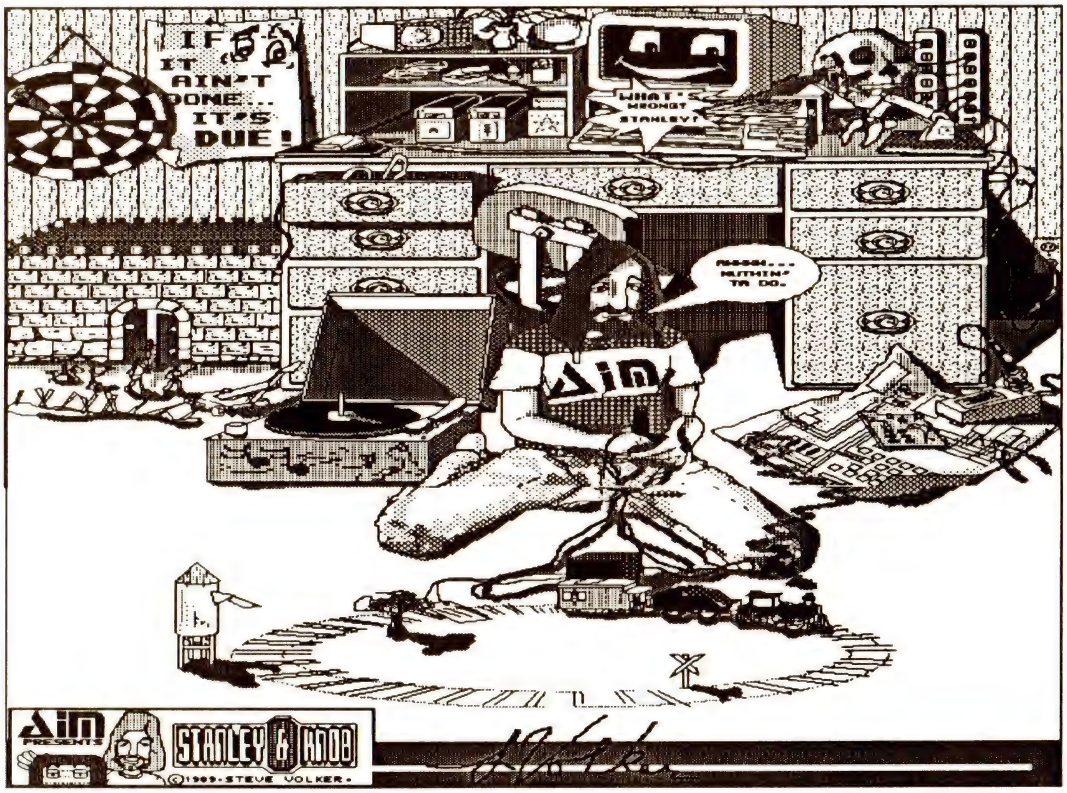
Once you type in all the necessary lines, printing will continue. When AW+ starts printing the second copy, you will go through the same process until you have several letters for several publishers.

Speaking of printing, you can do some special printing codes for jazzing up your hardcopy. (Take a look at your printer's manual if you wish to do something different.)

For example, let's say I want to space my lines only one seventy second of an inch apart. The hexidecimal code for my printer (yours may be different!) is 27,65, and a number to represent the space I want. It would be typed in the following manner: [CONTROL][O][2][7] [CONTROL][O][6][5] [CONTROL][O][1].

Now, that is a lot of keystrokes, but realizing you can do eye catching things will make your work more readable and will be better remembered by the reader.

Well folks, that pretty well takes care of writing, editing, spell checking and printing your bit of literary genius. That leaves us with Mail Merge, AW+'s database portion of the program, and that will be covered next time. Bye for now.



Atari, Where Are You??

Tim Holt (STE-EP)

On Wednesday, March 7, 1990, the column "Your Money's Worth" appeared in the El Paso Herald Post. This column is written by Sylvia Porter, an "expert" at personal finance. Ms. Porter is syndicated out of Los Angeles by the Los Angeles Times Syndicate. (The point is this is a national column.)

The title of this column was "Choosing the Right Computer to Fit Your Needs." I usually do not read Sylvia Porter, but the title peaked my interest. She started out with the usual asking of questions like: "How much should you spend on a home computer?" and "What features are you going to need?" After the formalities, the article got interesting. I quote:

"If you are going to use your home machine for anything more than glorified game playing, one key consideration is choosing between the IBM-PC or Apple Macintosh configuration."

That's it! No choices...just a Mac or IBM. No mention of Amiga or our beloved ST. Our machines were relegated to the role of "glorified game" machines.The article goes on to quote Eric Sternbach, of Microvideo Learning Systems.

"Serious software requires a serious machine...The best software was written for the MACs and PCs, so if you're looking to do some serious work, especially in a 'home office' situation, these are the machines of choice."

Serious software? Wordperfect and Calamus isn't "serious software?" Give me a break!

She goes on to say a basic IBM system will cost about $1000 and a MAC about $2000. (She slips up when she says a Macintosh has yet to be copied/cloned. I'll bet my Spectre GCR she's wrong!)

It really got me upset to see this in a nationally syndicated column. First of all, Ms. Porter, you don't know beans about computers. My 1040 is not a "glorified game machine." Next, you know very little about value, which is funny since you are a personal finance writer. Mac, IBM, the *only* choices? Hardly. My little old Atari ST can run MAC and IBM business software, *and* I'd still have money left over to buy some "serious" Mac games. (I forgot, the Mac isn't a game machine. Sorry.)

Sadly, we Atari users must put up with this prejudice all the time. Atari? No, Sylvia Porter, it is not a game machine. And no, Ms. Porter, you are not a very good financial adviser either.

DRAW

A Screen Drawing Program in GFA BASIC, Part I

Ed Smith (SPACE)

For those just learning GFA BASIC, Draw is a simple program making use of the mouse's movement and buttons. As the mouse is moved and the left mouse button is pressed, a thin line is drawn on the screen using the color value selected by clicking on the desired color box displayed at the top of the screen. In low resolution, up to 16 colors may be selected. To exit, press the right button.

Some techniques of programming included are:

A 1 dimensional array X%(16) is used to store X% (% means integer in GFA BASIC) locations on the TV screen of the 16 color boxes.

Constants W%, H% and D% define the width and height and the distance between boxes.

A FOR NEXT loop is used to plot the boxes. Within this loop, the X%() array is filled so that, for each color, the box xy location is known.

The DO LOOP is the main part of the program. This loop is constantly incrementing I% from 0 to 15 and back to 0, etc.For each value of I%, the color box coordinate Xa% is pulled from the X%() array.

Mouse data X%, Y% and K% (mouse pointer location and button press info) are obtained from GFA BASIC's MouseX, MouseY and MouseK instructions.

The first IF statement determines if the mouse pointer falls within any of the color boxes and if the left button was pressed. If so, a new color value C% is obtained from the GFA Point(x%,y%) instruction.

The second IF instruction states that if the left button is pressed and the pointer is located below the color boxes, then plot a color pixel using the GFA BASIC Plot X%,Y% in color C%.

Finally, the GFA EXIT instruction permits exiting to the desktop if K%=2, right button was pressed.

The listing of the program appear belows. The program will run in any, but is best used in low resolution. This short program does not permit saving screens to disk or varying brush size. In upcoming issues of AIM, we'll add these features to Draw.

After running DRAW.PRG (or whatever you decide to call it), you will notice only 15 color boxes appear onscreen. Don't be fooled. The 16th box is to the left of the leftmost block—in the same color as the background. This color can be used to erase, if you wish.

```
' Drawing program using mouse and mouse buttons
' by E.C. Smith June 23, 1989 for S.P.A.C.E ST SIG
'
Dim X%(16)    ! Array for color box coordinates
Print "DRAW.PRG - Left btn to draw, Rt btn to exit"
W%=10         ! width of color box
H%=10         ! height of color box
D%=8          ! distance between boxes
X1%=19        ! leftmost box position
Y1%=11        ! distance from top of screen
For I%=0 To 15          ! This FOR NEXT loop
  X%=X1%+(W%+D%)*I%     !   plots 16 color
  X%(I%)=X%             !   boxes across
  Color I%              !   the upper portion
  Deffill I%            !   of the screen.
  Pbox X%,Y1%,X%+W%,Y1%+H%
Next I%
Do           ! DO loop to look for left or right mouse button press
  Inc I%       ! increment to next color box
  If I%>15     ! Only 16 boxes possible (0 to 15)
    I%=0
  Endif
  Xa%=X%(I%)   ! Get X% location of color box
  Ya%=Y1%
  K%=Mousek    ! Look for press of mouse button
  X%=Mousex    ! Get location of
  Y%=Mousey    !   mouse on screen
  If X%>Xa% And X%<Xa%+W% And Y%<Ya%+H% And Y%>Ya% And K%=1
    C%=Point(X%,Y%) ! Color box was clicked on, get color value
  Endif
  If K%=1 And Y%>Y1%+H%  ! Left button pressed and pointer not in boxes
    Color C%             ! Set color held in C% and
    Plot X%,Y%           !   plot at location X%,Y%
  Endif
  Exit If K%=2  ! Exit by pressing right button
Loop
End

BRUTE FORCE BASIC #1

Mike Gillie (MACE)

Copyright 1990 by Mike Gillie. Permission granted to reprint as long as a copy of the publication is sent to the author at P.O. Box 23, Southfield MI 48037. Mr. Gillie is SysOp of Cosmic Stomper's BBS—(313) 569-7197.

The premise of Brute Force BASIC is that, with modern personal computers, we can take a "brute force" approach to writing programs.

The new machines are faster and have lots of memory. Most of the books on the BASIC programming language teach "efficiency" techniques. While the code may be "efficient" for the machine, it is not "efficient" for the person.

There are ways we can take advantage of the extra power our new computers have and make our programming tasks much simpler.

In this first installment of "Brute Force BASIC," I submit some code for a simple card shuffling routine. The routine is written in Hi-Soft BASIC from MichTron. It is similar to Microsoft Quick BASIC.

In BASIC, there is a concept called "strings." A string is a sequence of alphanumeric characters. In the BASIC code:

A$ = "HELLO"

A$ is a variable (a named area in computer memory) and the word "HELLO" is the string of characters stored there. Strings are a useful way to store information. However, if a program is very involved and uses a lot of strings, there is a process called "garbage collection" that reclaims memory lost to string variables that were deleted.

On the 8bit computers the garbage collection problem became a real nuisance. In the middle of a program, the computer would seem to freeze while doing a garbage collection. Consequently, programmers would avoid using a string as a solution. They would devise a strategy using numbers instead.

The new computers have so much memory it is unlikely you will use up the memory and force a garbage collection. The Hi-Soft BASIC manual says Hi-Soft can do a 350K garbage collection in two seconds.

The card shuffling routine I have included uses "strings." For a normal card deck, it starts with a 104 character string. A random number generator picks which card to deal. The string is split into pieces on each side of the card picked. The card it picked is removed and the two pieces are put back together to represent the "deck" of cards.

The program has been written in a structured fashion. It is meant to be used as a skeleton for your favorite card game. I hope the program will help you think of ways to make your programming easier.

```

NEW

DC DESKTOP

"The GEM Desktop just got better"

Enhance, don't replace!

- Place icons directly onto the desktop
- Display unique icons for all files and drives
- Store frequently used files and programs in our exclusive CABINET virtual disk drive
- Display NEOchrome, Degas, Spectrum and other pictures with no Install Application
- View files at the desktop with an enhanced SHOW routine (with mouse control!)
- Replace the desktop with a pattern or picture
- Recover files from the trash
- Printer spooler and icon (to drag files to)
- Works in all resolutions
- Drop down menu commands via keystrokes
- Load different desktops with a keystroke
- Comes with Quick ST 2.0 demo, a command line interface, bootup selector, icon editor
- Special hooks let RAM resident programs be called with one key from DC Desktop
- Completely modular and memory resident – only use what you want!
- Much more

Spell Checker for TextPro 4.5 Configured for SpartaDOS 3.2

Rick Reaser (P3ACE)

One of the most requested features for the fabulous 8bit word processor, TextPro, has been a spell checker. This article will explain how you can get an available "off-line" spell checker to work with SpartaDOS 3.2-configured TextPro and my experiences in fulfilling this quest.

My first word processor was Letter Perfect. Letter Perfect is one of the finest word processor available for the 8-bit line. One of the nicest features of Letter Perfect was its built-in spell checker, Spell Perfect. The dictionary could be huge (double density) and the dictionary is arranged by how the words sounded, not alphabetically. So, when you looked up a misspelled word, it gave options that sounded similar or with simple misspellings. Neat.

So what is wrong with Letter Perfect? It uses a non-standard DOS. In order to get a text file into standard Atari DOS format, you have to run a special utility. Of course the utility won't work without the Translator and it won't work with double density.

The second part of this problem is the fact that I bought a hard drive and, of necessity, went with SpartaDOS with its subdirectory feature to keep my 30 Megs under control. Letter Perfect will work on a hard drive, but the file directories rapidly get too long to be useful.

I have a 130XE, 256K MIO, 30 Meg FaST Hard Drive, R-Time 8, SpartaDOS 3.2 and Dual Double Density Percom Disk Drives.

In the Feb/Mar issue of Antic I spied "Spell Magic" (APO144) for $19.95 in the "Grab Bag." It "checks documents generated by other word processing programs." When I got the disk and read the documentation, there appeared to be a few roadblocks to my plan. It said, "1 or 2 disk drives running Atari DOS 2.0S or 2.5." It was time to do some experimentation.

First, I attempted to get the program to run with SpartaDOS. I copied INSTALL, AUTORUN.SYS, SPELL.OBJ and HLPFIL.SP from the Spell Magic disk to a SpartaDOS formatted disk. INSTALL is a BASIC program which simply records the default drives for the main dictionary and the personal dictionary. No problem here. After running INSTALL, much to my relief, I found that all drives are supported, not just Drives 1 and 2..

AUTORUN.SYS wouldn't work with the SpartaDOS formatted disk. I couldn't get a STARTUP. BAT to work either. However, SPELL.OBJ will binary load directly from the Command Line and works just fine. HLPFIL.SP, the Help Files, also are properly accessed by SPELL.OBJ.

Most importantly, the command line in Spell Magic supports directory paths and drives other than Drive 1. The Personal Dictionary can be located in a subdirectory as long at that subdirectory is the current working directory. The dictionaries also are accessed properly when the program runs with SpartaDOS.

I then moved all the files, except the main dictionary itself to the hard drive.

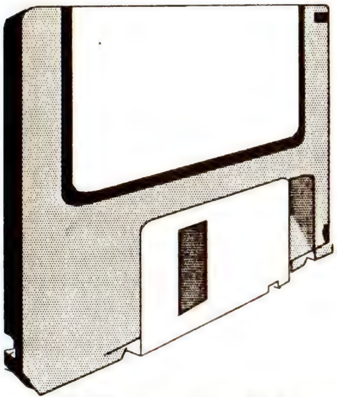
Running the main dictionary off a floppy disk turns out to be very slow. So, I decided to create a special "one disk" partition on the hard drive to store the dictionary.

I made two "one disk" 720 sector partitions for good measure. You have to use SCOPY to copy the main dictionary disk since a sector copy is required to get sector 0 copied.

I now have a resident spell checker that works on SpartaDOS 3.2 configured TextPro files. I simply exit TextPro and run a short batch file that changes the working directory so the Help Files and Personal Dictionary can be accessed properly and loads Spell Magic. I then check my spelling with Spell Magic. After a *system reset,* I reload TextPro. With a hard drive, TextPro only takes seconds to load.

1. Buy Spell Magic
2. Copy INSTALL, SPELL.OBJ and HLPFIL.SP to a SpartaDOS formatted disk or create a 720 sector partition on the hard drive and sector copy the Main Dictionary to the new partition
5. Run INSTALL to establish the drive set up for Main and Personal Dictionaries
6. Make sure Time/Date display is disabled
7. Make sure you have the proper working directory selected.
8. Run SPELL.OBJ from the SpartaDOS command line.

Spell Magic is not the best spell checker around. The dictionary could be better organized. The user interface could be better. The ultimate solution would be to adapt Spell Perfect or possibly Paper Clip's Spell Pack to SpartaDOS. If you have any questions please contact me on GEnie (ID: R.REASERJR1).



AIM Disk of the Month

All files on this disk are self-extracting LZH archives. Simply copy the files on this disk to floppies with plenty of free space (or a hard drive) and double-click to automatically extract.

Readers can purchase this disk by subscribing to the AIM Disk of the Month, contacting one of the AIM participating clubs or by sending $6/disk DS or $7/disk SS to Unicorn Publications, 3487 Braeburn Circle, Ann Arbor, MI 48108. Please specify the May 1990 disk when ordering.

ALMANAC.TOS—Almanac, based on articles in Weather Wise magazine. The program derives various parameters of the sun and moon including rise, set, etc on a day by day basis. It also gives dates of equinoxes, solstices and Easter. Medium rez, COLOR.

ARCLZH21.TOS—Version 2.1 of ARC2LZH automates the conversion of ARC to LZH files. This version adds the ability to convert from LZH to ARC, retain extracted file, get a verbose or short listing of ARC and LZH files, test ARCs and LZHs for integrity and much more. A major upgrade!

BODYSHOP.TOS—Body Shop is a program to help kids (of all ages) learn human anatomy. Allows for interactive learning of the skeletal system and organs, using common or technical terms. Low rez color ONLY.

BUBLEM.TOS—This game has three unique arcade games packed in one. First, you start in a bubble feeding a monster (lunar style screen), next you're in caverns fighting guards and lasers (much like bezerk) and finally you're in a cavern trying to avoid fally rocks and rising lava to get the energy crystals. Fast action and smooth graphics.

CHANGESZ.TOS—This program will change a disk's cluster size from two sectors to one, freeing up nearly 10K per disk. A great program if you're short on disk space!

CV2IMG12.TOS—Version 1.2 of Convert to IMG, a Shareware picture conversion program that converts "almost every ST paint program format" to IMG or DEGAS high rez pics. Images can be rotated, cropped and even edited.

GRAMSLAM.TOS—GramSlam examines documents for wordy phrases, grammatical errors and misused or confused words...and gives you suggestions on how to fix them. Can read files directly from most word processors and runs in medium or high rez. PD demo version.

HAGTRM33.TOS—HagTerm is a Shareware terminal program. Features include a script language more powerful than in Flash, a Record feature, multiple dialing and chain dialing, a nice editor, capture buffers, links to LZH and Dcopy, and a link to Shadow. Medium rez color.

HEROII.TOS—Hero II is a one or two player graphic dungeon adventure game similar to Gauntlet, but MUCH more complex. Features hundreds of items, spells, and creatures. This is a combined shareware/demo release; it is a fully playable game in itself, but will only load the dungeon included in this file. Color ONLY, low rez recommended. This is one AWESOME game!

LAZERBAL.TOS—Lazerball is a Breakout-style game that uses a 'laser beam' instead of a ball and bumpers like a pinball machine. Very clean user interface and fun to play, especially for those who can't get enough of the classics. Low rez COLOR.

MATCH3.TOS—A two-player, two round memory game, similar to Concentration. Designed for kids age 5 to 10. Low rez color ONLY.

MIDMAZED.TOS—The "official" MIDI Maze editor of Hybrid Arts Germany. Creating those Happy Face mazes has never been easier!

MODMFUN.TOS—Modem Fun gives you two games you can play via modem or use as online BBS games. Play a nice, friendly game of Black Jack...or fight it out to the death in Modem Knights. The game only needs to be run from one computer in the connection. Color or Mono.

MOPUZZLE.TOS—Moving Puzzle direct from Germany. You attempt to put the pieces of the picture back together...while the picture scrolls on your screen. MONO only. Press HELP while in this program for complete docs.

For 520ST, 1040ST, 520STfm and MEGA

MEMORY:

Expand your St's memory to ONE Megabyte, TWO and ONE-HALF Megabytes or even FOUR Megabytes with tech-specialities plug-in memory modules. All memory boards fit under the R/F shield. The CPU is completely available for any future enhancements (blitter, coprocessors, PC-emulators, speedup kits etc.). No soldering is required.

520ST modules use 256K DRAMs for upgrades to 1 MB and 1 Megabit DIPs for 2-1/2 and 4 MB upgrades. All boards are fully socketed and the expandable boards can be configured for either 256K or 1 Mb chips. This means that you can start by upgrading your 520 to one Megabyte and later move up to either 2.5 or even 4 Megabytes--the maximum for any ST, even the Mega! Installation is completely solder-free. Comes with detailed illustrated instructions and a one (1) year limited warranty.

expandable boards:

520A	Socketed, no RAM	$129.
520B	1 MB, socketed	$179.
520C	2.5 MB, socketed	$297.
520D	4MB	$465.

Blitter Upgrade:

520STfm/1040, new motherboard, Installed	$ 99.
Combined with TOS 1.4, Installed	$199.

Upgrade your 1040ST or 520STfm just as easily!

Send us your 520STfm and we will upgrade it to ONE Megabyte by installing a second bank of memory, easily removable in case you want to upgrade again. Complete with installation for only $149 plus shipping.

Or install one of our 1040 (fits 520STfm too) memory boards and upgrade your ST to 2-1/2 or even 4 Megabytes. There are nowadays four (4) different versions of the 1040/520 motherboards around. If you bought your ST less than 2 years ago, you need to check your machine, detailed info in our catalog.

Version "0" fits all 'old style" 1040/520 with 6 ROM chips under the power supply. Limited space above the 1040 mother board prohibits the use of conventional sockets in one bank. Optional "ZERO Height" sockets allow you to have this bank socketed too, so you can plug in or exchange 1 Mbit chips. The "ZERO-Height" socket kit is also available separately so you can install it at any time!

1040A	1 Bank sockets, no RAM	$110.
1040B	Fully socketed, no RAM	$149.
1040C	2.5 MB + 1 bank sockets	$317.
1040D	4 MB, 32 1 Mb DRAM installed	$485.

Version "1" fits all 1040/520 with the memory chips under the power supply. Available room prohibited the use of "DIP" packaged chips. The main board is only 6.4" x 2.9" and needs "ZIP" packaged 1 Mb x 1 DRAM. It fits in the area under the power supply with the shield installed and stays 0.5" away from the CPU to allow attachment of other upgrades. More details in our catalog!

1040B1A	1 bank socketed, no RAM	$149.
1040B1	Completely socketed, no RAM	$189.
1040C1	2.5MB, no sockets	$297.
1040C1A	2MB installed, 2nd bank socketed	$317.
1040D1	4 MB installed	$495.

Upgrades for version "2" and "3" of the 1040/520 motherboard also available! Prices same as above.

All upgrades can be equipped with a Clock Option on the Memory Board, comes with software, only $30.
Stand-alone CLOCK, please specify 520/1040 and your version of the motherboard $38.

EXPANDABLE Hard Drive Kits

come complete with software and all parts needed to get the system operational, 1 year ltd. warranty. There are right now three different case styles available:

1. Tower Type, 10" wide x 6.8" high x 15" deep, if sitting on your desk with monitor on top , with full SCSI interface and 'DMA-through'

-150 W PC power supply w/fan

-room for up to 5 half height hard drives or combination full/half height

-mounts on floor, under desk or on desktop

-can power up 520ST and external floppy drives.

-optional delay circuit for CPU allows fully automatic power-up!

T0S	No Drive, install your own emb. SCSI drive	$265.
T0	No Drive, MFM controller	$299.
T0R	No Drive, RLL controller	$475.

Complete with drive mechanism:

10 MB	$485.	20 MB	$565.	30 MB	$695.
40 MB	$745	64 MB	$795	85 MB	$895.

2. Monitor Style, 13.25" wide (same as MEGA) x 15" deep x 3.8" high with single port host adapter

-ready for up to three 1/2 ht or 1 each full/half ht. hard/tape/floppy drives

-55 W power supply with 115V fan

-can be placed under monitor or at side of your desk

M0S	No Drive, install your own emb. SCSI drive	$179.
M0	No Drive, MFM controller	$295.
M0R	No Drive, RLL controller	$365.

Complete with drive mechanism:

10 MB	$395.	20 MB	*$395.	30 MB	$545.
40 MB	$685.	49 MB	*$625.	64 MB	$795.
85 MB	*$795.				

3. Desktop Style, 4.5" wide x 6" high x 13" deep with single port host adapter

-ready for 2 1/2 height or 1 full height drive

-55 W power supply

-optional fan available (add $18)

D0S	No Drive, install your own emb. SCSI drive	$149.
D0	No Drive, MFM controller	$279.
D0R	No Drive, RLL controller	$349.

10 MB	$355.	20 MB	*$369.	30 MB	$525.
40 MB	$695	49 MB	*$595.	64 MB	$725.
85 MB	*$745.				

ATARI MEGAFILE:

Replace the 20 MB drive in your MEGAFILE 20 with a 42 MB 40 ms autoparking drive. Comes with a 1 year warranty on the drive mechanism. Exchange price including installation with your drive in good condition: $260., $369. outright.

Gain 65 MB of high speed (22ms av., 5 ms track to track) storage. Exchange with installation: $360., outright $449.

SUPRA 20/30 and ASTRA 20 MB:

Upgrade to 49 MB high speed storage with auto parking, 500 K/s transfer rate. With installation and transfer of your existing files: $379.

Host adapter cards are separately available and come with software and DMA cable or additionally with case and 6' round shielded SCSI cable with embedded power supply lines. Prices after the "/" are for version with case and cable. 1 port $79/119 full SCSI $119/159

CPU CASES:

Upgrade 520/1040 to the MEGA standard.

- Separate CPU and keyboard, gain space for three each 3.5"/5.25" floppy, hard or tape drives in two separate drive bays. Full height drives will also fit.
- A 150 W power supply with fan provides power for all possible combinations and keeps everything cool
- Reset button on keyboard
- A delay circuit allows fully automatic HD power-up.
- Monitor can be switched on/off with CPU, using an optional cable.
- Our kit uses a steel case 18" wide x 12" deep x 8" high, easily strong enough to support a high resolution monitor.
- The original keyboard gets a low profile enclosure, 18.7" wide x 7" deep x 2" high, consisting of a metal bottom part and the modified plastic top of the original case, supplied as exchange or you do the modification your self. The kit comes preassembled and installs without soldering. All mounting kits, wire harnesses and connectors to modify a standard machine are included.

Complete kit, please specify your machine type $295

OPTIONS:

Hard Drive kits for the CPU case consist of host adapter/controller with support bracket if necessary, DC harness and control cabling and might also be used with customer supplied case/power supplies. Kits with controller cards come with connections to two 5.25" drives. Kits for embedded SCSI drives come with one SCSI connector. Additional connectors $8. installed.

C0S	No Drive, install your own emb. SCSI drive	$99.
C0	No Drive, MFM controller	
C0R	No Drive, RLL controller	$299.

20 MB	*$295.	30 MB	$465.	40 MB	$595.
49 MB	*$525.	64 MB	$725.	85 MB	*$685.

Cable sets to connect additional 3.5"/5.25" floppies also available, please see catalog.

KEYBOARD KITS:

We noticed quite a lot of interest for our keyboard parts used in the CPU CASE. Keyboard kits consisting of metal bottom case, connecting cable with reset and modified plastic tops on an exchange basis are available separately for $69., please specify your machine type.

Space limitations don't allow a more detailed descriptions. For complete 24 page catalog contact:

tech-specialities Co.
909 Crosstimbers
Houston, TX 77022
(713)691-4527/8
FAX: (713)691-7009

We ship COD ($3) or prepaid (5% discount), sorry no credit cards! Add the following amounts for shipping and handling:

memory upgrades and host adapters, 1st unit $5, add. units	$2
Hard Drive kits/CPU cases without drive	$10/$20
with drive - special shock resistant packaging needed	$20/30

Texas residents and willcall customers add 8% state sales tax.

Above prices are correct on 1-19-90. Prices "*" are PREPAY SPECIALS, no further discount available.

520ST, 1040ST, 520STfm, MEGA and MEGAFILE are trademarks of ATARI Corp.

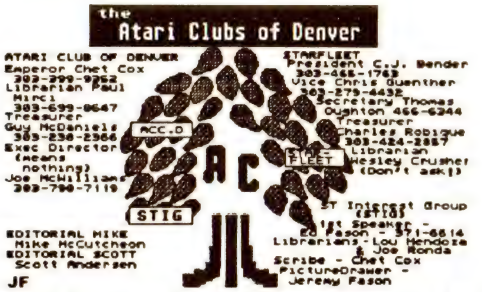
The Atari Boosters League East (ABLE) is one of the more persistent Atari users clubs, meeting monthly with enthusiasts since the summer of 1981. ABLE provides user support for all Atari computers except the Portfolio and PC line. The purpose of ABLE is to advance the knowledge of the membership through mutual education and the interchange of ideas.

General meetings are held in the Palm Magnolia Room at the Orlando Public Library, 101 East Central Blvd., on the last Sunday of each month from 1:30 to 4:30 P.M. ST SIG special interest meetings take place in Room 134 at the Bush Science Center on the Rollins College campus on the second Wednesday of each month from 7 to 9:30 P.M. Ad hoc meetings are scheduled as needed to present speakers, conduct special workshops, provide tutorial seminars and for parties. We assist members in service and software problems, as well as arrange group purchases and discounts.

Information is disseminated to members through our newsletter, the ABLE Atari Information Digest (ABLE AID). A package of twelve selected previous issues of ABLE AID higlighting the "super eight" computers is available for $10 ($5 for members). In 1990, ABLE began participating with a consortium of Atari User Groups in helping produce the Atari Interface Magazine, a quality monthly publication with obvious broader scope and greater depth of the issues. There is still a place for local ABLE AID information and our local authors will have an opportunity for national exposure.

We have also established an ABLE Program Library of User Software (ABLE PLUS), consisting of several thousand files for the super eight and sweet sixteen computers. This library contains public domain programs contributed by ABLE members, as well as other computer clubs and users, to allow the sharing of user-written software. A computer specific listing is available to non-members for $3 and disks are available to non-members for $6 each.

ABLE accepts written correspondence at P.O. Box 1172, Winter Park, FL 32790, while membership inquiries are handled by Hadley Nelson, President, (407) 671-0317 or Milton Eager, Treasurer, (407) 834-0581. Annual dues are $12.



(The Atari Computer Club of Denver meets in April and decides to build a new wing to the Aurora Library)

Since March's meeting had been blizzarded out, we had a LOT to discuss this time!

The Aurora Library, where we'd been meeting for free for over a decade, has been hurt by budget cuts on the federal, state and local levels. They have started charging groups to use their rooms. The charge, they said, could be preempted by a donation to their business wing. They had requested $100 for the rest of 1990. Our big-hearted group suggested we double that -- and the Library is now adding the Club's name to the wing's plaque. We have also been talking with the Library People about that new business wing. They need computers in it -- and we happen to know of computers *much cheaper* than those expensive MacIntoshes and IBMs they were saving for. Heh!

Ol' Chet promised to bring the Revolution Handbook for purusal next time, since there wasn't time this meeting; then he introduced three spectators -- two of which joined and the third of which said he'd ask his wife's permission. ("What?? You want to spend $15 a year for a *game machine* club?") And SuperFrog FunSpeller was demonstrated, with many a fanfare and burst of applause.

Paul said the club's eight-bit library was in better than ever shape since nothing had been added in months.

Guy keeps right on telling us that our treasury is healthier than ever, muchly due to the BINGO games on Sunday. We still need volunteers to work the BINGO games.

Mike McCutcheon demonstrated BobTerm, a new terminal program. BobTerm (Can you use it if your name's not Bob?) seems to combine the power of Amodem with the simplicity of Express, but you'd have to see the demo to make up your own mind.

Extra copies of A.I.M. were distributed to new members, and to one member who'd joined too late for last month's mailing. As usual, there were lots of expressions of "OOOO" and "AHHHHH" as we salivated over the great articles and the Darned Swell printing. But you're reading this in the zine, so you know what I'm talkin' about. (HEY! Stop drooling on this article!)

We'll be using the BIG ceiling projector for our demonstrations from now on, so get used to meetings with the lights off. Coffee was served and spilled, but the library took all their snacks out of the building when they saw us coming. (*sniff*)

Next Meeting: The Swap Meet (No foolin' this time!)

Starfleet Meeting Minutes -- April 13, 1990

Officers present: Guenther, Robique, Oughton

The newsletters were late in April because of problems with a mixup over the back cover ad from ICD.

Next month (May) we will be meeting in another place. Our current meeting place, Denny's, said we do not bring in enough business to keep meeting there. Our president will find another meeting place and he and Mike will contact our members. Several places were suggested: meeting in a bank, a library or a local recreation center.

The Atari Clubs of Denver have a BBS that sometimes works, but as time goes on it is getting more reliable. Its number is (303) 699-2673. We currently don't have much disk space for downloads, but it is very useful for EMAIL and ACoD news.

The Starfleet treasury currently has (as of April 2nd) $552.82. There was some talk of buying a joystick, again.

After these discussions, we set up the club's computer system and started to demonstrate programs. While the hardware was being set up one member passed around the documentation for Daisy Dot III. This impressive program, written by a local Denver resident, is the latest in the Daisy Dot line. It does both right and left justification, word wrap, it will change fonts in mid line, it allows variable sizes of fonts, and looks as good as some laser printer output. All this from a nine pin printer. The member had just gotten his copy, and didn't have time to produce any output for our review. The samples included with the documentation were very good though.

The first program we tried to demonstrate is Planetarium from Atari, but it appears the club system has a failure in either the drive or the system as this program wouldn't load. We then tried to use the Happy drive to copy the disk, but the copy also failed. We will try to demonstrate this again next month with different equipment.

Kennedy Approach had similar problems during its first two loads, with a HARDWARE FAILURE message printed on the screen. Another copy (without copy protection) did load and run. Kennedy Approach is a simulation of the operations an air traffic controller does to keep the airways safe for the traveling public. It has a nice digitized voice that says the commands to the aircraft and they respond with "ROGER." The airports are simplified to make for slightly easier play. Not to say that level five is easy. There are five levels. As you successfully complete a level, you advance to the next level, which is a little harder. Each level requires you to control traffic for about 10 minutes. I have never made it to level 5 starting at anything less than level 5.

The rest of the meeting was spent playing an Infocom game "The Leather Goddesses of Phobos." Some members did not appear to have ever played an Infocom text adventure and once started, few people wanted to quit and end the meeting.

The room we were in started to fill, so we disassembled our equipment and said fairwell to Denny's.

STIGS & STONES

Th' April STig Meetin' by good ol' Chet

The STig met on 17 April, two days in the future. Now, how do you expect me to report on an event which hasn't happened yet? Check this space next month to see if:

1) We were snowed out,
2) I demonstrated STOS Trek,
3) Joe Ronda had a BUNCH of new games to show, and/or
4) Atari imploded while we weren't paying attention.

Jeep!

A.C.C.T.

Atari Computer Club of Toledo club members receive, as part of their dues, Atari Interface Magazine and access to the 8-bit and ST public domain software libraries. Disks are $2/8-bit and $3/ST, non-members may purchase disks at a slightly higher cost.

A.C.C.T. meets on the second Monday of the month from 7-9 pm at Bassett's Health Foods, 3301 West Central Avenue (Westgate Shopping Center), Toledo, Ohio. 8-BIT SIG (yes, I said 8-bit) held monthly at the home of Jim Herzberg. Dates and times announced at meeting. ST SIG held monthly at the home of David & Brenda Micka. Dates and times announced at meeting.

A.C.C.T. may be contacted at 6107 Greenwycke Lane, Monroe, MI 48161, by calling Dave Micka at 313-241-1157 or Michael Justice at 419-242-7797 or via Fantasy Island BBS.

President:	David Micka	313-241-1157
VP & 8-Bit Librarian:	Michael Justice	419-242-7797
Secretary:	Sharon Hill	419-423-2135
Treasurer:	Rose Taylor	
ST Librarian:	Brenda Micka	313-241-1157
Fantasy Island BBS (3/12/2400)		419-691-6459

ATARI FEDERATION

Regular meetings are held at the VAFB Federal Credit Union, Vandenberg Village, Califorina on the first Monday of every month at 7:00 P.M. Dues are $10 for individual or $15 for family membership. The Atari Federation maintains a PD software library for both 8-bit and ST computers.

SECRETARY'S REPORT by Brian Pendergrass

The 2 April 1990 meeting was short and sweet, there doesn't seem to be too much going on this month. Topics which were discussed were: Atari has laid off 15% of its work force, they say its only temporary but others aren't so sure. Atari has stated they will support no more than one show a month so that they and vendors aren't over extended. Speaking of shows, Atari will show their new computer with the 68030 processor at the World of Atari show in Aneheim (which will be over when you read this) however, it is not in production yet. The Glendale show is still on (knock on wood) and scheduled for 15/16 September. A big show was held in Australia and several new products were shown including: Stacy, the TT, the transputor and the CD ROM. GEnie is now available in Europe, but it is a tad expensive. The phone company in Michigan is trying to close down a BBS because he refused to pay business rates for his 16 telephone lines.

After the break Space Ace and GFA Putmaker were demonstrated. A drawing was held for the 8-bit people with the winner getting an Antic magazine and disk. Two pizza certificates were raffled off courtesy of Dominoes Pizza and Gus Maio.

Thats it for this month, I hope everyone has (had) fun at Anaheim.

Birmingham Atari Computer Enthusiasts

The Birmingham Atari Computer Enthusiasts of Birmingham, Alabama meets at the Vestavia Hills Library downstairs at 7:00 p.m. the second Monday of each month. Membership dues are $20 for a regular membership,and $35 for a professional level membership.

Mark Bodenhausen	President
James Gilreath	Vice President
Brenda Bodenhausen	Secretary
Steve Yates	Treasurer

For membership information, contact Steve Yates, 1005 Candy Mountain Road, Birmingham, Alabama 35216.

Our BBS is at (205) 833-5012. This is both a voice and data line. To access the BBS, press 1 after the first ring. For voice, press 2. After 6 rings, 2 is automatically selected.

B.R.A.C.E.

Bluegrass Region Atari Computer Enthusiasts

President	Hal Nason	(606) 269-8989
Vice President	Greg Parsons	
Secretary	Chris Dotson	
Treasurer	Vacant	
Librarian	Chris Dotson	
BBS Sysop	Rick Bradfield	

B.R.A.C.E. (Bluegrass Region Atari Computer Enthusiasts) meets the third Sunday of each month from 1 - 4 PM. The site of the meeting is undetermined at this time. The officers will be in contact with you in the future to advise you of the meeting site. Current membership dues are $15 per year for an individual membership, $20 per year for a family membership and $10 per year for an associate membership. (An associate membership includes receiving the monthly newsletter, but excludes the use of the library.) Members of B.R.A.C.E. have extra downloading privileges on The Abyss BBS (606) 223-2782.

BRAG ST

Buffalo Region Atari Group for ST's

BRAG ST was founded in 1987 to serve Atari ST owners in the Western New York area. General Membership Meetings are held on the third Thursday of the month at Erie Community College North Campus, Room S-105 in the Student Center. Setup begins at 7:00 PM; Meeting starts 7:30 PM. The Board of Directors meet on the the first Tuesday of the month at the Your Host Restaurant, Harlem at Sheridan at 7:30 PM. All are welcome to attend. Piracy will not be tolerated at any BRAG ST function.

BRAG ST, PO Box 1035, Buffalo, New York, 14225

Chairman	Mark Pierro	(716) 691-7844
Vice Chairman	Ken Malark	(716) 683-1272
Finances	Gerry Genson	(716) 877-1328
Records	Joe Rogozinski	(716) 877-8378
Disk Librarian	Carl Barron	(716) 885-4325
Public Relations	Harvel Hontz	(716) 689-8074
Graphics	Dick Kersting	(716) 839-0494

May BRAG ST Club News

Our May meeting will begin with the usual club business and then move to "Beginner's Questions." This is the time to ask that question bothering you! Dick Kersting will continue our "Cyber Series" demonstrations by showing us what CyberPaint is all about. Our next demo will be DC DeskTop (if my copy arrives in time!). The raffle for May will be Migraph's Lablemaster program.

Upcoming meetings will include a MIDI demonstration by Don Missel and telecommunications topics. Your Board of Directors have been updating the BRAG ST PD/Shareware library. Look for a catalog of what's available at the meeting. Don't forget, the AIM disk of the month is also available at the meetings or by mail.

The Second Canadian Atari Users Convention in Toronto was a success. It was fun to meet Bill and Pattie Rayl (AIM), D.A. (Dot) Brumleve (Kidprgs) and Darek Mihocka (QuickST).

See you all in May!

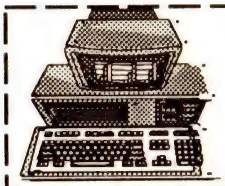
CACE

Cascades Atari Computer Enthusiasts

Fishin' Around by Brent Fisher

Well one and all, there just isn't much to report on this month. The BBS has been up and running smoothly under the new number for almost one month, at least as of this writing. Just in case some of you don't know by now, the number was changed to 517-764-4047. We also have some new games up online, so give the board a call and see what you think. In fact, we welcome anyone who wishes to call the board and give it a try.

About the only other thing I can add is that the May meeting will be held on Saturday, May 12th at 1:00 pm at the Boo's Center in Loomis Park. If you could use directions, give me a call and I'll see if I can get you headed in the right direction.



CDACC

CENTRAL DELAWARE
ATARI COMPUTER CLUB

Central Delaware Computer Club meets on the second Thursday of each month. For more information, contact President Alan Beddow at (302) 678-1450 or write CDACC at PO Box 545, Camden-Wyoming, DE 19934.

CUSTUG

Champaign-Urbana
ST Users Group

The Champaign-Urbana ST Users Group (CUSTUG) meets at 7pm on the second Wednesday of each month in the Auditorium of the Urbana Free Library at the corner of Elm and Race in Urbana, IL. Membership dues include a subscription to AIM and GLITCH and use of the commercial lending library. New members are welcome. The group supports a local BBS, Blackhawk's Keep, operating 24 hours a day at 3/12/2400 baud (1/8/N): 217-892-5512.

Henry Murphy	President
Jimmie Myers	Vice President
Jim Linder	Secretary/Treasurer
Tim Brumleve	Librarian

Central Connecticut Computer Club

Hi y'all...Hope you all had a good Easter holiday, with more to come. Gee, I received a letter from Ralph the other day. You guys remember Ralph, dont'cha? Yep...our ex-Prez of many years. Seems Ralphie moved up in the world and got himself a new condo in Woodbury. You gonna start coming to meetings again? Also I might mention Ralph went and got engaged to his main squeeze Mary McKenna and is going to take the fall again in April of '91!!

Last month's meet was a severely disorganized type fiasco. Seems myself and only a few hardy souls ventured out that summery, calm, peaceful night back in March. Musta' been something really good on TV that I missed. C'mon guys, if there's something THAT good on, let me in on it. I could have saved some gas money that day and stayed home too! Seems Bill Guire is the one guy who will always make it to a meet. (Bill even comes on off weeks, just in case someone shows up to talk to!) Gee Bill, you sure I can't talk you into the Vee Pee slot????

The meet slid into a casual group conversation-type thingie, with no demos, but lotsa rumor-mongering about the imminent collapse of Atari, of course, followed by massive shipments of hardware to everywhere...except here, naturally. All the while, I stood quietly...sagely nodding my head occasionally. Remember, I promised to do no more Atari bashing, no matter how short these columns got.

I even got beaned on my stand with Hewlett-Packard. Remember, I griped about them (well, the owner, David Packard, anyhow) donating substantial sums of money to anti-gun groups. One of our group chirped up that he would now buy an HP printer just because of their stand!! Jeez, ya gotta figure the guy is a liberal, protests fur coats/jackets, probably donates money to animal and plant rights groups and is quite content to munch on rocks and dirt. Well, no matter. I'd still defend HIS right to say whatever he wants to say, and be able to back it up. Enough of this.

Next month (that's May for the record) we are going to be honored by a visit from Gribnif...mark that down on your calendars, dog-ear your novel and rip it outta the newspaper! Yep, the people that brought the world NeoDesk are arriving on our doorstep on May 16th at 7:30 pm, probably not sharp.

I will attempt the impossible and arrive on time without Big Mac breath and a beer chaser. If somebody has a hard drive to bring in, please do...it'll more than likely be worth your while to do so. Both of Gribnifs finest will be here that day to do an in-depth demo of their latest version of Neodesk and the latest accessories they are working on.

Again, enough...if this doesn't make the deadline this month, you guys are probably going to fire me. Heh...right. See you at the meeting.

CDACE

Capital District ATARI Computer Enthusiasts

Who We Are: Capital District Atari Computer Enthusiasts (CDACE) is located in Albany, NY and serves the tri-city capital region. Meetings are currently held on the third Tuesday for the XE group and the last Tuesday for the ST group at the Computer Cellar, Westgate Plaza, Albany, NY. Meetings begin at 7 PM with the libraries available starting at 6:30 PM. Dues are currently $20 per year for each family. This includes a subscription to AIM, our monthly newsletter and our BBS. Membership is not required to visit a meeting.

COAC

Central Oregon Atari Club

- Dedicated to Central Oregon Atari Users and Enthusiasts Since 1986 -

President	Norman Moore	(503) 447-3598
ST-VP	Bob Kanski	(503) 548-8201
8-Bit VP	Marc Hitson	(503) 648-0513
Treasurer/Editor	Glenn Dulin	(503) 382-3956
Secretary	Nancy Kanski	(503) 548-8201

Address: Central Oregon Atari Club, PO Box 6824, Bend, OR 97708

Membership dues are $1/month and $1/year for each additional family member. We meet every second Saturday of the month at 5:00 PM at the Ann Rita Conference Center, which lies just in front of the St. Charles Hospital on Neff Road in Bend.

I hope all you ST owners are getting the AIM disk, because they are quite good and easy to de-arc. The files on the AIM disk are also free to our club members. You are going to have to come to the meetings to get one though, or, have someone get one for you...or you could send a dollar for each disk (disk and postage) and we'll mail you one. These are double sided disks, so if you are running single sided drives you will need two disks. We do have blank disks for sale at the meetings.

Our president, Norman Moore, traveled with his family down to the World of Atari Show in southern California and also to Disneyland. He will give us a report when he gets back. All you 8-bitters listen up. Being the shop-till-you-drop kind of guy he is, Norman is going to try to pick up some 8-bit stuff we can raffle off at the meetings.

In June and July, many of our members will have their dues come due, so keep please keep your eyes on your expiration date.

Sometimes, it seems no matter how long our meetings are, there just isn't enough time to see things you want to see or, especially, visit the people you want to visit. Time just goes too fast. One of our members, Greg May, who normally brings his 8-bit in because he likes to program on it (he is writing an adventure game, looks good), brought in his Amiga to show us. He showed us Marble Madness and a music program. The graphics were quite good, but what you noticed most was the sound. The Amiga played through its monitor only but the tones were clear and rich. I was impressed. Too bad Atari didn't do the sound chip justice on the ST. The 8-bit has better sound generation. Which leads to our next topic.

We received the Tweety Board from Practical Solutions last month, so we made arrangements to install and demo it at the April meeting. Mr. Bob Kanski was kind enough to volunteer (?) to do the install and demo. Bob's computer is a 520fm with the Yamaha sound chip under the drive. This is where he will connect the Tweety Board, on top of the sound chip. The manual has 29 pages of how-to's, but because there are several ST types and configurations, most of those pages are used to cover each one. The manual comes with step by step instructions and pictures. Most all of your work is spent taking the case and sheilding off, since installation of the Tweety Board is just a matter of slipping a connector over the sound chip, placing the board somewhere and routing the RCA connector out beside one of the ports in the back. No soldering, no drilling.

The Tweety Board doesn't just take the sound out the back...it is actually an amplifier. The amplifier built into the ST has a poor frequency response, so it's not just the little speaker in your monitor that's the problem with sound quality. Also, the Yamaha chip is capable of three channel sound which the ST circuitry quickly turns into one, thus the quality of sound is more like hearing it at the other end of a pipe. The Tweety Board separates the channels, amplifies them with greater frequency response, then sends them out the back to three RCA jacks. One thing you might note is the Tweety Board does not handle digitized sound very well. There are a couple of reasons given in the manual: 1) Digitized sound software expects all the channels to be combined together. 2) The Tweety Board's frequency response can also distort some sounds. Bob brought his stereo amp in and hooked it up to the Tweety Board. The results were quite good. With a full sound and stereo output, the Tweety Board can enhance all your games and musical pastimes. It retails for $59.95, but can be found in the range of $35-$45.

We plan on raffling the Tweety Board in the coming months, so come to the meetings and purchase some tickets.Tickets are $1.00 each. By the way, whenever you make any transactions by check with the club, please make them out to COAC or Central Oregon Atari Club and not the treasurer or the person you are giving it to. See you next month. Glenn

FACCS

First Atari Computer Club of Spokane

President	Tim Osborne	509-624-1917
Classic VP	Ron Hoffman	509-487-3520
ST VP	Keith Busch	509-926-9369
Treasurer	Norm Iverson	509-253-4733
Secretary	Nancy Prevost	509-456-0506
Sysop	Greg Morse	509-328-1013
Classic Librarian	Ed Hicks	509-992-1244
ST Librarian	Roy Steele	208-773-4876
Newsletter Editor	Merry Iverson	509-253-4733

We currently own and maintain a 24-hour Bulletin Board System (BBS), open to everyone with a 300, 1200, or 2400 baud modem, called the Atari Zone. To enter the Atari Zone call 509-326-5741.

Since we currently have renewal dates scattered throughout the year, please check your card for your current expiration date. Remember, once your membership expires we are no longer able to send you your AIM Newsletter or allow you to remain at the F.A.C.C.S. level on the Atari Zone. To prevent any interruption in your F.A.C.C.S. services please renew by the expiration date on your card.

Secretary's Report: Well, another month has gone by and some things haven't changed. We still haven't found a new meeting place, and we are still receiving our AIM magazines long after the monthly meeting, but there are good things happening, too!

We managed to raise around $150 for the club on the Skipper's coupon drive and are temporarily out of the hole. Activities planned for later in the year will, however, cost us some money, so we are looking at other fund raisers. Among future projects is a joint effort with STING, Spokane's "other" Atari group, to bring Atari's Bob Brodie to town in late August. Should be interesting!

Still more good news! The Atari Zone BBS is finally back up on the hard-drive, which means we once more have 20 megs on line to play with and plenty of file space to handle club library disks. If you haven't called lately, please do. We have a lot to offer.

Those of you who missed the April meeting missed the chance to see a demonstration of the Atari Lynx game machine! Thanks to

Glenn Bruner for bringing his Lynx. The April Disk-of-the-Month for the 8bit was a two disk set featuring TextPRO 4.54 for the XL and XE, complete with help files and documentation. Two disks were also offered for the ST monthly disk, one of games and one of utilities, in addition to the AIM disk. For more information contact the appropriate librarian or VP.

'Til next time, Nancy Prevost, Secretary

GKAUG GREATER KALAMAZOO ATARI USERS GROUP

GKAUG meets once a month by invitation only as time permits. Membership is through the MACE organization for those who want the AIM magazine and other benefits.

Frank Fellheimer can be contacted at (616) 657-6106 or 2nd System/GKAUG BBS (616) 385-2448

We finally managed to get a meeting together the weekend of 07 April. We got a demo program on Tetris (Atari Version). It really is simple to play, but not easy to conquer.

We did manage to look at "G:Device." It comes from an Antic disk. I can't remember which one right now, but I will locate it later. It allows you to copy your programs to the printer with all the inverse letters and such, resides in memory and is available at any time once loaded. We were using it to print out my Lotto 47 program. My program works just fine, but doesn't have much error trapping and could be a little easier to use with some modification. We are printing out the file to make modifications. Looks to me as if we will have to start from scratch. Lots of different ideas available to improve this program.

The Lotto 47 program is available on the BBS. David Bryant set up part of it to handle Epson, Star NX-1000 and Generic printer operation.

Overtime is my life for the next month. I hope to get back to another meeting come the end of May.

We also had a chance to look at a Smith/Corona Personal Word Processor (PWP-270LT). It has 50K of Ram, is a laptop, can handle some spread sheet operations, labels and envelopes and address listings. Even sorts the listings. The manual is decent, but I ended up typing my own "Cheat Sheet" to refresh my memory on the command codes.

Let me know if you want to join us. My number is at the top.

President's Monthly: 17 April 1990

With days lasting longer, and children trying to stay up later, and my family relocating a dozen miles south in the next week or so, I must admit I have not had much time to even catch up reading my regular allowance, let alone getting time to tinker with the old 8-bit. The move will put me just a mile or so from the meetings though, so I guess it will get better as soon as I get to unpack my stuff in the new house. Time will tell.

I have received a mailer from a former 8-bitter that advertizes the newest version of Daisy-Dot, Daisy-Dot III. It is available for $25.00 from the author, and supports more printers, has more nice features and will now work for those who use the Atari XMM-801 printer. I will have copies of this at the next couple of meetings, so if you are interested just see me there.

I suspect meetings will continue through the summer again, informally, and the current trend of getting back to the basics will continue. Greg Williams has covered for me at the April meeting, so I have to get up to date on what the next type of demo will be, but wordprocessors and databases are sure to come up in the not-to-distant future. I did hear the spreadsheet presentation worked out well...I am sorry I missed that one.

Remember, these back to the basics demos are for those of you who have just gotten started, or who have just joined the club, but we need to know what it is you would like to see. Don't be shy, when we ask what you want to see next, speak right up so you can get the information you need to get the most from your computer.

I have also received a mailer from the Atari Bit Byter User Club, an international collection of 8-bit users that I hope to get in touch with soon. It would be nice to get some of the information that we hear is available in Europe. More on this later.

See you at the meeting.

Tim

Greater Triangle Atari Users Group
c/o Joe Bryant, 2508 San Jacinto, Beaumont, TX 77701

HACE

The Houston Atari Computer Enthusiasts meet on the fourth Wednesday of the month, 6:45pm at the Health Economics Corporation, 2400 West Loop South, in Houston, Texas. The club supports all Atari computers from the 400 to the Mega4.

Membership is $22 per year, and gives full access to our BBS (713) 458-9923, access to our disk, magazine and newsletter libraries, a subscription to AIM, and our local news journal UPDATE ATARI. There are also other benefits, such as store discounts, door prizes, workshops, telephone help when you have problems, and much more! For more information, please contact one of our officers or drop us a line!

HACE, P.O.Box 460212, Houston, TX 77056

President:	Bill Kithas	713-855-0815
Vice President:	John Hauser	713-458-0595

Treasurer:	Jim Salmon	713-879-8119
Newsletter Editor:	Tracy Webber	713-981-5343

JACS

Jersey Atari Computer Society, P.O. Box 710, Clementon, New Jersey 08021. JACS BBS: (609) 346-1224

President	Mike Hopkins	227-9058
ST Vice President	Maureen Kelly	428-9381
Treasurer	Forrest Blood	877-3579
Recording Sec'y	Gary Mickus	767-1933
Membership Chair	Al Guretse	596-7567

The Jersey Atari Computer Society (JACS) provides a forum through which members may further their understanding and enjoyment of all Atari computers, through the exchange of ideas and information with other users.

JACS holds two meetings per month at the Camden County Library, across from the Echelon Mall in Voorhees, New Jersey. The executive meeting, where all the planning for the club takes place, is held in the 2nd floor meeting room from 7-9 PM (meeting dates vary from month to month). The regular JACS meeting is usually held on the third Tuesday of each month, in the 3rd floor meeting room from 7-9 PM. The regular monthly meeting includes topics of interest for users of all Atari 8-bit (400/800 & XL/XE) and 16/32-bit (ST/Mega) computers.

Membership dues are calculated at $2.00 per month prorated through the coming July, when the entire club comes up for renewal. August, 1989 - July, 1990 dues are $25. Spouses and children may be included under one membership fee. Attendance at our monthly meeting is free for all members. Guests may attend up to 2 meetings at no charge.

JACS dues help pay for the printing and mailing of our monthly newsletter, BETWEEN BYTES, monthly room rent, electricity and phone (for the BBS), door prizes, refreshments (Christmas Party) and the purchase and maintenance of JACS equipment. As a JACS member, you'll receive a subscription to our newsletter and AIM, full access to our 24-hour bulletin board and access to our growing libraries of public domain software for the all Atari computers. Our disk libraries currently include over 200 disks, available for $3 each (member price). JACS ST library now includes the AIM Disk of the Month.

You are welcome to attend a JACS meeting as our guest. Once you've become a member, you're encouraged to become an active participant in the group. It's the only way to have fun.

Layton ACE of Utah

The Layton Atari Computer Enthusiasts (L.A.C.E.) membership cost $20 per year. Privileges include the AIM Monthly Magazine, access to the 8-Bit and ST club libraries, monthly meetings, help and friendship. If you are presently not a LACE Club member and wish to join contact the one of following persons or write to LACE, c/o Irwin Brooks, 3897 So. 2275 W., Roy, UT 84067-3515.

Irwin Brooks,	President/ST Librarian	(801)731-1516
Richard Clark,	Vice President	(801)825-5823
Ken Karchner,	Secretary/Treasurer	(801)776-8015
Lonnie Allen,	8-Bit Librarian	(801)392-4450

The L.A.C.E. Club Meets in the basement of the Clearfield Library every second Wednesday of the month at 7:00 p.m.

Mark your calendars for the next three meetings.

May 9, June 13 & July 11, 1990

1.44Meg 3.5" and 1.2Meg 5.25" Drives for the Mega/STs

I would like to be first to report on the new PowerDrive from Dream Park Development. The company is a new startup venture for the Atari ST based locally in Salt Lake City, Utah. I recently contacted them to do or provide a demo of their soon-to-be-nationally-released 1.44 Meg 3.5" Atari ST disk drive. To my surprise, the night before the LACE meeting a confirmation call indicated the demo would be presented by the engineer/designer/co-owner, Neil Breeden. Mr. Breeden showed up early to set up and, to my surprise, came with not one but two drives. Both a 3.5" 1.44 Meg and a 5.25" 1.2 Meg drive was offered for the Atari ST.

Neil's presentation was regrettably short because of competing scheduled demos. However, I for one was impressed with the looks and performance of this high density addition to the ST's peripherals. I can see a real benefit for those desiring to keep abreast of the rapid changes in the IBM compatible arena.

This drive is not your standard Atari replacement disk drive. As such, it is not installed simply by daisy chaining it as Drive B, however nice that would be. The Atari ST simply was not designed to allow for these high density drives. Therefore, an internal modification must be performed to accommidate this new breed of peripherial. The folks at Dream Park Development will gladly install the internal modification or provide the parts and instructions for your local repair technician or skilled user.

For information on these Products contact Dream Park Development, 2469 E. Fort Union Blvd., Suite 100, Salt Lake City, Utah 84121, phone (801)943-4370.

Meeting Minutes, Apr. 16, 1990

The April meeting went extremely well with what turned out to be two surprise demonstrations. Our demos included:

Universal Item Selector III by Mike Cardon; Power Drives by Neil Breeden II (see above); Deluxe Arcade Construction Kit by Mike Russell; Lynx by Mike Cardon

Each one of these items could and should have had an evening to themselves in my eyes. However, when it rains it pours. It happened to be one of those meetings when more was going on than you could keep abreast of. Thank you, Mike Cardon, Neil Breehen and Mike Russell for you time and help in presenting these demos.

If you weren't there, you missed one of the BEST meeting I can recall. If you were there, you know what I mean!

Irwin Brooks

LBACE

The Long Beach Atari Computer Enthusiasts meet on the second Sunday of the month at 6:00 pm. Meetings are held at Mercury Savings and Loan on the corner of Long Beach Blvd. and Carson in the city of Long Beach.

President	Richard Hull	(213) 422-1055
Vice-president	John Saunders	863-2582
Secretary	Lee Curtis	423-2758
Treasurer	Greg Dukowski	498-9461
LBACE BBS		498-8824

Club dues are $20 annually. The club supports both the 8bit and ST. Members have access to the club's PD library and BBS and receive a year's subscription to Atari Interface Magazine.

The April meeting of LBACE was quite small since it was on the same day as WOA. We did, however, have some great demos. Michael Holmes demo'd the Frame Grabber. We were all impressed with how fast it grabbed frames from "Batman" on video cassette. I'm sure this will be one of my future purchases. We are all waiting for another demo of it as soon as Michael gets the color software for it.

Greg Dukowski demo'd Space Ace for us. It is amazing how they got all of that animation on four disks. I also have Space Ace, and my only complaint is its heavy copy protection. When the game runs, the disk drive sounds like it is chewing walnut shells. Lee Curtis also bought it and it won't even run on his computer, and I have heard of others that have machines on which it won't run. This is probably due to head alignment on their drives, but this much protection is ridiculous. When you put out a product this good, it will be bought. Just about everyone I know has bought a copy. Software makers -- give us and our drives a break!

Lee also demo'd a game he bought at the show, Dizzy's Treasure Island Adventure. This is a Super Mario Brothers type game. The graphics are great and the puzzles are fun but not too difficult.

My big purchase at the show was a Supercharger. This is an IBM emulator from Talon Technology Inc. in Solano Beach, CA. It comes with 1 meg of Ram, CGA and Hercules emulation and DOS 4.01. The nice thing about this unit is that it is complete, as opposed to other hardware emulators. You just plug in into your DMA port. Another nice feature is that it can be used as a 1 meg Ram disk for your ST. Although I showed it at the meeting, it wasn't demo'd. I wanted to learn more about it first. It will be demo'd at our May meeting running alongside Lee Curtis' IBM clone.

Now, for my overall opinion of the WOA show. Atari had a great display, demoing the Stacy, TT, Lynx and CD Rom. I wish I could afford all of it. There were quite a few software vendors and there were bargains galore. The biggest disappointment, as usual with WOA, was the lack of user support. The least WOA could do is set up a table on which user groups could set some brochures to advertise their groups. WOA seems to forget that without users and user groups they wouldn't have a show. 'Nuff said.

Happy Computing, Richard Hull

M.A.C.E.

The Michigan Atari Computer Enthusiasts

Members of MACE receive, as part of their dues, Atari Interface Magazine. Members are also entitled to purchase disks from the 8-Bit and ST public domain software libraries. 8-Bit disks are $3 each, and ST disks are $4 each. As an added bonus, if you purchase three (3) disks from either library you will receive a fourth disk of your choice at absolutely no cost. Non-Members may purchase disks at a slightly higher rate. Mail order is also available.

For a catalog of current disks in our libraries, send $2 to:

MACE, P.O. Box 2785, Southfield, MI 48037

Don't forget to specify which library you wish a catalog for.

President	Ed Hanson	313-675-0044
Vice President	Ted Newkumet	313-537-5298
Recording Secy'	Brian Wilmoth	313-777-7873
Treasurer	Jim Nichols	313-791-2015
Editor/Membership	Bill Boles	313-421-8867
Correspon. Secy'	Mark Tappen	313-443-1989
8-Bit Librarian	Anton Malje	313-565-7419
ST Librarian	Bob Retelle	313-483-7358
SysOp	Sharie Middlebrook	313-582-0657

Please note that the Recording Secy' and the SysOp's phone numbers are BBS data-lines. Please observe *normal* human hours when calling.

MACE meetings are held on the Third Tuesday of each month at the Southfield Civic Center at 7:30pm. The Southfield Civic Center is located at 10 1/2 Mile and Evergreen Rd, one half mile south of the Evergreen exit on the new I-696. Meetings are in the small pavilion, room 115. Parking is available in the parking garage below the pavilion or in one of the many parking lots on the Civic Center grounds.

If you have any problems with getting to the MACE meetings, please feel free to call on a MACE Officer to relieve you of your confusion. We are always glad to extend a helping hand!

Please come and join us! We are awaiting your visit!

The March Meeting of the Michigan Atari Computer Enthusiasts was held on Mach 20th. The March meeting was a Swap-Fest. Users grouped together to swap equipment and software. No formal opening or closing of the meeting was called, but those attending did not seem to mind.

The April Meeting of the Michigan Atari Computer Enthusiasts was held on April 17th and was a Dealer-Night. Local dealers of Atari computers and peripherals grouped together to sell their wares to the grouped masses. This meeting was very similar in content to the Swap-Fest held at the last meeting.

The May meeting will be the M.A.C.E. Birthday party! So come along and bring a friend! It's time to celebrate! MACE will be *nine (9) years old* on May 22nd!!!!

MID-OHIO ATARI USER GROUP

Mid-Ohio Atari User Group, Post Office Box 134, Ontario, OH 44862.

The Mid-Ohio Atari User Group supports all models of Atari computers. We meet at A&B Computers, located in the West Park Shopping Center on Park Avenue West in Mansfield. The meetings are the third Saturday of each month, from 7:00pm until 9:00pm. Demonstrations are welcomed, and pirating is expressly forbidden.

M.A.U.G. is a participating club in the Atari Interface Magazine group. As such, members receive an issue of A.I.M. every month for no extra charge. Club dues are $7.50 per year for all members.

The club maintains a disk library for both the 8-bit and ST line of computers. There is also a special M.A.U.G. section for members on the DataQue Support BBS, for email and file downloads. The number of the board is (419) 529-5197.

Middle Georgia Atari Users Group

M.G.A.U.G.

The Middle GA Atari Users Group is the sole Atari Club in the Middle Georgia area. We are composed of 60 members of which approx. half are ST users. Club president Pete Miller can be reached by phone at 912-328-8758. The MGAUG address is 115 Feagin Mill Rd., Warner Robins, GA 31088. MGAUG meets the second Sunday of each month at 2 PM at the Warner Robins Library. Annual dues are $5 with the newsletter optional. Use of the club library is free to all paid members.

April Meeting

The April meeting kicked off at 1PM. It seems some members did not get the message last meeting for the 1PM time and didn't show up til 2. We had one computer at the meeting -- Mike Wadsworth brought his 60Meg hard disk with his software collection.

We had a guest at the meeting: Jim Menegos. Jim is the President of ST RoundTable in Atlanta. Jim is trying to start up a new ST users group in Atlanta. He has a Mega 4 and an Atari Laser Printer and is using Pagestream for desktop publishing. Right now, the ST Roundtable has 30 members.

Several public domain files were donated, which I will cover next month. Among files for this month was a demo of a new sound and music program called Quartet. I have donated 7 music disks to the library with over 300 Music Studio songs. Also included is a disk with 3 TETRIS clone games and a disk with several Music Studio player programs. Another program is FORMS2, which is a program for filling out preprinted forms. Also, several of the latest issues of ZMAG/Z*NET and ST-REPORT are available to be copied.

The time is coming again for the collection of club dues. Dues will remain the same at $5.00 for the year. Please bring your dues in at the next meeting.

Computer Show—AUGUST 25 is a date to write down on your calendar for our annual computer show at the Houston Mall. I hope we will be able to have the great turnout again this year like we had last year. BSA Sales, the distributer and rep. for Atari in the SouthEast, has promised to send the club 200 brochures for use at the show. The main purpose of the show will be to increase local awareness that Atari is still alive and well and that there is an alternative to the IBM for home and business computing. Most people in the area are not aware Atari makes anything but the ole 2600 and have no idea the ST exists, let alone what it can do.

That's about it for this month. Put a note somewhere that the next meeting will be on June 10th at the Warner Robins Library at 1PM -- that is one PM -- O-N-E PM. OK?

O-ACEs

The PREZ Says

Once again, I have the opportunity to lay some heavy stuff on y'all, so, without further hesitation I'll get on with it.

First off, I just want to say I feel the Expo at McMillan High went over quite well. Believe me, with only myself, Pete and Damien to watch over all three tables with all of the equipment (my 130XE with d/d and modem, Pete's 800 with both a demo disk and the Koala Pad [this went over really big with everybody] and with Pete and Damien with their STs set up on the third table--not to include the TV and VCR we had set up for the 3D graphics demonstration), we were definitely kept busy explaining a variety of things to kids and adults alike.

Now, folks, what would you like to do or what would you like to seen done to attract attention to our club?What exactly do you feel we should do to get people interested enough to begin attending our meetings and joining our club? We need your fresh ideas and thoughts on how to run the club and what to do at the monthly meetings.

We have disks for sale in the club. Double-sided ST disks, $3 each and single-sided ST disks, $2 each. Also, we have DS 8-bit disks for $1.50 and SS 8-bit disks for $1. Also for non-members, all of these prices double. I'll be seeing you at the next meeting—every 2nd Wednesday at LaVista Rec. Center at 7:30 p.m.

If you have any input to help us attract Atari users, please feel free to drop us a line at the following address:O-ACES, PO Box 723, Papillion, NE 68128

In turn, if there's anything you want to talk about, how about addressing to each others' clubs?

PORTS ATARI PACE COMPUTER ENTHUSIASTS

President	Tracy Hendershot	525-1058
Vice President.	Larry Nadeau	525-7430
Sec/Treasurer	John Zupansic	394-9326
STLibrarian	Don Henricksen	729-6309
8bit Librarian	Gary Armbrust	729-6906
ST Coordinator	Geoffrey Bennett	722-3354
8bit Coordinator	Aaron Potopinski	525-1058

Membership to PACE is $30.00 per year or $9.00 per quarter. General meetings are held at 6:30pm on the third Sunday of every month. In the event of a holiday, a new date will be chosen and will be posted within the pages of this newsletter and on local Bulletin Boards. Membership includes a monthly newsletter, monthly meeting, FREE Disk-of-the-Month, access to our BBS, FREE printer ribbon re-inking, and FREE copying priveleges to our VAST collection of 8/16 bit Public Domain programs. Ports A.C.E. is an alliance of families with a mutual interest in the Atari Computer and is an independent, non-profit organization. PACE hardware assets: 130XE, 1050 Drive, MacInker and a Supra 300 baud modem. Any written correspondence should be addressed directly to Ports A.C.E., Tracy Hendershot, 4835 Crosley Avenue, Duluth, MN 55804.

From the President... I received a catalog in the mail last month from J&R Music World in Maspeth, NY. What do you suppose was on the front cover along with their other high-tech toys? A 1040ST, along with a Portfolio on top of it! This may be the big break we've all been waiting for...to get STs BACK in the Mail Order Marketplace! Sorry 8-bit Atari owners. No mention of the XL/XE's at all. The number is 1-800-221-8180. Request their catalog. Now your friends and relatives can have their own ST instead of coming over to your house and "play" with yours!

There was no meeting planned for April because of the Easter holidays. Be sure to read your newsletter for meeting dates. Since the May meeting will be our last until September 16th, let's make it one to remember! There will be several systems available for demos and for copying of the April and May AIM Disk of the Month. Also, remember to bring your dried-out printer ribbons for *renewing*! They will be reinked for you at no charge and will be available in September.

The 8bits have been pretty quiet lately. We have lowered the yearly dues for our 800/XL/XE members to $20. Daisy Dot III is now out on the commercial BBSes. This PD version is slightly crippled over the registered one. If you choose to register for $25, you get a manual and fifty fonts on two disks.

Our ST Library has finally been refurbished. Don has a master listing of what's in the Library and you can browse through it during any meeting.

The next PACE meeting will be held on May 20th, 6:30 at the Wisconsin DOT Building. Plan to attend!

PHAST - Phoenix Area ST

The PHAST monthly meetings are held on the second Saturday of each month at 8640 N. 19th Ave., Phoenix, Arizona from 10am to 12pm.

President	Robert Dytmire	(602)993-6463
Vice President	Lance Summers	(602)584-1183
Treasurer	John Steiner	(602)849-8949
Membership/Sgt. Arms	Mike Zachary	(602)273-1185
Recording Sec/ Editor	Jim Keho	(602)934-9181
Disk Librarian	Charles Cullinan II	(602)992-9040
Publications Librarian	Donald Thompson	(602)486-1593

Club Minutes for Sat. April 14, 1990 - by Jim Keho

The meeting was called to order at 10am and there were about 30 members and visitors in attendance. John Steiner reported we have $880 in the club's treasury. We had several new members join and we wish a big welcome to them!!

Old business: Making the club a non-profit organization was again brought up. It was decided to table this until such time as the club stabilizes. The purchase of a large screen TV/Monitor was discussed, but the matter was also tabled until a future date.

New business: It was confirmed that Bob Brodie from Atari will be at our May 12th meeting. It was decided to invite NWPAC, SEVAC and the Tucson club to the May 12th meeting. Let's get together and make this a great meeting!!

Richard Covert (President) lost his job at GTE (along with 300 others) and will be relocating to Hawaii. So he will not be able to continue to be President. Robert Dytmire volunteered and was voted into office by a unanimous vote.

It was voted and approved that the meetings will now start at 9am and run to noon. General business and demos will run from 9am to 10-10:30. Then, after a short break, the meetings will continue with special SIGs for the rest of the meeting.

Hopefully with the SIGs more people can learn about certain problems they're having with these amazing machines! If you have a problem with software/hardware on the ST maybe it can be answered at the next meeting!

We had a raffle for the game "Gridiron Football" donated by Computer Works.

The meeting ended with Dave Thorson doing a demo of the game Axe of Rage from Epyx and Robert Dytmire doing a demo of the game Death Bringer. Thanks guys!! Well, that's it 'til the May 12th meeting!! Hope to see you there!!

P3Atari Computer Enthusiasts (P3ACE)

Serving the Colorado Springs, Colorado ATARI community since 1982. PO Box 17779, Colorado Springs, CO 80935

President:	Rick Reaser,	380-8082
VP ST:	Steve Leser	591-6062
VPXE:	John Sandgren,	599-5933
Treasurer:	Jerry Sundee,	574-0005
STLibrarian:	Rick Mount,	596-8631
XELibrarian:	Dave Koster,	550-1410
Editor:	Ed Fletcher,	596-1130

The Prez Sez by Rick Reaser

So how does everyone like AIM so far? All we've gotten to date are good reports. One thing for sure is it forces us officers to think ahead and meet deadlines. If you did not receive the March issue of AIM and you think you should have please let Ed Fletcher know (596-1130). Several members have had articles published already, to include Jim Cox and Dave Koster. An important note is that, in order for you to receive AIM, your dues need to be paid up. The date your dues are due will be on the first line of the mailing label. Please check this. If this is in error, contact Jerry Sundee.

For those of you who are wondering, we have started a subscription to the AIM Disk of the Month. It is now in the ST Librarian's hot little hands. We also bought *The Revolution!* disk from Artisan. It is a pretty neat looking presentation. We uploaded the text onto Vector Space for everyone to read. The ST disk is in the Library.

Our meeting room has moved across the hall, for those of you who didn't know. The new room has a bathroom and heat! If you haven't been to meeting lately (shame!), now you have another reason to come.

8bitters are off to a shaky start with only a few attending the first meetings of the year. We were even snowed out in March. January's meeting was basically a group discussion. At the February meeting we demo-ed Tax Advantage.You can order it by calling 1-800-443-0100 ext. 315M. At the April meeting, we looked at several menu programs, as well as some of the demos of the German Club's disk. The June 8bit meeting will cover graphics. TextPro v. 4.54, SpartaDos Wedge v. 2.0 and several versions of Tetris are up on Vector Space as well.

At the March ST/Mega meeting we covered disk utilities. Jerry Sundee demonstrated some of the outstanding Double Click products and our new ST VP, Steve Leser, showed a plethora of public domain utilities. As advertised last month, Steve's Laser BBS is up and running. Give it a try at 591-4620. At the May meeting, we plan to discuss word processing programs.

RACC

ROCKFORD ATARI COMPUTER CLUB

WE'RE NOT JUST PLAYING GAMES ANYMORE!

We meet at Rock Valley College, the third Saturday of each month. Meeting time 9 to noon. We support the Super 8 and Sweet Sixteen Atari computers, the Atari company, and our fellow Atari owners. Support is also provided through BBS Camille 815-397-5327 @ 300, 1200, and 2400 baud. Our meetings include coffee and rolls, for refreshment; business events, and demonstrations of new and interesting equipment and programs.

President	Andy Learner	815-397-5316
8 Bit VP	H. Jake Olbrich	332-5303
16 Bit VP	Mark Kunkel	874-5546

Treasurer	Thom Lofthouse	654-1863

Rushmore Atari Computer Enthusiasts (RACE)

3512 Lawrence Dr. Rapid City, SD 57701 (605) 348-6331

The Rushmore Atari Computer Enthusiasts is a nonprofit organization of Atari computer owners not affiliated with Atari Corp. Meetings are held on the third Saturday of each month, 2pm, at the Westminster Presbyterian Church. Annual dues are $12 for basic membership and $15 for membership and newsletter. RACE offers the Black Hills Atari owner hardware and software support and the largest library of public domain Atari software in the state of South Dakota.

NO PIRACY WILL BE TOLERATED AT ANY RACE FUNCTION!

President	Rick Burton	(605)-642-5353
V. President	Gregg Anderson	(605)-348-6331
Secretary	Mike Douglass	
Treasurer	Mike Randall	
NL Editor	Mike Harbison	
ST Librarian	Mark Wolf	(605)-923-2841
XE Librarian	Ken Kayle	(605)-343-7289

8bit Library Corner: by Ken Kayl

Welcome to Rushmore Atari Computer Enthusiasts (RACE) 8-bit library. Let's first review RACE's Disk #52A.

Monopoly: this is almost like playing the board game. The computer keeps track of property ownership, rents, houses, hotels, and amount of money a player has. *Simon* is like the game machine Simon. *Spyplane:* you maneuver a plane through a maze and avoid the rockets and lasers. *Escape From Epsilon*: you go through a maze to pick up a key to escape to the next maze. *Chess* draws a chess board and allows you to select your color. *How Many Days:* this computes the number of days from your inputs.

On 52B we have three adventures: *Dalton, James Brand,* and *Alaskan Adventure.* In *Dalton,* if you choose to accept the mission, you become the sheriff and must capture the Dalton gang after they rob the bank in your town. In *James Brand* you are to protect the president's life as the superspy. In *Alaskan Adventure* you are to find a number of treasures and survive the cold, harsh weather.

On 56A we have: *Microids,* using a joystick you maneuver a Microid to the center after touching matching microids. *Hexapawn* is you against the computer. You must move one of your three men across the board or capture all three of the computers three men. In *Smokey,* you buy a car and outfit it to race from San Francisco to New York. *Volleyball* is a two player game of volleyball. *Adventure:* you decide on direction to travel and distance and whether to fight, run, bribe, or cast a spell to defeat monsters and gain points and treasures. *Jacks* is like the game of jacks. *Time Trials:* you move a car on a track attempting to qualify for the next round.

On 56B we have: *Darts. Hopper* is similar to Frogger. In *Creepy Caverns,* you pick up money bags and jewels while avoiding monsters and other nasties. *Knight And Chalices* is a one or two player game. You move your knight over the field trying to find the chalice and key. In *Biffdrop* you control Slyvester as he attempts to capture the eggs of the birds. *ABC Sports:* you hire crews, buy equipment, and spend money on research and development, all the while you are trying to get contracts to broadcast sports on TV.

On 59A we have *Goldhunt II* and *Level Editor. Goldhunt II* is an adventure type game. *Level Editor* is an adventure editor (Goldhunt II was created using the Level Editor.)

59B has: *Atlantis* where you try to find the lost city and get away with the treasures. *Dominion* is a Reversi type two player game. *Ezreader* allows you to read documentation and text files. *Typing Evaluator* makes up nonsense words and you type them in. *Micromail* is an electronic address book. *Zodiac* shows you the 12 sign of the Zodiac and tells you the brightest star in each. *European Countries And Capitals* is like States And Capitals with European countries.

The entire 8bit library, will be at the May meeting. Cost is $2 for members and $3 for nonmembers.

SEVAC

South East Valley Atari Connection meets the third Saturday of each month at 10 AM at 3234 S. Fair Ln. (Eaton Business Park, just off of 48th Street and Southern), Tempe, Arizona. Yearly membership is $12.00. Membership includes reduced prices on PD ST and 8-bit libraries and monthly newsletter. Club officers are:

President	Tim Barr	(602)821-1200
Vice President	Marc Dyer	(602)897-0314

ST CLUB EL PASO

The ST Enthusiasts of El Paso is the only Atari ST and Mega user group in the El Paso area. The Club has proven to be a benefit not only to new users, but also to the "old hacks" of computing.

We now meet twice a month at the Richard Burges Library, 9300 Diana. The first meeting of the month is always the second Saturday of the month, at 12:30pm. The second meeting of the month is held on the last Thursday of each month at 7:00pm. Meetings feature demoes of the latest ST software, as well as help for the those that might be having problems with their computers.

Membership in the STE-EP includes a year subscription to the magazine you are holding in your hands, discounts on software at Jenkins' Computer Store, and access to one of the largest public domain libraries in the nation. We also offer technical help, and we sometimes have a party or two when we run out of computer things to talk about. Voting membership is $20 a year, Sponsored and Newsletter only memberships are $15 a year.

To become a member of the ST Club of El Paso, call 915-821-2048, or write the ST Club of El Paso at 10953 Yogi Berra, El Paso, Texas 79934.

Secretary/Treasurer Report -- March

Where was everyone? I knew where our esteemed president was, but where was evryone else? Come on folks, let's get with it. So I suppose you will want to know what went on at the meeting? Well, not much really. With only about a half dozen of us there, there was not much chance of much going on. We did play with a member's new 520STfm...played D&D.

Greg (our President) showed up in time to ask if we would like to participate in an Educational program at the meeting in May...he was going to set it up with the Library (who agreed to help promote it). We agreed and he proceeded to take care of that end of it. So, if you are interested, it will be on May 6th (the first Saturday) starting at 10:00 A.M. (yes, in the morning) and last 'til 4:00 P.M. If you can bring your various and sundry *Atari* systems plus something to show off, it would be appreciated. Some suggestions would be Desktop Publishing, Word Processing and whatever else you can think of that would be ameanable to the public eye.

You never know, maybe we can get some more members out of this event. Remember folks, dues are coming due in just 3 (I think, however far July is away from when you see this) short months, and I do not think I will put out warning cards, though I will remind you all through this column. Also, elections (appointments) are also coming at that same time. It would be kind of nice to see someone else, besides those who already are taking care of the offices, get nominated.

Secretary/Treasurer Report -- April

Wasn't there, so I don't know how much I can say (HAD to go to Eufala, you understand). But, I heard the members were preparing for next month's meeting (the public Education one) and were comparing strategies.

Well, that is about it. Hopefully I will be been able to bring my STe, we will see.

Stephen C Moffit

TRI-CITY ATARI GROUP

The Tri-City Atari Users Group meets the last Saturday before the 18th of the month, at 9 am at the Rudy Zauel Memorial Library, on the corner of Center and Shattuck in Saginaw Township. Upcoming meetings are March 17th, and April 14th, 1990. Officers:

President	Steve Volker	865-9035
ST Librarian/Tech Advisor	LeRoy Valley	686-6796
Treasurer/Secretary	Marty Schmidt	792-6029
8Bit Librarian	Ted Beauchamp	686-8872

Club dues are still only $20, which provides support for both the 8-bit and ST, and full access to the club's PD library, along with a year's subscription to Atari Interface Magazine. Check your mailing label, if you need to renew (or haven't joined us yet!), DO IT NOW!

First Up... I think I'm going to do it! I...well I...I know about the cost and well it's a bit complicated and all, and I guess I can't come up with a number of ironclad reasons why...but still...yes, I am ready to take the plunge, I'm going to get a HARD DRIVE!! Oh I know everyone has one, and nowadays the hottest items are CD Roms and hardware emulation, STE's and TT's, MIDI magic programs and 9600 baud modems...But these are new and futuristic toys to me, like mammoth Moniterms and 4meg Megas. Sure! I want them all, and I couldn't go to sleep at night unless I promised to get them some time in the future...but none are REAL necessities for me. I've grown convinced that a hard drive is.

If you're thinking this is just *my* opinion...*you're right!* But I'm right also when I say I need a hard drive. I need it for a number of reasons such as storage, access time, downloads, and memory organization...all the normal reasons one might come up with when asked this question. But I 'need' it for a much more important reason also...I need it to *grow!!* Let me try to explain...

I have a nice system--it suits me...I'm comfortable with all the different peripherals, the drawing program I do all my sketching with, the same terminal program, games, utilities, etc...So how does the hard drive come into all this! Well...because it scares me a little! I have never worked with one and I'm afraid of failing, of not being able to understand it, of not *feeling comfortable with it!!* I need the hard drive because I need a new scare in my computing. Why? Because if I alway go to the most familiar piece of hardware, or the most familiar software program or utility, maybe I'll find that I'm doing the same with people and ideas too!

What You Missed... There were a lot of new faces, (and the absence of some old ones), at the meeting this month. A number of them were interested in what Atari had to offer in MIDI, and that worked out just fine as LeRoy demoed Digi-Sound to the amazement or enjoyment of everyone. Digi-Sound Professional, by Alpha Systems, is quite an impressive program. After the intro music, we were treated to a sample of Mr. Valley's cheerful voice in 3D! (with echos). Sounds were sent through both the monitor and the exterior speakers, giving us examples of a clear, crisp Bugs Bunny, the slamming of a door, and LeRoy's voice that had been converted nearly past recognition. All in all it was one of the more enjoyable demos for me. The program comes in a less expensive version, without the fancy logarithms which clarified the sounds and voices to such a degree, or the opportunity to hook up exterior, powered speakers. Nice! (Oh and it has it's own little oscilliscope built in...wild!)

In the regular meeting, we received the treasurer's report from Marty Schmidt, learned we had a few bucks, and voted to have a couple of raffles in the near future, one for the 8bit'rs and one for the ST users. We got a strong urging from Ted and the gang to acquire the new Diamond Operating System for the first raffle, and a somewhat uncommitted vote for DC Desktop (GEM replacement), for the ST side. We have introduced a new stipulation for the winners of all future raffles...*if you win it, you have to demo it!* Oh, and it was suggested that Wayne Fenior be excluded from furthur prize winning activities, on account of HE *wins them all!* If you have other suggestions for future raffles, *please tell us!!*

A motion was brought to the floor by Steve Volker that we begin getting the AIM disk for the club, because of the quality of previous disks. The proposal was seconded by LeRoy Valley, and the motion passed. One new member, a Mr. Rick Allen of Midland, says he has a music store in Midland called Mid-Michigan Music Shop, and invites us to take advantage of the dealer discounts he can get on Atari hardware. This gives us the opportunity to get him and Doc Brown competing with each other, to get the best price on what we need. Telephone is 517-832-9525.

On the 8Bit side, Ted Beauchamp was showing off Speed-Calc, a PD spreadsheet not unlike VisiCalc, and it's complementary WP Speedscript. The programs require at least 48K, abound with neat little keyboard shortcuts, and have what Ted called a Logical User Interface.

What You Shouldn't Miss... Next time...Bryant LaFreniere will be demonstration the 'dynomite' utilities from CodeHead, and there may be a surprise appearance from a mystery reviewer, who will have Michtron's utility package along to demo too.

Also, a look at a nice game from England called Hound Of Shadow, a RPG type mystery with some real historical meat and a wild, new user interface system.

Remember Your Local Dealers:

*MIDI-TO-GO I and II, 916 N Euclid Ave. in Bay City & in Saginaw next to Builder's Square on Bay Rd. at 799-4800

*Mid-Michigan Music Shop, 128 E Main in Midland

*Simply Software, 208 N Euclid Ave. in Bay City

Equipment Volunteers For Next Month...
Bryant LaFreniere will bring it all for the ST.
Ted has the 8-bit stuff.

UNYACE
Upper NY Atari Computer Enthusiasts

The Upstate New York Atari Computer Enthusiasts (U.N.Y.A.C.E.) meet monthly at the New York State Electric and Gas building, on Old Vestal Road in Vestal, New York. Meetings are from 7 to 9 PM in the Auditorium. The next meeting date is March 12th.

U.N.Y.A.C.E. had optional dues of $8 per year. Monthly meetings are informal and open to all who are interested in Atari microcomputers.

Contact C. Todd Krissel, President, at (607) 729-4303 or call the Cygnus BBS at (607) 729-5506 (9600 baud, 24 hrs/day) for more information.

The Washtenaw Atari Users Group meetings are held every second Tuesday of the month at 7:30 pm in the Michigan Union building on the campus of the University of Michigan on State St. at the corner of S. University in Ann Arbor.

Club dues are $15 per year and provide access to the PD library and subscription to AIM. Meetings feature demos of both 8bit and ST software and hardware. Nonmembers and questions are welcome. Officers can be contacted by calling Craig Harvey at (313) 994-5619 or by BBS at Molin's Den at (313) 420-0407.

The April meeting of WAUG, featuring discussions and demos of "Scanners, Graphics & Printers," was held on 4/10 in the Wolverine Room of the Michigan Union. President Craig Harvey called the meeting to order at *exactly* 7:30pm and immediately announced he had seen Elvis at the Toronto Atari show.

Naturally everyone attributed this to the fact the show was held on April 1, but he was serious! Of course, there were some immediate offerings to have him committed to a hospital in Ypsilanti...but it turned out he was referring to a picture that was included in the documentation for the IMG Scan device he picked up at the show, which he showed us. (The picture *and* the scanner.)

Surviving that, Craig went on to announce topics of future meetings: May's topic was scheduled to be Darek Mihocka's Quick ST series of utilities, but there is now some question as to whether a new topic will be considered. June will feature the traditional Swap Night, which will be preceded immediately by annual Officer Election Festivities.

Craig distributed a flyer which describes how to access and make use of The Treasure Chest BBS which supports AIM. Seems there is some confusion about how to access the various areas on the system, so Bill and Pattie have attempted to clear things up a little.

Craig's demonstration of the IMG Scan (Seymour Radix) proved as interesting as we had expected. Besides finding a secure way to mount the fiber optic strands to the print head, the only other complaint seemed to center on the fact this system forces your printer to print characters on the source object and, although one has presumably removed the ribbon from the printer, such activity could cause damage to the object being scanned. Craig suggested a photocopy of the original object be used instead and, in fact, found this to be a better way to deal with color than using the supplied software.

8-bit Librarian Mike Millage demonstrated the counterpart system on the club XL, Easy Scan (Innovative Concepts/Jim Steinbrecher) which comes with a variety of utilities for converting from the default MicroIllustrator format to other systems.

Co-Editor David Brzezinski showed Picture Plus, an Antic presentation, which supports most of the 8-bit picture formats. Dave noted this would make a great supporting package for the Easy Scan device. Co-Editor Paul Walkowski then played a video-tape in which he demonstrated the use of his hand scanner on his PC compatible creating clipart for use in the Boy Scout newsletters he produces. Member Ralph Salmeron showed us how he creates pic/clipart files using Computer Eyes (Digital Vision) on the XL.

Member Roger Tanner stood in for Librarian Russ Crum and described the monthly AIM disk and sold copies of it. The AIM disk is very well received among the members!

Fellow WAUG members,

It has come to my attention there is to be a swap meet (also known as a flea market) at the upcoming June 12 meeting of WAUG. Combined with this wonderful event is to be the even more wonderful event known as *elections*. And while I will admit it would be hard to improve upon the current selection of club officers, it is also considered a good idea to get some new blood into the process (I'm sure you've heard what happens with too much 'inbreeding'...). If you are afraid your knowledge or skill with computers or with officership is not up to that necessary to be an outstanding WAUG officer, rest assured you are probably right. However, I offer myself up as an example to prove that that doesn't matter. And if you don't buy that argument, then how about this one: there are bound to be some of us experienced/knowledgeable old-timers who end up getting re-elected (to the same or other positions), and we would therefore be able to share our expertise with you and bring you up to a corresponding superior level of excellence. What? You don't buy that one either??!!

Well then, here's my last resort: Please bring any hardware, software, and money that you can spare to the June 12 swap meet at the Michigan Union, (subliminal message: and raise your hand when told to), and have a great time making others happy with your valuable 'junk' and vice versa.

Craig Harvey

WNYAUG meets at 7:30 pm on the first Thursday of each month in room 116E, Bacon Hall at the State University College of Buffalo Campus, 1300 Elmwood Ave.

Dues are $15 for new members and $12 for renewing members. Send checks and correspondance to WNYAUG, PO Box 59, Buffalo, NY 14216.

President	Mike Husband	(716) 825-8486
Vice President	Kevin Packard	773-9325
Secretary/Treas.	Martin Schlund	689-7873
SysOp	Don Koepf	681-0564
8bit Librarian	Norm & Betty Knab	937-6974
The Wizard's Attic BBS		681-1654

The Pokey arrived in the mail today. I must say it looked outstanding. The only way to put out a Pokey is to have articles to put in it. Let's keep Bruce busy!

I missed the March first meeting; I had a little car problem. I do plan on making the April meeting. I also planned to make the March meeting.

I have a few things to bring up. Death of the Pokey? Let's just say the Pokey is in a coma and when we get enough articles, it will come out. AIM looks like a real nice newsletter. I hope you enjoy it. Mike

Nobody Asked Me, but....

In order to assess the changes, we would like some feedback from you members on the new (at no cost to you) AIM, the new meeting facilites and meeting format, and anything else that's important to you! Post Email on the Wizard's Attic, write or call, or better yet, come to the meeting.

It looks like John Tally is a one-man army of recruiters. He seems to show up at each meeting with at least one or two new people. As those of you who were at the April meeting may have noticed, I seem to be afflicted with premature senility, but if I heard right, two of the new faces have already volunteered....one to clean up the library and one to revive the Pokely (if he gets enough to write about—it's really up to all of us to support him.).

If you think John is good at attracting new members—you should have been at the April meeting for the extraordinary demonstrations he put on...sort of a one-man show, with just about everything an Atarian could hope for in the way of equipment. (His Board is no slouch either!) Keep up the great work, John and Thanks!

With Kevin Packard, Don Koepf and now John Tally, and hopefully some of the new members, we are at last getting the kind of "quality time" I have missed since we lost the likes of Bill Beerbower, Dave Arlington, John Bautz, Stan Buczko and so many others.

Look at the label on this issue. If it's 04/30/90, you are holding your last issue unless you renew by the May meeting. Marty

GREAT 8-BIT ATARI PRODUCTS

Graphics Image Scanner, Easy Scan II supports graphics modes 8,9,10,11 and 15. Saves images in standard 62 sector format. Makes banners, flyers, posters and more! Requires XL/XE/XEGS with atleast 128K and Epson graphics capable printer. **$99.95**

Print Shop Drivers
Use your "incompatible" printer with Print Shop and Print Shop Companion! **$14.95 each**, for your choice of the following printers: Atari 1020 printer/plotter, Okimate 10, Epson LQ-500-800 (24-pin compatibles).

Memory Upgrades
Our kits INCLUDE RAM and software! 128K and 192K upgrades are 100% 130XE compatible. 256K and higher upgrades INCLUDE our RAM-Drive Utiltiy Package! **Call for our low kit prices!**

XF35 Kit—720K of Storage!
XF551conversion kit to the 3.5"disks. Includes ROM, adapting cables and complete instructions. (3.5" drive and cage not included.) **$34.95**

Happy Doubler—Includes Free Utility Disk!
Software program Happy 1050 drives to match US Doubler, including skew, drive numbers to D:8! Includes Utilties! **Only: $19.95**

Immitator Controller
Happy 1050 Fast/Slow mode switch, write protect switch, two-color LED monitor. $39.95 IC1050 Controller, works with all 1050s, write protect only. **$29.95**

SIO Switch Box
Control two computers with one peripheral setup, OR, one computer with two peripheral setups! **$49.95** SIO Port Box—Four SIO ports, solves "dead end peripherals. **$39.95**

AND NOW—ST PRODUCTS

BLITTER Upgrade
It's not just for Megas anymore! We will install the BLITTER graphic speed chip in compatible 520STfms and 1040STfms (call about identifying motherboard) for only **$75 plus $5 shipping.** Let us do the work for ease and safety!

ST/Mega Memory Upgrades
Fast turnaround and low prices on memory upgrades. **520ST to 1Meg, $125, 520/1040 to 2.5Meg, $325, 520/1040 to 4Meg, $500. Mega2 to 4Meg, $300.** All ST RAM upgrades include installation, return shipping (USA) and FREE Utiltiy Disk!

TOS1.4 Installed
Let us put the new Atari operating systemin your ST or Mega for only **$125.** (Two or four chip sets.) Includes Utility Disk.

Bomb Fix (Driver Chips)
We can replace those weak 74LS373 drivers that can cause random crashes, especially when using accelorators, MAC & IBM emulators and TOS 1.4. We use the superior 74AS373s and do the work for just **$35.**

Do Two or more and SAVE!
Do any two or more of our upgrades at the same time and you will SAVE with additional discounts! Call for details!

BLITZ Copy Cable—Free Turbo Blitz Software
Make the fastest disk copies known to man with our BLITZ cable. Use two disk drives and even backup many copy-protected disks at lightening speed! Software and cable for only **$34.95.**

Xformer Cable
Using the Xformer Software, now included free, this cable lets you plug an 8-bit disk drive or printer into the ST or Mega! **Only $19.95**

Ordering Information (All US Funds)
Add $4 for S&H (USA/APO/FPO), COD add $3.50 (USA only). Canada/Mexico add $7. Others add $10 for S&H.

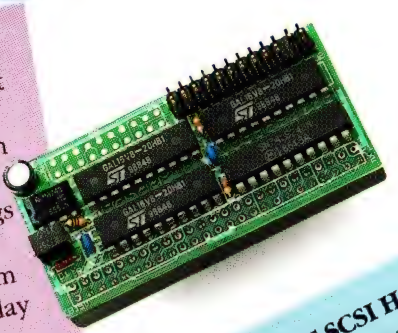
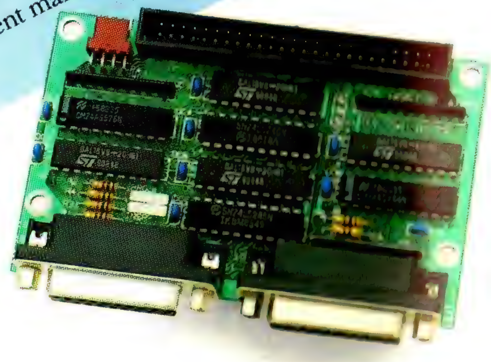
Advantage ST™

Advantage Micro ST™ SCSI Host Adapter - At 1.3 by 2.7 inches, it is the smallest SCSI host adapter commercially available. The Advantage Micro ST is a zero footprint design which makes it the perfect host adapter for internal MEGA needs. The Advantage Micro ST plugs directly into the 50 pin connector of an embedded SCSI drive and powers itself from the SCSI bus. The adjustable power-up delay circuit provides up to one minute of delay before allowing your Mega computer to boot. The Advantage Micro ST kit includes a sturdy mounting bracket for a 3 1/2 inch hard drive mechanism, internal DMA cable, drive power cable, our famous software, and excellent manual: everything you need to install a 3 1/2 inch hard drive inside your MEGA computer.



Advantage ST SCSI Host Adapter - Less than half the size of our original ST Host Adapter, the Advantage ST has all of its features except the clock. Added features include full SCSI command set, parity generation, dual mode DMA daisy chaining, and 48 ma drivers. The Advantage ST includes our unique new Dual-Mode DMA daisy chaining providing both the drivers for standard pass-through operation invented by ICD and full compatibility with devices that use parallel daisy chaining. The Advantage ST kit includes the Advantage ST Host Adapter, 3 foot molded DMA cable, DC power adapter cable, our famous software, and excellent manual.



Advantage Plus ST™ SCSI Host Adapter - With all the features of the Advantage ST plus a real-time clock, this board is the same size as our original ST Host Adapter and it can easily replace your old ICD ST Host Adapter in existing applications. (For replacements: Please specify side or end mounting of the DMA connectors.) The Advantage Plus ST kit includes an Advantage Plus ST Host Adapter, 3 foot molded DMA cable, DC power adapter cable, our famous software, and excellent manual.

ATARI BULLETIN BOARD

by Bill & Pattie Rayl

Atari Corp. News

Atari's 68030-based TT is currently at FCC. Although no firm release dates are expected until after the machine passes FCC, Atari President Sam Tramiel stated at the recent Stockholders Meeting that the TT would ship by the fall of this year. Recent reports have also indicated Atari Canada may hold a press conference in June to announce shipment of the TT in July.

The Stacy laptop has been shipping in the US and Canada for a number of weeks, with most of the US shipments going to MIDI professionals and dealers.

A number of the 4 Meg/40 MB hard drive models have appeared on the shelves of "normal" Atari dealers, with a price tag of around $2500 US.

In Canada, dealers have Stacy 1—1 Meg/ 20 MB hard drive units—in stock, selling for around $2500 Canadian. These models are expected to sell in the US for around $1800 when they become available.

Atari Financial Report

In mid-May, Atari released its first quarter financials, reporting a net income of $1.5 million or $.03 per share on sales of $85.5 million. These figures, according to Atari, reflect continued demand for the ST line, including the new STe, and strong sales of the Portfolio and Lynx.

The Spring issue of Atari Explorer, which was pulled from distribution when Atari fired the old Explorer staff, has been shipped to subscribers. The "infamous" editorial written by ex-editor Betsy Staples was replaced by one written by John Jainshigg, the magazine's new editor. Jainshigg was formerly a technical editor for Atari Explorer.

Developer News

Innovative Concepts has announced the commercial release of ARCIT and ARCIT Shell for the ST. These programs, which give user-friendly interfaces to the standard file compression programs, originated in the Shareware market.

Now a commercial product, the software has been upgraded to support new compression programs like ZIP and ZOO, as well as the ability to save your configuration. The package retails for only $14.95 (plus S/H) and comes with a disk containing all the various compression programs and their docs.

For more information on the ArcIt programs, there a review appearing this month. Innovative Concepts, 31172 Shawn Drive, Warren, MI 48093, (313) 293-0730.

For Mega ST owners looking to add a longer cable to their keyboard, Data Base Computer Systems is selling "high quality spring coiled" replacement cables that aren't as prone to tangling and kinking as other "flat" cables. Cables with a 12-foot stretch length retail for $15, while 25-foot versions sell for $20.

Data Base also offers a 5-inch flat cable "extension" for cartridge users for only $5, allowing the keyboard cable to be more easily routed around the cartridge. Add $2 S/H. CODs are available for an extra $5. Data Base Computer Systems, Box 20, Manti, UT 84642, (801) 835-8441.

Diamond Back II

Data Innovations has released a significant upgrade to their popular ST hard drive backup program, Diamond Back II. Diamond Back now supports backup of Spectre hard drive partitions, expanded wildcard masks, ability to append incremental backups to the last disk in a previous saveset, estimate of how many disks your backup will take and lots more.

Diamond Back II is also packaged with Diamond Cache, a user-configurable disk cache program. Current owners of Diamond Back can upgrade by sending in their original disks and $10 ($15 if new manual wanted). Retail price for the package is $59.95. Data Innovations, 127 N. Front Street, Rising Sun, IN 47040, (812) 438-3733.

New BobTerm

BobTerm, the Shareware 8-bit terminal program from Bob Puff, has been upgraded to version 1.21. BobTerm has full XEP-80 and DOS support and a "fast CIS Xmodem" protocol for speedy downloading on CompuServe. This program is available for download from the online services or for purchase from local user groups. Support Shareware!

Micro Solutions has introduced Transkey. Transkey allows you to add an IBM style detachable keyboard to your XL/XE computer. This small board fits under the shielding on the Atari 8bit and attaches to the IBM type keyboard with a 5-pin DIN jack and a small ribbon cable to the Trankey board. You are still able to use the regular, built-in, Atari keyboard. Transkey sells for $48 for the solder-in version for all 8bits, and $58 non-solder version for 400/800/XLs only. Micro Solutions, Box 750396, Petaluma, CA 94975 ph: (707) 763-9103.

Help Wanted

LEXICOR Software, a new company started by a group of former Antic developers, is looking for programmers. LEXICOR was "set up to support authors and programmers on a royalty basis so that there would be at least one software publisher for the ATARI that cared more about the author than corporate profits."

The company is interested in any projects and is also specifically looking for authors interested in programming for the new ParSec graphics board, ISAC board and learning P.I.X.R.'s Renderman. For more information, contact LEXICOR Software, 58 Redwood Road, Fairfax, CA 94930.

Online News

The ST Roundtable on GEnie has recently added a Trivia Quiz selection to the roundtable's main menu. Users who take the quiz can win free online time—the more you "play," the better your chances of winning.

From May 15th to July 15th, 1990, the Atari Portfolio Forum on CompuServe is sponsoring a programming contest for the palmtop IBM compatible. For more information on the contest and prizes to be awarded, stop in by typing GO APORTFO.

AIM Category On GEnie

GEnie has been doing a little housecleaning in the ST Rountable bulletin board, removing old Categories and adding some new ones. Atari Interface now has its own category on GEnie...stop by in Category 22 and chat with us!

Other recent categories have been set up for Double-Click Software (DC Desktop, DC Utilities, etc.) and Talon Technology (makers of the popular Super-Charger IBM emulator).

SOME LIKE IT... HOT!

The CodeHeads announce:

HOT WIRE + MAXI FILE

- "When the START editorial staff first saw HotWire, our collective reaction was 'Wow!'"
- By far the **fastest, easiest way to run programs** on the Atari ST...from a floppy disk **or** from a hard drive!
- Build menus for all your most commonly-used programs. Load new menus with a single keypress or mouse click!
- New **Ledger** function records time spent in programs of your choice.
- **Passwords** may be used to restrict unauthorized access to certain programs.
- New **on-screen clock**, appears in the programs that you choose.
- Unlike other shells, HotWire works correctly with all programs, just like the GEM desktop.
- A **seamless interface** offers direct access to MultiDesk and MaxiFile.

- Full-featured file-handling utility lets you **move/copy/delete/rename/touch/lock/hide** any combination of files and/or folders.
- Runs as a desk accessory **or** as a program in any resolution.
- Incorporates **every** file/disk feature of the GEM desktop plus much more.
- Intelligent **disk copying** routines.
- **Rename folders** - Print directory listings
- Store **comments** about any file/folder
- Unique and intuitive user interface designed for easy, speedy operation.
- **Customizable** for your style of use
- **Keyboard equivalents** for all operations
- Quickly select from up to 20 of your most-used paths.
- Even runs programs and loads documents.

Here's what our users are saying about HotWire and MaxiFile:

"The HotWire/MaxiFile combo has **changed the way I use my ST**."
"I haven't used the standard GEM desktop in weeks."
"Without HotWire and MaxiFile I'd be totally lost on the ST."
"...a tribute to **assembly excellence**." - "MaxiFile is **a wonder**!"
"HotWire and MaxiFile really 'beat up on the competition'!!"
"...you'll need to package it in asbestos because it is too **hot**."
"**AWESOME!**" - "Super!" - "a veritable software gem!"

HotWire Plus (includes MaxiFile)	$49.95
MaxiFile	$24.95
HotWire	$39.95
G+Plus - a replacement for Atari GDOS	$34.95
MultiDesk - load unlimited desk accessories	$29.95
CodeHead Utilities - a collection of useful programs	$29.95
MIDIMax - a powerful MIDI tool for performers	$49.95

Phone: (213) 386-5735. Visa, Mastercard, AmEx accepted. Shipping charge: US $2, Canada $3, Europe $5. CA residents add 6.5% sales tax.

CodeHead Software
P.O. Box 74090
Los Angeles, CA 90004

A New Choice for Printing

Now you have more than two choices for printing files. No more using the limited functions of the Desktop, or waiting for a wordprocessing or desktop publishing package--and all the extra features--to load. Now you can quickly print a text file, complete with margins, headers, and page numbers. Files and features may be selected with the mouse. You'll never have to touch the keyboard again. Ideal for ".DOC" and "README" files, or most any quick printing job. HELP is instantly available with a single mouse-click.

The Presswork's Assistant. Now available for only (US) $10.00! Check or Money Order always welcome.

Denver, CO 80221-6564

Annual Atari Stockholders Meeting

by John Pilge

The Annual Atari stockholders meeting is where shareholders vote for the board of directors and approve any changes in the company charter.

Action by the Stockholders

This year the change was to appoint Deloitte & Touche as independent auditors for the company. The motion to appoint Deloitte & Touche was approved 47,512,391 to 4,365.

Jack Tramail was elected Chairman of the Board by 47,510,376 shares. Of that number 25,300,156 are Jack Tramiel's own shares (43.8 percent of all stock).

The voting is a formality. The directors hold 51 percent of the stock and Warner Communications owns another 24 percent. There are about 57,138,000 shares of stock. Not everyone sends in the voting statement, so not all the shares are represented.

After the quick voting, the board answered questions and showed the latest line of Atari goods.

Questions for the Board

The questions got the official Atari statements. Atari Explorer magazine has been moved to the West Coast so it can be better supported and the new editor is chosen to maintain closer contact with Atari. [Ed. Note: John Jainshigg has been online for Atari Explorer as the new editor. But, when Sam Tramiel was asked, Sam said Jim Fischer is the new editor. Perhaps Sam meant publisher?]

News on the TT

The TT030 will not be released to any magazines or reviewers until it is ready for distribution. It is expected to be available in the fall. The TT is planned to be released in two configurations, with Unix available in the high end machines.

Atari did not buy Epyx, Atari bought the Lynx from Epyx. Atari will be advertising more in the United States in 1990 as the year progresses. Most of the ads will be for the Lynx and the Portfolio.

Some Atari Figures

Usually, Atari is quiet about numbers but some information did surface.

There were only 30,000 Lynx machines available last Christmas with 15,000 available in the New York area. This year there will be 400,000 Lynx machines available.

The production is limited to the number of Lynx Video screens they can get. Atari hopes to have 30 titles for the Lynx by the end of the year. One game, Slime World, will allow up to eight players/machines to connect.

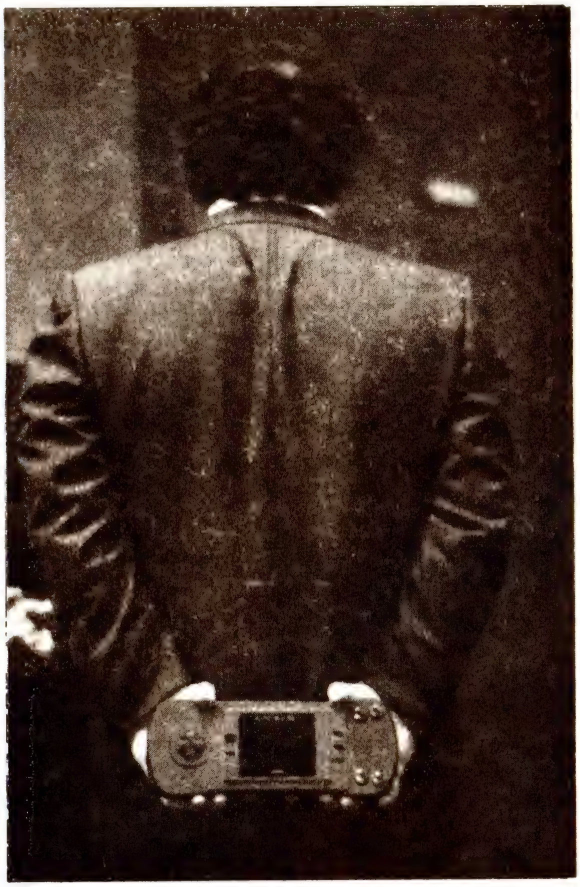
Worldwide Figures

There are about 1,500,000 ST computers in use. This number includes the Stacy which has been available since January. Last year, 250,000 XE computers were sold. In Poland, the XE sold 70,000 units, making it the most popular computer in Poland. Europe accounts for 60 percent of Atari sales.

The rest of the meeting focused on the abilities of the Portfolio, new software (there is one game planned for the Portfolio, but no one will say what) and showing some demonstrations on the STe and the TT030.

None of the 8-bit products were displayed and neither was the Stacy. From talking with members of the board, Atari still has one Federated store left.

Refreshments were cookies and soft drinks.



Atari's Sam Tramiel

NEW

DC DESKTOP

"The GEM Desktop just got better"

Enhance, don't replace!

- Place icons directly onto the desktop
- Display unique icons for all files and drives
- Store frequently used files and programs in our exclusive CABINET virtual disk drive
- Display NEOchrome, Degas, Spectrum and other pictures with no Install Application
- View files at the desktop with an enhanced SHOW routine (with mouse control!)
- Replace the desktop with a pattern or picture
- Recover files from the trash
- Printer spooler and icon (to drag files to)
- Works in all resolutions
- Drop down menu commands via keystrokes
- Load different desktops with a keystroke
- Comes with Quick ST 2.0 demo, a command line interface, bootup selector, icon editor
- Special hooks let RAM resident programs be called with one key from DC Desktop
- Completely modular and memory resident – only use what you want!
- Much more

Midwest Atari SwapFest

D.A. Brumleve (CUSTUG)

A few years back, there was a major effort by a coalition of Chicago-area users groups to present a large-scale Atari show. That effort failed, members lost money, the show did not take place and participants were very discouraged.

How it Started

It took a while to build up the courage to try it again. One group has taken the lead by putting on a multi-group "swap meet," a small-scale show which might serve as a test-case to indicate whether or not they might be capable of putting on a larger World-of-Atari-type event in 1991.

The plan was to host a small show to generate enthusiasm and develop intergroup spirit, and to provide some visibility to the many Chicago-area Atari dealers and lots and lots of bargains to the show-goers.

From 10am to 4pm on Sunday, April 22, the efforts of the Lake County Atari Computer Enthusiasts (LCACE), and especially of club officers Larry Grauzas, Mike Brown, John Schultz and JJ Johnson, paid off in the form of the Midwest Atari SwapFest.

Where Was the Show?

The SwapFest was held in the banquet room of the Diplomat, a restaurant associated with a Days Inn hotel in Gurnee, northwest of Chicago. A room at the Days Inn was made available for seminars.

Exhibition tables were arranged in a pattern of concentric squares in the banquet room. ST and 8-bit user groups brought their used software and group library disks to sell.

Among the groups participating were LCACE, MilAtari Ltd. (Milwaukee), SCAT (Southern Chicago and suburbs), RACC (Rockford) and GCACE (Chicago). Members of CRAG (Calumet IN Region Atari Group) distributed copies of their newsletter. The Rockford group passed out pocket protectors emblazened with their logo.

Who Was There

Other exhibition booths included my own (D.A. Brumleve), Kolputer Systems, Computer Cellar, CSA, Apple Annie, No Frills Software, Paper Express and Mars Merchandising.

Not all of Chicago's Atari dealers were represented; I was surprised at the absence of Digital World, Coz Computers and Software Plus.

Some of the booths focused on one or another aspect of computing; particularly noticable was the MIDI area, which entertained show-goers with music and other noises throughout the day.

All Atari products were represented in the booths. Most of the groups supported both the ST and 8-bit user, and dealers also had products related to the Portfolio, Lynx and game machines.

Atari had a booth manned by Bob Brodie, Jeff Williams, who is a sysop on GEnie, and Mike Groh, Atari's Chicago-area dealer representative. Bob brought along the Lynx, Portfolio, STe and Stacy for the enjoyment of attendees.

The STe's sound capabilities were demonstrated through the use of stereo speakers and a special demo program designed for the STe. Bob presented two seminars to packed audiences.

Did I say "packed?" The seminar room was not the only area that was packed. Organizers had anticipated only a few hundred attendees, but wound up selling over 1000 tickets!

The concern was expressed that the Fire Marshall might close the place down, it was so well-attended. The aisles were crowded with enthusiastic bargain-hunters throughout most of the day.

Around 3pm, the crowd began to dwindle, but this was fortuitous and appropriate in a way, as several vendors had sold out of their wares and were packing up to go home!

Where People Came From

Attendees came from as far away as Downstate Illinois, Indiana, Iowa and Michigan. CUSTUG was represented among the show-goers too: Menno Rapson, Harlow Bower and Sid Smart caravaned to Gurnee to catch the opening of the show.

As a vendor, I found my demonstration computer was in almost constant use. Many children attended the show with their parents. Several children came back to use one program or another again and again.

My hopping disks, as usual, "sold" like hotcakes, with some greedy little ones taking several apiece. (Maybe they knew they'd be losing at least some of them in short order.)

I made few sales, but those who did buy in every case took advantage of the "show special" ($65 for Kidpainter, Kidpublisher Professional, and Super Kidgrid), so for once I actually made a profit (!) at an Atari show.

Next to my display sat a box of flyers from M-S Designs. This is a company that Henry Murphy and Carl Stanford of CUSTUG have established for the marketing of their Calamus fonts. Mike Groh, who had participated in CUSTUG's own "Evening with Atari" at Leal School last February, was demonstrating Calamus in the Atari booth, so he disseminated many of these flyers from the Atari booth also.

Door prizes were presented to winners of a ticket drawing at intervals throughout the day. At the end of the day, Bob Brodie of Atari offered a MegaFile 44 as a gala door prize.

Vendors and users agreed that this show was a terrific success. In spite of its limited intentions, attendance was substantial and enthusiastic. I hope the organizers have sufficient momentum to pursue a major Chicago-area Atari show in the very near future!

"This is a GREAT program and it has cut my mail list time by over half. I just wish I would have had this program a couple of years back!!!"
--B.G., Texas

- ✦Full mail merge system *built in*, with word processing functions like cut & paste, bold, italic and underline.
- ✦Computer aided entry saves you thousands of keystrokes (*and lots of time*)--up to 10,000 keystrokes saved per 250 names!
- ✦Label settings for single, 2 and 3 across labels, and laser printed labels. Edit these and add your own for custom label formats.
- ✦One-step "subscription aging" automatically tracks remaining time in a membership or subscription.
- ✦Unique *Quick Letter* option for those occasions when you need to send a single "almost form letter." Great for follow-up letters.
- ✦*Unlimited notes* for each person in your files.
- ✦Easy importing of names and addresses from all popular data management packages into Tracker/ST.

SLM & Desk-Jet Support!

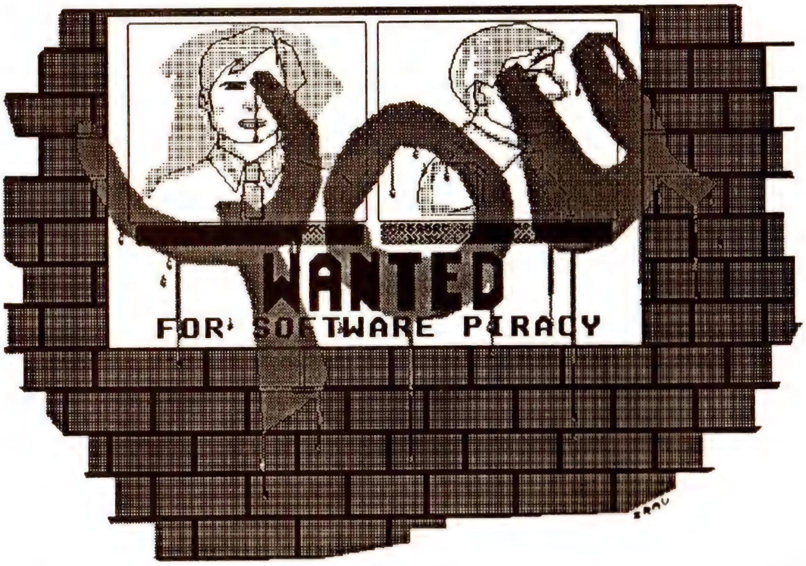
Troubles in Pittsburgh

Fallout from the PACE Show



Patricia Snyder-Rayl

[Ed. Note: We'd like to thank both STReport and Z*Net online publications for contributing to this article.]

"I kind of sensed trouble when we entered the school to get in line for tickets," wrote Robert Ford for Z*Net. "There weren't more than 40-50 people there. Total attendance for Saturday was only about 350 and Sunday was even worse with about half that."

Exhibitors were disappointed with the low turnout, but more upset about the open and free discussion of piracy practices. Developers heard show-goers say uncounted times, "I'll get a copy of that from a friend." Many people who attended the Pittsburgh show on April 28 and 29 summed the show up later by saying, "Pittsburgh was the pits."

Examples

Unicorn Publications (Bill and I) exhibited at the PACE show. We were demonstrating and selling AIM disks of the month as well as copies of Atari Interface magazine. We were asked many times "Is this commerical or public domain?"

When we explained all the programs on the AIM disks were either PD or Shareware, we were shocked to hear "Good. I don't buy commercial software."

Double Click Software had a booth opposite ours, and they were exhibiting DC Desktop. But people weren't interested in buying their new, and hot, package. I helped them out by watching their booth for a short time, and was trying very hard to get a fellow interested in DC Utilities to buy it for the show price of $20. He was convinced it was a good package, but he wouldn't buy it...he'd "Get a copy from the club."

This unabashed display of software theft reached a crescendo when George Miller of Michtron was asked to refund a show-goer's money on Canvas because "a friend" told the show-goer he could get the program for free. Canvas, a paint program, debuted at the PACE show.

Meeting of Minds

The low attendance and attitude at the show caused exhibitors to call a meeting Sunday with PACE officers. During that meeting, the mention of a club called Atari Elite with a commercial software lending library sparked even more anger from the unhappy exhibitors. Nathan Potechin of ISD indicated he would look into what action, if any, could be taken against lending libraries sponsored by Atari clubs.

Atari Users Association's Derek Signorini was at the meeting and was a member of the Atari Elite. He was strongly encouraged by the exhibitors to drop his affiliation with Atari Elite, which he subsequently did.

This action seems to have gained the AUA greater respect from developers, if I'm judging the online responses accurately. However, according to STReport's Ralph Mariano, representatives of the Atari Elite did not greet the news with calm, but became abusive and threatening.

Atari User Group Manager Bob Brodie was at the show on Sunday. "When I got off the plane and was greeted by Rick Flashman (Gribnif) with the stories he had to tell, I started getting upset. By the time I got to the show and talked to other developers, I was very upset."

Some Reaction

Bob was definately not his usual cheerful, open self. He had just flown in from Rochester, NY where he had a meeting Saturday with the New York clubs. "It may have been a mistake to go and do all that much that weekend. Being tired made it bad; being upset made it worse. One thing I've learned is to cut back on my schedule."

When Bob heard tales of open, and apparently accepted, discussion of piracy in front of the developers, he decided to not donate the door prizes to the show. These included sets of TOS 1.4, A MegaFile 60, Gauntlet for the Lynx and several software packages for the 8bit.

"It is a shame, as perhaps some legitimate user might have won a nice door price, but from what I saw, we just would have helped the wrong people out. Maybe I was rough on them, but was it unwarranted is the question?" asked Bob Brodie.

Bob went on to say he's talked to the president of the Atari Elite club, and the president denies all piracy allegations, and says their lending library is mostly full of games—there are few applications in it. Lending libraries are in a "grey" area of copyright laws, but most developers are very positive in their viewpoint that the only purpose of such libraries is to illegally spread commercial software.

Developers like ISD, Michtron, Double Click and Branch Always Software have produced demos of their commercial programs so potential buyers have a chance to check out the software before they spend their money. Many feel this defeats the argument for "try before you buy" lending libraries either in clubs or stores.

Atari recently developed their SoftSource program available on GEnie, which will allows users and dealers access to all sorts of Atari commercial software demos. Atari has plans to put all the demos they receive on CD ROM so stores will have the demos right at their fingertips.

To my knowledge, no one has leveled any serious accusations of piracy at the Pittsburgh clubs, but the greater Pittsburgh area, and possibly Pennsylvania, is now under a heavy cloud of suspicion. A couple members of PACE admitted to us they pirate software. They told us they stole software because they had tried for years to fight the Atari Elite to no avail.

We feel sure there are upstanding members in each club. They will be hurt by this software theft, but not nearly as much as the developers. The software theives are effectively stealing money directly from the developers' pockets.

Developers such as CodeHead and Gribnif can't afford an Atari market that won't even pay their expenses to travel to Atari shows. And the Atari market can't afford to be without such excellent companies.

Hard Disk Systems to Fit Every Budget

- All systems are complete and ready to use, included at *no extra cost* are clock/calendar and cooling blower(s)
- All ABCO Hard Disk Systems Are Fully Expandable (you are *not* limited to two drives only!) All cables and connectors installed
- Rugged Seagate Hard Disk Mechanisms!
- ICD Advantage+ Host Adapters!
- OMTI High Speed Controllers

CALAMUS OUTLINE ART®

OUTLINE ART is a vector- oriented, graphic generation tool. Multiply your creativity through the many functions which you will find in this program.

OUTLINE ART supplements the CALAMUS DTP system with a great number of new functions and effects. A extract from the extensive list of functions include:

- A user interface, quite similar to that of CALAMUS.
- Complete Vector Graphics Editor for lines, Bezier curves, control paths etc..
- Capabilities to generate freely-definable raster areas.
- Creation of rayed objects, ie; from a font to a central point.
- Nearly unlimited possibilities for the manipulation of text, characters and text attributes such as:
  - rastered, transparent, outlined, rotated, stretched, compressed and cursive styles...
  - circular text and text along a freely-defined vector path...
  - projection of raster areas and text on vector outlines...
  - conversion of text into vector objects...
  - kerning functions...
  - Functions can be freely combined and applied to all CALAMUS fonts.
- Integrated, fully programable calculator with a pre-defined and extendible library of transformations such as:
  - shift, rotate, mirror, enlarge/ shrink, project onto a sphere (globe, cylinder, cone), etc..
  - An intelligent clipboard and copy functions, allowing the automatic generation of transformation sequences.
  - loading and saving in .CVG format (CALAMUS Vector Graphic), making possible the integration into and optimal printing through CALAMUS on all supported output devices in all resolutions.

Now included!
Convert 2X,
our new Conversion program
CVG (Calamus Vector Graphic)
to EPS (Encapsulated Postscript)
or PS (Postscript) file format.

Note : DynaCADD, our complete 2D and true 3D Computer Aided Design and Drafting Package, allows the importation of Calamus Vector Graphic format, (CVG). Which can then be output through all output options supported by DynaCADD, ie: CAMM-1, Plotters etc,... An excellent solution for the Sign Making Industry.

PageStream

The DTPer's Dream!

Mike Harbison (RACE)

Who needs another article about PageStream? Why is someone writing an article about a program that's been around a while? I decided I'd not seen an article that did it justice.

For those of you new to the Atari ST or desktop publishing scene, Pagestream (PGS) by Soft-Logik is the answer to the high price of desktop publishing. It is as powerful as any of its competition (on any computer) and it's a snap to learn. You must have at least an Atari ST with 1Meg of memory and a double sided drive.

Prior to upgrading to PGS, I'd used Soft-Logik's Publishing Partner (PP) since May 1987. It was the first true desktop publishing program for the ST and it was a standard.

Soon, new programs began to surpass PP's capabilities and Soft-Logik itself decided to introduce a new professional version. Unfortunately, they advertised and took orders for the program about 12 months before it was delivered.

Originally intended to be an upgrade of PP, it was built from the ground up in assembly language because they felt that simply adding features to PP wouldn't work the way they wanted it to.

After many letters, they released version 1.0 (Nov 88) with a list of "known" bugs (it crashed a lot). It probably harmed their reputation more than no release at all.

I didn't worry much; I'd been using PP for a long time with excellent results. Three months later, I received version 1.5 (free). I promptly screwed it up by copying over the *new* disk (rats). I called Soft-Logik, explained my problem, and they said to mail back the 1.5 disk. About two weeks later, I received my new disk labeled v. 1.51. They'd updated PGS since I got the first upgrade!

Two months later, a friend of mine bought PGS v. 1.53! Soft-Logik said I could wait for the next major upgrade or copy v. 1.53 from my friend. You know what I did. Well the major upgrade (v. 1.8) hit the streets in late 1989. It wasn't free but well worth $25 for new manual and program. I don't see how they could afford to give free upgrades in the first place!?!?!

Now, what can PGS do? If you want something on a page, PGS can do it! The only limit is your own imagination. I've seen some better promoted programs (Calamus, Pagemaker, etc.) but none that can do any more than PGS. Sure there are a few features that it doesn't have, but it has a few that the others don't have as well.

Now let's talk about PGS version 1.8. The manual (downfall of most programs) is fantastic. It's very professional-looking, very well organized, and of course, it was created entirely with PageStream. The table of contents is extremely detailed and will help you find any topic you desire.

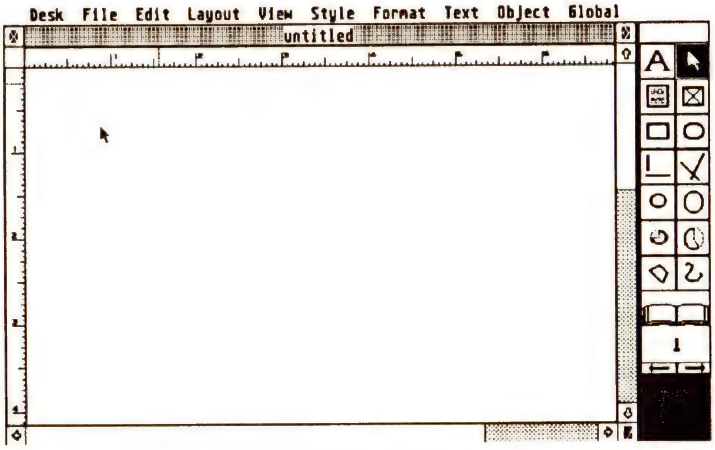
PageStream Quickstart

Chapter 1 is for people (like me) who don't like to read a lot before getting at it. You'll start running through the program in just a few minutes. The remaining chapters, thirteen in all, cover each function in detail.

One of the most interesting features is the "Spotlight." This is where they give you tips on visual effects, leading you through the process step by step. They've got these little "Spotlights" spread throughout the manual. My favorite is "Spotlight - Zooming."

And now...the program. Getting started was pretty easy. Click on the PGSTREAM.PRG icon and you'll start the loading process...it does take a long time to load. The more fonts, the longer it takes to load. I'd recommend a hard disk because of the shear size of the program and its support files.

Once it's loaded, you'll see the PageStream desktop. It displays the traditional GEM menu bar and the TOOLBOX.



Creating a Document

Now you'll need to go to the FILE menu to open a new document. It'll ask you about page size and orientation (landscape or portrait). I almost always use the same type of document, so I've set up a macro (F1) to do it. When you first open or create a document, it doesn't fill the width of the screen. This is so it won't cover the TOOLBOX. You can size the document to take the full screen width if you'd like. In this case, the TOOLBOX is hidden by the document; display it by clicking on the upper right button.

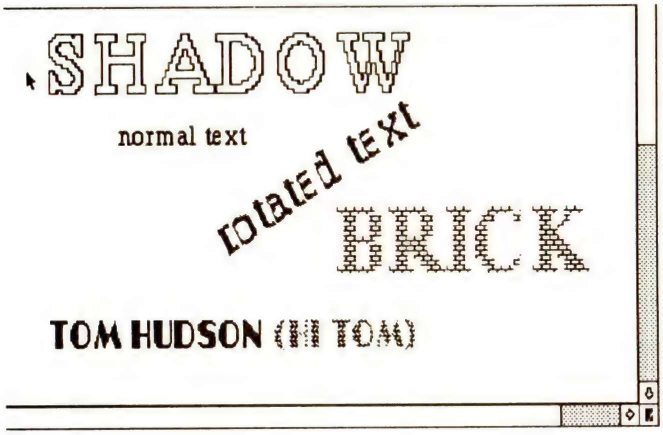
Now you've got a document right? Well, what do you do next? Text is important, let's start there. You can place text on the page as an object or within a text column. There are advantages to each depending on your purpose. A text column usually contains a fairly long string of text and can support some text functions that a text object can't. If you resize the column, the text remains the same size.

A text object is typed directly onto the page without support of a column. Just select the text mode on the TOOLBOX (large letter A) and click on the page. Avoid clicking near columns if you want a text object; clicking near a column will automatically put you in the column. If you're not in a column, you'll see a vertical line representing the start of text. Just type away. You can treat them just like any other graphic object. They work great for making charts, graphs, and titles.

Getting Text into Your Document

There are two ways to enter text into your PGS document; typing it in directly or importing text from another text editor. I've done both but most of the time I've typed it in directly. As far as I know (by the manual), you can import ASCII, Word Perfect 4.0, 1ST Word (WordWriter ST and 1ST Word Plus), and REDIGER files. PGS will import these files with the original formatting. All other text must be imported as ASCII. New import modules may have been added since I wrote this, so be on the lookout if your word processor isn't supported.

Font selection and management is now much easier. Ten fonts (type styles) are included with PGS. Now you can separate your fonts and load them as needed. This is handy since I've got 33 fonts but only load my favorite nine fonts on startup. Font selection and sizing is a snap. Although there are several preset sizes, you can choose almost any size you want by just typing in the height and width or for text objects just grab the sizing squares and drag. You can assign colors and patterns to any font just like any other object. In addition, text can have several style attributes, such as: normal, backslant, bold, italics, shadow, etc. Although the fonts appear blocky on the screen, never fear, they print out great—even on a 9-pin dot matrix printer!



Some of the Other Features

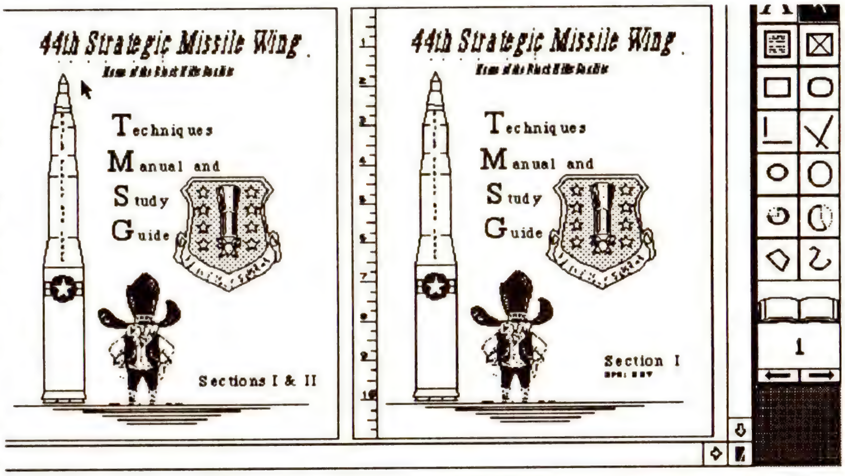
The Toolbox is one of the most used features. It's shown here in the figure on the previous page on the right side of the screen. You'll use it most often to select text or object mode. The large letter "A" represents text mode. When in this mode you can enter text in the document—either column or text object. The arrow is object mode. Once you're in object mode you can select objects to move, resize, group, rotate, etc.

The next two boxes on the Toolbox represent text columns and reshape. The icon that looks like a box with text inside is used to "draw" text columns on the page. It works like drawing a box but it disappears once you've finished unless you're displaying column outlines (more on display options later). What you're left with is a text column.

What's so special about this? Well, there are times when you need a column but don't want to use the standard create columns option. You can put any size column anywhere you want! Even overlaying another text column for a special effect. The icon on the right (envelope shape) starts the reshape mode. This is only used to reshape polygons drawn within PGS. I've used it a great deal, because I do a lot of artwork with PGS.

When selected and you click on a polygon (the multi-sided objects I create I wouldn't call polygons...) you get sizing squares at the end of each side instead of the standard sizing squares at four corners and sides. By selecting and dragging a sizing square you'll change the shape of the polygon (a very handy feature).

The remainder of the Toolbox options are mostly drawing tools: Box, Round Corner Box, Vertical/Horizontal Lines, All Other Lines, Circle, Oval, Circular Arc, Oval Arc, Polygon, and Freehand Drawing. At the bottom of the Toolbox is the book icon, number, and arrows. Click on the left or right page and you'll move to the left or right master page. Here you can set up any object(s) or text that you want to appear on every page or alternate pages throughout the document. The number displayed on the Toolbox is the current page. Click on the right arrow to advance to the next page; left for the previous page.



One of the most useful features is the view options menu. With this feature you can display: facing pages, full page, 50%, actual size, 200%, full width, user set scale and variable zoom.

Facing pages: When you select facing pages you'll see two pages side by side. The pages don't have to be adjacent pages either. The page displayed on the left is the only one that can be edited in this mode. The one on the right is for comparison only.

Full page: Same size page as facing pages but only one page.

User set scale, 50% and 200%: Your possible magnifications (two common presets and one user defined).

Full width and actual size: Both show the page's actual height but the full width option compresses the width to fit the viewing window.

Variable zoom: One of my favorite features. I can't look at the page and say what percentage of zoom I need. This feature lets me box around an area and the features within the box are expanded to fit the viewing window.

View magnifications are only part of the options. You can display rulers, guides, a grid, tabs, text routing and column outline. In addition, once you place a bit-mapped picture where you want it, you can turn off the picture display to speed up screen redraws. You'll see a frame representing the picture's location.

The last part of the view menu has page layout tools: show rulers, guides, grids, tabs, text routing, column outline and pictures. Each of the features is helpful in aligning and designing the page.

This is disgusting. I can't cover all the features in one article. There's just too much.

PageStream Update

Oh well, some exciting news. A few days ago there was a conference on GEnie with Deron Kazmaier, president of Soft-Logik Publishing Corporation. Being new to GEnie and modems, I could only figure out how to observe the conference. I wish I could've asked a question or two...but anyway here are some excerpts.

Soft-Logik is pleased to announce PageStream 2.0! PageStream 2.0 is fully integrated with Agfa Compugraphic's hinted outline fonts, as well as Adobe Type 1 IBM format (without hints). PageStream displays these outline fonts on the screen plus prints them to dot matrix, laser, and PostScript printers with exquisite quality. PageStream draws polygons with Bezier cubic curves as well as the usual straight lines.

PageStream 2.0 will load and save tags separate from a document. In addition, 2.0 will save a document as a template for future works of similar design. Version 2.0 allows for specifications of beginning and ending angles of arcs in 1/100 degree increments and allows for rotation in 1/100 degree increments. 2.0 allows the specification of font sizes in 1/100th point increments, and positions and sizes an object to the same 1/100th of a point. PageStream 2.0 allows larger maximum page dimensions (billboard size & beyond) plus the ability to easily "bleed" objects off the page.

The most important thing about the CG fonts is that it brings PostScript quality text to those who don't own a PS printer! The good news about the Adobe Type 1 is that for those who want to reach into the large Adobe font collection, you just need to drop them into your fonts directory, and viola, you can see the outlines on screen and proof them to non-PS printers!

Separate from the CG and Adobe Type 1, all fonts can be used for both screen and printer. This means that large type will look as good as possible, but if you still use a lot of 10pt type and have a bitmap for it, you can get the speed and quality of a bitmap. Rotated type looks great!

The only thing that will change with today's fonts is that they will be used more. Outlines (.DMF) will now show on screen, and get auto-converted into downloadable PostScript if the true font is not available, and bitmaps (.12h, 14h, 14i, etc) can be used for onscreen as before, but also dot matrix and PostScript!

The upgrade fee will be $75, and PGS 2.0 will retail for $299.95. If you buy/own an Adobe IBM font, all you need to do is copy the .PFB and .AFM files to a directory via Dos-2-Dos on the amiga, or just normal on an ST, and add the directory via the font manager. It's there ready to show the unhinted outline to screen and dot matrix, and print with the downloadable Adobe via PostScript. The AFM file will give the correct kerning and spacing!

Some Final Thoughts

Soft-Logik stuck with the Atari ST user and provided a very fine program. You know I'm going to get version 2.0 (probably need another memory upgrade too...ha, ha). Soft-Logik has donated PGS version 1.8 to many of the user groups for newsletter editors and raffles. I don't think they could support us any more than they have already.

MegaClick

Supercharge Your Mega Keyboard!!

Timothy Barr (SEVAC)

Have you lost confidence in your touch-typing ability when you use your Atari Mega ST? Do your fingers get confused when you switch from that IBM at work to your Atari at home? Or are you just getting tired of the incessant THOCK, THOCK, THOCK you get every time you hit a key?

If so, have I got good news for you!! Best Electronics has come to the rescue, with their MegaClick Atari Mega keyboard upgrades. And at a price comparable to a high quality IBM style keyboard.

Why the Need?

From Day 1, most Atari users have complained about how difficult the ST keyboards are for touch-typing. The original ST keyboard was made using the cheapest technology available at the time, and they felt cheap. Little pieces of rubber were used as "springs" for these keyboards. Atari partially solved this problem when they released the Mega 2 and 4.

The keys used in the Mega computers were real keyswitches, usually ones made by Cherry Electric. This was a major improvement over the original ST keyboard, and brought the Mega keyboard to the same level as most IBM clones.

Best Electronics has taken this one step further by offering the raw materials that will bring your Mega keyboard to the level of usability it should have been at from the beginning.

Raw materials, you say? That is one of the drawbacks to this upgrade.

Installing the Upgrade

MegaClick is basically a package of replacement keyswitches for a Mega keyboard. The MegaClick packages are available in quantities of either 10 or 30 keyswitches.

You must unsolder and remove the old keyswitches, then pop in and resolder the new switches. Best Electronics recommends that the installation be done by an experienced service technician or computer service center. Actually, if you are reasonably competent with a soldering iron, and have the right tools, this upgrade is really quite easy.

Radio Shack sells a very good desoldering iron for $8.49 that worked quite well for my upgrade. This is well worth the price, and is much easier to use than solder wick or a separate desoldering tool. A 60-key upgrade took me only a couple of hours, from removal of the case to testing the finished product.

Observe Caution!

The most difficult part of the upgrade is removing the keytops without damaging them. The easiest way I have found is to start at the top right side, at the Backspace key. This key is larger than a standard key, which makes it easier to grasp.

Also, you should be *very* careful when you remove the following keys: the left Shift key, Return key, Space Bar, the Zero key on the keypad and the Enter key on the keypad. These keytops all have special linkages that evenly distribute the key pressure. This linkage is also easy to break. In fact, I had to epoxy one of links on my space bar when I broke the locking tab.

Also, there is an easier way to remove the old switches, once they have been desoldered, than the one in the instructions. If you use two small screwdrivers to defeat both locking tabs, the keyswitches will practically fall out, if they have been desoldered correctly.

Mapping the Keyboard

It is also a good idea to map out the key layout on a piece of paper before you start. This makes it easier to remember where each keytop goes back to when you are done and want to put the keyboard back together.

One other item that bears mentioning. It seems Atari must wave solder the keyboard when they put it together, because I found a couple of (big!!) loose clumps of solder between the keyswitches and the circuit board, when I took my unit apart. So, gently tap the edges of your keyboard on a table, before you put the new keyswitches back in, to make sure that there are no loose "solder balls" floating around.

As for the operation of the new keys, I am *very* happy with my keyboard now!! The keyboard is more comfortable to type on now. And though I am not a "touch typist," I have noticed a reduction in the number of errors while typing. Being able to turn off the keyclick at the control panel is, in itself, reason enough to buy this upgrade.

The price for an upgrade is really not that bad, once you consider that a Northgate keyboard for an IBM computer is $120. A package of 30 keyswitches sells for $64.95 and a 10 key add-on package is $21.95. There are 58 keys in the main part of the keyboard, which requires two 30 switch packages, for a total of $129.90.

You should also check your keyboard to make sure you can use the upgrade. Look closely at the top of one of the keyswitches, after you have removed the keytop. If it says Cherry, you are home free. If not, this does not mean that you cannot upgrade, but you should call Best Electronics first, before you order any upgrade kits.

Quick Tools vol. 1

Utility Pack For the Atari ST -- for only $19.95

Quick Tools is a package of many powerful and memory efficient utilities for the Atari ST, Mega ST, and Atari STe computers. It includes a command line interpreter, smart file viewer, fast file finder, desktop editor, hard disk partition protector, custom control panel, speed benchmarker, real time status display, VT52 emulator, label maker with mail merge, program compressor, text screen dumper, and more!

Each Quick Tool can be installed to run as either a desk accessory or as a normal desktop application, for maximum versatility. Quick Tools even has its own unique way of getting around the 6 desk accessory limit. Quick Manager is a window that sits on the ST's desktop and has its own built-in desk accessory menu for installing the other Quick Tools. Quick Manager uses only 15K of memory, and only loads the accessories into memory when they are selected. Quick Manager with all of the Quick Tools installed uses less than 60K of memory!

Quick Manager also displays time, date, free RAM, and TOS version, allows for instant access to the file selector, has 16 desk accessory slots, and can be called from the desktop or any GEM program. **Quick CLI** makes complex file manipulations easy. Copy, rename, and delete files whenever you're in a bind. **Quick Env** edits environment variables. **Quick View II** is the ultimate replacement for the desktop's Show Print Cancel function. Just double click on any desktop file and Quick View II displays it in its native format. Text files display as text. Graphics files display as graphics. Even ARCed files display their contents. **Quick Find II** searches for any file on the hard disk, fast! **Quick Inf II** edits hard to change desktop parameters. **Quick Label II** prints mailing labels and disk labels, with text effects. And much more!

Quick Tools costs only $19.95. We accept checks, money orders, and VISA card orders. Add $3 for shipping. Phone orders: 519-570-4340. Write for more information. Demo available on Compuserve and Genie. Also available: **Quick ST II** Software Screen Accelerator. $19.95 + $3.

AMERICAN TECHNA-VISION

Mail Order: 15338 Inverness St., San Leandro, Ca. 94579
Sales Office: 2098 Pike Ave., San Leandro, Ca. 94577

Terms: NO MINIMUM ORDER. We accept money orders, personal checks or C.O.D.s. VISA, Master/Card okay. Credit cards restricted to orders over $18.50. No personal checks on C.O.D. - Shipping: $4.00 shipping and handling on orders under $150.00. Add $3.30 for C.O.D. orders. In Canada or P.R. total $7.00 for shipping and handling. Foreign shipping extra. Calif. residents include 7 1/4 % sales tax. All products new and guaranteed. All sales final. Send S.A.S.E for free catalog.

Prices subject to change without notice. Atari is a reg. trademark of Atari Corp.

The Basics of BASIC

Rick Burton (RACE)

You may have noticed that I was AWOL from Basics for a month. Well, I'm back for more and trusting you are too.

As I had been doing Basics for nearly a year in our local newsletter before AIM, I thought we would backtrack and cover some territory that has not been seen in AIM. Let's begin with loops this month—and let's begin with something that's just plain fun to experiment with to boot.

Sound!

The SOUND command must be followed by four numbers in the format: SOUND x,x,x,x with each number performing a different function in the making of electronic sound.

First number: (0-3) will select one of four "voices" or "channels." Four sounds can be made at the same time.

Second number: (0-255) determines pitch, with 256 pitches to choose from.

Third number: (0-14) is a distortion value. Only even numbers can be used with 10 making the "cleanest" sound.

Fourth number: (0-15) is the volume knob. Off is 0 and loudest is 15.

Now we are ready to compose Atari style.

Example: SOUND 0,100,10,10 uses voice 0, has a pitch of 100, has a distortion value of 10, and is "turned up" to 10. Type the example then press RETURN. Beautiful electronic sound! Type SOUND 0,0,0,0 then press RETURN to turn the sound off (voice 0 set to 0) or just press RESET. No, I didn't forget loops!

Looping

We will begin with the tried and true FOR-NEXT loop. The FOR- NEXT loop can be used to count. For example:

```
10 FOR X=1 TO 3
20 PRINT "THIS IS A TEST"
30 NEXT X
40 END
```

RUN this program and you will have *THIS IS A TEST* printed on the screen three times.

Now hold the Control key down while using the "arrow" keys to position the cursor over the 3 in line 10, type 9, and press Return. Move the cursor down and away from the program lines. Use the RUN command again and *THIS IS A TEST* is now printed nine times on the screen. Let's combine the SOUND command and the FOR-NEXT loop by typing:

```
10 FOR X=0 TO 255
20 SOUND 0,X,10,10
```

Lines 10 & 20 will automatically replace the old lines in memory. The X in line 20 will be substituted by FOR-NEXT value X (0-255) when the program is running.

Now use the RUN command again and the fun begins! Variable pitch! Next we count backwards by adding a STEP command.

```
40 FOR X=255 TO 0STEP -1
50 SOUND 0,X,10,10
60 NEXT X
70 END
```

Line 40 allows us to count from 255 to 0 (backwards) by ones when using -1 as the STEP value. RUN the program to hear falling and rising pitch. One more addition:

```
70 GOTO 10
80 END
```

Replacement line 70 creates a continuous loop back to line 10. Why the END statement in the examples? Tidy programming! This statement is also needed in certain applications. Run this program & press RESET when you tire of the "sine wave effect."

Our journey of exploration into FOR-NEXT, GOTO, loops and branches has begun...

Join me again as we take a look at more loops and with strings attached.

"Daddy, I can DO IT!"

A Review of KidPublish Professional

Steve Volker (STAG)

[For this article, Steve enlisted the aid of his eight-year-old daughter, Teresa.]

This month we are going to take a look at a surprising bit of fun called KidPublish Professional by D.A. Brumleve.

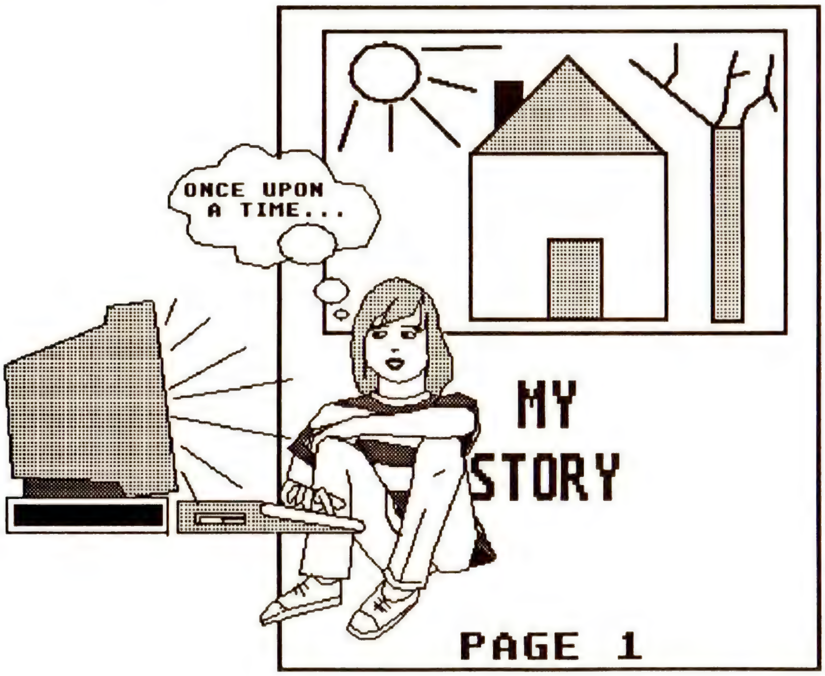
Dorothy Brumleve is the author of a number of pd programs written for kids, (i.e. KidMixup, KidGraph, KidPublish, etc.), and has worked with children and computers in a number of ways. She is also the mother of five little computer hobbyists herself.

Dorothy calls her word processor/publisher "A Desktop Publishing Program for Young Writers," so I invited my daughter Teresa to give us her impressions of what she liked or disliked about the program, after using it to produce her class project: Today I Was a Paleontologist.

A Kid's Veiw of KidPubish

Author: Teresa, let's talk about the KidPublish program you used for your report.

Teresa: OK.
Author: What did you like most about it?
Teresa: I liked the patterns things.
Author: What do you mean by patterns?
Teresa: The boxes you "click" on.
Author: Why?
Teresa: It was easy.
Author: How was it easy?
Teresa: It was easy to um... write and make dinosaurs!
Author: Why?
Teresa: Because you can use the "patterns" to draw things easy!
Author: You mean the icons... the "picture boxes?"
Teresa: Yep.
Author: What about the typing? Was that easy too?
Teresa: uh huh.
Author: Why?
Teresa: ....
Author: Do you remember Dad's word processor? When you used it to write letters to Jamie?
Teresa: Yes..?
Author: Was it easier than that?
Teresa: Oh yea!!
Author: OK. Teresa, one more question. What didn't you like about it?
Teresa: There was nothing I didn't like about it!
Author: Thanks Trese'...you can go play now.
Teresa: Dad? (hmmm...) Are you going to write this?
Author: Yep.
Teresa: OK.



On to the Program!

KidPublish Professional has a number of additions that make it easier to use for both kids and parents. It comes with a nice, little, 24-page Parent manual, that has just about everything in it you need, and a single sheet Kids manual, that has simple explanations and illustrations for easy reference.

There is a chapter called Getting the Most Out of KidPublish Professional which is full of ideas parents can pretend were their own, and a lively intro screen after the program loads that is sure to give young writers their first spark of imagination.

There are four fonts available to the child, (i.e. Sans serif, D'Nealian, Outline and Small), though only one can be used at a time, and a means of creating your own fonts with a Degas-compatible paint program and YOUR_FNT.PI1 provided on the single-sided master disk.

There are also chapters on Printing, Damage Control and information on Support options, which I found to be of unlimited usefulness. (See below)

Using KidPublish

The screens—drawing, title, and typing—are all colorful, easy to use and understand and very functional. I found the freehand drawing cursor to be very smooth and free, though I admit to missing a paintbrush that comes in different sizes, and I would have liked more configurable fills. I guess there is something to be said for the simplicity of the drawing controls.

The typing speed bugged me a bit, though I soon got used to it, and the deletes are slow, but I guess my only trouble with the text is the limit of one font per application. KidPublish Professional is written completely in GFA 3.0, runs in low rez only, is not copy-protected and uses every bit of RAM on a 520ST.

The Importance of Support

Though KidPublish Professional works great with most 9-pin, Epson compatible printers, I had a bit of trouble with my new, 24-pin NX-2400. This is where the support information really proved useful.

My daughter's project was coming due very quickly but the printouts I was getting from my test applications were spread out in a landscape format, over a page and a half, and much too light. I called Dorothy using the phone number provided and explained my problems. She was sympathetic and immediately began looking for a solution to my problem. Over the next few days, Dorothy sent me a number of different printer drivers which she had found on-line or elsewhere, and another version of the program altered to work with a 24-pin printer,..no luck.

After a lot of searching and looking for help from her different connections, Dorothy sent me the PD driver package NX_2400.ARC, written by Tom Hudson (of course), and containing an install accessory, an Epson LQ driver and an NX2400 hex dump. It was *All better!!* My daughter's project was finished in time. I am very appreciative of the way, and of the speed, in which Dorothy solved my dilemma. That's what I call support.

So, as a desktop publisher for my children, or as a quick and very easy way of producing simple documents for everyday uses, I think KidPublish Professional fits the bill just right!

Update to KidPublish

Dorothy left me some e-mail as I was finishing this review, saying that an upgrade for Kidpublish Professional will be out by the time you read this, containing several new additions. Such as:

A way for parents to configure each child's disk to allow for the number of pages available (up to 10 on a 1040), or to allow or disallow the LOAD option.
To allow or disallow the TITLE function.
To allow or not allow exiting to desktop.
Is user-friendlier and more icon-oriented, and includes backward scrolling now.

The cost of the upgrade will be $5 for registered users.

For Your Budding Artist or Mathematician!

MY STORY
PAGE 1

Kidpublisher *Professional*
(for ages 5–11)

- publish your own booklets!
- four built-in font styles
- extensive drawing program

Kidpainter (for ages 5–11)

- print your pictures and designs
- create and play onscreen puzzles
- mirroring, "rubber stamp", many challenging and fun surprises!

Super Kidgrid (for ages 3–11)

- print color-by-number pictures
- 1, 5, or 10 pictures in memory, automatically loaded from disk
- develops creative thinking skills

COLOR MONITOR REQUIRED.
PRINT FUNCTIONS IN THESE PROGRAMS REQUIRE A PRINTER WHICH ACCEPTS AN ST SCREEN DUMP.

To order, see your dealer or send check for US$25 (each) to:

D.A. BRUMLEVE
P.O. BOX 4195 / URBANA, IL 61801-8820 / USA

For MasterCard and Visa orders, call (217) 337-1937 business hours.

The Impossible Just Takes a Little Longer

Jake Olbrich (RACC)

Andy (RACC President) called to say a fellow had requested some help converting Data Perfect files to an IBM database. Being 8bit VP, could I give him a hand?

Getting Started

I started thinking about a file called Context in an old Analog magazine. And I knew Antic had a program to convert about anything to Atari DOS 2.0 called Transfusion. I wasn't the least concerned about cabling or transferring once I got it into Atari format. I had already gone through all that just recently getting one Atari to "talk" to another. Sure enough, the fellow called.

Well, this just wasn't one file, and it wasn't just one disk. It was one file on 400 disks, double density.

The Depth of the Problem

For those unfamiliar with Data Perfect, let me explain that DP was and is a very good database. It is, however, incompatible with Atari files. It isn't really all that compatible with Letter Perfect, which is the corresponding word processor. Files from DP can be printed out into LP but not exactly loaded in and processed. So, a program to convert LP files to Atari will not convert DP files to Atari. At least not without a lot of modification.

I read my documentation on DP, and it said they had a conversion utility. I called. A very, nice helpful fellow named "Leo" (Is this the 'L' of LJK?) explained no, they never did get it to work. I made a few changes, as he suggested, but I simply did not get anywhere.

Both Context and Transfusion are for single density. This means they may transfer 128 byte sectors of data but never 256. I tried a few other programs. They all used the famous "page 6." This is location 1536. Anytime Atari imports over 128 bytes of data, it uses page 6 for the overflow. In Bill Wilkinson's famous words "Blooey."

I called Leo again and he made up a short program for me to try. He wrote in Assembly, assembled it and gave it to me over the phone in hex. Now all I had to do was transfer it to decimal and I=1573 to whatever, Poke I characters I—you've seen the routine a few times I'm sure. Well, that didn't work either.

Grasping at Straws

I tried calling Antic. I wanted to talk to Charles Jackson about his utility Transfusion. Could it be changed to work on double density files? Well, Mr. Jackson is no longer at Antic, but there is a Mr. Wolfe. Mr. Wolfe is out to lunch.

I wait and call back. Mr. Wolfe can't help and sends me back to Carolyn. No. There is this policy about giving out personal phone numbers. She cannot help me get in touch with Mr. Jackson. OK?

No, I explain that I do not want anyone to violate any policy. If there is indeed this policy then someone has the authority to override this policy. Can she put me in touch with him please? Yes, but now he is out to lunch. Anyone else? Out to lunch. I think. "How come she is there? She would be eating lunch, but the phone rang." I try to be polite. She does also, although by now our frustration is beginning to show. Carolyn is a professional. She explains she has some phone numbers for Atari that she can give me in an emergency. I take them.

More Straws

I try Omnimon. This, for the uninitiated, is a very neat hardware chip that allows sector by sector read and write and a whole lot more. I try it. Yes, it reads a 256 byte sector of DP. Yes, I display it in memory. Yes, I write it to a different disk.

No, DOS doesn't know it is there. (Actually at this point I was very, very close to having what I needed, but I didn't know it.) I knew what was needed—some way to construct a VTOC and file directory to let DOS know what was on the disk. I have the customer call ICD. They suggest that he contact some "hacker."

I vent some frustration. If I have to, I can construct a Dos VTOC and file directory. But I never have, and I don't want to. ICD has, and all I need is a couple of numbers to get started.

Thanks for nothing fellows. You could have looked real good in this column. I tried to let you be a hero. I really tried. I got more support from a company that hasn't been in business in years, hasn't sold anything in years and doesn't expect to. And, their incompatible programs are not as incompatible as SpartaDOS. The latest version of DP runs on my 800. SpartaDOS doesn't.

After more coffee I go through every magazine, ROM, Atari Interface, Compute, Antic, Analog, Byte, Computer Shopper and Creative Computing—to December 1981. This takes me until 4:30 am.

I decide to reread the documentation on Omnimon. Red eyes see the phrase "use the K function of DOS to make a Binary file." (Now, I really haven't used DOS since January of 1985 issue of Antic magazine published the first version of Diskio. When I've had to I used MyDOS to set up my RAMdisks, and a few such things, but I never did use function K.) "This will construct a VTOC and File Directory." And that is all I need. I do it. It works. the commands:

```
<SELECT RESET>  go to Omnimon
R 14 4000 10
```

This means read sector 14 HEX (20 decimal) starting at location 4000 hex memory and continue reading for 10 hex (16 decimal) sectors. At 256 bytes to the sector this means I now have in memory at location 4000 hex to 4FFF hex, the 10 hex, 16 decimal, sectors of the file on DP.

```
T                 get in text mode so that I can
                  read it.
D 4000 5000       I want to see what this file loks
                  like on disk
                  Toggle the CONTROL and 1
                  key to to see what I have.
<System Reset>    I want to go to DOS because
                  I like what I see.
K                 I want to save this memory.
                  DOS asks me for a filename,
                  starting and ending memory
TEST,4000,4FFF  <return>
C                 I want to see what this DOS DP
                  file "TEST" looks like
TEST,S:           so I copy it to the screen.
```

It looks neat, just what I want. I call my customer. He's asleep; I wake him up. It's 6:30 in the morning. I'm not sure he is happy to hear the good news.

Getting Close

I sleep or try to (I haven't for 52 hours) until Charles Cherry calls me back from Atari. I explain the situation has been tentatively resolved. He suggests a couple of alternatives. I've already tried them. He continues to try to be helpful. We talk for some time on Atari's 25 cents. Who says Atari is not supportive? He asks who gave me his number. I tell him think about it. Everybody but Carolyn Cushman was out to lunch when I called Antic. He agrees. He says Atari should have put the Omnimon in every computer. We agree. We talk some more. He asks for this article. Here it is Charles.

The story continues: The customer does not realize that this is the way to do it. (If you have done this a better way let me know. I don't say it is the best way. It is the best way I can figure out. If you have an idea first do it. Then tell me about it.) Other people try to get in on the act. Somebody is going to build a box to do it. What are the rs232 signals coming from the Atari? That is a good question. Unless the rs232 was booted with DP, how do you get it out? A few tried.

Problems with the Database Fields

Then, somebody said the customer was going to have to use a modem. He called me, all upset about it. Try to explain what a null modem is and what a modem is and the difference on no sleep and only gallons of coffee. I needed more coffee.

Then somebody was going to try to intercept the signals coming out the printer interface and send them to the IBM. Then the customer came back. Everybody had a better idea, but nobody's idea got the job done. Besides there was this other problem.

Other problem: The DP database was 6 fields. The new IBM database was six fields. They were different fields. The DP had a key field and a name field. The IBM had a first name and last name field. Even if any of the "better" ideas could be made to work; the key field would be the first name and the last name would be the whole name. Now what?

I wrote a program to separate out the last name. Then came a name with Jr. I allowed for Jr. and Sr. with and without trailing periods. Then came a name without any first name. Another Wilkinson "BLOOEY." I corrected for that. We determined that Omnimon could reliably transfer 60 hex (90 decimal) sectors—double density using an old 3.012 version of MyDOS—at a shot. To get a complete disk and avoid the VTOC and file directory of DP we did it in 8 shots:

```
Command R 14 4000 60 : K A1,4000,9000
R 75 4000 60 : K a2,4000,9000
R 4000 2D : K A3,4000,6DFF ;  we have to stop at
   Sector FF
R 11c 4000 60 : K A4,4000,9000  ; to miss the File
   directory
R 4000 60 : K A5,4000,9000; like this to the end
   which is
R 4000 60 : K A6,4000,9000
R 4000 60 : K A7,4000,9000
R 4000 36 : K A8,4000,76FF ;  here
```

Now all that remained was to strip the six header bytes from each file and put it all back together again. So my program could swap fields, rearrange the name field and write it all back again.

There was another problem that we used to our advantage. DP pads each field that is not the total length with the Control B character, and it pads it after the delimiter. Now when my program reads in this key field, fine, strip it. Then the next field, may or may not have a number of Control B characters at the beginning, which is actually the left over from the DP database padded out characters. This will make a program all properly DIMmed go absolutely nuts. More coffee, less sleep. I said we used it to our advantage.

As long as I was going to have to strip out all the Control B characters anyway, why not change these six (useless to us) header bytes into Control B characters? How to do it? I tried a word processor first. The only one that could take in a file that long was Omniview.

Then the PRINT To Disk command, in order to keep from getting more header bytes added back in, really slowed things down. And it was messy. I simply did:

```
Open #3,12,0,"D:A1"
?#3;"six control b's";
Close #3
```

Then I scrolled up on the screen and changed the A1 to A2. Three returns and I scrolled up and changed the A2 to A3 and three returns and so forth through A8. Sweet, neat, petite, and quick as the brown fox over the lazy dog's back.

Now MyDOS and the ICD 1Meg MIO really got put to use. I append all eight files with:

```
C
A*.*,TEMPA/A
```

Now I run the program I wrote and write a 682 sector double density file, TEMPA to TEMPA.JKE. This becomes a 395 sector double density file. With DOS, Dup, BobTerm and my program, it leaves 50 sectors in RAMdisk 8. The first version to work took 24 minutes and 30 seconds. I tried rewriting a few of the algorithyms to speed things up. That trimmed it to 17 minutes and change. I turned off the screen with a POKE 559,0 and back on with Poke 559,34 (for the 800 use 22). Down to 14 minutes.

Casualties

During all of this, we smoked one computer, one disk drive and a bunch of disks. One of the disks had a file called TURBOBAS.SYS. I tried copying it to another disk. Luck be a lady, it was the only file I could copy.

TOADFILE 44

Extra Cartridges $99!

I figured if it only took a major rewrite of my program to save time, with 400+ disks to go, I had better do it. I tried it first with the screen turned on, no rewrite—nine minutes and change. This baby wants to fly. It not only works without a rewrite, it saves time. I feel the need for speed. I turn the screen back off. I rewind the stopwatch. I type run and press the Return key and the stopwatch. After only six minutes and 27 seconds my printer springs to life. 2003 records have been transferred.

I load in BobTerm and set up my Tandy laptop to do the null modem transfer—Three minutes and change at 9600 baud. 19200 baud is just a little faster but my Tandy Disk drive can't keep up. I don't find any errors in the completed transfer, but the program lists 25. I think I will stick to 9600 baud. Over 70,000 bytes removed from a 177,000 byte file (six plus minutes) and no errors is perfectly fine and so is three minutes for the null modem transfer.

The Project is Completed!

Although this is a long story, I have purposely been brief with what went wrong. Maybe we learn from our mistakes or others. But, if we do learn that way, what do we learn? Just another way of doing something wrong. Better we discuss what goes right. And what is right is that the customer is saving over $125 per disk transfer; and he is happy, and, also important, thinks Atari people are great. "Fabulous," his wife said.

If you want to know about a lot of similar problems that we had in programming, read the April issue of Computer Shopper. Page 664 discusses the carriage return, line feed phenomena. Or you can read Steve Scott's article on porting to an IBM from Macintosh in the March/April issue of Midnight Engineering. And if I have time, I might talk about it sometime. Hopefully somebody has an easier, better way to handle big files, DP double density, and they will tell me how they did it and how I did everything wrong. Then they'll probably ask who is LJK.

And I hope somebody tells ICD about the K function of DOS 2.0. I didn't know, but they did and they for some reason chose not to tell a customer. But their MIO surely did work great with MyDOS. And thank God for David Young and Omnimon. A special thanks to Wes Newell of Newell Industries for all of his support. I'm sure I interrupted his important business too many times. A very great appreciation to Charles Cherry at Atari for calling back and being helpful. And to my wife and others that simply overlooked this old man talking all night and day to his computer and himself in language unpleasant, unkind, yet cajoling, pleading, demanding and then asking Why?

Yes, six minutes and change. Impossible, but I had help and I thank you for it. And Turbobase; I love it.

What is Shareware Anyway???

Craig Harvey (WAUG)

As a note of background, I am not a lawyer and have taken no courses in the legal issues connected with software distribution. I am merely a computer user (Atari 8-bit, ST, IBM and Mac) and an ST enthusiast who happens to have been bitten by the programming bug (those things always show up together!).

If any of the following comes across as a sales pitch for my software, I apologize since that is not the intent of the article (merely an acceptable side-effect).

At the Toronto Atari Convention on April 1, 1990, I was enjoying manning my first booth showing off my desk accessory called Diary and selling it for $10 to those who wanted it. In general, the response was very good from those who actually had any use for a good text editor as a desk accessory.

Then there was one person who already had the shareware version who actually came up and told me what a good program he thought it was and that he used it all the time. So I said he ought to register it. And he replied that maybe when I added some more features he'd consider registering. After he walked away, I think I just stood there a while with my mouth hanging open trying to understand what I had just heard.

Here was a shareware user who had found a program that he liked and used regularly, but he thought nothing of continuing to use it without registering. And I figured from the fact that he happily told me all this that he didn't think there was anything inconsistent in his actions. It was right about that time that I started wondering what people thought shareware really was. And thus we have this article.

Fair Exchange

As more food for thought on all this, here is a message I left on a local BBS followed by a reply to it:

It appears to me we're running into a spectrum of the 'Free lunch' concept. At one far end of it, you have things like QUIKCASH chain letters and simple piracy—in which you get something of value but give nothing in return for it.

At the other end would be some sort of ultimate philanthropist, who gladly gives away all his/her money and valuables.

Either of these ends is irrational, since it contributes to its own demise (you can't keep giving everything away, because eventually you run out and starve, and you can't keep getting everything for free, because those you get it from starve).

In the middle of this spectrum is the most rational/long-lasting concept: one exchanges something of equal value for things one obtains. Note that "value" does not *have* to mean dollars. Other things can be just as valuable—such as a nice letter of thanks or writing and getting published a review of a piece of software. Fair exchange, Balance, Harmony, etc. To the degree one upsets this balance, one is asking for trouble in life. (These are the views of a shareware author who also sends in the $ for all the shareware he uses.)

If your statement is true Craig, I applaud you. I believe that there is, to some degree, a bit of a larcenist in all of us. The "risk-factor" vs. "reward" is probably what keeps that latent tendency from manifesting itself.

Yet, there seems to be such an extremely small "risk-factor" when one receives a decent piece of shareware. It is during these personal, private moral judgement times, in a person's life, that they will "take-the-program-and-run" and perhaps soothe their own self image with a weak promise to "someday" send in their shareware fee and register. Is the figure of return on shareware a fraction of 1 percent? A highly risky venture, indeed!

Freeware vs. Shareware

I have to admit that shareware authors like me have probably helped to muddle the concept of shareware in the eyes of the users.

I have labeled some things as "shareware" and then provided instructions like: "Hey, if this ends up being useful to you, how about sending me a few bucks?" which, in a strict sense is not what shareware means. The actual definition of shareware is something more like: "This is a commercial copyrighted piece of software. I am making it available to you and anyone you care to give it to so you can try it out for 30 days to see if you consider it worth the $30 selling price. If after 30 days, you decide you want to keep it, send your check to ..., otherwise you must destroy your copy."

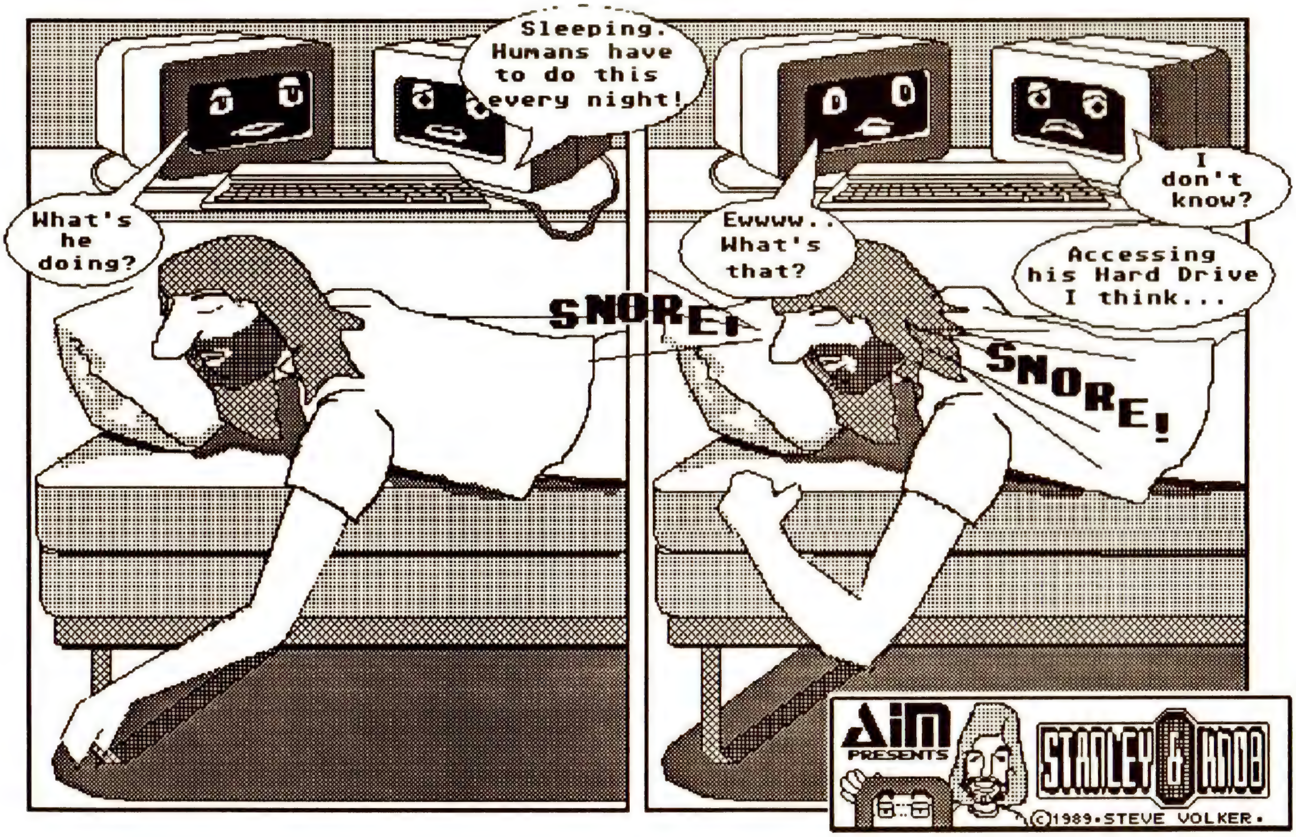
I believe that statement is basically what the first successful Mac shareware piece (Red Ryder) had. So, when a software author puts out a piece of software with a statement like the first one (suggesting a donation if the user feels like it), then I propose that it should *not* be labeled as shareware.

There is also a term being used these days of "Freeware." I am not sure if this is exactly the same thing as "Public Domain" or if there is some difference in who retains ownership (as I said, I'm not a lawyer). But from the user's viewpoint, the bottom line is the same for both—the user is not expected to send any payment.

So, there appears to be a wide range in how "public" a piece of software is. At one end would be something that is utterly free, including the source code, for anyone to do with whatever they please, including calling it their own and selling it as theirs. At the other end is an expensive commercial product with its glitzy packaging and voluminous documentation that is only (legally) available by purchasing it before using it. Shareware exists as a way to provide users and software developers with a compromise that CAN be better for both of them. Following is how I explain this all in my current documentation:

"This program is shareware, not freeware. This means that you get to try it out for free. If you find that you want to keep using it, then you are supposed to pay for it so you can legally own it. I have been considering distributing this commercially, but that would require much fancier (more expensive) packaging and printed documentation, as well as giving the distributor 60% of the retail price. The end result would be to force the price up to at least $15 or $20 just for me to keep from losing money. Personally, I much prefer the idea of making software available to as many people as possible for as little money as possible, and letting everyone get to really try it out before having to buy it. *That* is what shareware is all about. Therefore, you are welcome to use Diary & EdHak for a month as much as you like. If you decide it's not for you, that's fine. But if you decide it's a piece of software you'd like to own, then just send me the $10 registration and you will be rewarded with a more full-featured version."

In summary, support Shareware! But I may be a little biased and I'd be interested in other people's opinions on all this.



Sleeping. Humans have to do this every night!
What's he doing?
SNORE!
Ewwww.. What's that?
I don't know?
Accessing his Hard Drive I think...
SNORE!

DBMAN TIPS FOR THE ST-ER

Peter R. Killian (O-ACES)

One of the programs I find most useful on my ST is the dBASE III look and work alike, dBMAN from VersaSoft. I have used the program since version 2.0 and now have version 5.2, which includes a pseudo-compiler (it still needs either the interpreter or a run-time package, which is NOT included).

I find dBMAN useful for two reasons—it is programmable and it is compatible with what I use at work. But, since I don't want to just review dBMAN itself, let's get on with some tips on using dBMAN.

I brought up the advantages because they are what I want to talk about this time. Programming is both the biggest advantage of the package and the hardest thing about it at the same time—it provides the power that allows dBMAN to do so much more than most other data managers.

Compatibility with dBASE II, III, and III+ gives you a ready base of learning tools, since bookstores often stock several books on using and programming dBASE and, if your office uses dBASE, you can also get help there.

Before I get to specific tips, I want to make a couple points about the compatibility issue, since there is a lot of room for confusion here. First, compatibility does *not* mean you can run dBMAN on an IBM compatible, nor that you can run dBASE on your ST (unless you also use PC-Ditto, PC-Speed, Supercharger or another IBM emulator).

What it does mean is that you can read and write stuff created with with either package (provided you have the same type disk drive on both machines—or another way to move the files from one to the other, such as a modem).

Knowing the Differences

There are some limitations to this compatibility, however. Each system has commands the other does not and some things can do work differently. For instance, none of the dBASE family has mouse commands, while dBMAN (since version 3.0) does.

Although both programs create and use reports, they do *not* work the same and you cannot use one with the other. Just to take another example, dBASE requires you to use an ampersand (&) when you search using the FIND command, since it does *not* require quotation marks around the expression you want to find.

If you use the ampersand with dBMAN, however, it will think you want to substitute another variable for the first one and the same command will *not* work. On the other hand, data files, format files, program files, indexes, memo files, etc. *do* work with either system, providing you watch out for places where the two are different.

One other place where they differ in programming (this is an article about programming, remember?) comes when you have to deal with starting a new data file that doesn't already exist.

When I first started working with dBASE (I started with dBASE II, back in the dark ages before either IBM or ST computers), I always made sure the file already existed before running my dBASE program. This wasn't too difficult since I was normally the only one who had to use what I did.

If the program stopped because the data file it expected did not exist, it was no big problem. I simply created the file at that time or temporarily figured out a way to get the information I wanted by some other means.

Later on, I had to show others how to use my work and I could not always be there to explain or fix things when they did not work. Letting others use the programs also meant they might want to start from scratch and one of the easiest ways to do that often involved erasing old file(s) and starting over. It also meant there was a greater chance for accidentally erasing or damaging an old file.

As I learned more and more about using dBASE (and later dBMAN), I first started by copying from an existing file. This was not very satisfactory, however, since it still meant having one good file for each type, since I only knew how to copy files with the same data fields and then delete all the records to start from scratch.

Later (actually not much later), I learned how to copy just the structure, which gave me the blank file I wanted without having to remove old data from the copy. Finally, I learned how to create any new file from an existing one, even if the file was entirely different!

This method involved a variation of the COPY command, usable with both dBASE and dBMAN. The variation can be found under Copy Structure Extended and creates a new data file with four fields and a record for each field in the file it was copied FROM. Once you have such a field, you can delete records and substitute ones with the fields you want. After that you can create a new data file using the modified field data.

The four fields, appropriately named, are FIELD_NAME, FIELD_TYPE, FIELD_LEN, and FIELD_DEC. FIELD_NAME in each record, of course, contains the name of the field while FIELD_TYPE contains a single letter for the type of data that field would be able to use (N for numbers, C for characters, D for dates, and L for logical). FIELD_LEN stands for field LENgth, or how many characters can be stored in it. For number fields, the length includes any sign, the maximum number of digits in the number, and the decimal point, if any. The final field, FIELD_DEC, only has meaning for number fields—it is for the maximum number of digits the field could use to the right of the decimal point. Here is one method you could use with this technique (you can, of course, use your own names, types, lengths, etc.):

```
IF .NOT. FILE("2UU_STAT.DBF")
  CREATE STRUCTURE TO Temp
  USE TEMP
  APPEND BLANK
  REPLACE Field_Name with "FIX_BUNDLS"
  REPLACE Field_Type with "L"
  CLOSE
  CREATE 2UU_STAT FROM TEMP
  USE 2UU_STAT ALIAS Flag_data
  APPEND BLANK
  REPLACE FIX_BUNDLS with .F.
ELSE
  USE 2UU_STAT ALIAS Flag_data
ENDIF
RETURN
```

This example creates a file with only one field, FIX_BUNDLS, which can have only one of two different values—true or false (sometimes represented by either yes/no, .T./.F., or .Y./.N.). The simplicity of the resulting file made this method very usable. NOTE that this example is *not* compatible with dBASE, though, since only dBMAN has the CREATE STRUCTURE command used in the second line. To create the same file using dBASE, you would have to change that second line to something like the following:

```
USE Old_data
COPY STRUCTURE EXTENDED TO Temp
DELETE ALL
PACK
```

The rest of the program steps would be compatible, though dBASE would still have a problem if the data file called Old_data did not exist when the program ran. Also, the steps needed could get quite lengthy if you needed a lot of fields in the file you want to end up with. Just to give you an example, the following makes a new file with only four fields (it also still uses the CREATE STRUCTURE not available with dBASE):

```
? "CREATING Bulk mailing index . . .
CREATE STRUCTURE to TEMP
USE TEMP
APPEND BLANK && Bulk Mailing Category (description)
Field_Name = "Category"
Field_Type = "C"
Field_Len  = 20
APPEND BLANK && Bulk Key (reference for other dbfs)
Field_Name = "B_Key"
Field_Type = "C"
Field_Len  = 4
APPEND BLANK && # of items in the current bundle
Field_Name = "Bndl_count"
Field_Type = "N"
Field_Len  = 4
Field_Dec  = 0
APPEND BLANK && STICKER for bulk-mailing bundle
Field_Name = "Sticker"
Field_Type = "C"
Field_Len  = 20
CLOSE
CREATE UU_Bulk from Temp
RETURN
```

Now here is what I use today. It is compatible with both dBASE and dBMAN, uses several other concepts, and the basic method can be used to create any data file. The method uses two PROCEDURES, one of which takes information (PARAMETERS) from the other. Instead of using separate APPEND and REPLACE commands for each field, this method creates an intermediary file to add all the data at once.

The first PROCEDURE looks to see if the desired file already exists and, if it doesn't, it creates the intermediate file and then calls the general purpose PROCEDURE to create the desired file from that intermediate file. The resulting file has ten fields and would take far more programming using the older method above (assuming, of course, the other niceties, like looking for other source files and telling you if it could *not* find a suitable file to start with).

[Ed. Note: You can find the source code for these two procedures on the AIM Disk of the Month, or simply send a self-addressed, stamped envelope to AIM, 3487 Braeburn Circle, Ann Arbor, MI 48108.]

That should be more than enough for this, my first venture into writing about dBMAN for AIM. If you like what you see here or want to see more, please write to me care of O-ACES or AIM—or you can leave E-Mail on GEnie (my address is P.Killian). Send questions also, because you may not have the same experiences I have and may need to solve different problems with dBMAN (or dBASE—for those who have IBM emulators).

Operation: Cleanstreets

(Maybe this will make your day!)

Gordon Totty (MACE)

Dum da dum dum! Introducing Operation: Cleanstreets from Broderbund requires some heavy mood music. Dum da dum dum! (Hoo-boy, I hope you have a good imagination.)

It is night. The city is crawling with the fringe vermin, the parasites who suck the blood out of a vital community. You are Harry, a cop. Dum da dum dum dum!

You work nights. Drug thirsty, crazed sub-humans come out after dark. You have to go out after dark, too. You are underpaid to do it. You have to go where the bad people hang out. Your Mommy won't come with you. It's a dirty job, and somebody has got to do it, but do you ever wonder why you choose to do it? Dumb da dumb dumb!!! Good luck.

OK, OK, put your pens down. I have enormous respect for the police of our communities. Sincerely, I mean it. This game does not depict the policemen I know. This game is fantasy. Fantasy can be fun. Let's see what fun we can get out of Cleanstreets.

Cleaning the Streets

You will play the part of Inspector Harry. No, you cannot be Dirty Harry, but Brøderbund did dub you "Cleanup Harry." This doesn't sound as exciting, but your exploits will make the real, fictional Dirty Harry look like a Sunday school cherub. He had a big gun. What a pussycat!

You will have four weapons: two fists and two feet. You are given four weapons to even up the odds somewhat. Your opponents will only have whips, chains, baseball bats, power chainsaws, knives, swords, motorcycles, bricks, brass knuckles, Chinese stars, steel wrenches, other assorted objects that my weak eyes could not distinguish clearly enough to identify, and something that I think is called numb-chucks (two short sticks joined by a chain, an Oriental weapon).

Your opponents are hampered by not being allowed to have a gun, either. To make up for it, they are often allowed to gang up on you, two or three at a time.

A Word of Caution

By now, you can see that this game is not about a tea party. It is about violence. It lacks blood and gore, but it is not for the gentle in nature. Hark, tender spirits! If the sight of somebody being repeatedly smashed in the groin (i.e. the sensitive organs of the nether region) by a thug swinging a chain would offend you, look not here!

Actually, I laughed at the animation when I noticed what was going on with the chain, but did squirm a bit in my seat when my Harry-guy groaned in pain. Better him than me!

Your mission, as Harry, is to take drugs away from street pushers. When you burn the drugs, your life line increases. When you get all of the drugs from a level of play, you move to the next level.

There are five levels in all, each given a mission name. First is cleaning up the caffeine ring. Other levels include missions against other addictive substances. By level five, you will feel pretty smug—then you are sent on a mission against people like you! I'll not spoil that little joke by telling you the fifth mission name.

Harry operates in various scenes: ordinary streets, underground rooms, playgrounds, the waterfront, Chinatown, a Chinatown interior, etc. These repeat in every level, with mostly the same characters. The added difficulty comes from a larger drug quantity, a greater number of opponents, and gang attacks on the higher levels.

Eliminating the Problems

Unfortunately, there is no challenge in finding the pushers. Harry's best modus operandi is to simply pound the pith out of anybody he meets. Hit first, search later. Hit them before they hit you. Pound them until they fall down; when they get up, punch and kick away until they fall again. Keep this up until they cannot stand up anymore. Show no mercy. These people are pushers, so push 'em. That is the Golden Rule of this little scenario.

What do pushers look like? Can we learn from Cleanstreets? In Cleanstreets the pushers are male and female, white, black and Oriental. Hmm. No clues there.

Harry is a white male. Bet you expected that, didn't you? I normally wouldn't focus on this, but the racial and sexual distinctions are very plain in this game. I don't think I saw anything offensive in it. Harry's boss is black. Harry fights with a woman. Sometimes, she wins.

The game might have been improved for some people if you could select whether Harry was black or white, and whether "he" would be Harry or Harriet. I think Broderbund was just trying to inject more realism with these characters, but having called attention to race and sex I suppose somebody will find something in it to not like. Then again, maybe not, even though they left out three sexes and several races. Most folks are more mature than I am.

The Villians of the Piece

Harry's opponents include a jock, punks, "ordinary" citizens (who throw stuff out of windows at him), Santa Claus (the creep!), a fascist looking chap (insignia on his jacket sleeve, striped pants tucked into heavy boots, military style cap), and a lovely woman. The lovely is clad in high leather hose and short briefs. She has bare thighs and blonde hair. Lest any of you get all mushy over her, be advised that she has a look on her face that would stop a Mack truck on a dime.

La Lovely has a whip, and she knows how to use it. She intends to use it on you, Harry. The first time, I stopped her quickly because I didn't know if it would be for free and whether or not Harry had any spare change with him. It was free. Harry didn't like it.

This game could appeal to all sorts. Are you a sadist? Stay in level one and pound them to pulp. Masochist? Let them beat your Harry senseless while you watch (masochistic voyeur?). The really fun part is that you can do it over and over in one evening without messy trips to the hospital. Coward? See how long Harry can run around and not get in a fight. Please forgive these comments; I'm an unreconstructed Freudian. I go beyond the good doctor. To me, a cigar is never just a cigar!

Maybe you like to look at well-executed software. Cleanstreets has a lot going for it, technically. This includes excellent graphics for one thing, though not enough of them. After you have seen all of the scenes twice, noted all the details, and read all of the graffiti you will begin to notice that more variety might help your continued enjoyment.

The sound effects and music are exceptionally well done. The grunts and groans of pain, the sound of a chainsaw ripping garments and flesh, ... a garden of auditory delights! Sarcastic as this may seem to you, I am serious. The sound effects are first class. You'll feel bad every time you let poor Harry get hurt.

The background music is matched thematically to the screens, and is sometimes humorous, if you can take your mind off the action long enough to listen to what piece is being played. This brings up another point: unlike some games, the music in this one does not overwhelm you to the point that you feel the need for a "sound off" option, or reach for the volume control on your monitor.

There is more to commend this product. Instructions are clear and simple, and are also available on the disk should you lose your pamphlet. (For me, filing and finding those things is harder than filing and finding my disks.) Further, the game has a generous demo mode, which I always appreciate. I like to see what it is all about before I play. Coming attractions almost always make me want to see the whole movie.

Another strong point is that you can select your level of play from a menu—a big advantage in any arcade-like game for me. There are many games that have never revealed their highest level to me. Either I can't make it, or I get bored going through level one over and over and over and over and ... you get the picture. Either in disgust or boredom, I put the game aside.

If you want to start Cleanstreets at the highest level, you can do it. Prefer to start in the middle with level three? You can do that, too.

So, what do you think? Is this one for you? You might like it; it has ZERO socially redeeming content! It does have a certain amount of black humor. I did manage to grin at many of the "wrong" places. It is technically very well done. Simple to learn and it won't tax your tired brain cells. Escapist, in that it is not realistic. Kind of like a comic book story.

You might not like it, either. It has zero socially redeeming content. It makes fun, in some ways, of horrible violence. Some of the sounds and sights might make a tender person want to upchuck, er ... disgorge dinner. It has a very "thin" plot. No puzzles to solve, no mystery about who the bad guys are, no challenge to your brain. Too simplistic. Too much of a comic book, but definitely not one for children.

Violent Reactions

I admire what I will call the presentation and packaging, but I did not like the story. I decided to not let my 11-year-old son, my assistant reviewer Gordie, play Cleanstreets anymore. (He's the one who told me those things were called numb-chucks, but he couldn't spell it.) He laughed his head off at it, and recent news reports say that some educators are worried that our various media present violence to children in a way that makes them think it is acceptable. It's not supposed to be funny, is it? Do kids really care? Does it really affect them? Don't ask me. I'm not an educator; I'm just a dumb parent.

Perhaps the reason I focused on this aspect, this question of violence, is that the characters are presented as people you might see on the street, with the exception of La Lovely unless you walk the wrong streets. Zapping aliens or things is one thing. Listening to a person get ripped by a chain saw is another ... a thing too close to home, too "real". At least, Karateka didn't use knives, whips, chainsaws, etc.

So, I think I'm going to sell my chainsaw. But, I guess I'll keep Cleanstreets. I might decide that I like it.

IS THERE A TACTICIAN IN YOU? PART 4

Tim Feenstra (GRASS)

The Air War In Europe

Have you ever watched the old TV series 12 O'clock High, and wondered why and how the targets were choosen. The show was about a B-17 bomber group stationed in England during WWII. This show sometimes gave the impression that knocking off one special target could win the war, but in reality it was a continued effort that lasted many years and sometimes cost the Allies far more than the damage done to the target.

Maybe you saw some movie where the air raid siren brought dozens of fighter pilots to their planes to intercept a bomber raid that was attempting to reach some target deep in Nazi Germany. The fighters would find the bombers and then the skies would be filled with falling planes as the Luftwaffe would take a heavy toll on the Allied aviators.

U.S.A.A.F.

A somewhat realistic account of the US 8th Air Forces daylight bombing offensive against the Third Reich, and the Axis defense through the use of fighter gruppe can be found in the SSI simulation U.S.A.A.F. (United States Army Air Force). There is much more to this than just bombing targets or intercepting raids, for the Allied player must develop some idea of what he wishes to accomplish.

Occupied Europe gave the Germans a vast area for the production of the materials needed for the continuation of the war, and this allowed them to scatter factories. The allies had to pick certain types of targets and keep at them to reduce their production and hinder the Nazis.

As the Allied player, you must formulate some sort of plan as to which types of industry you feel will have the most effect and then assign these types of targets to raids and try to protect them as much as possible. Targets deep in Germany itself, far beyond fighter range, could spell the end for many of your valuble B-17 and B-24 bomber groups.

As the Axis player, you must assign your fighter groups to airfields, allocate replacements, and control the types and amounts of industry at many of the major cities in Europe. Anti-aircraft batteries must be placed around your most valuble areas of production to help the Luftwaffe deal with the incoming bombers.

Playing the Game

U.S.A.A.F. can be played from either side or by two players against each other. Included are weather and weather zones to simulate the different conditions accross Europe, unit morale, serviceable aircraft, rockets, flight altitude, and active Axis airfields, group experience, proportional loss of production due to damage and flack that can be moved around to different targets. Turns are a day in length and the clock runs in 10 minute intervals during the action phase.

There are three scenarios included that start from early 1943 to late 1944, and they all end when the war ends.

Each turn sequence begins with a Luftwaffe morning briefing where the Axis player can review the previous day's operations, check the weather forecast, inspect the fighter groups, check the status of industry and the production of aircraft, and check the numbers of aircraft in the replacement pool.

Next, the Allied morning briefing gives this player a review of the previous day, the weather forecast, inspection of the bomber and fighter groups at his bases, and the status of the German war industries.

Following the briefing, the Allied player assigns his raids using the bomber and fighter groups. Raids can be checked after forming with the option of canceling them; the weather can be checked as well as the map to help with target selection. This concluded, the Allied player is finished for the day except to watch the results as the action phase runs.

Before the action phase the Axis player first deploys his fighter groups and flak as he feels will help with that day's raids. Fighter tactics are assigned for the different types of fighters or for individual groups and unactive airfields can be activated, up to 48, or active fields can be moved to an inactive field.

Though this is a long game, it is one worth playing as it shows just how the daylight raids almost failed until long range fighters were developed. Control of German production levels can create new twists to the war, and it is possible to win as the Axis player.

For any Air Force buff this one is a must, not that hard to learn, but mastering this one will test the best tactician's mettle.

Good luck and good hunting.

ArcIt

A Program for File Compression

Earl Hill (SAGE)

Author's Note: Some of the material in this article is based on documentation Copyright 1989 by G.A. Szekely. ArcIt and ArcIt Shell are available from Innovative Concepts.

Part I

There is chaos in the Atari ST/Mega world! Not the kind in the latest game from FTL of that title, but chaos in the world of compression and uncompression of files.

Also known more familiarly as ARCing and UNARCing, which is the method used to reduce a disk; or files, folders, sub-folders, etc. to one file. This of course helps speed file transmission using a modem, economizes on disk space, helps to organize your files, allows a number of files to be consolidated into one file and other good uses.

For quite a while, all went smoothly. We had ARC.TTP and ARCX.TTP, and that was essentially it, except for some variations on the shell programs which some of us used to simplify command entry.

Most of us became familiar with the finer aspects of the Arc programs, but all at once a new force appeared in the land! Like so many new innovations, it began rather slowly and with very little portent of things to come.

Probably the first thing that happened was we began to notice that some of the ARCed programs we tried to uncompress wouldn't. Further investigation revealed that an updated ARC program, version 5.21, ported to the ST world by Howard Chu (WAUG), was being used by some to compress their files. After all, we ST users didn't want to be lagging behind the IBM ARC world!

It was not terribly long after that we started seeing not only ARC521 but a raft of programs having the weird names of ZOO, ZIP, LZH (LHARC) and Turbo ARC.

As I love to quote from Laurel and Hardy, Stan says: "It's a fine mess you've gotten us into, Ollie!" What we've all needed is a saviour to help us make some order out of this chaos, which is where we come to the "New Kid on the Block."

A new program has been introduced called ArcIt and ArcIt Shell, and it's written by Gerald Szekely. These two programs are like the light at the end of the tunnel, and point the way to efficient handling of these new versions of ARC, ZOO, LZH, or whatever, for both compression or uncompression of "ARC" files.

An ArcIt Overview

The ArcIt disk comes with the special program ARCIT.TTP, and the shell program for it, ARCITSHL.PRG. There are also a number of compression programs such as Zoo and doc files in compressed mode, which can be used to gain experience in using ArcIt.

The actual work of compressing or decompressing files is done by ArcIt and/or another program such as LHArc. ArcIt Shell, among other things, adds a GEM interface to the whole setup to avoid the labors of typing.

The ArcIt program does not do any kind of compression itself. ArcIt's main feature is keeping track of folder contents, so that you can easily compress an entire disk, even folders and their contents, into a single Arc file.

Like all Arc files, ArcIt by itself is somewhat cryptic to use, so ArcIt Shell was written to interface with ArcIt. ArcIt Shell then calls ArcIt, which repeatedly calls a compression program (e.g., Arc) until everything in the path that you specified is Arced.

Instead of calling ArcIt, ArcIt Shell can directly call any of the supported compression programs (Arc, DCopy, LHarc, Zip, Zoo, etc.). All you have to do is select "all programs below box," then select the program you want to call. This means that ArcIt Shell can then simply act as an Arc shell or LHarc shell.

[Ed. Note: Earl will continue discussion of ArcIt next month.]

New Book by Ralph Turner! Covers hard drive management & optimization, IBM emulators, connecting a 5 ¼-inch floppy drive, assembling a hard drive system from inexpensive components, disk structure and file recovery, SCSI ID numbers and LUN IDs, sector and file editing, binary, hexadecimal and decimal codes, ASCII file problems, escape codes, miscellaneous tips, and much more. No programming knowledge required. (Also available: *The Atari ST Book*) $16.95 + $2.00 shipping (Canada: $2.50). Check, Money Order, VISA or MasterCard. Index Legalis, Post Office Box 1822-62, Fairfield, IA 52556. Phone: (515) 472-2293

For Those Who Don't Want to Read The Book

Jimmy Boyce (CACE)

Well folks, I hope this makes it by deadline as I forgot to write this article until the last minute. Not procrastination, just plain forgot.

With all those great American novels we have written, edited and spell checked, we now need to send them to someone. What's more, we don't need all of those publisher's addresses lying about on scraps of paper that might get lost. Then, we would miss sending our manuscripts to the one publishing house that would have published our literary work of art.

So, let's think computer and not let our hours of seaching for those addresses go to waste. Let's save them in a nice neat file that can be retrieved at any time. That is a database (that is "computerese" for a list) and using it to print labels is known as MAIL MERGE.

A database is just an organized list of anything—friend and relative addresses for holiday card sending, your favorite records, tapes, CDs or whatever. I have my library in a database. During this section of the AW+ tutorial, we will eventually cover all of AW+'s database features and you will discover that it is easy and fun. The part I like is creating the format for my database and the rest becomes ho hum tedium...all of that typing.

So, where is the logical place to start <pg 61>? Load AW+ and wait for the menu. The last item on the left hand side is MAIL MERGE, so push the letter 'M'. Now, as your good old drive churns, grinds and makes other obscene noises, another menu comes up onscreen.

Across the top it reads "22292 BYTES FREE" or some such number. That is how big you can make a file. Next to this number is "255 RECORDS FREE." That is how many, as in my case, books I can list in a single file.

Now for the rest of the menu, rather than delve into a list with short explanation as is done on page 62 of the manual, I elect to take each section and go over it. What comes next is not going to make you happy but, because I screwed up and I am late with this, I am stopping here and we will take up in detail how to creat a database file next month.

STALK THE MARKET

Stock Charting and Analysis Software for the Atari ST and Mega Computers

"Stalk the Market is the only stock charting program for the ST ... it is very easy to use, it is speedy, and it provides good visual representation of the price movement of a stock. Stalk the Market is very inexpensive as far as charting programs go, and I recommend it to every ST investor."

Nevin Shalit
ST Informer

Stalk the Market provides you with an integrated package of customized data bases, graphics, spreadsheets, and technical tools, all designed to assist you in examining, manipulating and analyzing the price movement of stocks.

You may choose to use the program's data bases to simply archive historical stock price composites, or to display and examine this data using the charting features. Finally, you may use the analysis tools to develop your skills in timing buy and sell transactions to optimize the return on your investment. You may "train" on historical data (with no risk) or "compete" with current data.

- **Developed on ST computers for ST and Mega computers.**
- **Color or monochrome.**
- **Complete (160 page) User's Guide includes an introductory tutorial, comprehensive reference section, and detailed index.**

Only $79.95
(suggested retail price)

Quidnunc Software
Suite 175
P. O. Box 819081
Dallas, Texas 75381-9081

(214) 243-0663

DATA BASE FEATURES

Store up to **500** composite daily, weekly, or monthly prices (and volumes) for each stock of interest or for selected *Dow Jones Averages*. The number of stocks you can store is limited only by your disk space (a double-sided floppy can store over **100** full-sized stock files). With a subscription to *Dow Jones News/Retrieval* (included with the program) and a modem, you can automatically download historical quotes and update your stock files. Or you can enter or edit your stock price and volume composites manually.

Stalk the Market helps you administer your stock market activity with other data bases including transaction ledgers (for each stock), commission schedules, stock portfolio, and files of your various technical indicators. All these data bases are fully editable.

CHARTING FEATURES

Historical time/price data can be graphed in several formats including high/low bars or low, high, or closing price lines. Volume data may be superimposed. You may zoom in (at any magnification) on or pan to any region of interest. GEM window control points (scroll bars, arrows, sliders, etc) are used to control your display.

Up to four stocks can be plotted simultaneously, each in its own window. Time scales can be matched between windows (scrolling one window will cause all others to scroll synchronously).

ANALYSIS FEATURES

Cyclic analysis tools include moving averages, residuals analysis, derivatives, RSI curves, and Fourier analysis. Identified cyclic components can be saved for future reference and use.

Buy and sell indicators include Trend Line, Trailing Loss Level, and Moving Average breakthroughs.

Tools may be applied to historical data creating hypothetical "what if" transactions or may be used to identify real buy and sell signals.

All analysis features are generated and examined from interaction with the graphic displays.

Answers-Tips-and-Relevant Information

Paul Alhart (AFED)

This month I will tell you how to get the most out of AtariWriter+. This is an update of a column I did some time ago titled "Secrets for Successful Printing with AtariWriter+."

After using AtariWriter+ (48K version) to write papers for work, school and personal use nearly every day for four years, I have run into a few strange problems. For no apparent reason, what you get on paper is not at all what you expected. Well, here are some secrets that you can use to ensure this doesn't ever happen to you again. Note: Although these tips apply to the 48K version, most can be applied to the 130XE version as well.

Missing Headers or Text

If your header previews correctly but doesn't always print on each page, set the Top Margin to 10 or 14 instead of the default of 12. Also see Printer Drivers: Up 1/2 Line.

Have you ever found lines of text missing from your print out? When you chain files together, the values of the first file's Global Menu are carried over to all the chained files and their Global Menu values are disregarded. No problem, if they are there. But if you used the Save ASCII option to save the chained files, those Global Values won't be there, and two or three lines of text will be whacked off instead.

If you have a file (D:LONGFILE) that is too long to Preview, try this trick. Create a file (NEWFILE) that contains only the CHAIN command (^VD:LONGFILE). This will Chain LONGFILE to your NEWFILE. Now, use NEWFILE whenever you want to Preview or Print LONGFILE. Change the Global Menu Defaults of NEWFILE to reformat LONGFILE to your taste.

If LONGFILE had been Saved ASCII, the first few lines of text will be missing, as mentioned above. To correct this problem, create a BLANKFILE that contains only a <RETURN> character. SAVE BLANKFILE to disk. From DOS use the COPY with APPEND option to append LONGFILE to BLANKFILE (Copy LONGFILE/A,BLANKFILE). BLANKFILE will now contain LONGFILE with the Global Menu Values required for proper Chaining.

Right Justified Text

When several lines of text, such as a name and address, are to be right justified, you may have trouble getting the first character of each line to line up correctly. Follow the longest line with at least one blank space and then pad the shorter lines with spaces to make all lines equal in length. Use Print Preview to check the results.

Printer Drivers

For some time I have noticed letters magazines requesting various printer drivers for AtariWriter+. Could it be that the requesters have never read the manual? Page 38 describes the program on the AtariWriter+ disk that allows you to create your own custom printer drivers.

More likely they have tried building their own drivers and run into problems. For the most part, the manual is a good guide, but it leaves out a few important facts. Here are some tips for creating your own printer drivers.

Line feed and carriage return: when asked for the code for line feed and carriage return, use the decimal code 155 no matter what your printer manual says.

Underline off & on: the codes you put here don't seem to matter much. If your printer can backspace, AtariWriter+ will default to the slow process of printing a character, backspacing one character, printing a "_" character, then going to the next character and repeating the process. Spaces won't be underlined and the underline will not always be smooth. To get spaces underlined you can substitute the character "_" for each space in the text to be underlined. If your printer can underline by itself, place the underline codes directly into your text or in the Type Font 1-9 code area for a fast, smooth, continuous underline.

Up 1/2 line: this is normally used for superscript printing but placing a code here can lead to a couple problems. If your printer can *not* reverse line feed, you must leave up 1/2 line blank or you will not be able to do double column printing. Also if up 1/2 line contains a code, you will run into the missing header problem.

To change printer drivers without re-booting, go to Proofreader and then back to AtariWriter +.There is also a blank printer driver built into AtariWriter+. To access it, just hit <RETURN> when asked to enter the name of your disk-based printer driver prior to printing.This driver will not recognize any of the One Key instructions such as underline, bold or type fonts 1-9, but it will let you do single- or double-column printing on almost any printer. You can still enter special printer codes directly into your text with this driver. Also, you can use this blank driver to remove all Print Format and Printer Control Codes from text when printing to disk.

When you create a printer driver using the program found on the AtariWriter+ disk, you will find that two files are written to disk. The one with the extension of ".PDF" is used only by the driver creator program when a printer driver is loaded for editing. The other file is the one used by AtariWriter+. It is in exactly the same format as the Menu selected printer drivers contained *within* the AtariWriter+ program. The brave hacker with a sector editor can put his own custom driver into the AtariWriter+ program and then be able to call it right off the printer menu. To do this, you will have to overwrite one of the existing drivers.

If your new driver is longer than the existing one, it will overwrite part of the next existing driver as well. That's OK. Just delete that driver choice from the printer menu (Sectors 181-183 ($B5-$B7)). First write and de-bug a custom driver with the driver creator program on the AtariWriter+ disk. Then pick an existing printer driver you want to replace with your custom driver. With a sector editor, replace the data in that printer's driver with the data from your custom driver's file. I have had good luck putting my custom drivers in place of the existing 1027 driver or the BLANK driver mentioned above.

Following is a list showing the Start (sector & byte in HEX) of each of the built in drivers. Note that the sectors are *not* contiguous.

Sector Byte	Selection
1EA:	825114
54B:	1025114
78C:	10271E1
1AE:	FX-801E2
09I:	IDS-4801E2
58J:	JUNKI1E
0D<RETURN>	Blank1E3
2BD:	10201E3
47E:	10291E3
68F:	XMM-8011EF
4CG:	XDM-121

If you study the format of the driver data, you will see that each command begins with a HEX number indicating how many bytes make up that command. The printer driver creator program limits each command to a maximum of 9 bytes. With your sector editor and a little courage, this limit is now gone. I have used as many as 11 ($0B) bytes in some commands with no problems.

General Tips

Margins—AtariWriter+ counts spaces from the leftmost printable position of your printer to set margins. Zero will be the first column (0 spaces from the first printable position). Thus, to get proper results from a printer that is capable of printing a maximum of 80 columns the right margin should never be set to a value greater than 79.

Directories—Would you like your AtariWriter+ disk to be able to display its own directory? Using a sector editor, find the ASCII text "AP.OBJ" in sector 190 ($BE). Replace it with XX.XXX or any other unlikely but valid file name. How about reading the directories of drives 3-8? This tip came from a past issue of the South Bay ACE Gazette. Again with a sector editor, go to sector 178 ($B2). Starting with byte 33 ($21), find the byte string: 31 D0 03 [4C][B8][52] C9 [32][D0] 03 4C [BD] 52 C9 4C D0. Change only the six [bracketed] bytes so you have 31 D0 03 [EA][EA][EA] C9 [39][10] 03 4C [BF] 52 C9 4C D0. The menu screen will not be changed, but you will be able to get the directory of any drive (1-8) by typing its number.

Special Characters—If your printer has an extended character set (Characters with ASCII codes above decimal 122), these character can be easily used in your printed text. Just type Control-O followed by the decimal ASCII code of the character you want printed.

Defaults—Did you know there are two sets of Global Defaults built into AtariWriter+? One is loaded upon boot-up. The other is loaded when you press the Tab key from the Global Menu. These can also be modified with a sector editor, so your chosen defaults will load automatically. The second set could be set up for that special format required for school or work. The Global Defaults are located in sector 167 ($A7).

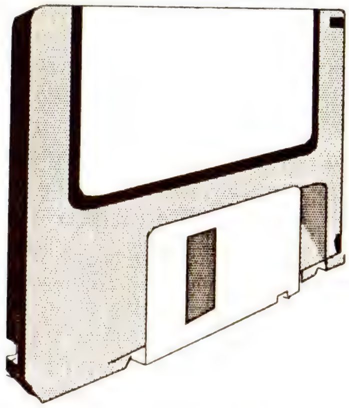
Because the defaults are stored on the disk in HEX, identifying and changing them can be a bit confusing. To make this mod as painless as possible, I wrote a utility called DefaultWriter+. You can find this program in the Antic Tech Tips, July '88 (for both 48K & 130XE versions).

I also wrote DefaultWriter+ Companions 1&2, Antic Tech Tips, May '89 (48K version only). Companion #1 allows you set the BUZZER default to OFF or change its duration. Companion #2 does the same for the PROOFreader program and also allows you to do away with that annoying ARE YOU SURE (Y/N) prompt that follows typing in a spelling correction.

For AIM readers, I have put together an AtariWriter+ Utility Disk that includes DefaultWriter+ and DefaultWriter+ Companions 1 & 2. Also included on the flip side is StarStuffer.

This is a set of utilities that allow owners of Star Micronics SG10/15 or NX10/15 printers to download custom fonts to their printers. Several fonts are included on the disk. The fonts can be used from any language (BASIC, ASSEMBLY, etc.) and from most word processors including AtariWriter+. Documentation for all these programs is on the disk as AtariWriter+ text files.

To get your copy, send $6 to cover my costs, to: Paul V. Alhart, 524 North Zee St., Lompoc, CA 93436.



AIM Disk of the Month June/July

All files on this disk are self-extracting LZH archives. To use these programs, simply copy the files on this disk to individual floppies with plenty of free space (or a hard drive) and double-click the files. The files will then automatically unARC themselves into the actual runnable programs.

Readers can purchase this disk by subscribing to the AIM Disk of the Month, contacting one of the AIM participating clubs, or by sending $6/disk DS or $7/disk SS to Unicorn Publications, 3487 Braeburn Circle, Ann Arbor, MI 48108. Please specify the June/July disk when ordering.

BIGCOLOR.TOS—Color monitor emulator for people with mono-only systems. Shareware fromthe UK. Coding is for European hardware, the screen offsets slightly, and CPU speed is definitely reduced. The default setting (press return at SPEED= prompt) is recommended; it uses 200k (screen cache?) and if it refuses to boot first time, just cold-boot to reset it. Wonderful!

DARTS.TOS—Shareware Darts game with speech synthesis from Budgie UK. Runs in low rez color only.

DIRSORT.TOS—This small program will sort any file directory. Very useful for changing the order of files in your AUTO folder or the order of your desk accessories.

FCOPY30.TOS—Latest version of a feature-packed copy program from Germany. Copy single sectors, change format while copying, virus check disks, make multiple copies, and more. Has a unique 'soft-format' option. Generates Spectre and MS-DOS format. Runs as a program or desk accessory.

FONEVOIC.TOS—Atari Phone Voice allows the user to make speech synthesized messages for phone answering machines. Uses synthesized voice, musical tones and sound effects. Low rez color. From Baggetta Shareware.

FREVENGE.TOS—Face's Revenge, a BoulderDash-like arcade game from Germany. Try to pick up the gems and avoid the boulders before the clock runs out! Mono only.

MINIGOLF.TOS—Mono only golf game from Germany. Try your hand (mouse!) at the Putt Putt golf course, bouncing the golf ball around various obstacles.

PATIENCE.TOS—Two solitaire card games—Canfield and Klondike—you'll end up playing for hours! Similar in play to Michtron's Cards. Color only.

PEANUT.TOS—Who Stole the Peanut Butter? a Shareware game for kids of all ages. You use your detection and questioning skills to apprehend the culprit. Low rez color. From Baggetta Shareware.

PGSFE08.TOS—Soft-Logik's completely new PageStream Font Editor! This file contains the font editor program and a 20 page PageStream .DOC file. Allows creation and editing of screen, FM and DMF files for PageStream! Shareware. Monochrome only!

PRINT_SC.TOS—This utility resides in your AUTO folder and allows you to press ALT-Help and get a Text screen dump rather than a Graphics screen dump. Works with all TOS versions. Mono only. Source code included.

PRTORSAV.TOS—Included here are three graphic screen dump programs, one for the DeskJet, one for the LaserJet and one for Epson or Atari 9-pin printers. Dump directly to printer or to disk file depending on keys pressed.

QUEBOID.TOS—A rather interesting arcade game from the UK. Fly your ship and pick up the keys and objects to get to the next level...but beware of the enemy ships. Color only.

RAMPLS11.TOS—Version 1.1 of the RamPlus utilities. Includes a fast, memory efficient RAMdisk with built-in print spooler that does not require a separate buffer, mouse doubler, screen saver, 11 sector format utility, and a GEMDOS fix that allows an extra 2K to be stored on every disk.

SCRAM.TOS—Scrambled Eggspressions is a two-player game for kids of all ages. Players take turns trying to rebuild the mixed-up cartoon faces. Also includes a bare bones editor so you can make your own cartoon faces.

SMRTPLAY.TOS—Smart Play is a sound editor/player for ST-RePlay sound samples. Allows you to load, edit and save sound samples. Smart Play has a unique 'AUTOPLAY' feature allowing you to play all the sound files in a folder just like a picture slideshow program.

SPRITE15.TOS—Sprite Studio is a low-res painting program written in GFA Basic useful in creating sprites for animations and games. Sprite Studio also has the ability to load any file as graphics (not just DEGAS or Neochrome pictures). Shareware.

TUI_DEMO.TOS—Working demo of a windowed MS-DOS style command line interpreter desk accessory. Supports wildcard operations, batch files w/parameters, execute TOS and TTP programs, I/O redirection and pipes, and more.

VSQUARED.TOS—Sequel to the Tetris clone Valgus. The seven familiar pieces now assault you from four directions, sometimes two at a time! Color only.

ABLE

The Atari Boosters League East (ABLE) meets monthly with enthusiasts and provides user support for all Atari computers except the Portfolio and PC line. The purpose of ABLE is to advance the knowledge of the membership through mutual education and the interchange of ideas.

General meetings are held in the Palm Magnolia Room at the Orlando Public Library, 101 East Central Blvd., on the last Sunday of each month from 1:30 to 4:30 P.M. ST SIG special interest meetings take place in Room 134 at the Bush Science Center on the Rollins College campus on the second Wednesday of each month from 7 to 9:30 P.M. Ad hoc meetings are scheduled as needed to present speakers, conduct special workshops, provide tutorial seminars and for parties. We assist members in service and software problems, as well as arrange group purchases and discounts.

Information is disseminated to members through our newsletter, the ABLE Atari Information Digest (ABLE AID). A package of twelve selected previous issues of ABLE AID higlighting the "super eight" computers is available for $10 ($5 for members). In 1990, ABLE began participating in the Atari Interface Magazine.

We have also established an ABLE Program Library of User Software (ABLE PLUS), consisting of several thousand files for the super eight and sweet sixteen computers. This library contains public domain programs contributed by ABLE members, as well as other computer clubs and users, to allow the sharing of user-written software. A computer specific listing is available to non-members for $3 and disks are available to non-members for $6 each.

ABLE accepts written correspondence at P.O. Box 1172, Winter Park, FL 32790, while membership inquiries are handled by Hadley Nelson, President, (407) 671-0317 or Milton Eager, Treasurer, (407) 834-0581. Annual dues are $12.

A.C.C.T.

Atari Computer Club of Toledo club members receive, as part of their dues, Atari Interface Magazine and access to the 8-bit and ST public domain software libraries. Disks are $2/8-bit and $3/ST, non-members may purchase disks at a slightly higher cost.

A.C.C.T. meets on the second Monday of the month from 7-9 pm at Bassett's Health Foods, 3301 West Central Avenue (Westgate Shopping Center), Toledo, Ohio. 8-BIT SIG (yes, I said 8-bit) held monthly at the home of Jim Herzberg. Dates and times announced at meeting. ST SIG held monthly at the home of David & Brenda Micka. Dates and times announced at meeting.

A.C.C.T. may be contacted at 6107 Greenwycke Lane, Monroe, MI 48161, by calling Dave Micka at 313-241-1157 or Michael Justice at 419-242-7797 or via Fantasy Island BBS.

President:	David Micka	313-241-1157
VP & 8-Bit Librarian:	Michael Justice	419-242-7797
Secretary:	Sharon Hill	419-423-2135

ATARI FEDERATION

Regular meetings are held at the VAFB Federal Credit Union, Vandenberg Village, Califorina on the first Monday of every month at 7:00 P.M. Dues are $10 for individual or $15 for family membership. The Atari Federation maintains a PD software library for both 8-bit and ST computers.

President	Phil Rominger
Vice President	Bob Ribortone
Secretary	Matt Matias
Treasurer	Herb Kanner
Newsletter Editor	Jerry Sullivan
8-Bit Librarian	Chester Hadley
16-Bit Librarian	Charlene Rominger

President's Notes by Phil Rominger

It has been quite some time since, I have let any of you in on what's going on in the club. We have had some good meetings in the past, but the next two meetings should get you up and to the meetings on time.

With some luck and a little arm twisting, I hope to get Herb to bring in his PC Speed machine for the June meeting. This will give us a chance to see an IBM emulator boot up a piece of software before we fall asleep waiting.

And finally, in July we will be demonstrating Spectre GCR (if the UPS man can find my house). This is the newest Mac emulator by Dave Small, and it has a lot of people excited.

Please, don't miss these meetings! We will be discussing a lot of new information, viewing demonstrations of new software, and you may even miss out on an upcoming club party. *So be there!!*

Secretary's Minutes by Phil Rominger

Phil opened the May meeting by discussing several topics of interest, not the least of which was the poor showing at some of the more recent Atari Shows. It was reported that the PACE show, if not a dismal failure, was close to it. Well the World of Atari Show in Los Angeles wasn't much better. I arrived at opening time, and there was perhaps 200 people there. During the three hours that I was there, I never saw attendance go much above 300 (if they were lucky). I know that there are more Atari owners out there than that, but we (the active Atari community) and especially Atari Corp is not getting the word out to them. I must say that our club had several of its members in attendance, which goes a long way in proving our support of Atari. This is especially true considering that we had to make a 400 mile round trip, and face L.A.'s notorious traffic. I don't know what the answer is, but you can bet that these shows will disappear if attendance doesn't improve.

On a lighter note Herb Kanner gave us a very informative, and humorous, description on how to install PC Speed. After several mishaps, Herb with the help of Bob Ribortone got it in and working.

After the break, we raffled off a free Dominos Pizza (courtesy of Gus Maio), and Matt Matias demonstrated several of the programs on the disk of the month. He also notified the membership that next month's DOM would be out of the Atari Interface DOM, and I have had the opportunity to see some of this software and it's great.

Finally, Paul Alhart (our own die hard 8-bit expert) gave a demonstration of his new and improved Star printer font stuffer. I was very impressed with the program and the addition of the font editor makes it a top quality program.

Birmingham Atari Computer Enthusiasts

The Birmingham Atari Computer Enthusiasts of Birmingham, Alabama meets at the Vestavia Hills Library downstairs at 7:00 p.m. the second Monday of each month. Membership dues are $20 for a regular membership,and $35 for a professional level membership.

Mark Bodenhausen	President
James Gilreath	Vice President
Brenda Bodenhausen	Secretary
Steve Yates	Treasurer

For membership information, contact Steve Yates, 1005 Candy Mountain Road, Birmingham, Alabama 35216.

Our BBS is at (205) 833-5012. This is both a voice and data line. To access the BBS, press 1 after the first ring. For voice, press 2. After 6 rings, 2 is automatically selected.

In the meeting on May 15, a total of 12 members and guests were present. Discussions continued about the B.A.C.E. garage sale. There was a demonstration of the OMNISWITCH, the Mitsubishi Diamond Scan 1381 multi-sync monitor, and a comparison of DITTO and the new SuperCharger.

The new 50 meg drive for the BBS did not work due to compatibility problems, and is being replaced with an 80 meg drive, bringing on-line storage up to 100+ megs. The upgrade should be complete by the time you read this.

The next meetings will be on June 11 and July 9 at 7:00 at the Vestavia Hills Library, downstairs.

B.R.A.C.E.

Bluegrass Region Atari Computer Enthusiasts

President	Hal Nason	(606) 269-8989
Vice President	Greg Parsons	
Secretary	Chris Dotson	
Treasurer	Vacant	
Librarian	Chris Dotson	
BBS Sysop	Rick Bradfield	

B.R.A.C.E. (Bluegrass Region Atari Computer Enthusiasts) meets the third Sunday of each month from 1 - 4 PM. The site of the meeting is undetermined at this time. The officers will be in contact with you in the future to advise you of the meeting site. Current membership dues are $15 per year for an individual membership, $20 per year for a family membership and $10 per year for an associate membership. (An associate membership includes receiving the monthly newsletter, but excludes the use of the library.) Members of B.R.A.C.E. have extra downloading privileges on The Abyss BBS (606) 223-2782.

BRAG ST

Buffalo Region Atari Group for ST's

BRAG ST was founded in 1987 to serve Atari ST owners in the Western New York area. General Membership Meetings are held on the third Thursday of the month at Erie Community College North Campus, Room S-105 in the Student Center. Setup begins at 7:00 PM; Meeting starts 7:30 PM. The Board of Directors meet on the the first Tuesday of the month at the Your Host Restaurant, Harlem at Sheridan at 7:30 PM. All are welcome to attend. Piracy will not be tolerated at any BRAG ST function.

BRAG ST, PO Box [illegible], Buffalo, New York, 14225

Chairman	Mark Pierro	(716) 691-7844
Vice Chairman	Ken Malark	(716) 683-1272
Finances	Gerry Genson	(716) 877-1328
Records	Joe Rogozinski	(716) 877-8378
Disk Librarian	Carl Barron	(716) 885-4325
Public Relations	Harvel Hontz	(716) 689-8074
Graphics	Dick Kersting	(716) 839-0494

The meeting was called to order at 7:35 PM on the 19th of April by Mark Pierro. In attendance were a total of thirteen club members with one potential new member present.

The proposal to increase the dues from a regular membership rate of fifteen dollars to twenty dollars was discussed. The family rate of twenty five dollars would be eliminated. The proposal was voted on and passed by ten members in favor for the increase and three members abstaining. The increase will take effect in July of 1990.

Ken Malark then discussed the status on the Bob Brodie meeting. We then discussed the vacant Board of Director's position. Mark explained that our current constitution states that we should have eight board of directors for the club. He asked if anyone would be interested in becoming a board member. With no response from the floor, the position remained open.

Mark then describe the subscription offer the club received from Current Notes. Club members have the opportunity subscribe to this eighty plus page Atari publication at a reduced subscription rate. In order to take advantage of this offer, we must get five or more people to sign up for it.

We then showed off the Mouse Master, which we received from Practical Solutions as part of their ACE support club promotion. This product is a switchbox that allows you to use either a joystick or a mouse in port 0! What was really nice is once the Mouse Master is plugged into the ST, both port 0 and 1 are readily available - no more fumbling around under your keyboard! It was used during the night's software demonstrations and was very convenient to have.

An announcement was then made that we have both March and April AIM public domain disks available in our library.

Then on to the demonstrations: Carl Barron gave us an interesting demonstration of Cyber Sculpt, a three dimensional modelling program. Gerry Genson then gave us a demo of a different kind of game called Populous. After Gerry finished the demo of the program, the club paused for intermission and raffled off Populus. As luck would have it, the winner of the game was Gerry Genson!

The club resumed from intermission with an open forum where all the members had a chance to participate in any topic they chose. One thing Mark brought up for discussion was what the club members wanted to see for upcoming software raffles. Members responded by asking for DC Desktop, Universal Item Selector III and Chaos Strikes Back. The meeting ended at 9:40 PM.

CACE

Cascades Atari Computer Enthusiasts

Cascades Atari Computer Enthusiasts is the Atari Club in and around Jackson, MI. The CACE BBS is run by the club and open to everyone. The number to call is (517) 764-4047. Current membership dues are $14.80. Any written communication with CACE should be sent to PO Box 6161, Jackson, MI 49204. Our meetings are held on the second Saturday of the month fro 1p.m. to approx. 4p.m. at the Boos Recreational Center. For more information, contact Brent Fisher at (517) 764-4599.

Central Connecticut Computer Club

Hoo boy......This has got to be a quick article. As you who showed up know, The Gribnif demo was scrubbed last minute due to wet feet. That's right, Gary called all members....past and present and not one of you could make it. Really now, that makes Atari stand out like a Gleaming knight in the cesspools of life.

The people from Gribnif have been *rescheduled* for *June 20th.* Luckily....Rick agreed to reschedule. So we get another chance. If this doesn't work out this time, I'm not gonna keep pulling my hair out for nothing. July might bring a *big* surprise guest...and again, it might not...it's up to you. I'm not going to be embarrassed again. If you come to the meeting in June you will find out about the "possible" BIG guest for July. All I'm going to say for now is we might need a larger meeting area for July, and it might *not* be held the 3rd Wednesday of July.

Other than that, We were pleasantly surprised at the large turnout of NON-CCCC members that showed up for the demo, and sorry to say there was *no way* we could have notified them of the cancellation. For this I personally apologise and sincerly thank all those from STARR, STATUS, and FACE who did show up. Gary suggested we again, utilise the BBS's to relay the info to all interested parties, but now we are going to ask for a quick E-mail style note to confirm that a user is coming.

Another sad note....the SX-212 modem we lent to a member has come back to us with a fried power pack....and no mention of making good for it, either. Hummph! We agreed to replace the power pack and offer it for sale. It also appears that the CCCC 8-bit monitor is for sale again. This stuff has got to go to make room for newer ST equipment.

Also be aware that I (Rich Scheidel) have cancelled my Compuserve account. GEnie is where you can get me. Send mail, spare change, unused cars etc. to the mailbox of BANDYT. It's a short story behind the change ... but this is not the place for it. I'm outta here....its late and I'm tired. 'Till next month......Rich

CDACC
CENTRAL DELAWARE ATARI COMPUTER CLUB

Central Delaware Computer Club meets on the second Thursday of each month. For more information, contact President Alan Beddow at (302) 678-1450 or write CDACC at PO Box 545, Camden-Wyoming, DE 19934.

CDACE

Capital District ATARI Computer Enthusiasts

Who We Are: Capital District Atari Computer Enthusiasts (CDACE) is located in Albany, NY and serves the tri-city capital region. Meetings are currently held on the third Tuesday for the XE group and the last Tuesday for the ST group at the Computer Cellar, Westgate Plaza, Albany, NY. Meetings begin at 7 PM with the libraries available starting at 6:30 PM. Dues are currently $20 per year for each family. This includes a subscription to AIM, our monthly newsletter and our BBS. Membership is not required to visit a meeting.

C.O.A.C.

Central Oregon Atari Club

Dedicated to Central Oregon Atari Users and Enthusiasts Since 1986

President	Norman Moore	(503) 447-3598
ST-VP	Bob Kanski	(503) 548-8201
8-Bit VP	Marc Hitson	(503) 648-0513
Treasurer/Editor	Glenn Dulin	(503) 382-3956
Secretary	Nancy Kanski	(503) 548-8201

Address: Central Oregon Atari Club, PO Box 6824, Bend, OR 97708

Membership dues are $1/month and $1/year for each additional family member. We meet every second Saturday of the month at 5:00 PM at the Ann Rita Conference Center, which lies just in front of the St. Charles Hospital on Neff Road in Bend.

Our fearless president, Norman Moore, ventured to southern California to the World of Atari Show. Unfortunately, he only had four hours on Saturday to see the show before it closed for the evening. He purchased a few things for our raffles and give-aways. He also ran into Andy Gray who's going to college down there. Andy should be back for the summer soon.

We have more T-shirts and the games to give away, so come to the meetings. The Tweety Board will be raffled off by the time you read this. For those who normally can't make the meetings, you could mail in some money for the raffle tickets so you'll have a chance to win. The tickets for the Practical Solutions items are $1 ach. If you want the AIM disk get in touch with someone so you can get a copy of this fine PD and shareware software.

We are in the process of adding some new by-laws to cover some situations. We would like to hear your opinions and ideas if you have anything that you are concerned about. Please bring them up at the meeting or send your suggestions in writing.

CUSTUG
Champaign-Urbana ST Users Group

The Champaign-Urbana ST Users Group (CUSTUG) meets at 7pm on the second Wednesday of each month in the Auditorium of the Urbana Free Library at the corner of Elm and Race in Urbana, IL. Membership dues include a subscription to AIM and GLITCH and use of the commercial lending library. New members are welcome. The group supports a local BBS, Blackhawk's Keep, operating 24 hours a day at 3/12/2400 baud (1/8/N): 217-892-5512.

Henry Murphy	President
Jimmie Myers	Vice President

Sysop	Greg Morse	509-328-1013
Classic Librarian	Ed Hicks	509-992-1244
ST Librarian	Roy Steele	208-773-4876
Newsletter Editor	Merry Iverson	509-253-4733

We currently own and maintain a 24-hour Bulletin Board System (BBS), open to everyone with a 300, 1200, or 2400 baud modem, called the Atari Zone. To enter the Atari Zone call 509-326-5741.

Since we currently have renewal dates scattered throughout the year, please check your card for your current expiration date. Remember, once your membership expires we are no longer able to send you your AIM Newsletter or allow you to remain at the F.A.C.C.S. level on the Atari Zone. To prevent any interruption in your F.A.C.C.S. services please renew by the expiration date on your card.

President's Monthly:18 May 1990

There were a couple of 800XL memory modifications done at the last meeting, and to the best of my knowledge, they work, or else I just haven't heard that they don't. It was kind of scary to watch the disassembly of a working machine, even though I must confess to have done a couple of memory mods myself.

That brings me to the subject of an upcoming demo, and a future article for AIM, the use of a ramdisk to speed up those programs that require constant disk access. It is really not as hard as you might think to modify a software package to run from the ramdisk, but it does take a little work, understanding, and the disk in question must meet a few requirements. More on this later, watch for the upcoming article.

Summer still seems a long way off, but it is almost here, and the monthly meetings will take on their summer appearance soon as the majority of our members have outdoor activities that keep them from attending. I think I will make them all, although it is too early to tell.

One last item to note, I have a new address, listed at the top of the column, and of course a new phone number, so make a note of it in case you need to contact me. I moved to within a couple miles of the meeting room, so it should be a lot easier for me to get to the meetings from now on, even though I have only missed 2 or 3 in the past 3 years or so.

Come to the meetings if you can, and tell all your Atari friends

GKAUG GREATER KALAMAZOO ATARI USERS GROUP

GKAUG meets once a month by invitation only as time permits. Membership is through the MACE organization for those who want the AIM magazine and other benefits.

Frank Fellheimer can be contacted at (616) 657-6106 or 2nd System/GKAUG BBS (616) 385-2448

We only managed to get together once this month. This time at Dave Bryants home. The BBS system finally ran out of funds to support it so it is no longer in operation. Another reason why "support" is so important to the operation of a club..

We got a copy of TextPro 4.54 and there is some 80 pages of documentation. I am sure it will take a while for me to sift through all the information. I am still checking on "G:Device". This month has been very busy for me with all the overtime I have worked and my wife wanting the yard all mowed and cleaned.... I hope the next month brings more computer time. Let me know if you want to join us. My number is at the top. There aren't so many of us now, but we still have a lot of fun. Planning on another summer computer picnic. Will let you know when if I can get everyone to agree on a date.

JACS

Jersey Atari Computer Society, P.O. Box 710, Clementon, New Jersey 08021. JACS BBS: (609) 346-1224

President	Mike Hopkins	227-9058
ST Vice President	Maureen Kelly	428-9381
Treasurer	Forrest Blood	877-3579
Recording Sec'y	Gary Mickus	767-1933
Membership Chair	Al Guretse	596-7567

The Jersey Atari Computer Society (JACS) provides a forum through which members may further their understanding and enjoyment of all Atari computers, through the exchange of ideas and information with other users.

JACS holds two meetings per month at the Camden County Library, across from the Echelon Mall in Voorhees, New Jersey. The executive meeting, where all the planning for the club takes place, is held in the 2nd floor meeting room from 7-9 PM (meeting dates vary from month to month). The regular JACS meeting is usually held on the third Tuesday of each month, in the 3rd floor meeting room from 7-9 PM. The regular monthly meeting includes topics of interest for users of all Atari 8-bit (400/800 & XL/XE) and 16/32-bit (ST/Mega) computers.

Membership dues are calculated at $2.00 per month prorated through the coming July, when the entire club comes up for renewal. August, 1989 - July, 1990 dues are $25. Spouses and children may be included under one membership fee. Attendance at our monthly meeting is free for all members. Guests may attend up to 2 meetings at no charge.

As a JACS member, you'll receive a subscription to our newsletter and AIM, full access to our 24-hour bulletin board and access to our growing libraries of public domain software for the all Atari computers. Our disk libraries currently include over 200 disks, available for $3 each (member price). JACS ST library now includes the AIM Disk of the Month.

Layton ACE of Utah

The Layton Atari Computer Enthusiasts (L.A.C.E.) membership cost $20 per year. Privileges include the AIM Monthly Magazine, access to the 8-Bit and ST club libraries, monthly meetings, help and friendship. If you are presently not a LACE Club member and wish to join contact the one of following persons or write to LACE, c/o Irwin Brooks, 3897 So. 2275 W., Roy, UT 84067-3515.

Irwin Brooks,	President/ST Librarian	(801)731-1516
Richard Clark,	Vice President	(801)825-5823
Ken Karchner,	Secretary/Treasurer	(801)776-8015
Lonnie Allen,	8-Bit Librarian	(801)392-4450

The L.A.C.E. Club Meets in the basement of the Clearfield Library every second Wednesday of the month at 7:00 p.m.

Mark your calendars for the next three meetings.

June 13 & July 11, 1990

May 9th Club Meeting Report

The last meeting went very well with a couple of issues being brought up. 1) We have decided to help spread the word of Atari's computer existence by contributing current issues of AIM to our three local libraries, Layton, Clearfield and Ogden Main. We feel that this will not only help Atari but will also help our club with publicity from this column.

2) We had a suggestion to hold a 8bit and a Mega/ST PD party. Names were taken at the meeting for those interested in participating in either or both parties. By the time you read this they will be history, but if enough interest is expressed I'm sure that we can arrange to do it again.

Irwin Brooks

LBACE

The Long Beach Atari Computer Enthusiasts meet on the second Sunday of the month at 6:00 pm. Meetings are held at Mercury Savings and Loan on the corner of Long Beach Blvd. and Carson in the city of Long Beach.

President	Richard Hull	(213) 422-1055
Vice-president	John Saunders	863-2582
Secretary	Lee Curtis	423-2758
Treasurer	Greg Dukowski	498-9461
LBACE BBS		498-8824

Club dues are $20 annually. The club supports both the 8bit and ST. Members have access to the club's PD library and BBS and receive a year's subscription to Atari Interface Magazine.

M.A.C.E.

The Michigan Atari Computer Enthusiasts

Members of MACE receive, as part of their dues, Atari Interface Magazine. Members are also entitled to purchase disks from the 8-Bit and ST public domain software libraries. 8-Bit disks are $3 each, and ST disks are $4 each. As an added bonus, if you purchase three (3) disks from either library you will receive a fourth disk of your choice at absolutely no cost. Non-Members may purchase disks at a slightly higher rate. Mail order is also available.

For a catalog of current disks in our libraries, send $2 to:

MACE, P.O. Box 2785, Southfield, MI 48037

Don't forget to specify which library you wish a catalog for.

President	Ed Hanson	313-675-0044
Vice President	Ted Newkumet	313-537-5298
Recording Secy'	Brian Wilmoth	313-777-7873
Treasurer	Jim Nichols	313-791-2015
Editor/Membership	Bill Boles	313-421-8867
Correspon. Secy'	Mark Tappen	313-443-1989
8-Bit Librarian	Anton Malje	313-565-7419
ST Librarian	Bob Retelle	313-483-7358
SysOp	Sharie Middlebrook	313-582-0657

Please note that the Recording Secy' and the SysOp's phone numbers are BBS data-lines. Please observe *normal* human hours when calling.

MACE meetings are held on the Third Tuesday of each month at the Southfield Civic Center at 7:30pm. The Southfield Civic Center is located at 10 1/2 Mile and Evergreen Rd, one half mile south of the Evergreen exit on the new I-696. Meetings are in the small pavilion, room 115. Parking is available in the parking garage below the pavilion or in one of the many parking lots on the Civic Center grounds.

If you have any problems with getting to the MACE meetings, please feel free to call on a MACE Officer to relieve you of your confusion. We are always glad to extend a helping hand!

Please come and join us! We are awaiting your visit!

MACE Meeting Minutes -- April 1990

The April meeting of the Michigan Atari Computer Enthusiasts got underway at 7:30 PM. This was dealer night, where Atari computer dealers were invited to sell their wares at the meeting and meet some of the members. However, only two dealers showed up (Thanks to Innovative Concepts and Team Computers for the participation).

Finally, to close out the meeting, Chuck Masek gave a speech on the importance of uploading public domain programs to local BBSes rather than just downloading.

The meeting ended around 9:50 PM. The May meeting will be our annual birthday party. This meeting is open to members only. See you there.

MID-OHIO ATARI USER GROUP

Mid-Ohio Atari User Group Post Office Box 134, Ontario, OH 44862

The Mid-Ohio Atari User Group supports all models of Atari computers. We meet at A&B Computers, located in the West Park Shopping Center on Park Avenue West in Mansfield. Meetings are held the third Saturday of each month from 7:00pm to 9:00pm. Demonstrations are welcomed and pirating is expressly forbidden.

MAUG is a participating club in the Atari Interface Magazine. As such, members receive an issue of A.I.M. each month for no extra charge. Club dues are $7.50 per year for residents of Ohio, and $10.00 per year for others. A monthly disk subscription is an additional $3.00 per year if you pick your disk up at the meeting. Disk subscriptions which must be mailed are an additional $24.00 per year.

The club maintains a disk library for both the 8-bit and ST computers. The library disks are made available at each meeting. There is also a message base on the DataQue Support BBS members to use. Anyone wishing to become a M.A.U.G member can contact Chuck Steinman at the club address or call the DataQue Support BBS at (419) 529-5197 and leave email to the SysOp.

Middle Georgia Atari Users Group

M.G.A.U.G.

The Middle GA Atari Users Group is the sole Atari Club in the Middle Georgia area. We are composed of 60 members of which approx. half are ST users. Club president Pete Miller can be reached by phone at 912-328-8758. The MGAUG address is 115 Feagin Mill Rd., Warner Robins, GA 31088. MGAUG meets the second Sunday of each month at 2 PM at the Warner Robins Library. Annual dues are $5 with the newsletter optional. Use of the club library is free to all paid members.

May Meeting The May meeting took place at 1 PM on the 13th at the Warner Robins Library. Turnout was a little low with it being Mothers Day.

The top of the meeting discussion was the Computer Show that will take place on the 25th of August. We will also be having two IBM users groups from the area to make it a gala event. The IBM coordinator for the show said that they plan to have about 35 machines for the show. If you recall two years ago when we had a show with the IBM group we were able to steal the show away from them. *We are a little short of volunteers for now so be sure to step forward and let me know if you will support us at the show.*

Lee Bengamin Demoed two interesting public domain programs at the meeting. NEWBELL is a program to put in your AUTO folder that changes the bell in your computer to a digitized voice. The other program was IconDesk. IconDesk allows you to give programs and folders their own unique icons. Also added were some new additions with the games data base - VIRTUE, FIGHTER, and BUBBLE, were added to the Library. Be sure to bring your favorite selection to the meeting for all to share.

For those of you that may have been following the episode of Jimmy and his computer for the last few months here is the last update. Well it seems that Jim finally got a computer. Did he get a new 1040 like the company promised?- NO - he got a very early model 520ST. Be sure to check with club members to find out the best places for hardware and software upgrades and repairs.

Well that's about it for this month. The July meeting will be on the 8th at 1PM. I look forward to seeing you there.

Nashville Atari User's Group

N.A.U.G.

Nashville Atari Users' Group P.O. Box 121752 Nashville, TN 37212

NAUG meets on the third Thursday of each month from 7PM to 10PM at the Cumberland Museum and Science Center. Membership dues are $24 per family for the entire year. With your membership you will receive our local newsletter, Atari News, a subscription to Atari Interface Magazine, access to the club's 8-bit & ST Public Domain/Shareware libraries, any group discounts on products, and entrance to all club related functions. We have an Associate Membership for $12 per year. With this membership, you will receive Atari News, AIM and access to our 8-bit & ST PD/Shareware libraries. People joining during or after the month of July pay 1/2 the yearly rate. Visitors are welcome to all meetings.

President & Editor	Walt Sullivan	(615) 228-7353
Vice-President	Coleman Smith	
Treasurer	Michael Gardner	
8Bit Chair & Librarian	Jerome Seward	(615) 385-9366

Emerald City BBS	(615) 754-4351	
Forgotten Realms		(615) 833-4971
The Nashville Exchange		(615) 383-0727
Troll's Cave		(615) 872-0757

O-ACEs

O-ACEs is a non-profit group interested in getting more out of Atari computers. We are NOT affiliated with Atari Corp. or any other commercial organization -- we are there for YOU! We cover BOTH 8-bit (including the 400/800, XL, XE, and XEGS series) AND 16-bit (ST series) Atari computers. We meet twice each month (except November and December) on the 2nd and LAST Wednesday each month. Doors open by 7:30 pm at La Vista Recreation Center, 8116 Parkview Blvd. (just off 84th Street, south of Food-4-Less and east of 84th at the light)

FIRST MEETING: (2nd Wednesday) Covers news, views, and decisions that ALL members might be interested in. FOCUS MEETING: (LAST Wednesday) Concentrated information on a single topic (such as word-processing, spreadsheets, music composition, desktop publishing, etc.)

Call 592-5427, for more info on O-ACEs!

The PREZ says...

Here we are once again -- right off the bat I'd like to let you know about a relatively new bulletin board that has been activated in the local area. It's called "The Freedom Network". The phone number is (402) 597-2400 and it'll be operating at 1200/2400 baud and be open 24 hours. At this time he has at least four (4), count them four, games you're able to play once you get online with his BBS. The first is Space Empire Elite (v. 9.06). The second is Final Frontier, the next is Dark Lords (v. 2.1) and the last is Action Arcade.

Next, Jim Pierce has several programs of his that he's selling for a fraction of the price you'd pay over the counter. As some of you know, his prices are fair, so talk to him at the next meeting to find out what he's got left in his library of original ST programs.

On yet another note I asked around exactly what you all, as a group, thought would be a good way to attract more people to our little gathering so as to entice them to join us. You came up with such responses as:

1. Putting information out on other BBS's.
2. Developing and distributing some flyers on the club.
3. Taking out a newspaper ad.
4. Having some new club cards made and putting them in some stores such as HobbyTown.

So, if any of you has any other ideas as to how to get the (large) group of Atari users we know IS out there in the greater Omaha and surrounding area, feel free to give us your ideas. Call either Pete Killian (592-5427) or me, Bill Zimmerman (593-4027), and we'll consider giving your ideas a try.

I've determined we've got approximately $400 in the club's account. We have to remember that we'll have to reimburse Pete for any money spent on relaying our monthly articles to AIM. Also, we must reimburse George Ortiz for whatever monies he spent on getting the Atari 3D film sent to us for the Computer Expo '90 at McMillan Math and Computer Center by US West.

Also, we must determine if we're going to spend any money to put together an ST for the club.

We've every intention of ensuring every member receives his or her copy of AIM. Therefore, if you haven't received any copies since we began this system, inform me or Pete and one of us will get on the horn to determine why there's a problem.

We're still accepting ideas as to what should be discussed at the FOCUS meetings.

PORTS ATARI P.A.C.E. COMPUTER ENTHUSIASTS

8bit Coordinator	Aaron Potopinski	525-1058

Membership to PACE is $30.00 per year or $9.00 per quarter. General meetings are held at 6:30pm on the third Sunday of every month. In the event of a holiday, a new date will be chosen and will be posted within the pages of this newsletter and on local Bulletin Boards. Membership includes a monthly newsletter, monthly meeting, FREE Disk-of-the-Month, access to our BBS, FREE printer ribbon re-inking, and FREE copying priveleges to our VAST collection of 8/16 bit Public Domain programs. Ports A.C.E. is an alliance of families with a mutual interest in the Atari Computer and is an independent, non-profit organization. PACE hardware assets: 130XE, 1050 Drive, MacInker and a Supra 300 baud modem. Any written correspondence should be addressed directly to Ports A.C.E., Tracy Hendershot, 4835 Crosley Avenue, Duluth, MN 55804.

From the President...

This is really getting old hat, but WHERE ARE THE STs? I'm getting tired of having to explain to people that Atari makes a fine home computer. (I should shut up and save my breath!) Everything in this area is IBM. IBM this, IBM that. Amiga here, Amiga there. Amiga enjoys popularity in our area, but where is Atari? The Amiga 3000 is on the front cover of BYTE magazine. Powered with a 68030 cpu and running at 16 mHz ($3500) or 25 mHz ($4000), it may very well be far more advanced than the "soon to be released" TT. I have yet to even SEE a Portfolio or Lynx. Why? Has Atari Corporation ever heard the words "successful management?" I hate beating a dead horse, but if things don't start falling in place soon, our computer will soon be "dead" and everyone will be using IBMs (ecch) or Amigas in their homes. Macs are about as rare as ST's! Ok, off the soap-box now.

Our May meeting was successful. Almost everyone was there and the main topic was, of course, Atari computers! We had two STs in operation mainly making copies of the ever popular AIM April and May Disk 'o the Month. The blend of software on these disks satisfy even the pickiest of software collectors! The 8bits were busy copying some of the excellent PD software that has come to us from our friends at UFFDA.

Our treasury is doing very well and should sustain us over the summer months. It would be nice to recruit more new members during this time, too. Several members are awaiting the arrival of Leisure Suit Larry III and Word Up 3.0 for the ST. Larry 3 has been available in IBM format for several months now. I hope Tom Meierotto allows us to use his facilities next season. The location is convenient for most, except for our member from Eveleth.

The modem transfers of this file and mailing list are going along just great. I can log on, upload the file and log off in under 2 minutes. At 1200 baud, that is quite good. And it is only costing us 25 cents per month. Not bad management, do you agree? Maybe I should take over running Atari Corporation for a month! I certainly couldn't make things any worse!!!

Our next meeting will be...Sunday, September 16th at 6:30pm at the Wisconsin DOT building, at the foot of the prestigious John Blatnik bridge! Good luck and long live Atari!

PHAST - Phoenix Area ST

The PHAST monthly meetings are held on the second Saturday of each month at 8640 N. 19th Ave., Phoenix, Arizona from 10am to 12pm.

Disk Librarian	Charles Cullinan II	(602)992-9040
Publications Librarian	Donald Thompson	(602)486-1593

Club Minutes for Sat. May 12,1990 -by Jim Keho

The meeting was called to order about 9:15am. There was a good turn out, approximately 90 members and visitors in attendance. There were eight new members that joined!!

The business was short this meeting due to our special guest, Bob Brodie! Robert spoke briefly until Bob's arrival, He brought up the idea of using $100 from the club's treasury for purchasing some magazine subscriptions for the club to help build up the club publications library and also for the purchasing of some new PD software for the club's PD disk library. It was approved. We'll also be working to get more guest speakers at the meetings, if you have any ideas please let us know! Also there is still a need for articles for PHAST Times, your newsletter! Also some people volunteered to run the SIGs that should be starting in June.

Bob arrived about 9:30am, he brought along a new Stacy, STe, Portfolio, Atari44 meg removable hard drive, and the new Lynx!! He also showed the Lynx TV commercial, haven't seen it Phoenix, not yet anyway! The Lynx is available at our local Atari dealer though. It was a really informative and entertaining meeting! And it was interesting to hear some of what's happening with the new and old stuff from Atari straight from someone at Atari.

Also there was 1 free ticket at the door for everyone at the meeting for the drawings that were held and additional tickets for $1. All the prizes were furnished by Atari!! *Thanks Bob!* It was the best meeting we've had! Also a big thanks to Lloyd, Marc, Robert, Lance, Rick and all that helped with making this meeting happen!! If you missed this meeting you missed a great one! Well... Next meeting is Sat. June 9th, see you there!!

P3Atari Computer Enthusiasts (P3ACE)

Serving the Colorado Springs, Colorado ATARI community since 1982. PO Box 17779, Colorado Springs, CO 80935

President:	Rick Reaser,	380-8082

XELibrarian:	Dave Koster,	550-1410
Editor:	Ed Fletcher,	596-1130

The Prez Sez by Rick Reaser

We had our first officer's meeting in April. Among the items discussed was the possibility of a Computer Swap Meet this summer. The Club Treasury is also in good shape. We would like to have a picnic this summer like last year. This would be a good time to let our computer widows an widowers see who our friends are.

Vector Space will be down for an extended period of time. All you Telecommunicators need to hop over to LASER BBS which is run by our very own ST VP, Steve Leser (591-4620). While ST Librarian Rick Mount is off to school this summer, Steve Leser will be administering the ST Library.

The Club purchased a genuine Hayes 300 Baud Modem (for $10 bucks). This is our "loaner modem" for those of you who would like to give telecommunications a try. We are also putting together the cables, interfaces and software. At the April ST SIG meeting, Terminal Programs were the topic of discussion. Word Processing Programs will be the topic for the June ST SIG meeting.

At the May 8-bit SIG meeting, members got to see the Diamond Graphical Operating System in action. The July 8-bit SIG will be at my house again. There will be no particular agenda for the meeting.

I'm sure that everyone was happy to receive their Atari Connection Magazine after all the rumors of editor firings.

Be sure to ask at the next meeting, if you have any questions. Remember that the only dumb question is the one that doesn't get asked.

RACC
ROCKFORD ATARI COMPUTER CLUB

WE'RE NOT JUST PLAYING GAMES ANYMORE!

We meet at Rock Valley College, the third Saturday of each month. Meeting time 9 to noon. We support the Super 8 and Sweet Sixteen Atari computers, the Atari company, and our fellow Atari owners. Support is also provided through BBS Camille 815-397-5327 @ 300, 1200, and 2400 baud. Our meetings include coffee and rolls, for refreshment; business events, and demonstrations of new and interesting equipment and programs.

President	Andy Learner	815-397-5316
8 Bit VP	H. Jake Olbrich	332-5303
16 Bit VP	Mark Kunkel	874-5546
Secretary	Roger Creedy	877-3769
Treasurer	Thom Lofthouse	654-1863

Like the Prez Says! I truly enjoyed the swapfest. I met most of all the closest surrounding clubs' officers. There was a crowd, from around 9am till we started to pack up at 3:30.

Our table was set up right next to where Bob Brodie had the ATARI demos of a STe, a 4 meg Stacy, connected to a Megafile 44meg removable hard drive, which wound up as a door prize. Also showing were a Lynx and the popular Portfolio.

There was a lot of interest in the AIM magazine, and we were the only club affiliated at that time.I had a lady from Michigan buy an extra copy of AIM I had, as well as a DOM!

I was particularly glad to get to know Bob Brtodie a little. He is genuinely a nice fellow. He comes across as a real straight shooter and not as a salesman. If you ever have a chance to have him come to one of your areas, do it! I think our best sale of the day went to Bob. He had read in our newsletter, on his plane ride in to Chicago, about our "RED SATIN" Club Jackets. Any of you guys inviting Bob to your events, you'll know where that one came from!!!

June 16 is our annual picnic. I hope this next AIM comes out a little earlier for folks to read this notice! We will be having a MIDI SIG at Randee's Music new store, Sunday June 24. I hope we can start a MIDI sig as a regular event, since Randee has offered the space and time to have it in the store. July/August will have a combined newsletter. Our next scheduled regular meeting will be in September, unless folks decide differently, at the May 19 meeting.

That's All Folks! G'data, Andy

Rushmore Atari Computer Enthusiasts (RACE)

3512 Lawrence Dr. Rapid City,
SD 57701 (605) 348-6331

The Rushmore Atari Computer Enthusiasts is a nonprofit organization of Atari computer owners not affiliated with Atari Corp. Meetings are held on the third Saturday of each month, 2pm, at the Westminster Presbyterian Church. Annual dues are $12 for basic membership and $15 for membership and newsletter. RACE offers the Black Hills Atari owner hardware and software support and the largest library of public domain Atari software in the state of South Dakota.

NO PIRACY WILL BE TOLERATED AT ANY RACE FUNCTION

President	Rick Burton	(605) 642-5353
V. President	Gregg Anderson	(605) 348-6331
Secretary	Mike Douglass	
Treasurer	Mike Randall	
NL Editor	Mike Harbison	
ST Librarian	Mark Wolf	(605) 923-2841
XE Librarian	Ken Kayle	(605) 343-7269

President's Particulars

Well, here are those words of profound wisdom you all have been waiting for. The information age is upon us! Political news, financial news, scientific news, and etc. is being exchanged via air and wire at an incredible rate every minute around the globe. Look at eastern Europe, the Japanese stock market, and the Hubble telescope as examples. I for one have been involved in the global information flow through my 130XE, a modem, and a BBS. Several news services from various countries can easily be tapped. People from around the nation network routinely and the BBS I subscribe to is now moving into Europe! If this sounds a little like a plug for our August telecomputing demo, it is. But that's not all...

Who cares what the Tramiels do or don't do? Big deal. Not to minimize the problem of U.S. support, but as we Atari users know we have the power without the price. My Atari has written letters to senators. It's printed fliers and generated amortization tables. It's helped my kids with reports and math besides allowing me access to the information age. Contact with fellow hackers by way of our club has taught me a great deal about computing. Iron sharpens iron. No belly aching here! Let's continue to explore the world of Atari capability together. I'm looking forward to seeing all of you at the June meeting Sat. the 16th on Soo San as usual.

Rick Burton

P.S. Thanks to Mark W. for filling in for me while I was absent from the meeting.

SEVAC

South East Valley Atari Connection meets the third Saturday of each month at 10 AM at 3234 S. Fair Ln. (Eaton Business Park, just off of 48th Street and Southern), Tempe, Arizona. Yearly membership is $12.00. Membership includes reduced prices on PD ST and 8-bit libraries and monthly newsletter. Club officers are:

President	Tim Barr	(602)821-1200
Vice President	Marc Dyer	(602)897-0314
Treasurer	Lee Whiteside	(602)962-9415
Secretary	Blaine Nelson	(602)969-1949
Disk Librarian	Mike McKittrick	(602)982-9065
Publication Lib.	Walt Schultz	(602)897-7098

Minutes for May 19 Meeting

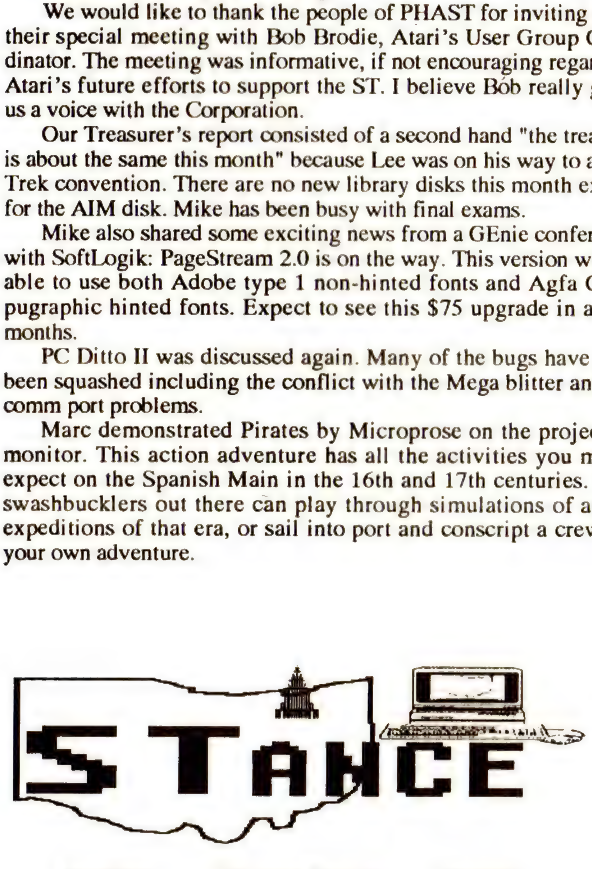
We would like to thank the people of PHAST for inviting us to their special meeting with Bob Brodie, Atari's User Group Coordinator. The meeting was informative, if not encouraging regarding Atari's future efforts to support the ST. I believe Bob really gives us a voice with the Corporation.

Our Treasurer's report consisted of a second hand "the treasury is about the same this month" because Lee was on his way to a Star Trek convention. There are no new library disks this month except for the AIM disk. Mike has been busy with final exams.

Mike also shared some exciting news from a GEnie conference with SoftLogik: PageStream 2.0 is on the way. This version will be able to use both Adobe type 1 non-hinted fonts and Agfa Compugraphic hinted fonts. Expect to see this $75 upgrade in a few months.

PC Ditto II was discussed again. Many of the bugs have now been squashed including the conflict with the Mega blitter and the comm port problems.

Marc demonstrated Pirates by Microprose on the projection monitor. This action adventure has all the activities you might expect on the Spanish Main in the 16th and 17th centuries. You swashbucklers out there can play through simulations of actual expeditions of that era, or sail into port and conscript a crew for your own adventure.

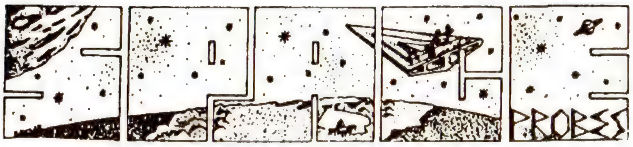


President	Claudette Tishcler	226-5644
Vice-Pres	Gary	521-2855
Treasurer	Kathi Koenig	892-0881
Newsletter Ed	Joseph Adato	449-6881
Disk Librarian	Barbara Carlstrom	371-2732

The ST Atari North Coast Enthusiasts (STANCE) is an independent, not for profit Atari computer user group and is not affiliated with Atari Corporation, or any of its affiliates, in any way.

$12.00 per Year with a one time sign up fee of $13.00.

STANCE club meetings are held every third Monday of each and every month at B & G Electronics, (located at 15729 Madison Ave., Lakewood, Ohio 44107) starting at 7:15PM



Meeting NoticesCombined Club Meetings: January 15, 1990 (7:30 to 9:00 PM) at the Camp Hill Shopping Mall Community Room. This date is different from that listed in the December newsletter.

Future Meetings: March 19, 1990 (7:30 - 9:00 PM) April 16, 1990 (7:30 - 9:00 PM) May 21, 1990 (7:30 - 9:00 PM) June 18, 1990 (7:30 - 9:00 PM) July 16, 1990 (7:30 - 9:00 PM)

All meetings will be held at the Camp Hill Shopping Mall Community Room until further notice. Currently all dates are set for the 3rd Monday of the month.

SAGINAW/TRI-CITY
ATARI USER GROUP
STAG

The Saginaw/Tri-City Atari UG meets the last Saturday before the 18th of the month, at 9am, at the Rudy Zauel Memorial Library, on the corner of Center and Shattuck in Saginaw Township. Upcoming meetings are June 16th, and July 14th, 1990. Officers:

President	Steve Volker	(517)865-9035
ST Librarian/Tech Advisor	LeRoy Valley	686-6796
Treasurer/Secretary	Marty Schmidt	792-6029
8 Bit Librarian	Ted Beauchamp	686-8872

Club dues are still only $20.00, which provides support for both the 8 Bit and ST, and full access to the club's PD library, along with a year's subscription to the Atari Interface Magazine. Check your mailing label, if you need to renew,(or haven't joined us yet!), DO IT NOW!

FIRST UP...

Toys-R-Us has the Lynx!! Yes! It's on display with all the other new generation game machines, (i.e. Sega, Nintendo, Genesis, etc.), and that's not all! HILLS department store, a block down the street, has IT TOO!! Do you know what this means! We were wrong! ATARI does just make game machines...No, that's not what it means, what it means is,..before we go on, does anyone out there have proof that IBM OWNS Nintendo? NO? Oh well, that might have made what I have to say, easier to swallow. Tom Hudson couldn't make a decent buck so he went to IBM, Atari can't keep ST's on the shelves of their Authorized dealers-but they can convince stores who dumped their products in the the past to carry their new, over priced game machine, Commodore 64's are selling for pocket change in the Toy department of most stores,..If you go to buy a computer anywhere in the Tri-Cities, you will see IBM & Clones, Macintosh & Game machines. That means you will see price-inflated 'yuppy' machines, stoic, conservative business machines with entertainment applications, and game machines. A toy for the older generation, a toy for the 'me' generation, and a toy for the younger generation. Where are all the computers? What does this ALL mean? Is it prophetic? Is the day of the 'hacker' over? Have we come full circle, breaking away from the standard way of things, only to fall victim to our own insatiable desire for entertainment? If you take too many steps away from the business-oriented machine, does it then metamorphize into a game machine? I don't know. I guess we have just have to wait and see...

WHAT YOU MISSED...

There has been alot of emphasis on utilities lately, with the midi utility last meeting, and reviews on alternate desktops coming up, this meeting Bryant Lafreniere examined the workings of the Codehead utility package, and there was alot to talk about. Because the Codehead Utilities disk seemed to hold so much more than could be adequately reviewed during the demo portion of our club meeting, I called John Eidsvoog of CodeHead software, who is also the author of most of what is on the disk, to see what he could add,..he added a lot! I spoke with John for nearly an hour, so most of what was said won't fit here, but I'll try to touch on the more important points. Look for a much more complete article later in the pages of AIM.

Our 8-bit users have been growing in both number and voices lately. There's been alot of activity on that side of the room, and this is great! A proposal was made by them that the president write a letter to AIM requesting that an 8-bit disk of the month be established for the 8-bit members of AIM. The motion was seconded and carried and the letter will be sent out this month.

WHAT YOU SHOULDN'T MISS...

Next time,..Marty Schmidt will return to the demo circle with Wayne Fenior, as they show us the mysteries and advantages of the new Neodesk 2.5 and Double-Click Desktop, both alternatives to the 'old' standby GEM desktop. Both will be RAFFLED OFF afterwards (if they survive), for the cost of a ticket. Ted Beachamp should have the Diamond Operating System for the 8-bit here for a review, (cross your fingers!), and since us ST members were threatened with loss of life or limb if we didn't let them order it, it must be quite an application!!

ON ANOTHER NOTE...

In the April issue of ST Informer is a story worthy of some note. On the cover page under the heading; Waldensoftware to carry ST products, we read about a group of ST hackers from the STAXE UG, and an enterprising gentleman by the name of Rod Moore, who seem to have persuaded the local district and store to handle ST software for a 2 month trial period. I think this is an impressive accomplishment, and that the local UG should be recognized for there ingenuity and tenacity.

Equipment Volunteers For Next Month...

Marty Schmidt is graciously bringing his hard drive & monitor and Larry Hendricks, (a newby), is bringing his M-E-G-A-!-! Ted has the 8-bit stuff.

ST CLUB EL PASO

The ST Club of El Paso is the only Atari ST and Mega user group in the El Paso area. The Club has proven to be a benefit not only to new users, but also to the "old hacks" of computing.

We now meet twice a month at the Richard Burges Library, 9300 Diana. The first meeting of the month is always the second Saturday of the month, at 12:30pm. Meetings feature demoes of the latest ST software, as well as help for the those that might be having problems with their computers.

Voting membership is $20 a year, Sponsored and Newsletter only memberships are $15 a year. To become a member of the ST Club of El Paso, call 915-821-2048, or write the ST Club of El Paso at 10953 Yogi Berra, El Paso, Texas 79934.

President	Tim Holt	915-821-2048
Vice Pres	Morris Miller	594-1906
Sec't/Tres	Joann Anderson	751-2710
Editor	Paul Stampfli	821-4861
Librarian	Norm Bates	593-6234

SWAG

SOUTHWEST WASHINGTON ATARI GROUP

The Southwest Washington Atari Group was formally created in April, 1985; prior to that, local Atari enthusiasts met on an irregular basis. The group has been holding its meetings at 6:30 p.m. on the last Sunday of the month (save July) at Clark County Fire District #5, Station 3 on 213 NE 120th, Vancouver, WA. SWAG started out with a large following of 8bit owners and as more and more members upgraded to the Atari ST, the membership has become mainly ST owners, but 8bit is still supported. Annual dues are $12 and SWAG can be contacted at PO Box 1515, Vancouver, WA 98668.

Salinas Valley Atari Computer Enthusiasts

President	Gary Klugman	758-4894
Vice-President	Dale Meisenheimer	449-7750
Secretary/Tresurer	Charles White	449-8966

Meetings 7:30 P.M., the first Tuesday of the month at the Salinas Community Center.

This is my first letter to the club as president. We now have Atari Interface Magazine as our newsletter, and as an excellent source of Atari information. We have many benefits to membership. I think it is a real bargain at $12 a year. So often we have a computer problem, many times these are easily solved by another member at the SVACE meeting. We have a monthly PD disk to copy. There is also a PD demo and a commerical product demo each meeting. There is also many tempting offers made by companies to user groups.

Unfortunately, we are in a period when there is probably more Atari computers being moth-balled than bought. This means there are less users, and less people to become members of SVACE. It makes it all the more important for all of us to encourage Atari users to become members of SVACE. Why? Because in the strength of numbers we have greater purchasing power, and a larger pool of knowledge to draw from.

FOR SALE

SPECTRE 128, complete with Translator, Documentation, and software. Sorry, no MAC ROMs.

$125 obo.

TACE

TINKER ACE OF OKLAHOMA

Tinker ACE of Oklahoma meets the first Saturday of each month at 1 PM (12:30 set-up time) in the Moore Public Library, 225 S. Howard, just off of SW 4th and I-35 in Moore. TACE can be contacted at 104 E. Northrup, Midwest City, OK 72110 or at the TACE BBS (405) 755-9561, 24 hrs., 3/12/2400 baud, running Oasis 4.3 software with over 60megs online storage. ST & 8bit support. Dues: Full - $20, Correspondence - $15. Dues are prorated at $1.25/month for correspondence membership and $1.66/month for full membership.

President/VP	Greg Ray	(405) 964-3765

Secretary/Treasurer Report-May, 1990

We had a great time at the "public education" meeting at the Library. Wish you were there! Where were all the folks from the Oklahoma City club who said they were going to come? In any case, I hope to see you all at the next meeting 'cause it is getting time for officer elections. Which also means it is also getting time for dues. That is right. Pay up if you wish to still receive this wonderful magazine in your (grimy) little paws right now!

UNYACE
Upper NY Atari Computer Enthusiasts

The Upstate New York Atari Computer Enthusiasts (U.N.Y.A.C.E.) meet monthly at the New York State Electric and Gas building, on Old Vestal Road in Vestal, New York. Meetings are from 7 to 9 PM in the Auditorium. The next meeting date is March 12th.

U.N.Y.A.C.E. had optional dues of $8 per year. Monthly meetings are informal and open to all who are interested in Atari microcomputers.

Contact C. Todd Krissel, President, at (607) 729-4303 or call the Cygnus BBS at (607) 729-5506 (9600 baud, 24 hrs/day) for more information.

WACO

WESTMORELAND ATARI COMPUTER ORGANIZATION

Westmoreland Atari Computer Organization meets the second Tuesday of each month in the North Huntingdon Township Town House, Center Highway and Brownstown Road (just off Route 30 near the Hamilton car dealerships, Irwin, PA) at 7:30 P.M.

Founded in December, 1983, WACO boasts huge ST and 8bit PD libraries. Double-sided disks are only $3 for members, $4 for non-members. Disk catalogs on disk are only $2. The $20 annual membership ($24 for family) now includes a subscription to AIM as well as the vocal, consumer-oriented WACO Printout newsletter which features Z*NET. Memberships by mail are welcome.

WACO also operates the WACO Ward BBS, 300/1200 baud. The club was founded to help Atarians support each other. One of the regular features of each meeting is called "Upload" when members share new information or ask for assistance in solving questions. Both 8bit and ST disks-of-the month are demoed as well as new hardware and software.

Since the first Taricon back in 1984, WACO has been represented at most of the northeastern Atari shows from Washington to Toronto as well as having a booth at all Pittsburgh shows.

WAUG!

The Washtenaw Atari Users Group meetings are held every second Tuesday of the month at 7:30 pm in the Michigan Union building on the campus of the University of Michigan on State St. at the corner of S. University in Ann Arbor.

Club dues are $15 per year and provide access to the PD library and subscription to AIM. Meetings feature demos of both 8bit and ST software and hardware. Nonmembers and questions are welcome. Officers can be contacted by calling Craig Harvey at (313) 994-5619 or by BBS at Molin's Den at (313) 420-0407.

The May meeting of WAUG was held on May 8th. The meeting was called to order by President Craig Harvey at 7:30pm while a demo of Dragon's Lair was playing on an STe (courtesy of Bill and Pattie Rayl...) behind him. Craig immediately introduced guest Darek Mihocka, who made the trip to Ann Arbor to demonstrate his Quick II series of screen accelerators and assorted utilities.

Craig repeated last month's announcement that the June meeting will feature officer elections and a swap meet. Mike O. read descriptions of the various officers' duties from the club charter, and several of the other officers further defined the duties they have performed in the past years.

Craig discussed a meeting between some of the officers of Windsor WAUG and Ann Arbor WAUG regarding the possibility of jointly sponsoring a "Poly-WAUG" Atari show in the future (possibly in May next year) and asked how many members had an interest in pursuing the subject. The general consensus was for the officers to continue their investigation of how AA-WAUG might contribute anything (planning, labor, etc) in such a venture. Craig will stay in touch with the counterpart officers and continue reporting any progress.

Bill and Pattie brought a video tape of the highlights of the Pittsburgh Atari Show which was held the previous weekend. This show was not very well attended, unfortunately, and there are reports that many of the vendors lost money on this show which could have some serious effects on future shows of this type.

Darek's demonstration of his Quick ST software was the highlight of the evening. The room was very quiet when Darek showed how much faster the ST screen will update when running his Quick ST II software. Derek also showed his Quick Tools collection of utilities for improving ST operation.

Bill Rayl spent about 20 minutes describing the STe he has recently acquired. Bill fielded questions from members and told how easily he had done an upgrade from 1 to 4 megabytes of RAM, which he said took about 15 minutes to do.

The meeting was adjourned at 9:45pm, at which time Derek sold copies of Quick ST II at $15 each.

The next meeting will be held on June 12.

WNY UG

WNYAUG meets at 7:30 pm on the first Thursday of each month in room 116E, Bacon Hall at the State University College of Buffalo Campus, 1300 Elmwood Ave.

Dues are $15 for new members and $12 for renewing members. Send checks and correspondance to WNYAUG, PO Box 59, Buffalo, NY 14216.

Innovative Concepts

Classic Atari 8-Bit Products

Easy Scan II - 1989 Antic Award Winner! The Graphics Image Scanner that saves files in standard 62-sector format! Supports graphic modes 8,9,10,11 and 15. Make banners, flyers, posters, and more! Requires XL/XE/XEGS with 128K RAM, and Epson capable printer. FREE Utilities!. SALE! - $79.95 (save $20!)

Print Shop Printer Drivers - Now use that "incompatible" printer with Print Shop and Print Shop Companion! Choose from the following printer drivers; Atari 1020 printer/plotter, Okimate 10, or the newer Epson LQ500/800 printers. (or other 24-pin cmpatibles) SALE! - $9.95 each

Memory Upgrades - All include RAMs and utiltilities (we have MANY others!). Call us!

128K - 130XE Compatible types, ALL on SALE:
For 800XL - $49.95 / For 65XE - $39.95
For the XE Game System - $39.95

XF35 Kit - 720K storage! Easy to install upgrade for XF551 Drives, for using the newer 3.5" disks! Fully compatible with; SpartaDOS, SpartaDOS X, and MyDOS. Also GREAT for HD Backups! SALE! - $24.95
Save! XF35 Kit, 3.5" drive & cage - $89.95

Happy Doubler - Includes FREE Utility Disk! Programs Happy 1050 to FULLY Emulate the U.S. Doubler, including skew format! Also programs drives D1: - D8:. SALE - $14.95

Immitator Controller - For Happy 1050, has 2 swirches to control Speed & Write Protect. Also has 2-color LED monitor. SALE - $34.95

IC1050 Controller - (For ALL 1050's) Same as above, but no speed switch. SALE! - $24.95

SIO Switch Box - Controll 1 computer with 2 drive setups, or share 1 drive setup with 2 computers! SALE! - $44.95

SIO Port Box - Has 4 SIO ports for solving the "dead end" problems. SALE! - $34.95

NOTE - We have even MORE products! For our latest Catalog (included FREE with orders), just send a S.A.S.E. (business size).

Atari ST/Mega Products

NEW! ARCIT & ARCIT SHELL (version 1.20) Commercial version with new features! Makes arcing and un-arcing "ARC" & "LZH" files, a snap! Includes; Printed Manual, FREE utilities, and more! Introductory Special - $9.95

Turbo BLITZ - The Unique backup/disk copier, that is Lightning Fast, on even commercial software! Uses two drives. Includes Custom Cable and FREE software. SALE! - $29.95

Xformer Cable - Now incudes FREE software! Run many of your Atari 8-bit software titles on your ST/Mega! And, directly from an 8-bit drive! Also allows 8-bit printer! Only - $19.95

ST/Mega RAM Upgrades - Installed Fast! We use only the BEST upgrade boards! NO future MMU problems! FREE utilities disk!

520ST: 1meg $125, 2.5 Meg $325, 4meg $500
1040ST: To 2.5meg $325 / To 4meg $500
Mega 2: To 4meg for only $300.!

NEW! Tick - Tock Clock - Internal clock for 520/1040, at a LOW price! Includes FREE utilties disk. Installed for only - $39.95

BLITTER Upgrade - For 520STFM/1040STF. (Call for details) Speeds up graphics! Have a "mini-Mega" for only - $75 (Installed!)

TOS 1.4 - We us only LEGAL ROMs! FREE Utilities Disk! Only - $125 (2 or 6-chip set)

Bomb Fix - Replace weak 74LS373 chips (2), with Superior 74AS373 chips. Fixes Random crashes on Accelerators, TOS 1.4, & MAC/IBM Emulators. Installed for only - $35

Note - ALL of the above internal mods INCLUDE installation and return S&H!
SAVE - Get two or more of the above mods, and save more! Others also available!
We also - Buy, Sell, Trade, and Repair Atari equipment. Please call for more information.

Ordering Information - S&H add (US Funds); USA/APO/FPO - $4. COD: $3.50 (USA only) Canada/Mexico: $7. All other countries: $10.

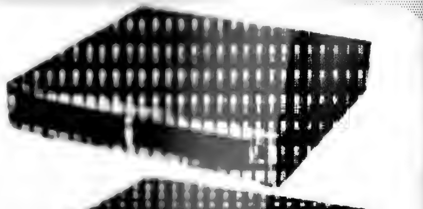
Tri monitor holds 3 - 3.5"
all cases $119.95



DISCOVER THE 4TH DIMENSION

Explore computer imaging and animation in time and space.

"PHASE-4"™ opens a universe in which you actually cut, copy and paste time itself. View your solid 3D objects in the past, present and future from any point in space/time simultaneously, cyclic polymorphic-transformation without point and face limitations.

"PHASE-4"™ a new modular Program Platform for the ST which totally eliminates the need for program control codes like those required for animation using such programs as Cyber Control™ from ANTIC™. "PHASE-4"™ is fully mouse and tablet driven programming system with keyboard support.

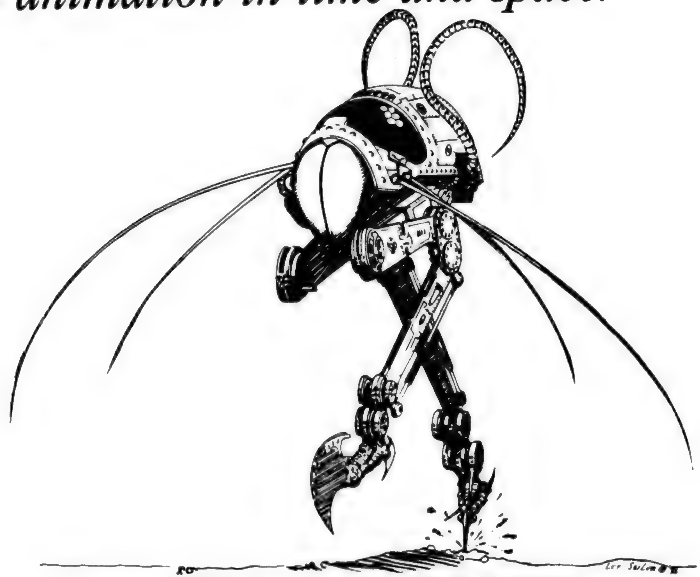
"PHASE-4"™ Modular system consists of 4 modular segments each independent yet, fully compatible with the others. Used independently, each module is a powerful package of programs, applications and accessories. When combined these modular segments form the most advanced and flexible Motion Control and solid object animation system available for the ATARI ST™.

"PHASE-4"™ ROSETTA-3D Translator/Viewer.

"PHASE-4"™ CHRONOS Keyframe Animation Studio.

"PHASE-4"™ PRISM Rendering Package.

"PHASE-4"™ KINETICS Player Package.



Object complexity is only limited by your imagination.
Can you create CAD objects like this one? We do it all the time using "PHASE-4"™

ROSETTA-3D

Just as the original ROSETTA STONE allowed scholars to decipher the secrets of Egyptian hieroglyphics and translate them into other languages, ROSETTA-3D allows you to translate a wide variety of the most popular CAD, animation, and rendering formats. Files created by ROSETTA-3D can be transported to many different computer systems and modeling programs or may be sent to remote rendering services capable of creating photo realistic quality images for commercial use. You are no longer confined to the limits of one machine or your current animation software.

ROSETTA-3D

is much more than just a file translator, it is also a draft animation package. It allows you to quickly create and preview an object file you wish to animate in "PHASE-4's" CHRONOS motion control program, from any format that you select using the fastest wire frame and solid-polygon render available for the Atari ST™. ROSETTA-3D's simple point and click animation system features a unique three dimensional "object-marker" which enables you to design animation story boards for waiting clients in a matter of seconds. *Price $59.95*

ROSETTA-3D FEATURES:

Eight Three-Dimensional Modeling/Rendering Formats Supported.

File Translation:

Direct translation from one format to another format. Translate objects which are too large to animate on your system. File size not limited by system memory size.

Import and/or Exports:

- AutoCAD Release 10 ASCII (DXF), Binary (DXB) for the IBM and Macintosh.
- CAD-3D Version 1.0 (3D) and Version 2.0 (3D2).
- PHASE-4 Animation Libraries (LIB).
- Sculpt-3D for the Macintosh and Amiga.
- Swivel-3D for the Macintosh.

... and output of P.I.X.A.R.'s Renderman RIB files!

Animation Capabilities:

- Fast Depth-Cue "Point Cloud" mode, for real-time playback of extremely large objects.
- High speed wire frame and depth-cue wire frame modes.
- Several solid-polygon modes.

Object limitations:

- Any combination of 65,000 vertices and faces per object.
- Total number and size of objects limited by memory size only.
- Animate objects with over 15,000 vertices and 30.000 faces on 1Meg systems.
- ROSETTA-3D expands ANTIC™'s original 3D universe in all directions to more than 400 times its original size.

DISK, FILE, and FOLDER Management Supported.

"PHASE-4's (ADEPT) Supported.

FUTURE FEATURES INCLUDED IN THE FORTHCOMING PROFESSIONAL PACKAGE.

- ATARI TT/68030 VERSION.
- PARSEC GRAPHICS 4768 SYSTEM (INCLUDING 8768 UPGRADE).
- SPECIAL 50MHz TI34010 version running at 6.25 MIP's with the standard 8MHz 68000 running in parallel.

PRISM-AGE

(Photo realistic Rendering Interpreter for Solid Modeling in Advanced Graphic Environments)

PRISM-AGE 1.0 is a powerful drawing program that runs in all ATARI resolutions plus 1024X768 4096 color mode. Not only will you find many of the features expected in a drawing program (such as boxes, circles, ellipses, area fills, cut, copy and paste, (with fine pixel editing), but also explores some rather unique areas of it's own! One of the more interesting areas of PRISM-AGE is that it uses PRISM-GTE (Graphics Tablet Environment) which supports the new Cal-Comp graphics tablet in four resolutions. Another feature of PRISM-AGE is that it uses all of the computer's memory to support multiple picture buffers. This can range from approximately eight buffers on a 520ST to over 110 buffers on the MEGA4 ST, which allows the creation of animations using the built-in slide-show features.

When used in combination with other PHASE-4™ programs PRISM-AGE takes full advantage of ADEPT* and the Image Systems ISAC High-Res color board. *Price $49.95.*

PRISM-GTE

(Graphics Tablet Environment)

PRISM-GTE is a fully functional graphics tablet environment designed to be used with all "PHASE-4"™ programs. This feature is embedded in all programs and available as a stand-alone program which can be used with most well-behaved ATARI programs. *Price $29.95 if ordered separately.*

ADEPT

**(Application Data Exchange ProTocol)*

Allows any "PHASE-4"™ program to utilize the features of another program while also sharing data and limited resources (such as memory and peripherals) in a multitasking or single application environment. (ADEPT imbedded in all "PHASE-4"™ programs.)

For more information write or call Lexicor Software Corp., 58 Redwood Rd., Fairfax, CA 94930. (415) 453-0271. Dealer inquiries welcome.

FEATURE ARTICLES

Right On Target 8
Dave Plotkin writes the first of many monthly articles. This month Dave tells why he likes his ST and the community.

Summer CES 1990 11
Atari's showing at the Summer Consumer Electronics show is detailed by Bob Retelle (MACE).

Basically Speaking 14
ACORN's Jeff Summers guides us through some basics of programming on the 8bit.

The British Connection 16
Robert Arp shares his views on what a lack of ST technical articles can mean to all users.

Intermediate and Advanced Atari ST Subject 17
SPACE's John Slade reviews Ralph Turner's help book on the ST.

AtariWriter+ Tutorial, Part X 18
Jimmy Boyce (CACE) continues his in-depth AtariWriter+ series.

Magical Anagrams 19
Atari's Bentley Bear tutorial is reviewed by Steve Volker (STAG) and his daughter, Teresa.

Stik-Gripper 20
WAUG's Bill Rayl reviews the joystick hardware product from Duggan DeZign.

The GOOD Backup Utility 21
Tidbit Software's hard drive utility is reviewed by Rich Deen (SPACE).

The G-Man 23
David Grace shares his popular monthly column. In this article he talks about trading an old partner in for a new, improved one.

The Truth about Pittsburgh 26
Members of the WACO club share their opinions on the recent PACE Show and all the fall-out in their area.

STalker/STeno 28
Paul Stampfli (El Paso) talks about Strata Software's background terminal package.

Is There a Tactician In You? 30
Part 5 of Tim Feenstra's (GRASS) series on wargaming.

BASIC Dialog Box 31
SWAG's Michael Calvin tells us how to create dialog boxes for use in GFA Basic3.0.

ArcIt 32
Earl Hill (SAGE) continues his series on ArcIt and ArcIt Shell for the ST, now distributed by Innovative Concepts.

Why SysOps Are... 34
BACE's Gizmo shares his thoughts on why SysOps are the breed they are.

The Basics of BASIC 35
Rick Burton (RACE) continues his tutorial about programming on the 8bit.

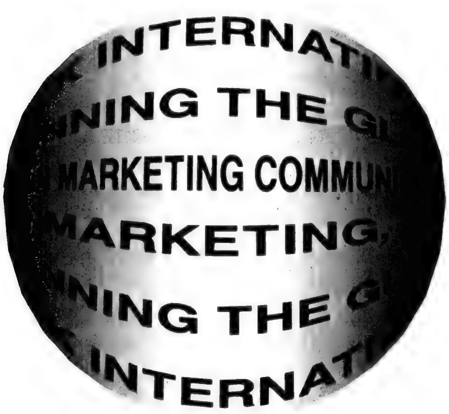
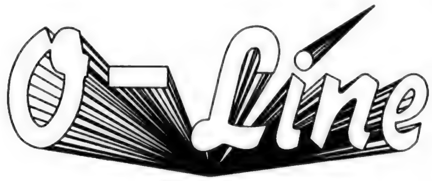
CALAMUS OUTLINE® ART

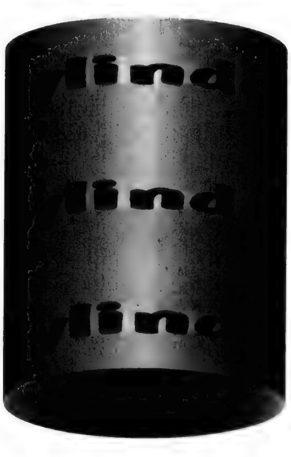
OUTLINE ART is a vector- oriented, graphic generation tool. Multiply your creativity through the many functions which you will find in this program.

OUTLINE ART supplements the CALAMUS DTP system with a great number of new functions and effects. A extract from the extensive list of functions include:

- A user interface, quite similar to that of CALAMUS.
- Complete Vector Graphics Editor for lines, Bezier curves, control paths etc..
- Capabilities to generate freely-definable raster areas.
- Creation of rayed objects, ie; from a font to a central point.
- Nearly unlimited possibilities for the manipulation of text, characters and text attributes such as:
  - rastered, transparent, outlined, rotated, stretched, compressed and cursive styles...
  - circular text and text along a freely-defined vector path...
  - projection of raster areas and text on vector outlines...
  - conversion of text into vector objects...
  - kerning functions...
  - Functions can be freely combined and applied to all CALAMUS fonts.







ISD MARKETING
ISD MARKETING *ISD MARKETING* ISD MARKETING
ISD MARKETING

- Integrated, fully programable calculator with a pre-defined and extendible library of transformations such as:
  - shift, rotate, mirror, enlarge/ shrink, project onto a sphere (globe, cylinder, cone), etc..
  - An intelligent clipboard and copy functions, allowing the automatic generation of transformation sequences.
  - loading and saving in .CVG format (CALAMUS Vector Graphic), making possible the integration into and optimal printing through CALAMUS on all supported output devices in all resolutions.

Now included!
Convert 2X,
our new Conversion program CVG (Calamus Vector Graphic) to EPS (Encapsulated Postscript) or PS (Postscript) file format.

Note : DynaCADD, our complete 2D and true 3D Computer Aided Design and Drafting Package, allows the importation of Calamus Vector Graphic format, (CVG). Which can then be output through all output options supported by DynaCADD, ie: CAMM-1, Plotters etc,... An excellent solution for the Sign Making Industry.

Calamus Outline Art has a suggested retail price of US $289.95.

AIM Disk of the Month

August 1990

All files on this disk are self-extracting LZH archives. To use these programs, simply copy the files on this disk to individual floppies with plenty of free space (or a hard drive) and double-click the files. The files will then automatically unARC themselves into the actual runnable programs.

Here's a short description of the files found on the August '90 disk.

3DLETTER.TOS—Create title screens with 3D letters and more. You may view the screen in the program, include them in your GFA programs (it actually writes the code), or view them with the included special screen viewing program. Shareware. Low rez color only.

BEEP.TOS—Replace the system bell with a digitized sound of your choice. Unlike NEWBELL, this works *with* the interrupt system, allowing multiple entries of a BELL character to override each other instead of chaining one after the other.

BIGCOLR2.TOS—Color emulator (as seen on the June disk), modified to fix a problem when running on a Mega ST 4. Now you can run "color only" software on your mono monitor. Source code included. MONO only, of course.

CLICK.TOS—Replaces the dull "click" of a keypress with a digitized sound of your choice. Each key can be assigned a different sound or assign one sound to all keys.

DESKSW11.TOS—Lets you instantly switch to a completely different desktop setup! Desk Switch reads .INF files (created with the "Save Desktop" function), and uses the file to set colors, mouse double-click rate, positions of all desktop windows, etc. Shareware from Charles F. Johnson and Little Green Footballs Software.

DIGIVEC.TOS—Attaches a digitized sound to exception vectors, allowing you to change system bombs to hysterical laughs, a scream, an explosion or whatever. Even makes a sound during disk access. Any and all exception vectors can be configured to different digitized sounds.

GRAMPAS.TOS—Help Grampa Howard find and defeat the evil Dr. Malvert in this text adventure. Completely menu driven. Medium rez color only. Shareware.

KV_PARK_.TOS—Animated playground for children age 2-5 yrs. Children use the mouse to fly a butterfly around and find children playing, trees, hot air balloons, and more. Nice animations and graphics. Low rez color only.

KV_ME2ND.TOS—Twenty-four animations with music for children age 2-6 yrs. Includes simple addition and subtraction. Good graphics and sound, simple for children to use. Low rez color only.

LTRBOMBR.TOS—You are in charge of a sleeve of bombs that you use to fire at a wall hiding an assortment of letters. You attempt to match the letters behind the wall to the letter flashed at the bottom of the screen, firing the bombs to "match" letters. Fast action, graphics, sound effects, etc. Low rez color only. Shareware.

MMM171.TOS—MIDI Music Maker plays 11 different types of music files from four different computers. The program gives you software control over presets, tempo, volume, transposition, channeling, etc. and can create a standard MIDI file from any of the music it plays. Plays through synthesizer and the ST's internal speaker. Shareware.

NAARJEK.TOS—Can you "hack" your way through Uncle Carl's security system and gain access to some hidden programs? We'll see. Medium rez color only.

ORACLE.TOS—Simple program to "tell the future." You ask questions like "Will Atari ever be a major force in the US computer marketplace?" and Oracle will tell you!

PATIENC2.TOS—Solitaire card game from Germany, with several types of solitaire included and a self-playing demo mode. English docs included. Mono only.

PTCHPLAY.TOS—Single-note sequencer for owners of keyboard-less synthesizer modules like the MT32. Lets you easily listen to the sounds/patches in your module. Written by Michael Calvin (SWAG).

STICKLER.TOS—Have trouble remembering dates and upcoming events? Forget your wife's or mother's birthday this year? Stickler is a GEM program designed to help you remember those important dates.

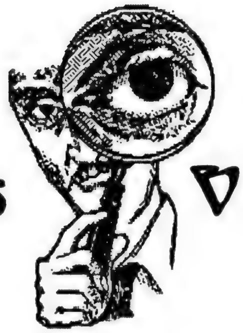
STUSPOOL.TOS—Play pool with 6, 7 or 8 balls. Auto or manual scoring, one or two players, auto aim and other features.Best when played on a blitter-equipped system. Low rez color only.

SYSEX.TOS—Allows you to dump information from your MIDI synthesizer to disk, and to send the info back to the synth at a later date. Use this program to save user configurations, voice data, and other things you would save for future reference. Written by Michael Calvin (SWAG).

VE_10.TOS—Vulcan Embassy BBS Version 1.0, including message bases and upload/download through shell programs. Easy to set up and run.

Readers of Atari Interface Magazine can purchase this disk by subscribing to the AIM Disk of the Month, contacting one of the AIM participating clubs, or by sending $6/DS or $7/SS disk to Unicorn Publications, 3487 Braeburn Circle, Ann Arbor, MI 48108. Please specify the August 1990 disk when ordering.

From the Reader's Viewpoint



What is Happening and Who is at Fault?

Dear Editors,

I subscribe to ten newsletters and several Atari magazines. At least I *did*.

First Compute dropped their ST-only magazine. "No biggy," I said. ST X-Press missed several issues. They sent a nice letter saying my subscription would be extended to cover the missed issues. That sounded fair. Well, I received four of twelve issues. That's about twenty dollars an issue. ST X-Press is *gone*. I'm starting to worry. I was about to subscribe to ST-Log. I've had a subscription to Analog since I bought my first 800XL. Lucky me. I was too late. ST-Log is *gone*.

So far STart has been hanging in there. Well maybe not having any competition helps.

Now for the newsletters. Current Notes, PSAN, AIM are getting better all the time. They are the greatest. MVACE is right in there too.

Some of the others will remain nameless but seem to be maintaining a few new articles and reviews and keep plugging along. A March issue had a total of two pages. A title page with the reverse side having an article by the editor and the second page was an advertisement with the reverse side showing a map to the meeting place.

Another of my once-looked-forward-to newsletters has gone from 10-12 pages of outstanding coverage to four double-sided pages. They did have one excellent article reviewing hardware, but they also had three old, overdone reviews and hardware tech tips. This was their best newsletter in some months. This was once a great newsletter. Now it is OK, maybe.

My local newsletter has been a real surprise. Going from monthly to bi-monthly was no surprise because very few of us were sending in articles, but the quality improved and it began to look very nice and had almost all original articles. There were three new reviews by local users. It included Atari news and information and also dates and meeting places of other groups (including the Commie and Meega groups.)

This really surprised me because of the name bashing that they (C & A) had been doing to the Atari Community. The Atarians have been the only group with any organization, now these other guys want to make a combination group to share meetings and the newsletter. I say "bunk." It seems they want to use the already fine chain of command and newsletter staff to help them out without the hard work of starting their own.

The remainder of the newsletter was a plea to old and new members to pay their dues and get involved with the newsletter and meetings. A *very nice* small town newsletter. Best Ever. Then the S-Bomb came in the mail. Our newsletter Editor/plus another club position had to resign. Too bad. He was doing a great job. We will miss him. Haven't seen a newsletter from the local group in some time. Sorry, but I don't expect to either.

I have been trying to write articles and have been sending them to several newsletters. Granted, I'm not much of a writer but bad reviews seem to me to be better than none. I don't care all that much about typos and misspelling as long as I can get some good information about hardware and software. Why aren't we supporting ourselves? Granted, some newsletters are doing a great job but are they suppose to replace our once-proud local groups and newsletters?

Well, I'm about burned out trying to get local Atari users to *help themselves* so I will probably not support them anymore. It has cost me a lot of money to do the things I have been doing for the local group and only two or three members have shown any appreciation.

I'm sorry but no one seems to be able to answer my question (What's Happening?). Too Bad. We once had the best computer on the market for the money.

Thank God we have the Dave Small type of people out there to keep things coming. I will not abandon my 800XL or ST, but I will not be able to enjoy them as much as I would like to because I'll always feel abandoned by the other users and by Atari Corp.

I guess that's enough said. I just wish more had been done.

Steve Filler (WAUG)

Revolutionary Concepts

An open reply to Mr. Timothy Holt,

In the April, 1990 issue of Atari Interface Magazine, Mr. Timothy Holt thoughtfully provided some suggestions which may help advance the position of Atari computers in the US. He offers thought-provoking opinion and advice and additional ideas of how we might make a difference.

In essence, Mr. Holt suggested that writing to Roseanne Barr may not be productive and sending orders for Atari ST products that do not exist may effectively pinch pocketbooks. I do have a couple of reservations concerning Mr. Holt's suggestions and offer them here.

First of all, let's assume that every Atari enthusiast is an active battery. If we sit around long enough not being productive, we may ultimately explode or, minimally, leak valuable energy and corrode. The Revolution is designed to help keep those batteries active in a way that helps inform prospective computer buyers that there is another alternative they may not have thought of. Writing to personalities is more effective than writing to my mother in Chicago which is more effective than writing negative articles in magazines which are only seen by Atari enthusiasts who, thus, sell their machines and buy Macintoshs because the negative article said "What's the use?".

I might also caution you on the legality of your proposals. The points in the Revolution fulfill carefully considered objectives including nominal cost to participants *and* legal protection. If you are encouraging people to send money to software companies, you *could* be responsible for the company's losses dealing with the problem of responding to these people. You could be responsible for the consumer who does not receive a refund because many companies immediately deposit incoming checks and the order goes on to another department. You might also find some companies becoming aggravated with Atarians and deciding never to support us. They will know what is going on.

I think you also have to consider that these software companies are not the source of our problems. If the market was there, they would support us. It is as simple as that.

You may be interested to know a couple of other facts. First, *CBS This Morning* is planning a *"The Comeback of Atari"* segment this coming week. Secondly, ST Informer reported that Waldensoftware has decided to test market Atari ST software in some of their stores due to a letter writing campaign.The Revolution is not attempting to take credit for these, but neither one would have occurred by sending bogus orders to software companies.

Another fact: On April 28 and 29, PACE (Pittsburgh Atari Computer Enthusiasts) held an Atari show at the Chartiers Valley High School. Piracy was so openly rampant there that users were returning product to participating software companies telling them they found where they can get it for free. Mr. Bob Brodie, Atari's spokeperson and User Group Coordinator, was so disgusted that he withheld Atari's generous offering of door prizes which he painstakingly arranged. Although I was not present, I have spoken to several people about this unfortunate affair.

I sincerely believe that anything we do which represents ourselves as Atari users should be done as ethically and professionally as possible. I also believe any progress we see will be slow. I encourage users to enjoy their systems and tell other people about them. If they are so inclinded, help us tell a new market what we already know about the value in Atari computers.

Quick ST II version 2.1

The fastest screen accelerator at any price!

No other software or hardware upgrade speeds up screen redraws as fast as Quick ST II or for less money. Not a blitter. Not a 16MHz upgrade. Not Turbo ST 1.8. Forget the high price alternatives. Choose Quick ST 2.1. Your ST will run faster as a result. For only $19.95.

- speeds up GEM text and graphics operations, and VT52 text output
- speeds up the desktop font, 6x6 font, and even GDOS fonts
- requires less than 25K of memory and runs on any ST or STe
- supports all screen resolutions, plus the Moniterm monitor
- supports custom desktop patterns, pictures, and fonts

Turbo ST is a trademark of SofTrek and sells for more than double the price!

The reviews are in and Quick ST II gets top marks!

"my ST has taken another step closer to being the perfect personal computer. ... makes using an ST a real joy. ... amazingly FAST" - Nick Berry, Puget Sound Atari News, 4/90

"Nice job, Darek" - Darren Meer, ST Informer, 5/90

"If, however, you do not have Turbo ST yet, then Quick ST from Branch Always Software seems to be a better choice, and not only because of the lower price. ... Buy it"
- A. J. Wrotniak, Current Notes, 6/90

Quick ST II was written by Darek Mihocka. 100% assembly language. Quick ST II costs only $19.95 at ST dealers all across America, and $22.95 in Canada. Or order directly. Add $3 for s/h. We accept VISA.

Now save $5 on Quick ST II version 2.1!!!

When ordering direct, clip this ad for a $5 discount towards the purchase of **Quick ST II** or our **Quick Tools** utility pack. Each is only $14.95 U.S. with this ad. Add $3 for s/h in the U.S., or $5 elsewhere.

Branch Always Software

Box 2624, Station B, Kitchener, Ontario, Canada N2H 6N2

Right On Target

David Plotkin

I love to write. I must, because I'm doing this piece for free, and it's the first time in a very long time I've written anything without getting paid for it.

What you have to understand, though, is that writing for the Atari audience is special, and worth doing, even just for the fun of it. Atari owners are a special breed—we are appreciative of any effort put out in our behalf.

Flattery Will Get You...

My name has become fairly well known, and people tell me they enjoy reading my stuff. Yes, flattery works wonders. So when Pattie (the esteemed managing editor) cornered me during the regular Wednesday night conference on GEnie and asked me to write for AIM, how could I refuse? Besides, she flirts even better than I do!

I've been into Atari computers for a really long time, and I have learned a few things in that time. The first is that Atari (the company) is going to do whatever they think necessary to turn a profit and remain in business, regardless of the rantings of XE/ST owners and the press. It's not that they don't care what we think, but that they have to play things the way they see it.

They have to maintain cash flow and bring new products to market with a very small engineering staff and limited manufacturing resources, and they do it the best they know how. They make what I consider to be mistakes along the way, but hey, I certainly don't have all the answers. I do have to say they have managed to stay in business when other, "better managed," companies have faded from the scene.

So when people complain that Atari won't ship the new machines till the old ones are used up, remember that lack of inventory control is what killed Kaypro (PC clone manufacturer), and hyping new machines is what killed Osborne (first of the "luggable" computer manufacturers). Say what you will about the Tramiels, they have *learned* from history—something many others have not.

Another thing I have learned is that the ST is one really nice machine. I sit here looking at mine, and I am real happy with it. Its not all "official" Atari at all. I've built it from parts that were best suited to me. There's ICD's FAST tape backup unit, with an 85 meg hard drive inside that my friend John Russell (JRI, the Genlock people) installed. My ST is a Mega2, upgraded to 4 megabytes, and sporting dual ROMs—the old 1.2 and the new 1.4, with a switch to go back and forth.

Switchable ROMs

This arrangement has been incredibly useful to me as a reviewer, because when a particular piece of software displays strange behavior, the first thing I try is switching back to the older ROMs to see if that corrects the problem. Surprisingly, it is extremely rare that this is the problem, but it is awfully nice to be able to make sure easily.

The Mega also has a JRI JATO speed-up board in it, as well as their 4096 color board. I would dearly love to get my hands on Jim Allen's (Fast Technology) Turbo16 board. Jim keeps promising me one, but I have to have one that can have the 16 Mhz 68000 processor turned down to 8 Mhz, like my JATO. Certain software doesn't work at 16 Mhz, and though Jim promised to modify one for me, I haven't gotten it yet. Jim, are you listening?

Impressions by the ST

Of course, plugged into the left side of my Mega is Spectre GCR, the results of the efforts of my friend Dave Small and company. This Mac emulator is simply amazing, and I wouldn't be without it. There is stuff that will never be available on the ST—and with GCR, it really doesn't matter.

Sitting out in front is Talon's Supercharger PC emulator. This little gem plugs into the DMA port and works like a charm. It is my emulator of choice because it is so easy to install. I have both PC Speed and pcditto II, and they both work very well, but I have no room in my Mega to leave them there, plus neither one works with the JATO board installed.

My main hard drive is an old Astra "Expander," a huge, rather ungainly device that sports a 3.5 inch floppy drive and 50 meg hard drive. Astra went out of business about a year ago, and I was saddened by their passing. Lou (president) was a friend of mine and we had worked together for many years. Recently, the hard drive gave up, and was replaced with another 85 meg monster. That should take care of my hard drive needs for awhile.

I have an I.B. 5.25 inch drive for reading PC disks, a 1200 baud Hayes Smartmodem, and, of course, both color and monochrome monitors. The cabling is a nightmare, but it is made more bearable by a wild assortment of switches—Astra's SW2 monitor switch, RS-232 switch (which includes a null modem connector), Practical Solution's Drive Master (switches between external drives) and Mouse Master, as well as their Cordless mouse. Also, I have one of their Video Keys to move output to videotape.

Printer Options

In the printer department, I have a printer spooler and switches to run output to my old Star SG10 dot matrix printer, as well as my beloved HP Deskjet+—the printer of choice in the Atari community. Almost unbelievably, this printer is available after rebate for about $450, and it is silent, does 300 dots per inch (same as a laser), accepts multiple font cartridges, and is well supported by Atari software. I would never part with mine.

The result of all this hardware is that I can really *use* my ST, just flipping a few switches to get the configuration I need. I would like to have a Moniterm large screen monitor, and could probably get one at a good price (the value of name recognition again), but have nowhere to put it. It's strictly monochrome, and I do need color on occasion (game reviews, you know?). Ideally, I would like to have a decent screen size (say 15 inch) that supports both monochrome and color, and I have heard rumblings of such things in the offing.

Collecting Software

Interestingly enough, however, I don't collect hardware for hardware's sake, but only to facilitate getting my work done. I do collect a certain amount of software, and this is made easier by the fact that I am a reviewer, so I get more software than I can possibly look at. The good stuff I keep, the bad or not-so-useful finds its way to the members of my user group. Since their needs are different from mine, they are usually glad to get it. Some stuff just gets reformatted and the disk added to my blank disk collection.

An appalling amount of stuff in this last category manages to get to market, though heaven knows why. I won't name names, but be sure to check software thoroughly before you buy—i.e., read reviews and try to go through a dealer (yes, I know they are scarce).

CAD and Word Processing

The software I am most interested in is CAD3D and drafting programs, desktop publishing/word processing and databases. I do enough modeling that the CAD stuff and packages like Migraph's Easy Draw are in constant use. I often do manuals, and page layout programs like Timework's Publisher ST are very useful.

Word processors have a particular fascination, since I use my ST about 90% of the time for writing. I have tried most of the word processors available, and like WordUp and Word Flair for fancy layout and including graphics.

For fast output and just general writing, I still use Timework's WordWriter 2. It works, though it's a shame Timeworks hasn't seen fit to upgrade the product (or any of their other ST products—oh well).

DTP

With the upcoming upgrades to GDOS and the availability of UltraScript (Postscript interpreter), desktop publishing packages are going to have to be updated, and if Timework's doesn't get on the ball, their products will become hopelessly outdated. I would hate to see that happen, since, for my needs, Publisher is more than adequate and I don't look forward to learning a new package!

DataBasing

My fascination with databases stems from the fact that I love to dabble in programming, and the databases I use, such as Superbase Professional, sport powerful programming languages for generating custom applications. I use dBase III+ and FoxPro on my PC, and there is nothing to match them in the ST world (despite dBMan's claims to the contrary). But FoxPro works just fine under PC emulation, so why worry? Use the real thing—the power of some of the professional PC software is simply incredible (but then, so is the price!).

Another good example is Microsoft's Word for Windows, which runs under Windows 286 on the Supercharger. This package does everything you can think of for a word processor, right down to generating indices. If you think of something it can't do, it has a macro language that will let you program just about anything you want, and then put a menu item up so that you can activate it with the mouse. This package weighs in at $450—but I think it's worth it for a serious writer.

Well, it looks like I am out of room for this month. I didn't get everything said, but there's always next month. So remember, if your AIM is good, you'll always be Right on Target.

New Book by Ralph Turner! Covers hard drive management & optimization, IBM emulators, connecting a 5 1/4-inch floppy drive, assembling a hard drive system from inexpensive components, disk structure and file recovery, SCSI ID numbers and LUN IDs, sector and file editing, binary, hexadecimal and decimal codes, ASCII file problems, escape codes, miscellaneous tips, and much more. No programming knowledge required. (Also available: *The Atari ST Book*) $16.95 + $2.00 shipping (Canada: $2.50). Check, Money Order, VISA or MasterCard. Index Legalis, Post Office Box 1822-62, Fairfield, IA 52556. Phone: (515) 472-2293

1050 MECHANISM

Factory fresh TANDON mechs. make difficult repairs a snap. Units are complete with Head, Stepper, Spindle motor, belt etc. Just plug in, no difficult alignments or adjustments required.

$47.50

POWER PACKS

Exact replacement transformer for 800/400, 1050 810, 1200XL, 850, and XF551 units. Part #CO17945. $14.50

XL/XE SUPPLY

Power Pak for 800XL,600XL 130XE, 65XE & XE Game. $25.00

KEYBOARDS

New and complete subassembly.
Easy internal replacement.

130XE/65XE	$35.00
800	$40.00
800XL	$29.50
400	$12.50

XL 40 PIN LSI CHIP SET

A Complete set of 40 Pin Large Scale Integrated Circuits for your 800XL, 600XL or 1200XL computer.
Great for quick repairs! Set contains one each of the following: CPU, GTIA, ANTIC, PIA AND POKEY. $16.95

800 4 PIECE BOARD SET

Includes Main Board, Power Supply Assembly, CPU Module and 10K Revision B Operating System Module. All boards are new, tested and complete with all components. $28.50

800/400 MODULES

NEW PARTS COMPLETE WITH IC'S

• CX853 16K RAM Module	$9.50
• 800/400 CPU with GTIA	$8.75
• 800 10K "B" OS MODULE	$8.75
• 800 POWER BOARD	$14.50
• 400 POWER BOARD	$9.50

Summer CES 1990

Bob Retelle (MACE,WAUG)

The 1990 Summer Consumer Electronics Show was held in Chicago the weekend of June 2nd. While there were games and gadgets galore, there was really very little of interest to an Atari computer owner.

Atari Corp. was there, but even though their booth was identified with large signs reading "Atari Computer," the content of the booth was primarily games (featuring the Lynx) and the Portfolio. June 2 at CES was the U.S. introduction of the STe, but while there were STes there, they were pretty much ignored.

CompuServe Sysop Ron Luks reported that he had to ask five Atari representatives if the STe was there before he found one who even knew if they had them. Then when he asked the person in the Atari "uniform" at the STe a question about the machine, he was told "I don't know anything about these. I'm just playing a game."

Most of the STes I saw were playing games as well. In fact, I almost missed the fact that there were STes there at all, until I noticed that the XE Game System Light Guns were plugged into the *left* side of the STs. Unless you *already* knew that's where the new game controller ports are on the STe, you'd never know there was anything new or different about the machines. There were *no* signs or displays that said "NEW! STe!" or "Introducing the Hot New STe!" or "Atari makes *real* Computers," or anything at all.

One of the STs even had a Supercharger hardware IBM emulator hooked up to it, but most of the time I saw it, it was playing games too.

Again, there were no signs to indicate the Atari computer line could emulate MS-DOS machines or anything to catch the interest of passing show attendees. If attendees thought anything about it at all, they probably thought it was a modem. Most of the people passing by no doubt went home never knowing one of the great strengths of Atari machines is their ability to emulate other computers. All it would have taken was a simple sign.

Advantage Package

In fact, the only signs near the STes said "Advantage," which had nothing at all to do with the long-awaited introduction of a new model of Atari computer. The "Advantage Package" is a promotion which Atari has been talking about for some time now, similar to the way Commodore markets the Amiga 500 and the way the 520ST has been marketed in Europe.

The package will bundle an Atari ST computer with a wide selection of popular software packages. Atari had apparently hoped to show the Advantage package at this CES, but from reports of people talking with Atari representatives at the show, it may be some time before we actually see this promotion because Atari still hasn't made up their minds as to what software and hardware will actually be included.

STe Shipping

The suggested retail price for the STe is $699.95, and amazingly enough, there are reports it is already being shipped and is showing up at Atari dealers now!

No 8-bits Present

That's about it for Atari computers in the Atari booth. There were no 8-bit computers on display at all, not even an XE Game System among the video games. One ST was connected to a MIDI keyboard, but I never did hear it playing anything.

There was no literature about Atari computers in the booth, and even though they had a fishbowl full of buttons that said "Atari Advantage," there was no literature about the package. If I'd been a computer dealer looking for new products to sell, I'd have been underwhelmed by the presentation.

The Portfolio

The Portfolio was featured in the Atari booth, and the RAMcard drive made its first appearance. This device connects to an IBM system and allows the bigger computer to read the RAMcards written by the Portfolio. This allows easy transfer of data between the two systems. Also being shown was the new Portfolio transfer software for both IBM and Macintosh systems. Strangely enough, the first thing that caught my eye when I entered the Atari booth was the Macintosh computer running next to the Atari PC.

Atari announced three new ROMcards for the Portfolio—a File Manager, a set of DOS utilities and a Finance card. The File Manager will be shipped with new Portfolios, and will be available directly from Atari for only $20.

It provides a window/menu

system to bypass the DOS command line interface and includes a comprehensive tutorial.

The DOS utilities ROMcard supplies over 78K of versatile batch files and includes a Public Domain telecommunications program. The Finance software performs statistical and financial operations and can apparently be used along with some of the built-in programs in the Portfolio. Both of these new ROM-cards carry a suggested list price of $89.95.

The Lynx

The main focus of the Atari booth was games, in particular the Lynx. There were several stations with four Lynxes, some of which were "linked" to allow simultaneous multi-player games. Much of the crowding of the booth was due to showgoers bending over all these Lynxes. Atari announced several new games for the Lynx, two to be available this summer, and others later in the fall and winter. Also announced were several games for the 7800 and 2600 game machines.

One of the most prominent features of the Atari booth was a *huge* mockup of a Lynx, with a large screen TV as the display, running the Lynx TV ad.

Nintendo Dominates CES

Outside of the Atari booth, it was easily apparent that the rest of the show, at least as far as the computer and games areas, belonged to Nintendo. In fact, it became a game in itself to find an aisle that didn't contain something referring to Nintendo. Nearly every software company was converting their games for Nintendo, both the home system and the Gameboy. For example, Heroes of the Lance, Ultima IV, The Bard's Tale, Silent Service, Miner 2049er, Lode Runner, Shanghai...well, you get the idea. I even heard a rumor someone was converting M.U.L.E. to Nintendo, to use their new 4-player controllers, but I wasn't able to get anyone to confirm that. There were so many new games for the Nintendo systems that I literally lost count. It's obvious Nintendo has the full and enthusiastic support of the third-party segment of the game marketplace.

No STs at Third Party Booths

That leads to an interesting observation I made during the first day of the show, and confirmed during the second. Three years ago, nearly every booth was demonstrating their games on Amigas, IBMs, Commodore-64s, and Atari STs. Two years ago, some of the companies were still demonstrating on STs. This year, *none* of the booths had *any* Atari STs at all. There were still Commodore-64s, but the STs have disappeared. It provided a somewhat graphic picture of the kind of confidence the third-party market has in Atari Corp.

Some companies are still doing conversions for the ST, even if they didn't feel it worthwhile to demonstrate them to potential buyers. I talked with Peter Molyneaux, the designer of Populous, in the Electronic Arts booth. He was demonstrating his new game, PowerMonger, which is a lot like Populous, only taken several steps further. The version he was showing

OLYMPUS

BY OLYMPIAN SOFTWARE

For Atari ST w/ Double sided drive, joystick

An epic quest for a legendary treasure. You will travel to over 600 graphically detailed locations in your search for the Golden Fleece - only its healing powers can save the dying Princess Eleni. You will fight detailed, animated monsters such as Minotaurs and the Medusa. Digitized audio and real-time arcade sequences!

was running on an IBM, but he said an ST version should be available by September.

Lord British

Richard Garriott, "Lord British" himself, from Origin Systems showed us the latest in the Ultima series (Ultima 30, I think it was), along with some very loud demonstrations of other games Origin is working on, including the first in the "Worlds of Ultima" series.

Worlds of Ultima is a game design system that will allow Origin to produce more games in a shorter period of time. The first in the new series is "The Savage Empire" which will use the same icon driven interface they developed for Ultima VI, and will involve the same kinds of characters, but in a completely different setting. This one takes place in a jungle world full of dinosaurs, high priests, jungle princesses and lost underground cities. Now available only for IBM systems, Garriott told me they're looking for people who can do conversions for other systems, including the ST.

[Ed Note: Virgin Mastertronic was also demonstrating a game called "Wonderland," based on Lewis Carroll's Alice in Wonderland. Designed by the same people who brought us The Pawn, Wonderland takes graphic/text adventures to a whole new level. A window-based, point and click environment with built in hints and auto-mapping, coupled with excellent animated graphics, makes Wonderland a standard by which future graphic/text adventures will be judged. Though demoed on an IBM, Wonderland is available for the Atari ST.]

A "famous person" who was attracting a lot of attention at the show was Bart Simpson. One of the hottest licensing properties now, there were Bart Simpson telephones, Simpsons Nintendo game cartridges, handheld Simpsons video games, watches and one trade magazine even mentioned Simpsons "action figures." I dropped one of my business cards in a fishbowl, but didn't win the Simpsons T-shirt that one company was offering, darn!

The New NEC Handheld Game System

On a more serious note, one of the most interesting things I saw at this CES, and something that is destined to spell trouble for Atari Corp. was the new handheld NEC video game system. Based on its "Turbo-Grafx 16" video game machine, the new handheld game system is sure to give the Lynx a run for its money.

The color LCD screen is smaller than the Lynx, but the picture is sharp and bright and has five times the resolution of the Lynx. Essentially, it's like seeing an Atari ST low-resolution color display on a 1-1/2 by 2 inch screen, except that the NEC can display up to 256 colors at once.

Probably the greatest strength of this new handheld game is that is uses the *same* game cartridges that the home NEC game unit does. This means you won't have to go out and buy a new version of the same games you have at home, like you do with the Lynx and Gameboy.

It also means—unlike the Lynx, which still has only *six* games available for it six months after its introduction—the NEC handheld will have the entire library of NEC games available immediately. Since different versions won't have to be developed for the handheld, new games should be easier to develop, and should appear more quickly, too.

As if it didn't already have enough going for it, the NEC handheld video game will also have an optional TV tuner that plugs in and allows you to use the game as a high quality handheld color television set. The picture was very bright, and even in the electronic jungle of CES the reception was extremely clear. In fact, it looked better than some of the dedicated handheld color portable TVs I saw at other booths.

The price on the NEC handheld video game system will be higher than the Lynx, but not by much. It's expected to retail for about $220, and will be available in the US by Thanksgiving. Atari Corp has about that long to get the Lynx established, and to get more games out for it. Unless they do, their own slogan, "Game's Over, GameBoy," may end up being turned around into "Game's Over, Lynx."

Basically Speaking
8-bit Atari BASIC Made

Jeff Summers (ACORN)

This month we will tackle a common question, namely "How do I get this (data, information, text, you name it) on the printer instead of the screen (or on a disk file, sent to my Watusi device, or whatever)?" To answer this question, we must first understand how the computer transmits information to devices.

Devices

From BASIC, the computer treats virtually all devices the same. This is because BASIC uses the Central Input Output (CIO) portion of the operating system. CIO is probably the greatest invention since sliced bread, and it works like this: No matter what device you are sending your information to or getting your information from, you access CIO the same. There is no difference in the process of printing to the printer or the screen, reading from the keyboard or the cassette, putting bytes to the modem or the Watusi. All devices work the same.

This would seem like something that most systems would use—a sort of "universal interface" for input and output that is not device dependent, so you don't have to write different programming instructions if you want the information to possibly go to several different devices. Unfortunately, this is not the case.

Even the ST is brain damaged and requires some variations in coding. Don't mention Apple or Commodore, their systems are abysmal.

So, our 8-bits have an operating system with a stroke of genius. How do we access this? By using OPEN, PRINT #, CLOSE, GET and PUT, of course. Briefly, there are eight channels of input/output through CIO. Channel 0 is reserved for the screen editor, channel 6 for graphics, and channel 7 for saving and loading. Use at your own risk. Channels 1-5 are available for your programming pleasure and are used like this:

```
10 PRINT "Where do you want the
text?"
20 DIM A$(20):INPUT A$
30 OPEN #1,8,0,A$
40 PRINT #1;"In the Beginning there
was the Word..."
50 CLOSE #1
60 END
```

The first two lines ask where the output is to be directed and gets the answer in A$. Line 30 opens channel number 1 for output to whatever A$ might happen to be:

P: = Printer
E: = Screen Editor
S: = Screen
R: = RS232 port if device handler loaded
W: = Watusi device if device handler loaded, etc.

Line 40 dumps the characters to the device and line 50 closes the channel, freeing it up for you to use for a different device later.

The British Connection

Robert C. Arp, Jr.

Apparently, all but two American ST magazines are dead. One of them has not yet been buried, but I've not seen life within its pages for many months. British ST magazines, on the other hand, are now prevalent; I purchase three of the four available monthly.

I have recently begun to regularly purchase "Atari Interface Magazine" and "Current Notes" also. As for "ST Informer," which is sort of a newspaper, I've subscribed to it since its inception. I watched the other American magazines come and go. And there was one from Canada which took my money and ran.

In the beginning, many of the ST mags attempted technical article series, but none carried those attempts beyond a few introductory articles. Because I was a new 1040ST owner, I bought them all in order to become acquainted with the machine.

I did learn a few facts from some of those earlier technical articles, but most of them simply rehashed information available in the Atari developer documentation. I could not appreciate the programming language articles for their language specific value because I had learned to use every available ST language in classroom environments.

Nevertheless, I dutifully purchased each new issue and all available back issues of those magazines. I am not so confident about my own knowledge that I can afford to doubt the possibility of learning from someone else. A thought here, an idea there, a misunderstood concept clarified now and then—these made the purchases worth the money.

I've probably learned more about the ST by using the libraries and bulletin boards on GEnie than I learned by reading ST magazines, but I must say the quality of technical information presented in the British magazines is generally better than any other source.

In the main, however, I find American technical books to be of finer quality than those from foreign countries. Specifically, the Compute! AES, VDI, TOS, C and Assembly language books are the best available; the exception is the Bantam C book. As for the Compute! ST magazine, I'd say that it was the best of its kind, during the period it was being published.

The problem is that books take a long time to write and publish. In fact, I don't know of any publisher that would accept an American ST book—self-publishing is probably the only means available. Because of the time lag between the conception of an author's ideas and the availability of those ideas to readers, the information in books tends to be dated.

In every technical field, magazines and journals fill the information gap during the book writer to book reader time lag. And that's the British connection. At present, it is their magazines that have assumed the role—to some extent.

Too many British readers object to technical information in their "games" magazines. Of course, they don't realize the games they love to play are doomed to mediocrity if programmers have no information media. I wonder if American users yet realize that it has already happened here?

The dilemma is easily stated and easily resolved. Users need and want new programs. Programmers need and want new information so they can write those programs. New information is exchanged via technical articles in magazines.

Magazine publishers can afford to print technical articles only if enough people buy the magazines which contain those articles. There are few programmers compared to users. There are not enough programmers to support those magazines. Therefore, users must support them, if they are to be supported at all.

Programmers could afford to support a technical publication if their expenses could be recouped via software sales. But ST users want power without the price. Pirates want it free. In the end, users possess the most clout, so an end to the dilemma depends on user action.

A similar situation exists in universities. Professors must publish in order to maintain information media, but too few people purchase the publications. Therefore, academic writers (or their collegiate departments) must pay the publishers the cost of printing each article. In this case, the users are taxpayers who must pay for living in an advanced society.

Am I now hinting that ST users must pay for an ST programmer's information medium? No, I'm not hinting, I'm telling it like it is. If ST users want to enjoy an advanced computing environment, then, one way or another, they must pay for the privilege.

Ralph C. Turner's

Intermediate and Advanced Atari ST Subjects

John Slade (SPACE)

If you only use your ST for playing games, you don't own a second disk drive, you have never even considered getting a hard drive, and could care less how the computer gets its information to run those wonderful programs, then save your book money for another game.

Everyone else who owns an ST, or even an IBM user for that matter, who wants to know something about how files are stored on floppies and hard drives should go right out and buy this book.

Atari Subjects

Mr. Turner's book is truly the best compilation of general information on the workings of file storage and retrieval and disk drives themselves that I have ever read. And best of all, it is written on a level that anyone can understand.

Turner begins the book with the basics—explaining what binary code, ASCII, Hexadecimal and decimal mean, and how they relate to saving files to disk. From there, he goes into the formatting of disks, how the computer knows where the files are on the disks and the recovery of deleted files.

Another plus for this book is that the author not only lists commercial programs and utilities that would be of help, but he also lists public domain programs that do the same or similar tasks.

If you are at all considering purchasing a hard drive for your ST, this book is an absolute must. Turner goes into all the basics of hooking up a hard drive, why you need a host adapter for the ST and the need for partitioning the drive into more than one logical drive. He also details the setup procedure for the ST and the various ways you can boot your system with the hard drive.

Writing Style

What is really wonderful about this book is the clear manner in which the author explains such advanced topics as the affect on disk access time of interleave, why file fragmentation will seriously slow your once fast hard drive and disk caching—to list a few.

He even details his experience in setting up a hard drive system from scratch. Although Turner points out that this book is not a cookbook for all systems, it will give you a good idea what you are getting into if you want to set up your own hard drive.

Another topic many will find important is hooking up a 5-1/4 inch floppy drive and the use of this drive with an IBM emulator such as Pc-Ditto II. The last chapter of the book is devoted to a variety of common problems and useful utilities for all users.

Many ST users will buy this book as a primer on disk drives, but will end up putting it on their computer bookshelf as a handy reference guide.

About the Author: John Slade is an Air Quality Control Engineer with the Pennsylvania Department of Environmental Resources, and has been a member of SPACE for several years. He currently holds the position of Vice President in charge of Programming for the club.

AtariWriter + X

For Those Who Don't Want to Read the Book

Jimmy Boyce (CACE)

Ahh, the prez has nudged my elbow to remind me that I screwed up last month and wrote a poor excuse for an article. He is right, so I will get busy and meet my deadline with a proper bit of literary genius.

Mail Merging

Now where were we, oh yes, creating a file <pg 63> in Mail Merge with our scraps of paper that contain our publishers' addresses. Well, as a wise sage once said, "a file is a file." And so it is. What we will do is create a file in Mail Merge like we would create a file in AtariWriter+. Here we can be just as creative as before.

Please boot up and format a disk to which you will save your database files. With that done, select Mail Merge by gently depressing the [M] key. When all the noisemaking from the disk drive is done, a menu appears on the screen that we discussed last month in that terrible article I submitted.

Please lift that same finger you used before and depress the letter [C] for CREATE FILE. Wow! Check it out! Look at all that stuff! What you have on the screen is the Mail Merge format the good people at AW+ created for those of you that did not eat your powdered milk biscuits and are too shy to try something new.

The next step is to make this format permanent. That is accomplished by gently lifting the aforementioned finger and pushing with sufficient strength on the [RETURN] key to get it to move down the screen to the bottom of the screen. In other words, bash that sucker fifteen times.

After all that exercising of your finger, the bottom of the screen should read: DEFINITIONS COMPLETE, Y/N. I am aware that there is no question mark to signal that this statement is a question, but it is one and requires that you type a [Y] or an [N]. Be brave and type [Y].

Oops, where did it go and why am I back to the menu? Well friends, you have just told your Atari that you are doing business in this format because you want to. Isn't it great to have that kind of power! Of course, unless you do it this way your computer will thumb its CPU at you and that is embarrassing.

"So What?" you say, "my finger is sore from bashing the return button!" Try [E] for EDIT FILE <pg 64>. See, it didn't go too far away.

Entering Text

Now get carried away and type in your last name: [B][U][N][K][Y]. Bash the old [RETURN] key. You did it! Go ahead and type in your first name, do the [RETURN] bit and continue on until you are at the end of the record format.

What's that you say, Bunky? You don't have a title. Skip it by doing the [RETURN] Rumba. What do you mean you can't find it in the index? Never mind.

You can also move the cursor past an item by using the up and down arrow keys and through an item with the left and right arrow keys and the [TAB] key. The [DELETE BK/SP] can be used for editing a line when you goof.

Now that you are at the bottom, you must answer the non-question DEFINITIONS COMPLETE Y/N with a [Y], because if you don't you will have to do that last bit of typing all over again. *Please* remember that you *must* type in [Y] to save the current record to memory! Continue entering information about your publishers using the above directions.

Now, to Business!

Let's assume you have typed in all the information about your publishers, and you have faithfully typed in [Y] after each record when prompted. With all of these records stored in memory, now is the time to make them available for future use. Let's save them to that formatted disk.

This is done the same way you saved your files for AW+, hit [ESC] for the menu, then type [S] for SAVE FILE, type in your file name (such as PUBLIST) and [RETURN]. Ahh, the sweet whirr of the old 1050 saving the names of all those publishers waiting with baited breath to publish *your works of art.* Boggles the mind.

Well Bunky, what do ya say fella, shall we call it a day?

MAGICAL ANAGRAMS
A BENTLEY BEAR TUTORIAL

Steve Volker (STAG)

Confusion in the Honey Pot

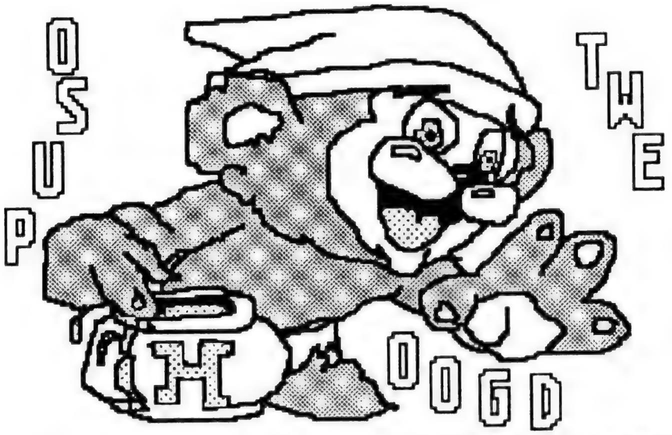
I can't tell you how hard it has been to write this article. I have to write a less than glowing review... for something *I really like!*

In almost every way, I found Magical Anagrams to be an excellent program for my eight-year-old child. It contains bright, pleasant and colorful graphics, it has a whimsical story base that gives the taste of adventure to the solving of difficult word puzzles, and it displays levels and score screens to give children rewards for their efforts and a reason to push themselves.

In fact, I have only one problem with it, but it's a big one! The interface between the child and the computer is imprecise, unresponsive, *very* difficult and takes away from the lesson! It goes like this...

You are visiting the mysterious Winter Palace. Inside, you find lots of exciting rooms to explore—each with its own treasure trove of gems, fruit and honey. The trick is to solve a two-word anagram, and collect your reward, before the sneaky, little white rat hauls off the entire cache. Simple in principle, though it requires a little thought. Perfect for a bright and 'bored' adolescent looking for a way to pass a few hours, right?

Well...to actually accomplish this, you must first use the mouse pointer to position Bentley Bear above the box where you want the next letter to go, then get the computer to recognize your choice with the left mouse button. Then, directing the white arrow found in the upper, middle part of the screen, the child must select the next letter in the anagram. All before the rat gets to your treasure, which even on the slowest setting is only about 25 seconds!



If the words contain four letters each, the child would have to do this eight times, in less than 30 seconds, to 'win' the round. It is therefore, not a test of your midget's mental abilities, but rather an unforgiving assessment of how alacritous they are with a mouse! (Remember how difficult is was for you to learn?)

My little bit of sunshine, Teresa, is both smart and competitive, and she had little or no difficulty with the anagrams themselves, but to manipulate the mouse at such speeds and with software that only noticed you 'half-the-time', she soon grew very frustrated!

Then came the words (with sympathy), "Dad...I love you but...*I don't want to play the computer anymore!*" (The cruelest 13 words in all of fatherdom. This is instant shelf-life for any application!)

Despite this 'little' problem, Magical Anagrams is one of the more imaginative programs in the Bentley Bear series.

The series itself has a lot going for it. I like the protective plastic covering, the bright packaging, the fact that either color or monochrome can be used, the handy and informative manuals and the way in which learning is initiated in the guise of fun. Oh, and I tried using a joystick instead of the mouse (much easier to move around quickly, sometimes), but... wouldn't happen.

Magical Anagrams comes on one single-sided disk, requires no special hardware, and boots out of an AUTO folder.

It has a separate program included to allow you to alter the words in the dictionary that will be shuffled around for the game. You can also edit a number of other parameters in the application, such as the number of items in each room, speed and repeat factors. (Maybe through user adjustments this game can become better.)

In short, put in a joystick driver or diminish the steps to enter your guesses, and my family will try it again.

Stik-Gripper

Get a Grip on Gameplaying

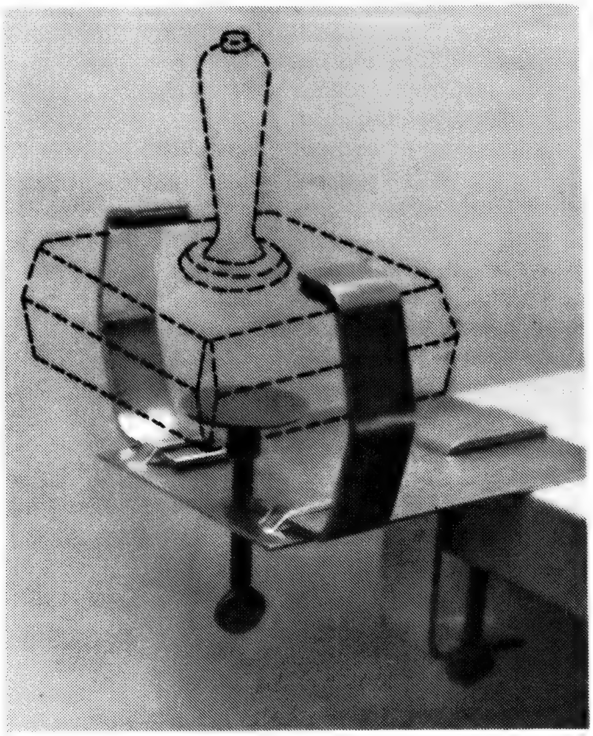
Bill Rayl (WAUG)

I've never been what you could call a gaming wiz. I enjoy playing a good, mindless arcade game now and again or wandering through the mazes in Dungeon Master and Bloodwych. But, I've never really been a "serious" gamer.

Of course, I can remember being drenched in sweat after a particularly long stretch of playing Karateka...and the time I leaned a little too far and fell right out of my chair while blasting aliens in Galactic Conqueror...and, of course, there's MIDI Maze!

More than one joystick has succumbed to the rigors of that game, and I can remember a few days of cramped hands and bruised thumbs from MIDI Maze tournaments. (When's the next get-together anyway, guys?)

Recently, Duggan Design has released a product that has helped me cut down on the cramped hands and bruised thumbs...and it has even helped me play some games *better!* The product is called Stik-Gripper and it retails for only $18.95.



What is Stik-Gripper?

Basically, Stik-Gripper is a clamp that holds most any joystick firmly to a ledge or desk/tabletop. The clamp is made of solid steel and is very sturdy. Nothing fancy like Rally racing stripes or peel-n-stick lightning bolts...no color coordination to match your computer or joystick. There is even "some assembly required," but it's not what you would call a hardware project by any stretch of the imagination.

Once you attach the Stik-Gripper to your computer desk (or whatever) and clamp down your joystick, you're ready to go!

Stik-Gripper Puts You in Control

I've found Stik-Gripper actually gives me better control of the joystick and gives much more of an arcade-type feel to my favorite arcade-type games. Because the joystick is held stationary, I can pull off those dreaded angle shots with ease (I've never been very good at those). Since Stik-Gripper frees up one hand, I've also begun using one hand on the stick and the index finger of the other on the fire button. Having one hand free is a *big* plus for those games that require you to use the joystick and keyboard at the same time.

That brings me to an even greater benefit I've gotten from Stik-Gripper than better control. Because I'm not tightly holding a joystick, I don't have to worry about "Gamer's Hand," the equivalent of Tennis Elbow. And *no more bruised thumbs!!*

Now I can play games as long as I want—once I figure out how to convince Pattie I'm really doing serious, business-type stuff! (grin) Hmm...maybe I can get away with "I'm just working on a review of this game and I have to test it thoroughly to make sure it doesn't do weird things after five hours of play."

Naw, she'll never buy that one!

The GOOD Backup Utility

Rich Deen (SPACE)

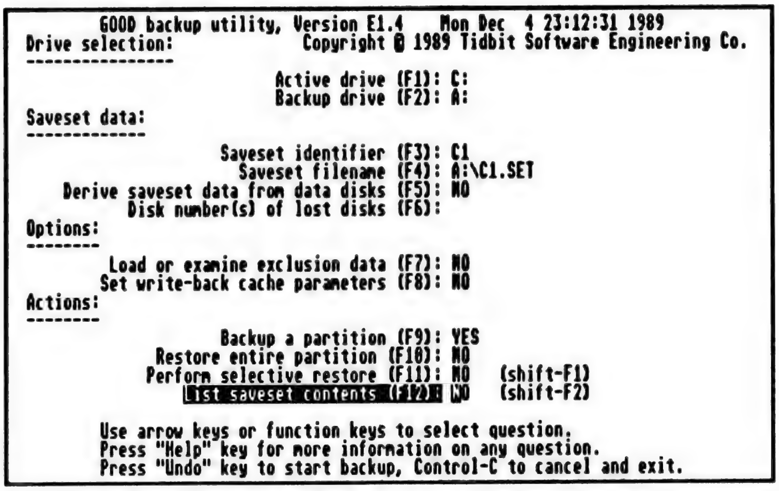
"Tidbit's GOOD Backup Utility is specially designed for keeping complete backups of your hard disk partitions. This program creates and maintains a set of backup disks that contain the same files as your hard disk, and uses a disk cache to make updates fast. Only new files and modified files are actually copied. Easy and fast enough to run every day, so you never have to risk your valuable data."

This is the opening paragraph on the outside packaging. And as stated, the program is true to the word. However, there are some things that I thought were a little misleading. I'll get to those after I discuss some of the better features of this program.

My review was of Version 1.4, dated December 4, 1989 of this program. This program is for backing up data and information from your hard drive or removable cartridge drive. It was tested on two 20meg Lapine hard drives and a 1040ST with color monitor.

The program comes on one, single-sided disk which contains three files and one folder. The files are GOOD.TOS, CHECKSUM.TOS and GOOD.NIC. GOOD.TOS is the backup program, CHECKSUM.TOS is a file checksum utility, and GOOD.NIC is an icon file for use with version 2.0 or higher of NeoDesk.

The folder contains spare copies of the above mentioned files. You should also receive a 30 page (5.5" x 8.5") user's manual, an update letter and a registration card.



```

```

It is stated that the GOOD Backup Utility uses an algorithm in the backup process allowing the program to get around the 40 folder bug in the ST TOS. You should still use the folder fix program when not using this program. It helps to speed the backup along, I believe.

As you may have noted by the filename above, the GOOD Backup Utility is a TOS application program. Because of this, you don't have use of the GEM environment, the mouse or any desktop accessories. Of course, when you are backing up, you probably won't need any accessories, but I for one usually demand that all my programs use the mouse and the GEM environment. If you like the program DCOPY, this program will be your cup of tea. The author is supposedly going to come out with a GEM version of the program in the future.

Some of the program's listed features include:

- copies data from a selected active disk partition to a saveset of backup disks
- you can keep your backup saveset on single- or double-sided floppy disks, removable cartridges, or keep a shadow partition on another hard drive (I did not try this as my hard drives were too full!)
- large files can be split across as many disks as needed
- backups can be interrupted and finished at a later time
- updates to a backup will only copy the files that have actually changed since the last time (the program can tell which files have actually changed even if you don't have a clock chip in your computer)
- disks need not be pre-formatted
- checksums are used to verify that files on the active drive and on the backups are all intact. Errors can be detected and corrected before they become costly
- lost or damaged disks in the saveset can be replaced without replacing the entire backup saveset
- pressing the HELP key will provide additional information at any step in the backup process

Does the program work as stated? Yes it does. One of it's particularly strong points is the data verification. Because of this, you should not have to worry about the integrity of your backup data. The program manual also has some nice pieces of advice about backups.

Does the program have any flaws? Here again, I have to answer yes. Maybe I shouldn't call them flaws, but nuisances may be a better term. Can you live with them? Yes, depending upon your computer usage style and background.

I found the manual to be somewhat vague at points. In particular, I was not sure what a "saveset" disk was until I started to play around with things. And I expected the backup to go quicker the first time through. I think the terminology on the packaging which reads "Easy and fast enough to use everyday" gave me the idea it would just breeze through everything. Well, after you have backed everything up the first time, it is a breeze, because you are only copying the new and changed files since your last backup.

My recommendation? If you are only using Turtle, the program is worth considering. If you have another commercial program, stay with it (unless you don't like it, then try to get your dealer to show you a demo of this program). If you need a program that performs incremental backups, provides a high level of data integrity without the use of a mouse or GEM environment, this program will fit your needs nicely.

** ** Introducing the GOOD Backup Utility ** **

GOOD
Backup
Utility

Specially designed for keeping complete backups of your hard disk partitions. Backup disks are TOS compatible.

Intelligent Updates!

Update your backup every day! Only new & modified files are copied, and the old files are deleted to make room. As good as an image - but done in less time.

Great for use with Cartridge Disk Drives

All this for only:
$29.95
Suggested Retail Price,
(in massachusetts add sales tax)

Tid bit

Tidbit Software Engineering Company
25 Wood Lane, Maynard MA 01754
Telephone (508) 897-7429

Features of the GOOD Backup Utility:

- Copies data from a selected active disk partition to a pile of ordinary TOS readable backup disks.
- A backup can be interrupted before it is done, to be completed later.
- You can keep your backup saveset on floppy disks, removable cartridge drives, or keep a shadow partition on another hard disk unit.
- No folder limit on backup or restore.
- Any file that cannot be fit on a single saveset disk will be split up across as many as needed.
- Updates to the backup will only copy the files that have actually changed. If you update your backup frequently, the update goes very quickly.
- The GOOD Backup Utility can format floppy disks for you as additional disks are needed.
- Lost or damaged disks in the backup saveset can be replaced without replacing the entire backup saveset.
- Checksums are used to verify that the files on the active disk drive and on the backup disks are all intact.
- Write back disk cache technology is used to make all the copying go fast.
- Backup can be by partition, or select specific files by including or excluding a set of wildcard file specifications.
- Files can be restored as an entire partition, or by wildcard selection. When restoring an entire partition, only files that are actually missing need to be restored.
- A reference list can be produced for locating individual files within the backup saveset.

Pressing the HELP key will provide additional information at every step.

If your dealer doesn't have the GOOD Backup Utility, you can order it from the Computer Bug, 113 Russel St., Hadley, MA, 01035 (413) 584-7722

SOME LIKE IT... HOT!

The CodeHeads announce:

HOT WIRE + MAXI FILE

- "When the START editorial staff first saw HotWire, our collective reaction was 'Wow!'"
- By far the **fastest, easiest way to run programs** on the Atari ST...from a floppy disk **or** from a hard drive!
- Build menus for all your most commonly-used programs. Load new menus with a single keypress or mouse click!
- New **Ledger** function records time spent in programs of your choice.
- **Passwords** may be used to restrict unauthorized access to certain programs.
- New **on-screen clock**, appears in the programs that you choose.
- Unlike other shells, HotWire works correctly with all programs, just like the GEM desktop
- A **seamless interface** offers direct access to MultiDesk and MaxiFile

- Full-featured file-handling utility lets you **move/copy/delete/rename/touch/lock/hide** any combination of files and/or folders
- Runs **as a desk accessory or** as a program in any resolution
- Incorporates **every** file/disk feature of the GEM desktop plus much more
- Intelligent **disk copying** routines
- **Rename folders** - Print directory listings
- Store **comments** about any file/folder
- Unique and intuitive user interface designed for easy, speedy operation.
- **Customizable** for your style of use
- **Keyboard equivalents** for all operations
- Quickly select from up to 20 of your most-used paths.
- Even runs programs and loads documents

Here's what our users are saying about HotWire and MaxiFile:
"The HotWire/MaxiFile combo has **changed the way I use my ST**."
"I haven't used the standard GEM desktop in weeks."
"Without HotWire and MaxiFile I'd be totally lost on the ST."
"...a tribute to **assembly excellence**." - "MaxiFile is **a wonder**!"
"HotWire and MaxiFile really 'beat up on the competition'!!"
"...you'll need to package it in asbestos because it is too **hot**."
"**AWESOME!**" - "Super!" - "a veritable software gem!"

HotWire Plus (includes MaxiFile)	$49.95
MaxiFile	$24.95
HotWire	$39.95
G+Plus - a replacement for Atari GDOS	$34.95

THE G-MAN
NOTES FROM THE COAT POCKET

David G. Grace (WACO)

I was driving west on Interstate 70, about to cross from Pennsylvania into West ByGod Virginia. It was a cool, clear morning and traffic was light.

I was making good time on my trip to Wheeling. I was dropping off my old partner and picking up my new one in the same trip. I hoped the new one would be as compatible as the last. We'd been together since 1976 in New Jersey, but we were to finally part upon his retirement.

Trading Partners

We'd been together nearly as long as my wife and I, maybe longer if you count hours rather than years. We'd been through a few scrapes together. I'd done some things I wouldn't normally do, knowing that if it went sour, my backup was there, ready and dependable. His replacement was black and brand new, but highly touted. There would be some additional training before and after he was assigned to me full time.

We were meeting at the Wheeling Police Department's riverside training building. As I reached for the directions inside my coat, I accidently bumped my old partner's butt. Smiling, I went into my best Mae West impersonation, "Is that a pistol in your pocket, or are you just happy to see me?" He was as quiet as usual, always letting his imposing look do his communicating. I hoped his replacement would be the same way.

My coat pocket was stuffed full of notes, including phone messages, Things To Do lists and a rather large group of computer notes. Not notes on how to use them, but on what to write about them. The size of the wad told me it was time to get serious about writing another article.

Lots of One Liners

I try to make a note of good ideas for an article and many people offer suggestions. They're most often one liners, not the kernel of a good article. Of course, a good article can be full of one liners, though the opposite isn't always true. But the coat pocket is getting so heavy, I'm beginning to list to one side.

Before I capsize, I need to throw some loose baggage overboard. I want to encourage people with ideas, so I better start using some. At the risk of sounding like a (hopefully good) stand up comedian, I'll now dump out the remainder of the pocket. As some of the ideas are my originals, I've decided not to share the byline. If you contributed something to this effort, you can have the satisfaction of knowing your idea made it into print.

My first note is a reminder to apologize for the reference in my last article to my appearance in the series pilot of ABC television's "Equal Justice." Oh, I was in it all right, but you needed an Evelyn Woods speed watching degree to catch me. After filming for over three days, I expected more. I'm a member of two user groups. The Pittsburgh Atari Computer Enthusiasts showed a video of the one scene of mine that survived the cutting room floor, thanks to President Bruce Markey.

I wasn't at the meeting, but I heard it was rather pathetic, with the backing up of the tape over and over so everyone was sure to see me. I understand an informal straw poll was held at the break: 40% never saw me, 30% thought I deserved an Emmy (but only if awarded posthumously) and 29% were still wretching in the rest rooms. Only 1% wanted my autograph (thanks Martha).

As a humanitarian gesture, the Westmoreland Atari Computer Organization refused to inflict a copy of the tape on its members, opting to bulk erase it instead.

If you were one of those who sat through the two hour flick to catch me, you can take some consolation in knowing you weren't alone. I had managed to notify virtually *every* person I have *ever* known! I'm now filming a new movie for theater release with a bigger part, but nothing more goes into print until I see the edited version.

I'm honored to have had an Atari community leader like Dave Small spend nearly two full, though rambling, pages in Current Notes supporting me. His advice was very interesting, something like "the best defense is a good offense."

Emulators

My only criticism was that Whatshername read it and now thinks he's funnier than I am. Before that, she had only thought he was more intelligent, prolific and rich. She may go to the next D.C. show just to meet him. I tried to meet him at the last one, but he was too busy making a fortune off his emulators for the Apple Macintosh. Apple, of course, is a rather extensive software format for which there is no adequate hardware.

I'm finally moving up to an ST, and I'd buy one of his emulators to make it run Mac software, if I could only figure out why I'd want it to. The rumor is the next Small emulator is to be called "Squint GCR," for those Apple Purists who *must* get absolute 100% emulation. It slows the ST down 20% and shrinks the screen by 30%.

Speaking of emulators, I hope they are able to work out the bugs in PC Ditto II, the IBM emulator. Some consider it a pretty serious design error when you make an add-on which may require cutting away parts of the computer to get it inside. I'm told PC Ditto III, now in the planning stages, is so large that the ST is mounted inside the emulator.

I hear there is now an Amiga emulator for use on the ST. It's a hardware attachment to the drive, slowing it down until load time to run time is a five to one ratio. A software ST emulator for use on the Amiga is said to have been released for Beta testing last week. There is no word yet as to whether it works, as the program is still loading. The development of a cartridge version of a Commodore emulator, for use on the Atari 8-bit, was dropped for lack of interest.

I see there is a revival of the "let's not do any Atari bashing" pleas hitting the Letters to the Editor section of many publications. I wonder if any of them were written by former employees of Atari Explorer, now that they have more time on their hands? I suppose I could be accused of Atari bashing in the past, but my complaint has been almost exclusively with the marketing, or lack of same, of the machines. I sold my Atari stock, fodder for an article in itself, in order to have the cash for the purchase of the STe. It's my way of saying where my faith lies in Atari hardware and Atari management.

TRACKER/ST

The Ultimate Mailing List/Mail Merge/Person Tracking Software

Tracker/ST is an exciting new application which combines traditional mailing list capabilities with a full built-in mail merge system, database style reporting, and much, much more.

"This is a GREAT program and it has cut my mail list time by over half. I just wish I would have had this program a couple of years back!!!"
--B.G., Texas

Step Ahead Software

I ordered Talon's IBM Supercharger hardware emulator at the recent Pittsburgh show sponsored by P.A.C.E., so I'll be able to do G-Work at home. In a solemn promise to Whatshername, who is not very "computer literate" by the way, I agreed to limit software purchases to those programs which were compatible with my work data files and other necessary, serious software. I considered telling her the Supercharger was just a door prize at the show, but I didn't have that much cash on me. I was happy to report to her later that my only purchases were the Falcon wordprocessor (with Mission Disk spell checker), the Red Storm Rising spreadsheet program, and the popular Space Ace Data Base.

PACE Show Comments

Elsewhere at the show, Bob Brodie ingratiated himself with the local user groups by repeating his tired chestnut about how computers, like cars, should be traded in every few years. "How old's your car?" he asked no one in particular. As I'd arrived in my thirteen-year-old Chevy, I had to sympathize with WACO 8bit Librarian Paul Plants who stated that his old car and 8bit computer both ran fine, but his car was still supported by the manufacturer.

Ralph Mariano of ST Report, who everyone knows is not affiliated with Atari (giggle), ran blocker for Brodie throughout the session. Keith Krause, President of WACO earned the Best Comeback of the Show Award, when Mariano scourged the assembly by saying the user groups weren't doing enough to encourage the next generation of Atari users. "There are no kids here at the show," he challenged, "Where are the kids?" "They're at home playing with their Nintendos," was Krause's retort.

Remember when the ST first came out, everyone wondered what the ST stood for. Various suggestions were SixTeen bit, Sam Tramiel...even Super Terrific. It's been suggested that, comparing potential to the efforts in marketing, the ST could stand for Simply Tragic.

In the April 16 issue of the USA Today newspaper, the Atari Portfolio was highly rated in an article on portable computers. The next day the Atari stock fell. Go figure. Also in the papers recently, Atari founder Nolan Bushnell has taken a job at Commodore. Wasn't he announced as being hired back at Atari to work in the games division a year or so ago? If so, I hope he didn't take too much with him. In Atari's report to the stockholders, Sam Tramiel confirmed my prediction of his quote to the effect that the 90's would be the decade of the Atari. That prediction was made in my last article, in the issue of Current Notes which carried a similar message on the cover.

Miscellaneous Notes

The computer hacker who got into a number of mainframes, including the NASA computer, was convicted in Federal Court of intentionally writing and spreading his virus program, resulting in untold damages. This was despite a defense which supposedly claimed it was all just an accident which happened while he was short on sleep. Wide awake, I can't put a delay loop in a basic program without getting an error message.

And how about that guy who sued the major broadcasting company because he owned a hundred shares of stock and felt he could prove the company was mismanaged? They settled out of court for millions! Now if I could only find a company that would fit that bill.

Atari Quiz

ST Informer recently carried an Atari IQ quiz. It was all right as far as it went, but I would have added some additional questions, like the following, which could *really* test the knowledge of a true Atarian.

1. In what way is the number 60 significant to Atari? A) The number of dealers in the Toronto area. B) The number of U.S. dealers. C) The percentage of workers on the job in Sunnyvale.

2. Atari's marketing strategy is primarily concentrated... A) in Europe. B) in Canada. C) in sanity.

3. Which represents the smallest unit of time? A) A nanosecond. B) The G-Man's appearance on TV. C) The battery life of an Atari laptop.

4. What goal is the most difficult to attain? A) Getting the Babel Fish. B) Recording an Atari commercial on your VCR. C) Collecting an executive pension in Sunnyvale.

5. Atari stock inspired what famous old saying? A) You get what you pay for. B) What goes up, must come down. C) You can't lose money on stock...unless you sell it.

Yes, those notes and more were found in the coat pocket that morning. When I stopped outside the destination—the Wheeling Police indoor firing range—my partner and I got out of the G-Car together for the last time. I walked over to the riverbank and watched the Ohio eddy by. I hoped my conversion from 8bit to ST wouldn't be as difficult and potentially traumatic as this switch was about to be. At least I knew I could count on my local user groups to get me through that switch. And I'd still have the trusty 8bit, because I don't trade in products as long as they work well.

I reached under my coat and pulled out the Smith & Wesson .357 revolver and dumped the six rounds into my open palm. I carried it, empty cylinder open, into the firing range. I placed it on the table in front of our range instructor, who'd arrived earlier from Pittsburgh. The badge stamped into the side of the gun was facing up, like a giant proofmark.

The instructor passed me a box containing the replacement. It was a black, 9 MM pistol with those new, glow-in-the-dark sights. "It's small, but carries nearly three times the ammo without reloading. You get three magazines and a box of ammo to go, after you qualify." He removed the grip adapter, something I wouldn't need with the new one's double stack magazine and wide grip. "Read me off the serial numbers while I make a note." I recited the number on the old gun without having to look. "With that number, it must have been out of the first batch of 66's they bought fifteen years ago. You won't miss it much, the replacement's better in every way."

He sounded like someone comparing his ST to my old 8bit, talking as if it was only a piece of plastic. I watched him look down the barrel, double check the empty cylinder and place the revolver into a box.

"No, I won't miss it," I lied sarcastically, "After all, it's only a piece of iron."

The Truth about Pittsburgh

WACO

with a little help from our friends

From a consumer point of view, the controversial Pittsburgh Atarifest was terrific—plenty of hardware and software for sale (except for the disappointing absence of STes—dozens could have been sold).

Yet, from a vendor's viewpoint the show was a disaster, perhaps because dealers had set their expectations too high for a show which drew only about 800 people for two days. Now that the smoke has cleared from the suicidal post-show accusations, it is time to review a few facts and compile the observations from many show visitors and participants to present "the other side of the story" in hopes of restoring balance and reason. Aren't we all guilty of "forgetting to engage brain before putting mouth in motion" sometimes?

First of all, WACO sold far more PD disks (*both* 8bit and ST) than it did at any previous Atarifest in Pittsburgh or anywhere else. Traffic was so brisk that this observer had time for only one pitstop and no lunch during the seven hour Saturday show. Some customers admitted they were on limited budgets and could afford only a few PD disks, but others even turned up their noses at our $2 catalog disk.

The WACO booth was even praised on-line on GEnie in the Z*NET account of the show for having the best dressed individual and for stereo demos, making the handful of volunteers believe their sacrifices were worthwhile. The STe demo at the WACO booth was also rave-reviewed by the MVACE News (Dayton, OH) which concluded, "...the Atarifest in Pittsburgh was well done and a pleasant experience."

Attendance was off especially because Atari had ticked off so many of its users. (One of our usual booth volunteers was off at a hamfest in Dayton that weekend to spend his money on IBM clone flea market bargains instead of at the Atarifest so who's to say how many other Atarians went there instead?) Only the gung-ho Atarians attended the Pittsburgh show, and then they were ticked off by User Group Coordinator Bob Brodie's comments at a Sunday seminar and then the next day on-line.

Brodie, visibly weary and battle-worn from taking the flak from disgruntled Atari users, became so psyched up over dealers' complaints about lower than anticipated sales that he said things in anger which hurt and angered the legitimate user groups of western Pennsylvania.

"As for a future show in that area, good luck. I can't go to Atari and recommend that we go back to that area," he said. What irony! Atari had become the laughing stock of the show Sunday when a vacant table next to the WACO booth was inhabited only by a lonely Atari sign. Passers-by pointed to it repeatedly and sneered.

Even the weather did not cooperate because the temperature was exceptionally hot outside (so hot that a pop can exploded inside our van parked outside), and one of our own volunteers commented he would rather be in the outdoors enjoying the weekend. A vendor suggested the show should have been scheduled a month earlier, but attendance had even been off at the Atari show in Anaheim a month earlier, however, so why should Pittsburgh have been any different?

Furthermore, it was rumored that many of the 72 members of an "exclusive" club were individually boycotting the show. Having only a third of the membership of PACE, WACO and SAGE combined, it nevertheless became the scapegoat for the frustrations of dissasisfied show participants. (Have you ever heard of Ruckert's law: 'There is nothing so small that it can't be blown out of proportion'?)

The story about someone trying to return an unopened software package because he said his friend could give it to him free was repeated over and over. Another oft-told story that supposedly hinted piracy turned out to be overreaction to a dispute between a developer and a PACE member over the cost of an upgrade of an original program.

The end result was that the whole Pittsburgh area received a bad rap over piracy. The vendors claimed software sales were low because the exclusive group rented purchased commercial software to its members; in other words, this group is more influential than the PACE-WACO-SAGE coalition. Who is so naive?

Brodie said on-line: "The group in question did not have a booth. They did have members at the show, I AM TOLD. What was incredible was the blatant way they discussed their practices right in front of the developers. They had an obvious effect on the sales of software at the show." (If some of those 72 people boycotted the show, is something missing in the logic here?)

A quick poll of a few WACO members came up with over two grand being spent at the show. (One bought a Supercharger, but he doesn't have an STe yet, thanks to Atari USA.) More than $100 spent per member was the rule rather than the exception. One PACE leader said he and his friend had dropped $1300 at one booth alone. Meanwhile, the offended club reportedly asked all its members to collect their sales receipts from the show in order to total up just how much the group actually bought from show vendors—a verifiable response to Brodie's charge.

Fact—the people who attended were buying, but the problem was there weren't enough of them. One of the largest software vendors had a big gap (vacated by Saturday's sales) on its table Sunday morning which was restocked before the doors opened.

Don't forget that tables here cost dealers only $100, not the $250 of typical shows or the $500 demanded by the October Washington show. Darek Mihocka didn't sell as many of his programs here as he did at the Toronto show a few weeks earlier, but he noted that it cost only $10 in gas to drive down to Pittsburgh, and they didn't stay in a first class hotel.

We heard so many complaints about the lack of new software releases (especially from 8bitters) at the show, but Space Ace for the ST was reportedly selling out. Now if most ST users subscribed to ST Format, ST Action, and ST User from England, as we do, their appetites would be aroused to buy more software. One of the largest USA importers of these magazines sends out only 8,000 per month nationwide so the majority of American ST users still don't realize how many new European programs are released each month.

According to a WACO survey (coupons for a free drawing) fully half of the visitors to our booth still had 8bit equipment, and they obviously could not find much to spend their money on except PD disks (as well as being antagonized by the news that Atari had discontinued the 130XE computer, dooming prospects for future commercial software for it anyway). Adding that to the equation suggests that far less than 500 of the show attendees had any reason to buy ST software.

Yet, Brodie was so irate that he took all his marbles (the $1000 worth of raffle prizes) home to California rather than risk handing them out to "pirates," a real affront to most of those attending the show and a further irony to some sources who said that Pittsburgh, unlike other large metropolitan centers, doesn't even have any pirate bulletin boards. (Someone suggested that Brodie might be a hero in the eyes of his bosses for saving the company money.) This is like using an elephant gun to kill a mouse. Atari has often, by its own admission, been shooting itself in the foot. The problem is now it has the gun aimed much higher.

Ralph Mariano of ST Report (moderator at a seminar) later apologized for his Pittsburgh-bashing: "It becomes painfully apparent that I too was guilty of thinking that an entire city of STers were punishable for the dumb actions of a few jerks...I was wrong." (Along with this editorial we sent a personal note to Brodie indicating that user groups were waiting for an apology from him also.)

Pittsburgh Atari repairman Mark Spires of At Your Service blistered Brodie in an on-line message: "...I am telling you that you know very little about the Atari dealers, the Atari user groups, or the Atari people in the Pittsburgh area..." One of Brodie's resented comments referred to complaints about Pittsburgh not having an Atari dealer "and now we know why."

Admittedly, Bob Brodie did not hear our private plea to Sig Hartmann (Bob was off in a different place at the Washington show last October) to intervene to give Pittsburgh's major Atari dealer the support, service and parts the owner needed in order to remain an Atari dealer. (That dealer had shared his frustrations over Atari with us so we know the *real* reasons why Pittsburgh doesn't have an Atari business center anymore!) Sig wrote down the information in his pocket notebook and promised to contact the dealer. Unfortunately, we were probably the first to hear Sig's hint that he might retire, but we didn't take it seriously until he made it official just a few weeks later, without resolving that dealer situation.

What kind of business strategy is this for Atari to try to take the heat off its own mistakes by passing the blame on to its faithful users? Brodie used the same tactic during a seminar when he blamed Atarians for abusing the hardware exchange program (which allowed customers who had no area service centers to pay Atari directly for replacement equipment) and forcing the company to about double the prices for such service.

Bob cited the example of one customer who kept sending back the computer four times to keep upgrading it eventually to a double-sided drive. Some in the audience were probably scratching their heads in wonderment; by any math, sending back a computer four times would cost about the price of a brand new computer. Furthermore, if Atari jacked up the prices to discourage customers from returning the equipment, then why did it pass along similar increases to its own dealers (the few left) who would only send back what they couldn't fix?

PACE should be commended for staging a show that pleased the user groups and the users if not the vendors. Unfortunately, airing all this dirty laundry in public has undermined an already shaky Atari market, sending tremors all the way to Washington. Vendors are reportedly leary of spending five times as much as the PACE show charged for a booth; we hope they take a chance that the momentum of previous WAACE shows will coast this one to success, even if it is much more costly. If not, Atari has fired the shot (in Pittsburgh) heard round the Atari world!

STalker

Is this What I've Been Waiting for all this Time?

Paul Stampfli (El Paso)

Firstly, STalker is a twin program to STeno. They come together in a very understated shrink wrapped light blue manual. No box, not a lot of flash, looking fairly "home grown" next to all of the colorful boxes and flashy stuff on the shelves down at Jenkins'.

The claims on the back aren't all that flashy either. Three screen shots of the ST and some fine print. Couple this understated packaging to the name of the company (about 50 percent larger than the name of the product), Strata Software, and you have for a very meek product in the software arena of today. However, let's examine this puppy and see how it runs.

Now for those of you who have never read my column, don't expect a lot of benchmarks and "techie" stuff. I fly strictly by the seat of my pants.

STalker is the terminal emulator and STeno is the ASCII notepad/word processor. These twin programs run either as Desk Accessories, as an application (.PRG) or a TTP by simply renaming them with the proper extension. Why you would want to do so is beyond me, as they work quite well as accessories. As a matter of fact, the whole power of this package, in my opinion, is its ability to work in the background and leave most of the central processor available for other things. Almost, but not quite, multi-tasking.

So, I shall speak mostly to these programs running as accessories. Of course, note if you run them as programs, you won't have conflicts between programs when running two or three at a time. Like I said, almost, but not quite, multitasking.

Basically, in a "non-techie" type of way, what happens is that when the 68000 CPU uses the modem, it uses a very small amount of processor space, or ability, to operate that modem. What STalker does is to leave the rest of the processor open for applications to run in.

Actually, that's not altogether correct, either. What happens is STalker uses a part of the processor *if* the application running in the "foreground" is well behaved. (That means will let it be and not come wandering into the "reserved" space. Much like your teenager's room.)

Now, what is "well-behaved" can be a problem. Running as an .ACC depends entirely on the application that is running in the "foreground." For example, WordPerfect, when auto back-up is enabled, and STalker both want the hard drive at times. This can lead to incorrect file saving and corrupted files. This occurs during up and downloading.

Inadvertently I have started with the problem list, so I'll go ahead with that, but don't think this is going to be a "slam" review. Just take it with a grain of salt.

A program that doesn't use a command line will give you problems with background file transfers. Programs that I know have problems with background transfers:

Dslide
Wordperfect—if autoback-up is on.
Any wordprocessor—when using the Spell check or Dictionary. Lots of disk access occurring when the modem wants to save. (Using a RAMdisk, if you have the room, for either of these may solve the problem. I didn't have the time to try it out.)
GifSpc.prg

The Xmodem 1K protocol does not seem too reliable. Some stuff I downloaded from IBM boards was bad because when an error occurred, the 1K block was retransmitted but was *added* to the file along with the error block. This resulted in a bad file. This occurred with *no* program running in the "foreground" but utilizing STalker as an ACC nonetheless. This may be curable in a number of ways. However, in my experience, the 128 Xmodem blocks format works without problems. Background uploading and downloading has not failed.

The "L" (Log-on) settings are not good, only because the blocks are seven characters long. Prompts must be a complete word so, for instance, the prompt "Password:" is two characters too long. This doesn't seem a big problem, and will probably be fixed before you can say...well, pick your own saying.

We need Zmodem, but that's obvious and has been promised. This is where the folks at Strata will prove their worth. And whether or not they are deserving of printing their name so large on the package! (ha)

So what do you get for your bucks? A little willie-nillie terminal program that supports ASCII and Xmodem. Not much, huh? Well, that is a matter of evaluation and taste. Sure, I know this is not a

Super-dooper-hi-speed-multi-protocol-mind-bending-blazing-speed terminal. But then again, it's not supposed to be.

It's a *desk accessory,* for God's sake. It works well, in the background, tells you when something significant has happened, and the price is *right!* Only $29.95 *(retail!)* fresh from the factory. Strata Software (a company I'd never heard of) is prompt on the phone and seems genuinely dedicated to supporting this product.

Oh, and did I mention Remote Mode? And I seem to have forgotten all about the twin, STeno.

Remote BBS

Remote mode is like a mini-BBS in that your friend can call you on it and give or get files from your machine. A word of caution. If you utilize this mode, *know your friend,* and monitor what he does, anyway. STalker gives complete access of your hard disk to the caller—no security levels available. If he knows the password, he's in. It would be a sad thing for him to "mistakenly" type in something like "Erase *.*" or, well, use your imagination.

Steno

STeno is the twin to STalker, and they are as much alike as the fingers in a glove. STeno is *pure ASCII* and nothing else. It's a good text editor with a good number of options, and it makes simple note taking a breeze. I worked up this article on it! It is *not* a word-processor, but is always there.

It suffers the same limitations as STalker, and all other accessories, when running as an accessory. Specifically, it's at the mercy of the main application, and applications that don't use the menu bar will give it trouble. On the upside, it doesn't autosave (so save before switching applications), so it's not as sensitive to applications that do a lot of hard disk accessing. The saving mentioned above is purely for safety, as STeno's text will be right there, even the cursor will be where you left it, unless you have some sort of a crash. That *is* why we save things, isn't it?

You can also use STalker and STeno at the same time. You can type ahead, use STeno as STalker's capture buffer, read text you have captured from STalker to STeno, or work on something totally different. You can even have them on the same screen together, there is an option on the menu for them to automatically arrange themselves onscreen for you. I know I've overlooked a ton of features and possibilities in this review. But I hope the folks at Strata won't be upset.

Overall evaluation: I love it. I have waited a long time for multi-tasking that works like this. Ok, so I know it's not *really* multi-tasking. But it *does* work in the background and it *does* work. Couple that to the idea that the company is responsive and seems dedicated to the ST market, and you've got a real winner on your hands. The upgrades should be exciting!

Hard Disk Systems to Fit Every Budget

- All systems are complete and ready to use, included at *no extra cost* are clock/calendar and cooling blower(s)
- All ABCO Hard Disk Systems Are Fully Expandable (you are *not* limited to two drives only!) All cables and connectors installed
- Rugged Seagate Hard Disk Mechanisms!
- ICD Advantage+ Host Adapters!
- OMTI High Speed Controllers

IS THERE A TACTICIAN IN YOU? PART 5

Tim Feenstra (GRASS)

Objective: Kursk

During July 1943, Germany tried to encircle and destroy the Russian armored forces based at Kursk. The Ninth Army attacked from the north, while the Fourth Panzer Army would drive up from the south. What followed became one of the largest armored battles ever.

Objective:Kursk is a grand-tactical game of the Fourth Panzer Army's drive north toward the Kursk salient. The Fourth Panzer Army consisted of seven Infantry divisions, four Panzer-Grenadier divisions and eight Panzer divisions divided into four Korps and Group Raus. They faced 30 Russian Rifle Divisions and eight Tank Armies.

This is a one- or two-player game, with the single player always in command of the German forces. Turns represent 12 hours of realtime, one daytime and the next night. During the day, if the weather permits, air missions may be conducted against the enemy. You have a number of bombers and fighters, and may select targets, assign bombers and escorts to it, and leave some fighters to intercept enemy air missions.

Each division is divided into regiment- and battalion-sized units consisting of various weapon types. For example, an infantry regiment might have about 100 infantry squads and some anti-tank and infantry guns as well as some mortars. A Panzer Battalion might have 30 to 50 tanks of different types, and artillery battalions would have a number of field guns—the type used for indirect bombardment. Combat groups can only contain units from one division, are limited to five units each, and there is a limit of 63 combat groups for the Germans and 64 for the Russians.

Besides the supply and air mission phases which occur only once each other turn, each turn has a group adjustment phase and a group movement phase. During the adjustment phase, groups in the same hex can exchange units and groups can be split into two groups. The map is a section of Russia, from Kursk in the north, south to Belgorod.

Movement is accomplished by giving a movement plot to each group, with armor and mech groups able to move four hexes per turn and infantry two hexes.

A plot of numbers only will move the group in the direction indicated, during the appropriate pulse in the action phase, where units attempting to enter a hex occupied by an enemy group will have combat with that enemy group. If more than one group attacks the same hex, their attack strength will be combined. Two units defending a hex will have their defense strength combined.

The strategy in this game is to break through the Russian lines and to protect the line of supply needed to keep advancing toward Kursk. The Russian, especially when computer controlled, will make every effort to break the supply line and cut off your forward groups. The German might then encircle and destroy the Russians as they break through, if he has enough strength at that point.

This is an armor battle, one that I have enjoyed many times. I recommend this for those who love the feel of sweeping the enemy before them, even if it is only for a little while.

Reforger '88

Every year NATO conducts exercises around the Fulda Gap, where Warsaw Pact forces would attack to capture Frankfurt and destroy Rhein-main Airforce Base.

Divisions are divided here just as in the previous game. There are a few new additions though—anti-tank guided missles, several types of armored personnel carriers and long and short range anti-aircraft.

Air superiority is important, as with control of the skies comes an easier job of attacking enemy groups without losses due to enemy fighter protection.

The NATO mission in this game is to hold up—or stop if possible—the Russian advance toward Frankfurt. Heavily outnumbered, the NATO commander will be hard pressed to slow the Russians, and find it almost impossible to stop them.

This game gives a good feel for how the opening week of World War III would feel to the forces guarding the Fulda Gap, even today, and how armored warfare has changed since WWII. A good game for any tactician of modern armored battles, this is the best simulation of WWIII I have seen.

Good luck, and good shooting.

BASIC Dialog Box

for GFA BASIC Version 3.0

Michael A. Calvin (SWAG)

GFA BASIC 3.0 has made the resource file a lot easier to use for the average programmer. Still, on a quick job, it is a pain to use the resource editor just to create a single-line dialog box.

DIABOX.LST was created for those times when you need an input routine that is familiar to the user. It uses all the keys you would expect a dialog box to use, and they react in the standard way. DIABOX.LST is liberally sprinkled with comments and irrelevancies. You can control the number of characters allowed in the input line by setting a single variable. Prompts and titles are equated strings and can be changed to suit. It is possible to set upper and lower limits for acceptable characters. How about a filled border or other fancy stuff? Changes are only limited by your imagination.

Two potential problems do exist: First, saving the screen area under the box takes a fair chunk of memory. Second, the literal screen locations are for a mono system and will require changes to make them work on a medium res system. (I assume some brave soul will make it work for low res as well!)

The listing is a GFA procedure, and the call is at the head of the listing as comments. DIABOX.LST was created for a program I was writing, and I realized it had potential for others.

Call the Action Annex BBS at (206) 892-8969 (300/1200) for more of these GFA goodies and 8-bit stuff.

```

ArcIt

A Program for File Compression

Earl Hill (SAGE)

Note: Some of the material in this article is based on documentation Copyright 1989, on ArcIt and ArcIt Shell, by G. A. Szekely. ArcIt and ArcIt Shell are now commercial products available from Innovative Concepts and not in the public domain.

Last time we talked about problems inherent in compressing and uncompressing files using all the new "ARC" formats. There is another problem that presents itself when we decide to use a particular 'shell' program to make things easier. Shell programs sit on top of ARC programs and let us do mostly mouse clicks to enter information and choices, rather than typing in a lot of filenames, etc.

ArcIt Shell

The problem is this: With the plethora of different compression and uncompression programs, you really need a dedicated shell—not a shell which can copy files, mow the lawn, scrub the floor, wax the car, etc. Additionally, you need a shell which works with many programs, rather than separate programs which only unarc, etc. ArcIt Shell is such a dedicated shell.

ArcIt Shell is the GEM interface between the user and ArcIt. It makes ArcIt a whole lot easier to use, since it allows you to point and click to select the various options instead of typing a command line. (ST users hate to type!)

Essentially, you select the ARCing options you desire with ArcIt Shell. ArcIt Shell calls the ArcIt program, which in turn calls the ARC.TTP utility (or any other file compression program) to accomplish the desired ARC functions.

ArcIt and ArcIt Shell (now at version 1.20 in the commercial release) can work with any version of ARC.TTP, including the latest 6.02 version. As of version 1.16, ArcIt Shell and ArcIt can work with any version of any of the following programs: ARC, ARC 521, ARC 602, Turbo ARC, DCopy, LHARC, FastLZH, Zip, Unzip or Zoo. These programs are provided on a second disk in the package sold by Innovative Concepts.

Before you run the ArcIt Shell program, you must make sure the compression program(s) and ArcIt.TTP are placed together in the same directory or folder from which the ArcIt Shell program is run. If you are using a RAMdisk, you don't have to copy ArcIt-SHL.PRG to the RAMdisk (saves RAMdisk space), but you may if you so desire.

The ArcIt Shell menu is divided into five main regions. The regions are the Primary Option box, the Secondary Option box, the Encrypt Password box, the File Name box and the Do-It box.

Primary Options

The Primary Option box is located in the upper left region of the ArcIt Shell menu. These buttons represent the primary commands passed to ARC.TTP. Only one button can be selected at a time—if you click on a button to select it, the previously selected button will be turned "off."

Following is a brief summary of the primary ARC commands:

ADD = add files to archive
MOVE = move files to archive
UPDATE = update files in archive
FRESHEN = freshen files in archive
DELETE = delete files from archive
TO STD OUT = copy files from archive to screen or printer
EXTRACT = extract files from archive
EXT & DEL = extract files from archive then delete ARC file
LIST = list files in archive
VERBOSE = verbose listing of files in archive
TEST = test archive integrity
CONVERT = convert entry to new packing method

The majority of these options are described in detail in documentation that comes with the original ARC programs.

Secondary Options

To the right of the Primary Option box, is the Secondary Option box containing the ARC "flags." Unlike buttons in the Primary Option box, more than one secondary option can be selected at a time.

Following is a brief summary of the available ARC flags:

HOLD SCREEN = holds screen after each ARC function
KEEP BACKUP = retain backup copy of archive
NO COMPRESSION = suppress compression (store only)
NO WARNING MSG = suppress warning messages
NO COMMENTS = suppress notes and comments

Select a Compression Program

As of version 1.10, you can use ArcIt Shell to run ArcIt or directly run the compaction program you select. This option is selected in the box labeled "ArcIt Shell Calls:" which is located in the upper left corner of the main menu box. If ArcIt (default) is selected, all ARC functions will be applied to folders and their contents, and unARC functions will be applied to any internal ARC files found inside the main ARC file.

Since there will be cases where you would only wish to manipulate a few files, or do partial extractions, ArcIt Shell can be configured to directly call a specific compaction program instead of ArcIt.TTP, by selecting the "PRG BELOW" option. For example, if "PRG BELOW" and "ARC" are both selected, ArcIt Shell will behave just like an ARC Shell; if "PRG BELOW" and "LHARC" are both selected, ArcIt Shell will behave just like an LHARC Shell.

ArcIt can be configured to call any compaction program to do the actual file compression or file expansion. This is accomplished by selecting the desired program name from the panel titled: "Compression Program:". (Note: when you tell DCOPY to extract files from an ARC file, it extracts all the files. Therefore, it is not possible to extract only certain types of files from the ARC files using DCOPY.)

Redirect Standard Output to Printer

ARC can be instructed to redirect the standard output to either screen or printer. You can extract ASCII text files to the printer by selecting "TO STD OUT" as the primary option, and then selecting the appropriate printer from the panel on the left-hand side of the main menu box. Different versions of ARC either use PRT or PRN to redirect the standard output to the printer. The printer name used by the version of ARC you are using can be found in the docs that came with your version of ARC. To extract an ASCII text file to the screen, select "SCREEN" from the "Direct STD Output to:" panel.

Do It

Directly below the right side of the ENCRYPT PASSWORD box is a box that contains buttons allowing you to do the functions you've selected ("DO IT"), exit ArcIt Shell and return to the GEM desktop ("EXIT"), or get some more info about the ArcIt Shell program ("INFO").

Path Names

Finally, along the bottom of the main menu are three long text string buttons labeled "ARCS," "FILES," and "TEMPORARY." This is the area where files that ArcIt will operate on are specified. The button labeled "ARCS" is the name of the ARC files that will be manipulated. The button labeled "FILES" is the names of the files that will be extracted from, or added to, the ARC file. And the button labeled "TEMPS" contains the pathname where any temporary files can be placed. If the "ArcIt Shell Calls:" parameter has been set to ARC, then the "TEMPORARY" pathname parameter is used to locate ARC.TTP if it is not located in the same pathname as ArcItSHL.PRG.

To change any of these pathname parameters from their preselected values, click on the desired pathname and a standard GEM file selector box will be displayed. From here, you can select the desired drive, folder or filenames. Perhaps the easiest way to do this is to use a program such as Universal Item Selector where you need only point and click to select paths, sub-paths, etc.

It is not usually necessary to completely specify these pathnames all the way down to the file name. A folder name will generally suffice. This is what makes ArcIt.TTP unique from the plain old ARC.TTP. Further information on the pathnames used by the ArcIt.TTP program, may be found in the documentation file for ArcIt.

To be continued....

"This is a second opinion, Mr Carter."

Q: What's the Fastest Way to Print a Page?

A: Use the Presswork's Assistant!

Stop wasting time loading a wordprocessor or desktop publishing program just to print your files. The Presswork's Assistant loads quickly to give you access to the printing features you need. The intuative **GEM** interface allows for easy control of margins, headers, page numbers, and other features--all with simple mouse-clicks. You'll never have to touch the keyboard again! Ideal for ".DOC", ".TXT", and "README" files, or most any quick printing job. Best of all, online **HELP** is always just a mouse-click away.

The Presswork's Assistant is available now for just $10.00 (US).

The Presswork's Assistant

Why Sysops Are...

Or 1001 Ways to Perform a Self-Lobotomy with a Rubber Herring

Gizmo (BACE)

Gizmo is a former BACE SysOp, now residing at the Happy Homes Sanitarium.

I, being of sound body, but very wary of mind, do hereby...excuse me, wrong paper. Ok, where were we? One of the prerequisites of being a SysOp is you must have a veritable mountain of patience.

Can you imagine getting this question, "Hey dude, I'm 13 years old, and I wanna be yer Co-SysOp"? Sound familiar to all you old hats out there? Or, how about this one (pardon the spelling, but this is an actual reproduction of a conversation I had a few years back).

"Hey man, I'm a kool duud, and I wuz thinkin' I wanna be a Co-Sysop on yer board duud. I kan do anything ya want. Rad system ya got here 2." Hm.... Needless to say, I was impressed with the current translation of the English language (that *was* English, wasn't it?)

Everyone wants to be helpful, but you know that the work has to be done by *you* or disaster will result. So many hours are spent with your one-eyed monster that you affectionately name HAL.

Users sometimes wonder why SysOps are so odd looking. Can *you* sit under a fluorescent lighting system for months and still boast about that weird tan you have? Got hunchback problems? Is your daughter calling you "Hey mister?" Is the floor covered in a layer of floppy disks? Is your telephone bill something approaching the National Debt?

If you answered "yes" to any of these questions, *you are a sysop* already, and no longer need vocal cords, as you can communicate by keyboard only.

Back to the article, though, a SysOp is a special person. Not only can s/he bring back that user who hasn't called in 6 months (I used a magic three pound Sledgehammer, as opposed to a wand), s/he can, with a touch, restore a crashed hard drive. What? You say you *didn't* backup the beast? Work, work, work...Okay, now I have magically recreated the BBS (after 20 or 30 hours of hard work), and it is back online. Dilithium crystals coming to power...wait...a wisp of smoke coming from the back panel!

"Cap'n Kirk, the modem drive won't come on! The controls are completely fused! We canna go online!"

"Not to worry Scotty, we have SysOp-Man here! He can fix *anything!"*

Ughhhh..... Another little problem a SysOp will encounter is a message going something like this: "Hey, I just got a (fill in your favorite peripheral here), and I can't make it work!" Hmm... sounds like a job for a computer repairman... but you, as a dedicated SysOp, attempt to find the cure for what ails your user. It goes something like this:

The phone rings. This is the voice line, time of day is not essential. The SysOp answers. He is still groggy from restoring the last of 324 data files needed for Escape from Plasti-World, the newest Japanese on-line game that mysteriously crashed and wiped out all 100 users.

"Hello?"

Faint Voice: "I just got a Golgafrinchan Model LXVII Printer, and I can't get it to print graphics. Do you have a printer driver that will work?"

You look through a *mountain* of old backups (what are those moldy disks?), and come up with every conceivable driver ever made, but, oddness of oddness, you can't find GOLGAFR.DVR. After you find out the call was a prank, you become *very* excitable, and your friends take away your chainsaw (that you were using to reprogram the computer with), and you decide it was funny after all. Being the Commander of the Starship BBS, you retaliate by blasting Photon torpedoes at his user file. Zaaaaaapppppppp! Heh heh!

One of the age-old problems that have stymied SysOps is what to call their BBS. Here is a sample of some in our area: The Matrix, The Sanitarium (my old BBS), Doc's Atari BBS, and my favorite, The Crunchy Frog BBS (it should say: Real dead frog, encased in... etc., etc., etc.).

Although you may be a little of a puritan when it comes to naming your BBS, always keep in mind that the name will reflect a little part of you, so a name like "Stinky's BBS" may not be very active, although it may boast a *very* weird assortment of users.

In short, a SysOp must be able to walk on water, perform astounding feats of wisdom, amaze and pacify those fickle animals hereby referred to as "users" and have an inherent ability to "see" a system crash coming! Have Fun!

Next Month:

How a SysOp Retires, or 50 Ways to Change Your Lifestyle.

The Basics of BASIC

Rick Burton (RACE)

Before we continue with loops this month, I suggest we look at a few brief editing notes. You will find that, in last month's demo, an existing program line was replaced by typing a new line with the same line number and pressing the RETURN key.

A line can be as easily erased by typing its line number only and then pressing RETURN. (Remember: only upon pressing the RETURN key is a line or a corrected line inserted into memory!)

Why all these line numbers anyway? Chronological order. The program will execute lines in order of the number sequence. Why the numbering by tens? Convenience. You, the programmer, will sometimes want to insert new lines between existing lines. Simply number them accordingly.

A final note: Pressing the CONTROL key while pressing the "arrow" keys will position the cursor anywhere on the screen without disturbing text. You can then type right over the top of errors. Pressing CONTROL while pressing the INSERT key will "push" the text over to the right of the cursor to add extra spaces. Pressing CONTROL while pressing DELETE BACK SPACE will "gobble" text to the right of the cursor Pac-Man style.

Now, on to this month's demo. I strongly urge you to type as you go with each demo covered. It's more fun, it's much more educational than just reading about it, and you can then experiment on your own—which is how much real learning happens. The previous demo program should have looked like this...

```
10 FOR X=0 TO 255
20 SOUND 0,X,10,10
30 NEXT X
40 FOR X=255 TO 0 STEP -1
50 SOUND 0,X,10,10
60 NEXT X
70 GOTO 10
80 END
```

Now let's look further into the STEP command by changing lines 10 and 40 to look like this...

```
10 FOR X=0 TO 255 STEP 5
40 FOR X=255 TO 0 STEP-5
```

The loop now goes faster because it's counting by fives! Don't forget—the minus sign in line 40 allows counting backwards (255 to 0).A brief rundown on the SOUND command is in the last Basics of BASIC. Decimals can also be used in the STEP command. Change lines 10 and 40 again like so...

```
10 FOR X=0 TO 255 STEP 0.5
40 FOR X=255 TO 0 STEP -0.5
```

A beautiful, slow "sine wave." We are counting 0.5 at a time. Let us now further explore the realm of loops using electronic sound as a medium. FOR-NEXT loops can be "nested" or inserted inside one another. Clear the program using the NEW command. Type a new demo as follows...

```
10 FOR V=15 TO 3 STEP -4
20 FOR P=150 TO 200 STEP
  0.4
30 SOUND 0,P,10,V
40 NEXT P
50 NEXT V
60 END
```

The echo effect! Notice that the "P" loop is started in line 20 and closed in line 40 while the "V" loop is started in line 10 and closed on line 50. The SOUND command is sandwiched inside of both loops at line 30. One loop must be contained within the other so that NEXT V could not come before NEXT P. Any letter, by the way, can be used to designate a specific FOR-NEXT loop. Variables "P" and "V" in the SOUND command are being manipulated by the loops as the program runs. Now type:

```
45 FOR DE=1 TO 150:NEXT
  DE
```

This is a self-contained delay loop telling your Atari to count to 150 before going on. The colon acts as a sort of "glue" allowing both the FOR and NEXT portions of the loop to be on the same line although they are technically separate commands. LIST your program afresh and you will see:

```
10 FOR V=15 TO 3 STEP -4
20 FOR P=150 TO 200 STEP
  0.4
30 SOUND 0,P,10,V
40 NEXT P
45 FOR DE=1 TO 150:NEXT
  DE
50 NEXT V
60 END
```

RUN this one and hear the delayed echo electronic sound. So far we have actually heard what the loops are doing as the demos are run!

Come again next month and we will continue to pursue The Basics of BASIC.

The Atari Boosters League East (ABLE) meets monthly with enthusiasts and provides user support for all Atari computers except the Portfolio and PC line. The purpose of ABLE is to advance the knowledge of the membership through mutual education and the interchange of ideas.

General meetings are held in the Palm Magnolia Room at the Orlando Public Library, 101 East Central Blvd., on the last Sunday of each month from 1:30 to 4:30 P.M. ST SIG special interest meetings take place in Room 134 at the Bush Science Center on the Rollins College campus on the second Wednesday of each month from 7 to 9:30 P.M. Ad hoc meetings are scheduled as needed to present speakers, conduct special workshops, provide tutorial seminars and for parties. We assist members in service and software problems, as well as arrange group purchases and discounts.

Information is disseminated to members through our newsletter, the ABLE Atari Information Digest (ABLE AID). A package of twelve selected previous issues of ABLE AID higlighting the "super eight" computers is available for $10 ($5 for members). In 1990, ABLE began participating in the Atari Interface Magazine.

We have also established an ABLE Program Library of User Software (ABLE PLUS), consisting of several thousand files for the super eight and sweet sixteen computers. This library contains public domain programs contributed by ABLE members, as well as other computer clubs and users, to allow the sharing of user-written software. A computer specific listing is available to non-members for $3 and disks are available to non-members for $6 each.

ABLE accepts written correspondence at P.O. Box 1172, Winter Park, FL 32790, while membership inquiries are handled by Hadley Nelson, President, (407) 671-0317 or Milton Eager, Treasurer, (407) 834-0581. Annual dues are $12.

Good News For The Atari Computer Club of Denver! by good ol' Chet

First, the good news. With new duties keeping me even busier than ever, I'll be resigning as Emperor of the ACC.D (and writer of these minutes) and as Scribe of the STIG. With these pressures off, I should have time to continue IN YOUR DRIVE on a semi-regular basis.

Now the bad news: this column isn't over yet.

In May, we held our Once Every So Often Swap Meet, with Roy Goldman as Big Time Guest demoing his latest Daisy Dot (Number three in a series, collect 'em all!). We then presented a check for $300 to the Aurora Library just because we wanted to. And we hope that Roy forgives our ruder members who kept talking during his demo. (Who, me???)

By June, I was busy with NCO Leadership School, so Original President Ed Fason (aka STIG guru) took over and spent his usual hour with his patented ST demo, showing the machine to many of our 8bit fanatics for the very first time. Since I wasn't there, I have to take as hearsay the fact that he ran, on ONE ST computer: ST software, IBM, Mac, Apple, Atari 800, and Commodore software.

Why would ANYone want to run Apple or Commodore software?

STIGS & STONES for May 90

Re: April's meeting. Refer back to my predictions in the March minutes and follow along. Yes, STOS Trek was demo'd, as were the usual buncha Joe Ronda games; and Atari DID implode while we weren't paying attention. As for May, I was stuck in NCO Leadership School, and just didn't have the chance to go to the meeting. (See announcement in ACC.D minutes.)

Geez, do we EVER need a new scribe!

Regular meetings are held at the VAFB Federal Credit Union, Vandenberg Village, Califorina on the first Monday of every month at 7:00 P.M. Dues are $10 for individual or $15 for family membership. The Atari Federation maintains a PD software library for both 8-bit and ST computers.

CACE

Cascades Atari Computer Enthusiasts

Cascades Atari Computer Enthusiasts is the Atari Club in and around Jackson, MI. The CACE BBS is run by the club and open to everyone. The number to call is (517) 764-4047. Current membership dues are $14.80. Any written communication with CACE should be sent to PO Box 6161, Jackson, MI 49204. Our meetings are held on the second Saturday of the month fro 1p.m. to approx. 4p.m. at the Boos Recreational Center. For more information, contact Brent Fisher at (517) 764-4599.

Fishin' Around by Brent Fisher

Well this will probably be another short address, but what the hell I'll do it anyway.

The board is up and running very well and we have grown since we started under BBS Express! Professional back in February. We now have six online, or play them while you are on the board, games. We now have Blackjack, Kingdom, Chess, Slots, Reversi, and Z.S.S. Express. If you haven't been on in awhile take a little time and come back and check us out. We are up and running at 517-764-4047. The next meeting is scheduled to take place on Saturday July 14th. So if you need directions give me a call at 517-764-4599. I really don't have a lot more to say, except that I have just heard a nasty rumor that Atari has dropped all support for the 8-bit line of computers. I don't know just what to expect now, maybe it is time to consider getting another computer. Ah well I'll catch you all later.

Central Connecticut Computer Club

July, huh?? Wow. I haven't even had time to enjoy the summer and it's already half over. All I've seemed to do so far is turn more laps around the yard on my Wheel Horse than Mario Andretti has completed laps around Indianapolis Motor Speedway. I guess some of the stuff I write about here gets out the window and fertilizes the lawn. Heh.

Did anyone make it to the Giant Computer Blowout sponsored by the Computer Factory in Elmsford, New York on May 19th through the 22nd? Jeez. I have one sterling recommendation for anyone planning to attend this event in the future...leave about 3:00 a.m. I'm not kidding. Moi and Tim Brant had to wait (outside, mind you) for three and a half (expletive deleted) hours! We watched a coffee truck operator go from breakfast to lunch and then retire, probably for the summer!! I never saw so many dedicated idiots in my life. I was praying for rain, hoping to drive some of these people away so that we could get in the building before nightfall. Was it worth it? Some people thought so. I saw hand trucks full of CPU cases, monitors, software, printers etc., all being carried out to the rear of the building where the check-out lines formed up.

I was looking for a Diconix 150p ink jet printer, but would have settled for the 300 wide carridge ink jet. Found one, but didn't trust the bent-up box it came in enough to take a chance. A lot of the equipment was labeled 'DOA' (Dead On Arrival). Supposedly, this stuff wasn't really out all that well when returned. Perhaps you could find a gem in the rough this way....all you had to do was dig and hope all covers and little access doors were there. Maybe even buy a couple and end up with one GOOD unit.

Tim found a printer. I struck out. I even checked out the multi-sync monitors, hoping to find something to do all three resolutions and with a good mono screen as well as the color that they all came in. Didn't have much luck there either. I'm willing to bet that the good stuff I was looking for walked out during the 3.5 hours I stood outside. Like I said, come early. It started at 9:00a.m. so we figured, if we leave by at least 8:30, we stood a pretty good chance of getting there early enough to get what we wanted and not have to wait in line that long.....hah. I will do that better...next time.

Also I'm writing this a bit early (for a change) and I'm going to presume that we all had a great time with the Gribnif people In June. Supposedly we have a lot of confirmations this time. Talked to Rich Flashman the previous Wednesday on GEnie and he says all was for the better. He now promises that NeoDesk 3 is a LOT better and he's pretty happy with it. We'll find out soon, only 3 more days to the demo.

Like I said last month, we might have a real exclusive demo happening in July. I'm not saying who yet. Stay tuned. If this comes off, I'll truely be amazed, myself! 'Nuff said, take care, and see you at the meeting.

Rich, aka Yankee, Prez of CCCC.

CDACE

Capital District ATARI Computer Enthusiasts

Who We Are: Capital District Atari Computer Enthusiasts (CDACE) is located in Albany, NY and serves the tri-city capital region. Meetings are currently held on the third Tuesday for the XE group and the last Tuesday for the ST group at the Computer Cellar, Westgate Plaza, Albany, NY. Meetings begin at 7 PM with the libraries available starting at 6:30 PM. Dues are currently $20 per year for each family. This includes a subscription to AIM, our monthly newsletter and our BBS. Membership is not required to visit a meeting.

CDACC

CENTRAL DELAWARE

ATARI COMPUTER CLUB

Central Delaware Computer Club meets on the second Thursday of each month. For more information, contact President Alan Beddow at (302) 678-1450 or write CDACC at PO Box 545, Camden-Wyoming, DE 19934.

C.O.A.C.

Central Oregon Atari Club

Dedicated to Central Oregon Atari Users and Enthusiasts Since 1986

President	Norman Moore	(503) 447-3598
ST-VP	Bob Kanski	(503) 548-8201
8-Bit VP	Marc Hitson	(503) 648-0513
Treasurer/Editor	Glenn Dulin	(503) 382-3956
Secretary	Nancy Kanski	(503) 548-8201

Address: Central Oregon Atari Club, PO Box 6824, Bend, OR 97708

Membership dues are $1/month and $1/year for each additional family member. We meet every second Saturday of the month at 5:00 PM at the Ann Rita Conference Center, which lies just in front of the St. Charles Hospital on Neff Road in Bend.

CUSTUG

Champaign-Urbana ST Users Group

The Champaign-Urbana ST Users Group (CUSTUG) meets at 7pm on the second Wednesday of each month in the Auditorium of the Urbana Free Library at the corner of Elm and Race in Urbana, IL. Membership dues include a subscription to AIM and GLITCH and use of the commercial lending library. New members are welcome. The group supports a local BBS, Blackhawk's Keep, operating 24 hours a day at 3/12/2400 baud (1/8/N): 217-892-5512.

We currently own and maintain a 24-hour Bulletin Board System (BBS), open to everyone with a 300, 1200, or 2400 baud modem, called the Atari Zone. To enter the Atari Zone call 509-326-5741.

Since we currently have renewal dates scattered throughout the year, please check your card for your current expiration date. Remember, once your membership expires we are no longer able to send you your AIM Newsletter or allow you to remain at the F.A.C.C.S. level on the Atari Zone. To prevent any interruption in your F.A.C.C.S. services please renew by the expiration date on your card.

Secretary's Report

Well, folks, time for another report from your fearless (well, almost!) leaders! Sorry we missed you last month, but things were kind of hectic around here.

Our biggest news for you, of course, is that Atari's Bob Brodie will be in Spokane on August 18th! We've been working with STING in a joint effort to make this event the best one possible, and hopefully involving a few other Inland Northwest clubs as well.

Mr. Brodie will be bringing a few goodies to show off to us, like the STe, Lynx, STacy, Portfolio, a Mac Cartridge). Paid-up members will probably be issued one free ticket each for a "mystery door prize," with other chances available for a very small donation!

The location we've reserved is the East Central Community Center, at S.500 Stone (corner of 5th and Stone), including the kitchen. The center is just west of Altamont, and just south of the freeway, with easy exits both east and west, a bus stop right out front, and plenty of parking. It looks like Mr. Brodie will be speaking around 10 AM, but we will let you know if the time changes.

As a final note, Bob Brodie will be going to Seattle from here, and will speak there August 19th, if any of you can't make the Spokane date. We've coordinated a bit with Jim Chapman of PSAN there, who says any of you in FACCS who care to may subscribe individually to that newsletter. Mark your calendar for July 12, Aug. 9, and don't miss the Brodie event Saturday, August 18th!

GKAUG GREATER KALAMAZOO ATARI USERS GROUP

GKAUG meets once a month by invitation only as time permits. Membership is through the MACE organization for those who want the AIM magazine and other benefits.

Frank Fellheimer can be contacted at (616) 657-6106 or 2nd System/GKAUG BBS (616) 385-2448

We got together again last month and even had a new member join us. He brouht along his Archiver/Byte Writter drive and explained a how the system works. It is somewhat different in operation than the Happy Backup sytem and is considerably slower.

We managed to get TextPro 4.54 on SpartaDos/double density and got it running fairly well. I still need to read the docs if I am ever going to get good at using this word processor. It seems I have heard "Read the Docs" mentioned a number of times before now.

We decided to have a computer picnic again at my home on, or about the 21st of July. That should be an opportune time for the wife and kiddies to join us on the computer.

Let me know if you want to join us. My number is at the top. There aren't so many of us now, but we still have a lot of fun.

Frank Fellheimer

GRASS

GRAND RAPIDS ATARI SYSTEMS SUPPORTERS

GRASS meets the first Wednesday of every month at the Wyoming Public Library, 3350 Michael S.W.. Doors open at 6:30, meeting starts at 7:00pm. Dues are $22.00/yr. including AIM. Bring in one PD software disk and get 2 blank disks for your time.

Tim Feenstra	President	(616)249-9742
2239 Collingwood SW., Wyoming, MI 49509		
Greg Williams	Vice President	(616)698-7319
George Nosky	Treasurer	(616)942-1527

Chuck Baughman	Librarian	(616)795-7373
Gerry Borysiak	Membership	(616)896-9358
Charlene Bird	Co-Librarian	(616)795-3593

President's Monthly: 17 June, 1990

With summer here, meeting attendance is down, but the reasons for going are getting better. The next couple months, we will cover the use of disk sector editors and how data is stored. How to fix and retieve files from a bombed disk, and how to alter those multi-file programs to run from ramdisk if you have one. This is the brain-child of our Vice-President, who pioneered this process, and I must admit it sure has improved the enjoyment of my wargames. Perhaps we can get Greg to write an article about the process to let everyone with a ramdisk to enjoy this dramatic speed increase in the loading of program segments.

I will also be preparing a demo on the use of a harddrive on the 8-bit, as I have recently purchased one and am in the process of getting myself aquainted with it's use.

Till the next meeting, good computing.

G.T.A.U.G.

Ass Secretary	Carlton Trimble	
Asst Secretary	Lynn Simon	
Librarian	Ray St.Cyr	
Key Master	Terry Booth	
BBS Number		(409)722-6526

Congratulations to all the officers and thanks to last years group. May we all have a fine year in the GTAUG! The GTAUG has been 'around' since 1981 and supports both the 8-bit and 16-bit communities. Meetings are held the first Tuesday of each month at a location announced in the previous meeting.

At present our dues are $24 per year (Our year begins in September.) and is pro-rated at $2 per month for new members the first year. Since our nearest dealer is 90+ miles away, it is imperative that we support each other. It is for this very reason our group is a fairly close and diverse. We support all facets of Atari computing from 8-bit to Spectre/Mac to IBM and MIDI.

May's meeting saw 17 members present as the discussion centered around FUND RAISING. The Golden Triangle Savers Card was introduced as an opportunity for the club to make some much needed cash. V.P. We decided on an initial quantity of 25 cards per member.

June's meeting revolved around ideas to gain greater exposure. After brief discussion, the group agreed to contact Practical Solutions, Soft-Logik Publishing, and the authors of ACCESS command line editor.

Next month's meeting is set for: July 3, 1990, 7 pm First Federal on Highland. Be there or be square! Joe B.

HACE

The Houston Atari Computer Enthusiasts meet on the fourth Wednesday of the month, 6:45pm at the Health Economics Corporation, 2400 West Loop South, in Houston, Texas. The club supports all Atari computers from the 400 to the Mega4.

Membership is $22 per year, and gives full access to our BBS (713) 458-9923, access to our disk, magazine and newsletter libraries, a subscription to AIM, and our local news journal UPDATE ATARI. There are also other benefits, such as store discounts, door prizes, workshops, telephone help when you have problems, and much more! For more information, please contact one of our officers or drop us a line!

HACE, P.O.Box 460212, Houston, TX 77056

President:	Bill Kithas	713-855-0815
Vice President:	John Hauser	713-458-0595
Secretary:	Bob Leeper	713-665-3229
Treasurer:	Jim Salmon	713-879-8119
Newsletter Editor:	Tracy Webber	713-981-5343

JACS

Jersey Atari Computer Society, P.O. Box 710, Clementon, New Jersey 08021. JACS BBS: (609) 346-1224

President	Mike Hopkins	227-9058
ST Vice President	Maureen Kelly	428-9381
Treasurer	Forrest Blood	877-3579
Recording Sec'y	Gary Mickus	767-1933
Membership Chair	Al Guretse	596-7567

The Jersey Atari Computer Society (JACS) provides a forum through which members may further their understanding and enjoyment of all Atari computers, through the exchange of ideas and information with other users.

JACS holds two meetings per month at the Camden County Library, across from the Echelon Mall in Voorhees, New Jersey. The executive meeting, where all the planning for the club takes place, is held in the 2nd floor meeting room from 7-9 PM (meeting dates vary from month to month). The regular JACS meeting is usually held on the third Tuesday of each month, in the 3rd floor meeting room from 7-9 PM. The regular monthly meeting includes topics of interest for users of all Atari 8-bit (400/800 & XL/XE) and 16/32-bit (ST/Mega) computers.

Membership dues are calculated at $2.00 per month prorated through the coming July, when the entire club comes up for renewal. August, 1989 - July, 1990 dues are $25. Spouses and children may be included under one membership fee. Attendance at our monthly meeting is free for all members. Guests may attend up to 2 meetings at no charge.

As a JACS member, you'll receive a subscription to our newsletter and AIM, full access to our 24-hour bulletin board and access to our growing libraries of public domain software for the all Atari computers. Our disk libraries currently include over 200 disks, available for $3 each (member price). JACS ST library now includes the AIM Disk of the Month.

Layton ACE of Utah

The Layton Atari Computer Enthusiasts (L.A.C.E.) membership cost $20 per year. Privileges include the AIM Monthly Magazine, access to the 8-Bit and ST club libraries, monthly meetings, help and friendship. If you are presently not a LACE Club member and wish to join contact the one of following persons or write to LACE, c/o Irwin Brooks, 3897 So. 2275 W., Roy, UT 84067-3515.

Irwin Brooks,	President/ST Librarian	(801)731-1516
Richard Clark,	Vice President	(801)825-5823
Ken Karchner,	Secretary/Treasurer	(801)776-8015
Lonnie Allen,	8-Bit Librarian	(801)392-4450

The L.A.C.E. Club Meets in the basement of the Clearfield Library every second Wednesday of the month at 7:00 p.m.

Mark your calendars for the next three meetings.

June 13 & July 11, 1990

The Atari Computer Role in Europe

The events that are taking place in Europe are good times for the Atari computer lines. I'm speaking the new found freedom that the Eastern Block countries are finding more and more of. So just over night, we have a whole new user base of Atari 8-bit computers to revitalize this market. There are probably other communist countries that have large numbers of Atari computers in steady use. I understand that East Germany has the Atari ST as the number one selling computer. That makes perfect since to me after all it has been the best selling computer in Wert Germany for quite a while and East Germans speak the same language.

The U.S.S.R. has slightly more people than the U.S.A. at about 260 million, West Germany about 50 million, England, East Germany, Checoslavikia, Romania, Bulgaria, Hungary, etc.

Atari Corporation are you listening? You are poised with such great possibility whether on accident or on purpose. The opportunity and timing is yours for the taking. However, don't look back because the other guys are doing their best to grab this chance from your grasp.

June 13th Club Meeting Report: Our June meeting brought up a couple interesting possibilities for furture events. 1) LACE sponsered swap meet night. This would have to be held someplace else since the Davis county library does not allow for money to exchange hands in the building. Hopefully, you will be notified about it before hand. 2) The other event to be worked is for a table to be set up in either the Newgate Mall or the Ogden City Mall. We could set up both an Atari ST/Mega color system and an Atari 8-bit system for a Saturday. This should give the Atari product line some attention and the LACE Club a little publicity and possibly some new members. If you are interested in manning the booth or bringing some equipment, be sure to let me know since I will be making the arrangements. Mark your calendars for the next two meetings: July 11, 1990 August 8, 1990 September 12, 1990

LBACE

The Long Beach Atari Computer Enthusiasts meet on the second Sunday of the month at 6:00 pm. Meetings are held at Mercury Savings and Loan on the corner of Long Beach Blvd. and Carson in the city of Long Beach.

President	Richard Hull	(213) 422-1055
Vice-president	John Saunders	863-2582
Treasurer	Pat Connelly	
LBACE BBS		498-8824

Club dues are $20 annually. The club supports both the 8bit and ST. Members have access to the club's PD library and BBS and receive a year's subscription to Atari Interface Magazine.

First of all I would like to comment on an article that I read in USA Today. It said that "penny-pinching" Atari plans on spending $10 million to advertise the ST line of computers, including the new STe. I sure hope that this is true. It is about time that Atari promotes the ST in the US. If this happens and more people find out what a great computer the Atari ST is, maybe our clubs will start to grow again instead of dwindling in size and number.

Now for a sad story. My hard drive broke on me this last month. I quickly brought it to my local Atari dealer to see if it could be fixed. After they checked it out, they told me that the drive motor was burned out. I was told that ICD had installed the drive upside down and that might be the reason the drive broke after only 16 months of use. Of course it was only guaranteed for one year.

I can no longer live without a hard drive so I ordered a Toadfile 129x. This is an 85 meg Seagate and a 44 meg Syquest removable with an ICD host adapter. This will be Demo'd at our next meeting if it arrives in time. In the mean time I called ICD asking them about the drive being installed upside down. They told me that it doesn't make any difference and that they thought that the drive motor probably was not burned out. They said that there is an over lubrication problem in Seagates and that my drive had probably just jammed. They kind of explained what to do to fix it. Something about poking the spindle of the drive with a toothpick to free it up.

I would like to thank Mid-Cities Comp Soft for donating a copy of Word Quest to our club for it's monthly raffle. There has been many rumors about the sale of Mid-Cities. I talked to Jane and Al and it is a fact that the store has been sold. I met the new owner and I was assured that contrary to a rumor that I heard that the store would remain open as an Atari store.

Till next month, Richard Hull

M.A.C.E.

The Michigan Atari Computer Enthusiasts

Members of MACE receive, as part of their dues, Atari Interface Magazine. Members are also entitled to purchase disks from the 8-Bit and ST public domain software libraries. 8-Bit disks are $3 each, and ST disks are $4 each. As an added bonus, if you purchase three (3) disks from either library you will receive a fourth disk of your choice at absolutely no cost. Non-Members may purchase disks at a slightly higher rate. Mail order is also available.

For a catalog of current disks in our libraries, send $2 to:
MACE, P.O. Box 2785, Southfield, MI 48037

The May meeting of the Michigan Atari Computer Enthusiasts got underway at 7:22 pm. This month was our annual birthday party. President Ed Hanson got things rolling with the latest Atari news. Afterwards, Bob Retelle demo'ed the May AIM disk of the month, as well as those from previous months. All through the evening, gifts donated by local dealers were given away to those in attendance while everyone enjoyed pop and cookies brought in by the officers of MACE. Special thanks to Michtron, Team Computers, Rite-Way, and Software Trends for their generous donations.

MID-OHIO ATARI USER GROUP

Mid-Ohio Atari User Group Post Office Box 134, Ontario, OH 44862

The Mid-Ohio Atari User Group supports all models of Atari computers. We meet at A&B Computers, located in the West Park Shopping Center on Park Avenue West in Mansfield. Meetings are held the third Saturday of each month from 7:00pm to 9:00pm. Demonstrations are welcomed and pirating is expressly forbidden.

MAUG is a participating club in the Atari Interface Magazine. As such, members receive an issue of A.I.M. each month for no extra charge. Club dues are $7.50 per year for residents of Ohio, and $10.00 per year for others. A monthly disk subscription is an additional $3.00 per year if you pick your disk up at the meeting. Disk subscriptions which must be mailed are an additional $24.00 per year.

The club maintains a disk library for both the 8-bit and ST computers. The library disks are made available at each meeting. There is also a message base on the DataQue Support BBS members to use. Anyone wishing to become a M.A.U.G member can contact Chuck Steinman at the club address or call the DataQue Support BBS at (419) 529-5197 and leave email to the SysOp.

Middle Georgia Atari Users Group

M.G.A.U.G.

The Middle GA Atari Users Group is the sole Atari Club in the Middle Georgia area. We are composed of 60 members of which approx. half are ST users. Club president Pete Miller can be reached by phone at 912-328-8758. The MGAUG address is 115 Feagin Mill Rd., Warner Robins, GA 31088. MGAUG meets the second Sunday of each month at 2 PM at the Warner Robins Library. Annual dues are $5 with the newsletter optional. Use of the club library is free to all paid members.

June Meeting

The June meeting went quite well with two other members showing up with their computers. Thanks go to Lee Benjamin and Mike Carter for bringing in their computers. The highlight of the meeting was the demo of two of the Migraph Hand Scanners. It was easy to see that this is one item that I need to pick up. The results that members have been able to obtain were very impressive and the bundled program TOUCH UP makes editing a breeze.

Planning for our computer show goes ahead. We may have need of some tables in that we will have to share with the IBM group members. If you have a table we could use then let us know so someone can pick it up. Our subscription to Z-Net is about to expire and I will need a vote soon on whether we should put out some of our meager funds to continue this great supplement to our magazine.

A new feature at the club will be a Disk of the Month. The disk of the month will feature the best of the month's public domain plus some of my picks of some of the best from the club library. The disk will be available for free for those members that bring me a blank disk for exchange or you can purchase the disk for only $1 each month. Now that is a deal that is just too good to pass up. The Disk of the Month for June featured some great demos of some commercial software and some public domain programs. Some great demos of CONQUERER, and ANARCHY. Also some public domain games Bubble and LazerBall, the latest version of Pinhead 1.7 and a great copy program F-Copy from Germany and more.

Next month will feature a great Shanghai style game for Mono users called Draken, and a great demo of a new import called Colorado and many others. Come to the meeting and get your copy.

New offer from CURRENT NOTES. Just clip out the Current Notes subscription form from the Newsletter that you can pick up at the meeting and you will get $4 off the price of a subscription of Current Notes. You can get a subscription for just $20 to this fine magazine. Get your copy of the newsletter at the next meeting.

Well that's about it for this month. The August meeting will be on the 12th at 1PM. I look forward to seeing you there.

Nashville Atari User's Group

N.A.U.G.

Nashville Atari Users' Group P.O. Box 121752 Nashville, TN 37212

NAUG meets on the third Thursday of each month from 7PM to 10PM at the Cumberland Museum and Science Center. Membership dues are $24 per family for the entire year. With your membership you will receive our local newsletter, Atari News, a subscription to Atari Interface Magazine, access to the club's 8-bit & ST Public Domain/Shareware libraries, any group discounts on products, and entrance to all club related functions. We have an Associate Membership for $12 per year. With this membership, you will receive Atari News, AIM and access to our 8-bit & ST PD/Shareware libraries. People joining during or after the month of July pay 1/2 the yearly rate. Visitors are welcome to all meetings.

President & Editor	Walt Sullivan	(615) 228-7353
Vice-President	Coleman Smith	
Treasurer	Michael Gardner	
8Bit Chair & Librarian	Jerome Seward	(615) 385-9366

O-ACEs

O-ACEs is a non-profit group interested in getting more out of Atari computers. We are NOT affiliated with Atari Corp. or any other commercial organization -- we are there for YOU! We cover BOTH 8-bit (including the 400/800, XL, XE, and XEGS series) AND 16-bit (ST series) Atari computers. We meet twice each month (except November and December) on the 2nd and LAST Wednesday each month. Doors open by 7:30 pm at La Vista Recreation Center, 8116 Parkview Blvd. (just off 84th Street, south of Food-4-Less and east of 84th at the light)

FIRST MEETING: (2nd Wednesday) Covers news, views, and decisions that ALL members might be interested in. FOCUS MEETING: (LAST Wednesday) Concentrated information on a single topic (such as word-processing, spreadsheets, music composition, desktop publishing, etc.)

Call 592-5427, for more info on O-ACEs!

PORTS ATARI P.A.C.E. COMPUTER ENTHUSIASTS

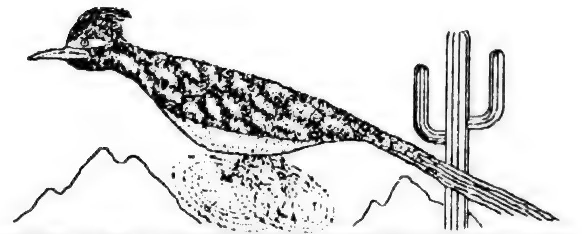
President	Tracy Hendershot	525-1058
Vice President.	Larry Nadeau	525-7430
Sec/Treasurer	John Zupansic	394-9326
STLibrarian	Don Henricksen	729-6309
8bit Librarian	Gary Armbrust	729-6906
ST Coordinator	Geoffrey Bennett	722-3354
8bit Coordinator	Aaron Potopinski	525-1058

Membership to PACE is $30.00 per year or $9.00 per quarter. General meetings are held at 6:30pm on the third Sunday of every month. In the event of a holiday, a new date will be chosen and will be posted within the pages of this newsletter and on local Bulletin Boards. Membership includes a monthly newsletter, monthly meeting, FREE Disk-of-the-Month, access to our BBS, FREE printer ribbon re-inking, and FREE copying priveleges to our VAST collection of 8/16 bit Public Domain programs. Ports A.C.E. is an alliance of families with a mutual interest in the Atari Computer and is an independent, non-profit organization. PACE hardware assets: 130XE, 1050 Drive, MacInker and a Supra 300 baud modem. Any written correspondence should be addressed directly to Ports A.C.E., Tracy Hendershot, 4835 Crosley Avenue, Duluth, MN 55804.

From the President...

Well, there's a slight ray of hope for the survival of Atari Corporation for us to witness here in the Northland. The Lynx has made its appearance at Suncoast Pictures in the Miller Hill Mall. There were six game titles available for the Lynx. If you were wondering where those 520 STFM's (with bundled software) are, as of mid-June, nothing in stock at the major retailers. Great market timing Atari, yI'm tired of being laughed at when I mention what brand computer I use. I just wish they had better press, support and saturation in the marketplace. Our members and all loyal Atari users demand something positive happen... soon!

The last PACE meeting of the summer was May 20th and the turnout was great. Nice to see everyone there and enjoying themselves. John Zupansic demonstrated his home-brew "Blitz" cable. The speed at which it duplicates a diskette is F*A*S*T! Our AIM disks copied faster than we could give our blank disks to John. The other ST was furnished by Geoff Bennett. He showed us TOS 1.4 and his Z-Ram 2.5 megabyte upgrade. For the most part, we all had a memorable evening and I hope all of you have a prosperous summer!



PHAST - Phoenix Area ST

The PHAST monthly meetings are held on the second Saturday of each month at 8640 N. 19th Ave., Phoenix, Arizona from 10am to 12pm.

President	Robert Dytmire	(602)993-6463
Vice President	Lance Summers	(602)584-1183
Treasurer	John Steiner	(602)849-8949
Membership/Sgt. Arms	Mike Zachary	(602)273-1185
Recording Sec/ Editor	Jim Keho	(602)934-9181
Disk Librarian	Charles Cullinan II	(602)992-9040
Publications Librarian	Donald Thompson	(602)486-1593

Club Minutes for Sat. June 9,1990

The meeting was called to order at 9 am. There were only about 20 members and visitors in attendance. Does the low turn out mean summer is here?? Well for those that don't know the meeting place is air conditioned and pretty cool!! So come on down! On with old business...

All in attendance were informed that PHAST money has been allocated for the purchase of some new magazines for publications library. Also the magazines currently in the library will be clearanced at a future meeting to clean out the old and make room for the new magazines. SIG (Special Interest's Groups) were discussed. And again we still need articles for YOUR newsletter (PHAST Times)!!

New business.... New news about PHAST Times there'll now be an advertisement section for all to sell their unwanted items - and this means any type of items not just computer related! Ads for members will cost $2 for 5 lines $1 for 5 additional lines, and $2 for 5 additional lines for non-members. Ads must be prepaid and brought to Lloyd at the meeting the month before you want the ad published.

Other news: there's new lower prices on blank disks!! And the PHAST PD Disk Library has been re-newed, re-worked, just plain started over with all the newest/latest versions and some neat demos!! Thanks goes to Lloyd for all his time getting this longtime disk library problem turned around, and making up the great disks labels!! Another note regarding the disk library - an external double-sided disk drive has been purchased by the club for the disk librarians use, so he won't have to worry about wearing out his own disk drive.

The SIG's seemed to go rather well this month! Mike Zachary did a MIDI SIG w/Hybrid Arts EZ track Editor, Lance Summers did a down to basic's SIG, and Robert Dytmire did a CAD 3D/Drawing SIG. Thanks guys! It's kind of neat to be able to go around and see what interests you, too bad most of the stuff is interesting and you can't see it all! <grin>. If you've got some suggestions regarding SIGs and there's a need for people to do the SIGs in any areas of software/hardware/programming/Anything! So if your interested let Robert know. Remember it's your club and you can make it better too!

Well one last note: It's in the works to possibly get more guest speakers to our meetings. Do you have any ideas on guests?? Please let the President (Robert) know! That's it for this month next meeting is Sat. July 14th, see you there!!

P3Atari Computer Enthusiasts (P3ACE)

Serving the Colorado Springs, Colorado ATARI community since 1982. PO Box 17779, Colorado Springs, CO 80935

President:	Rick Reaser,	380-8082
VP ST:	Steve Leser	591-6062
VPXE:	John Sandgren,	599-5933
Treasurer:	Jerry Sundee,	574-0005
STLibrarian:	Rick Mount,	596-8631
XELibrarian:	Dave Koster,	550-1410
Editor:	Ed Fletcher,	596-1130

The Prez Sez by Rick Reaser

The year is half over already and we are moving into summer when meeting attendance tends to fall off. Please show your support by coming to the 8-bit or ST SIGS. We really do have a good time and are there to help with your latest problem or hear your latest triumph. One thing we can't stress enough is that if you have a problem or question, please be sure to blurt it out the meetings, even if it doesn't have anything to do with the meeting topic. We all learn by hearing about your problems.

Be sure to check your mailing label to see when your membership expires. Remember that dues are $15 per year per family. When your dues are out of date, your subscription to this outstanding magazine stops. Bring you dues to the next SIG meeting or mail them to the P3ACE P.O. Box.

With the temporary demise of Vector Space, your best BBS opportunity is with Steve Leser's LASER BBS which is run by our very own ST VP (591-4620). The ST library catalog is on LASER BBS and you can request whatever files you want by phone now. We are attempting to arrange the same thing for the 8-bit library. WHAT A DEAL!!! For those of you who don't have a modem you still don't have an excuse. The Club has a Hayes 300 Baud Modem (with cables) which is available on a "loaner basis." Check it out! Call Pres. Rick Reaser for details.

The topic at the May ST SIG meeting was Desktop publishing. Two desktop publishing packages, one commercial, and one public domain were demonstrated.

We included Easytext in our disk of the month for P3ACE. From now on, we will be offering 2 disks as our disk of the month. The disk that Aim puts together, and a disk that the librarian puts together with what he calls the top three picks of the month. The topic for the July meeting "bring your favorite program and demo it." Call Steve Leser for details.

RACC

ROCKFORD ATARI COMPUTER CLUB

WE'RE NOT JUST PLAYING GAMES ANYMORE!

We meet at Rock Valley College, the third Saturday of each month. Meeting time 9 to noon. We support the Super 8 and Sweet Sixteen Atari computers, the Atari company, and our fellow Atari owners. Support is also provided through BBS Camille 815-397-5327 @ 300, 1200, and 2400 baud. Our meetings include coffee and rolls, for refreshment; business events, and demonstrations of new and interesting equipment and programs.

President	Andy Learner	815-397-5316
8 Bit VP	H. Jake Olbrich	332-5303
16 Bit VP	Mark Kunkel	874-5546
Secretary	Roger Creedy	877-3769
Treasurer	Thom Lofthouse	654-1863

Rushmore Atari Computer Enthusiasts
(RACE)
3512 Laurence Dr. Rapid City,
SD 57701 (605) 348-6331

The Rushmore Atari Computer Enthusiasts is a nonprofit organization of Atari computer owners not affiliated with Atari Corp. Meetings are held on the third Saturday of each month, 2pm, at the Westminster Presbyterian Church. Annual dues are $12 for basic membership and $15 for membership and newsletter. RACE offers the Black Hills Atari owner hardware and software support and the largest library of public domain Atari software in the state of South Dakota.

NO PIRACY WILL BE TOLERATED AT ANY RACE FUNCTION!

President	Rick Burton	(605)-642-5353
V. President	Gregg Anderson	(605)-348-6331
Secretary	Mike Douglass	
Treasurer	Mike Randall	
NL Editor	Mike Harbison	
ST Librarian	Mark Wolf	(605)-923-2841
XE Librarian	Ken Kayle	(605)-343-7289

President's Particulars

Ya get out what ya put in! Our work is cut out for us as individual users and as clubs or groups. We all know US support for the Atari comes from the user at this point. What am I trying to say? I am encouraging those of us who have possibly not been as involved as we could have been to jump in. I am thanking the guys in my club who have been self-motivated and done together what none of us can do alone anyway! It's rewarding to see a new user light up at learning how to operate that Atari. It's rewarding to support fine hardware and software.

The Atari Bit Byter User Club from West Germany contacted me by way of seeing RACE in AIM! I am in the process of getting the German text on the sample disk that was sent translated and will bring in the disk to demo some good stuff at the July meeting. Will be corresponding with them soon.

DON'T FORGET...the August meeting will be at Mark Wolfs' house so that the Great Modem Demo can be done as we had technical difficulties with the phone lines at the usual location on Soo San. Hopefully Mark's wife will survive the onslaught.

Here's wishing you all a good summer and we'll see you RACE drivers at the meeting.

Minutes of May's meeting:

Our May meeting began a bit unusually. When I drove up everyone was standing in the parking lot. Not because we were locked out, but because it was one of the first nice days we'd had in a while. After a little talking in the parking lot, we all went inside and set up the equipment. We discussed a new club flyer and Rick Burton showed one that was promising. After that we started discussing the old business. One of the things we needed to check on was the progress of the computer/music show at Westmore music. Because of their high vivibility location in the mall, we could get a lot of exposure as well as Westmore. Some of the member didn't receive their May newsletter before the meeting, so I called a few of the folks. Next on the agenda was demonstrations. The meetings have become more informal than they were in the past and most of the membership likes it that way.

The 8-bit owners viewed a list of public domain programs from Germany. Since there weren't very many 8-bit owners around, it didn't take too long.

The ST demos were assorted public domain, shareware, and commercial utilities. There were a couple of good desktop utilities: DC Desktop and Icon Desk. We looked at a few terminal programs but decided to wait until the August meeting when we'll demo modems and terminal programs.

Since it was such a nice day we took off early.

SEVAC

South East Valley Atari Connection meets the third Saturday of each month at 10 AM at 3234 S. Fair Ln. (Eaton Business Park, just off of 48th Street and Southern), Tempe, Arizona. Yearly membership is $12.00. Membership includes reduced prices on PD ST and 8-bit libraries and monthly newsletter. Club officers are:

President	Tim Barr	(602)821-1200
Vice President	Marc Dyer	(602)897-0314
Treasurer	Lee Whiteside	(602)962-9415
Secretary	Blaine Nelson	(602)969-1949
Disk Librarian	Mike McKittrick	(602)982-9065
Publication Lib.	Walt Schultz	(602)897-7098

Minutes for June 17 Meeting:

Summer again in the (dry) Salt River Valley! That means when the weathermen forcast "very warm" they mean over 100 and it's not hot until it hits 110. Stay cool with your STs.

This report should find its way into the August issue of AIM as the June-July issue last month was combined so that the cover date would be in advance of publication. You aren't being shorted- you will still receive 12 issues this year. By the way, congrats to AIM on the high quality and variety of programs on their monthly PD disk.

Tim subtly slipped in a remark that he is giving six months notice that he will not run for president (of the club) next year so we will have plenty of time to recruit a new one. Be thinking about it. That means _you_. Tim, thanks for your continuing dedication to SEVAC. We know its a lot of work.

New product news: Dave Small's prolific group is working on an Appletalk interface board to allow the attachment of ST's to an Apple network. This is in addition to his new 68030 accelerator board which should be available by now.

Marc demonstrated the PC Ditto II IBM emulator on his Mega. The installation is not simple. Avant Garde is now recommending soldering the connector onto the 68000 chip. The good news is, it works. Norton's SI test gives either 4.0 or 4.2 depending on its mood at the time. We watched a dazzling demo of the Quattro Pro spreadsheet which is the latest in the IBM world to challenge Lotus 123. PC Ditto II should cost around $300 here locally with dealer installation included.

Speaking of dazzling, that adjective might be more appropriate to describe the Laserdisc video of computer graphic animations we saw. Lee missed the meeting again but he made sure we had the opportunity to see this great example of the future of computer video. I wonder how long it will take to get that kind of power on our desktops?

The new version of Word UP has not yet arrived, so that demo has been pushed back to next month's meeting on July 21. See you then.

SPACE

Meeting Notices July 16, 1990 (7:30 - 9:00 PM)

All meetings will be held at the Camp Hill Shopping Mall Community Room until further notice. Currently all dates are set for the 3rd Monday of the month.

SAGINAW/TRI-CITY ATARI USER GROUP STAG

The Saginaw/Tri-City Atari UG meets the last Saturday before the 18th of the month, at 9am, at the Rudy Zauel Memorial Library, on the corner of Center and Shattuck in Saginaw Township. Upcoming meetings are June 16th, and July 14th, 1990. Officers:

President	Steve Volker	(517)865-9035
ST Librarian/Tech Advisor	LeRoy Valley	686-6796
Treasurer/Secretary	Marty Schmidt	792-6029
8 Bit Librarian	Ted Beauchamp	686-8872

Club dues are still only $20.00, which provides support for both the 8 Bit and ST, and full access to the club's PD library, along with a year's subscription to the Atari Interface Magazine. Check your mailing label, if you need to renew,(or haven't joined us yet!), DO IT NOW!

Meeting Minutes for June by Ted Beauchamp (filling in for Steve)

The turnout for the meeting was down slightly from the last several meetings. Things were starting to look good as we have seen some increases in attendence over the last several months. A suggestion was made to have some of the "regulars" call people the week of the meeting to remind them of the upcoming meeting. We can discuss this at the next meeting.

The demo portion of the meeting started off with a review of NEODESK. This program is one that has been out for awhile but there are a lot of public domain upgrades for it that keep making it better.

Marty showed how to assign icons to the files so you can run them from the desk top by selecting the icon. He also showed alot of the icons available. The editor seems easy enough to use and since the icons are not all that large, pixel wise, it would not take to long to create custom icons for your favorite programs.

The next program was DC DESKTOP, this program is simular to NeoDesk except it uses the GEM desktop but lets you modify it to your particular taste (for those of you with taste, that is). DC DESKTOP can use NEODESK icons plus the ones that come with it. It also has an icon editor, but cannot save edited icons in NEODESK format, YET anyways.

We were supposed to raffel off DC DESKTOP but decided to wait for a better turn out, (next meeting right guys).

Also at the next meeting we will discuss filling the President's position since Steve has had to resign due to time/responsisbility conflits. So please let's have a good turn out so we can be sure everybody is represented.

STANCE

President	**Claudette Tishcler**	**226-5644**
Vice-Pres	**Gary**	**521-2855**
Treasurer	**Kathi Koenig**	**892-0881**
Newsletter Ed	**Joseph Adato**	**449-6881**
Disk Librarian	**Barbara Carlstrom**	**371-2732**

The ST Atari North Coast Enthusiasts (STANCE) is an independent, not for profit Atari computer user group and is not affiliated with Atari Corporation, or any of its affiliates, in any way.

$12.00 per Year with a one time sign up fee of $13.00.

STANCE club meetings are held every third Monday of each and every month at B & G Electronics, (located at 15729 Madison Ave., Lakewood, Ohio 44107) starting at 7:15PM

ST CLUB EL PASO

The ST Club of El Paso is the only Atari ST and Mega user group in the El Paso area. The Club has proven to be a benefit not only to new users, but also to the "old hacks" of computing.

We now meet twice a month at the Richard Burges Library, 9300 Diana. The first meeting of the month is always the second Saturday of the month, at 12:30pm. Meetings feature demoes of the latest ST software, as well as help for the those that might be having problems with their computers.

Voting membership is $20 a year, Sponsored and Newsletter only memberships are $15 a year. To become a member of the ST Club of El Paso, call 915-821-2048, or write the ST Club of El Paso at 10953 Yogi Berra, El Paso, Texas 79934.

President	Tim Holt	915-821-2048
Vice Pres	Morris Miller	594-1906
Sec't/Tres	Joann Anderson	751-2710
Editor	Paul Stampfli	821-4861
Librarian	Norm Bates	593-6234

From the Prez...

Hello folks. Well, if you missed the June meeting, you didn't miss much. We were supposed to have a swap meet, and ALL of you got something in the mail about it, or read about it on the BBS's around town. And ALL of you were called. And did ALL of you show up? Heck no! 12 members made it to the meeting. 12! That's it. The worst turn out for a Saturday meeting in a long, long time! I was pretty embarrassed because I had been trumpeting about the Atari Swap '90 for about a month. And YOU people complained about the last auction. "We didn't get enough money for our stuff." And YOU people were asking me in December when the next auction was, and YOU people all told me that the swap idea was a good one, because you could set your own prices, and on and on. So, all 12 of us swapped things from TWO people! Dave Davis and myself had things to trade. One guy came from outside the club to the "Big Swap Meet". I can assure you he won't be back. He probably laughed all the way home, and told all his friends that have Ataris what a farce this club is!

While I'm up here on my soapbox, let me tell you about STE-EP. Great idea Tim! The club could use a BBS! Okay, you got a BBS, and it's the best damn Atari ST BBS in this area. ATARI ST ONLY! And how many of you are calling? Well, some of you that I know have modems aren't even trying! Give the darn thing a call. You paid for it! And you won't be able to get the disk of the month anywhere but STE-EP. Okay, forgot the number? Gee, I sent ALL of you a letter about STE-EP...915-821-9220.

Still up here on my soapbox...who wants to be president? That was a question that came out at the last meeting. Suddenly, all the heads in the room were looking out the window, at the floor, at the person in front of their's head. "Well, Tim, your doing a good job...why don't you do it?" Because I told you folks a month ago that it was time for new blood, new ideas. Who wants to be vice president? Secretary? Treasurer? Same response. But that's okay, cause when the club bites the dust because there was no new ideas, and no new imput, don't come crying to me for your refunds. Has anyone seen our librarian lately? or our secretery? This club IS NOT just a magazine you get once in a while. This is your darn club. If it starts to suck, it's because YOU LET IT! I realize it's summer, but what do we ask of you? ONE HOUR A MONTH! That's 1/720th of a month! By the way, for you folks that haven't made a meeting in a while, like 3 months or so, why the heck did you join to begin with? We are STILL meeting at Richard Burges Library, behind NorthPark Mall, at 12:30 pm on the SECOND Saturday of each month.

Next month, July, we will have a meeting. And this is the meeting that we vote on new officers. If I am the only one there, then I will vote myself absolute dictator, take the club money, buy myself dinner at McDonald's,(Because that's about all the money we have), declare war on the United States, surrender, and exile myself to a far away island, where none of you can find me. I will take the BBS and turn it into an electronic brothel. Now, you have had fair warning.

Until next month, Tim the Despotic

Salinas Valley Atari Computer Enthusiasts

President	Gary Klugman	758-4894
Vice-President	Dale Meisenheimer	449-7750
Secretary/Tresurer	Charles White	449-8986

Meetings 7:30 P.M., the first Tuesday of the month at the Salinas Community Center.

SVACE President's message

At our last couple of meetings we've had demonstrations of Wordflair and PC-Ditto II (working). As our PD demos we had demonstrations of LZH and Informer II. As long as we have volunteers to share their knowledge we will have interesting and informative meetings.

Dues are still only $12 a year. They include your subscription to AIM, our mailings, the monthly PD disk, and of course our meetings. As long as our commercial software holds out, we will be having free raffles for it as well. As time goes on, we hope to have more benefits to membership. There is strength in numbers.

If you know someone that uses an Atari computer, or is interested please bring them as your guest. See you at the next meeting.

SWAG

Southwest Washington Atari Group

The Southwest Washington Atari Group was formally created in April, 1985; prior to that, local Atari enthusiasts met on an irregular basis. The group has been holding its meetings at 6:30 p.m. on the last Sunday of the month (save July) at Clark County Fire District #5, Station 3 on 213 NE 120th, Vancouver, WA. SWAG started out with a large following of 8bit owners and as more and more members upgraded to the Atari ST, the membership has become mainly ST owners, but 8bit is still supported. Annual dues are $12 and SWAG can be contacted at PO Box 1515, Vancouver, WA 98668.

Allan Coker	President
Steve Traxler	Vice President
Gary Lentz	Sec/Tres/Librarian
Michael Calvin	Newsletter Editor
The Bear Cavern BBS	(206) 574-1146
Action Annex BBS	(206) 892-8969

SWAG Meeting 27 May 1990

Meeting started at 6:30 and was informal as usual.

President Coker opened the meeting explaining about the AIM Magazine. Secretary/Treasurer Lentz reported that he had figured a way to pro-rate the dues for all members to get an April renewal for all. Counted the cash, had enough. It was reported that we have now registered with Practical Solutions, D.C. Notes, and Computer Shopper.

Decided to buy 1000 count rolls of disk labels and resell them to the members at cost + two cents. No main program, so discussed Turtle Hard Disk Backup program, Cheetah File Copier, CodeHead Utilities, and IMG Cat from Wiz Works. Reminded members to continue to support Braun's Computers, and Atari software writers as much as possible. Discussed and cussed the availability of the latest series of Atari computers. Heard the STE is selling in Canada, that the STACY is shipping (sans batteries), and that the TT is still in limbo. Meeting adjourned to watch the gully washer rainstorm.

TACE

Tinker ACE of Oklahoma meets the first Saturday of each month at 1 PM (12:30 set-up time) in the Moore Public Library, 225 S. Howard, just off of SW 4th and I-35 in Moore. TACE can be contacted at 104 E. Northrup, Midwest City, OK 72110 or at the TACE BBS (405) 755-9561, 24 hrs., 3/12/2400 baud, running Oasis 4.3 software with over 60megs online storage. ST & 8bit support. Dues: Full - $20, Correspondence - $15. Dues are prorated at $1.25/month for correspondence membership and $1.66/month for full membership.

President/VP	Greg Ray	(405) 964-3765
Sec/Treasurer	Stephen Moffitt	(405) 732-8449
Librarian	Chris Hamilton	
BBS Sysop	Rick Spencer	
Technical Advisor	Ron Hamilton	(405) 387-5649

Secretary/Treasurer Report-June

Okay, to start off, I should get my STe pretty soon. Doesn't that make everyone happy? I no it would me.

To get on with business, we now have a little over $41 in the account (gees, we are rich), the BBS is finally up (it should be at a different number and sysop by the time you read this, the new number as yet not in existance, so I can't give it at this time), right now it is running Express! Pro! BBS ststem, please call me or another officer for the new number.

Other business, dues are due! If you have not payed up by now, it is probably to late (what am I saying, it is never too late, send in your money now!!!!). Also, as the BBS is no longer at the previous number (the new sysop is not quite willing to pay the phone bills like the old one was...) we shall probably have to help with the phone bills by contributing a small pittance at each meeting...

Also, by the time you read this, we will probably have appointed (I mean elected) the officers for this year...

'til next time, Stephen C Moffit

UNYACE
Upper NY Atari Computer Enthusiasts

The Upstate New York Atari Computer Enthusiasts (U.N.Y.A.C.E.) meet monthly at the New York State Electric and Gas building, on Old Vestal Road in Vestal, New York. Meetings are from 7 to 9 PM in the Auditorium. The next meeting date is March 12th.

U.N.Y.A.C.E. had optional dues of $8 per year. Monthly meetings are informal and open to all who are interested in Atari microcomputers.

Contact C. Todd Krissel, President, at (607) 729-4303 or call the Cygnus BBS at (607) 729-5506 (9600 baud, 24 hrs/day) for more information.

WACO
WESTMORELAND ATARI COMPUTER ORGANIZATION

Westmoreland Atari Computer Organization meets the second Tuesday of each month in the North Huntingdon Township Town House, Center Highway and Brownstown Road (just off Route 30 near the Hamilton car dealerships, Irwin, PA) at 7:30 P.M.

Founded in December, 1983, WACO boasts huge ST and 8bit PD libraries. Double-sided disks are only $3 for members, $4 for non-members. Disk catalogs on disk are only $2. The $20 annual membership ($24 for family) now includes a subscription to AIM.

WAUG!

The Washtenaw Atari Users Group meetings are held every second Tuesday of the month at 7:30 pm in the Michigan Union building on the campus of the University of Michigan on State St. at the corner of S. University in Ann Arbor.

Club dues are $15 per year and provide access to the PD library and subscription to AIM. Meetings feature demos of both 8bit and ST software and hardware. Nonmembers and questions are welcome. Officers can be contacted by calling Craig Harvey at (313) 994-5619 or by BBS at Molin's Den at (313) 420-0407.

The June meeting of WAUG was held on Tuesday, 6/12. The meeting was called to order at 7:35pm by President Craig Harvey who said this would be the annual Officer Election/Swap Night.

Craig discussed further developments in the plan to jointly sponsor an Atari show with the Windsor WAUG club. A definite date has been established as the first weekend in May '91 pending there is no conflict with any other shows planned at that time. A tour of the tentative location, a community college in Windsor, yielded positive results and the price to rent floor space is VERY acceptable. Officially, the show will be known as "The Windsor/Detroit International Atarifest."

Elections of officers took place immediately following this discussion. Craig Harvey remains as our fearless leader; David B moves to Vice President; Russ Crum moves from ST Librarian position to Treasurer; Mike Millage remains as the 8-Bit Librarian and Bill Rayl takes on the duties of ST Librarian. Pattie Rayl was a natural selection for Newsletter Editor; and Mike Olin remains as Secretary.

The meeting was adjourned at 8:30 pm and table space was made available for members to sell off their used goodies.

The July meeting will be held on 7/10. The feature topic will likely be Homespun Software which will include a demonstration of Craig's pet programming project, Diary/EdHak, and any other programs written by members.

WNY AUG

WNYAUG meets at 7:30 pm on the first Thursday of each month in room 116E, Bacon Hall at the State University College of Buffalo Campus, 1300 Elmwood Ave.

Dues are $15 for new members and $12 for renewing members. Send checks and correspondance to WNYAUG, PO Box 59, Buffalo, NY 14216.

Mega Click™

For the Atari Mega 2 and Mega 4* Computers

BEST ELECTRONICS

New Product Announcement

Have you ever felt that something is missing from your Mega* computer? Those who have used other brand computers for work or school agree something is missing! When asked, any touch typist who owns a Mega computer will tell you right away! It's the Click in the keyboard key they miss!

Best Electronics is happy to announce their new product for the Mega 2 and Mega 4 keyboards called "Mega Click." By the name you can tell what this product does. After searching the world for half a year, we've found a replacement keyboard switch that gives the Mega owner that positive tactile "click" response like most real-world keyboards!

Our test sampling of Mega owners, who have tried our test Mega keyboards with Mega Click installed, all say the same thing, "I want the product now!"

The installation of Mega Click keyboard switches requires the ability to unsolder and solder-in components in your Mega keyboard. We strongly recommend that installation be done by an Atari computer service center!

Mega Click keyboard switches are packaged in a **30 Switch Starter Kit** and a **10 Switch Add-on Kit**. Suggested retail for the 30 Kit is **$64.95**, and for the 10 Kit is **$21.95**.

Mega Click Products became available December 26th. Place your order now!

Innovative Concepts

Classic Atari 8-Bit Products

Easy Scan II - 1989 Antic Award Winner! The Graphics Image Scanner that saves files in standard 62-sector format! Supports graphic modes 8,9,10,11 and 15. Make banners, flyers, posters, and more! Requires. XL/XE/XECS with 128K RAM, and Epson capable printer. FREE Utilities!. SALE! - $79.95 (save $20!)

Print Shop Printer Drivers - Now use that "incompatible" printer with Print Shop and Print Shop Companion! Choose from the following printer drivers; Atari 1020 printer/plotter, Okimate 10, or the newer Epson LQ500/800 printers. (or other 24-pin cmpatibles) SALE! - $9.95 each

Memory Upgrades - All include RAMs and utiltilities (we have MANY others!). Call us!

128K - 130XE Compatible types, ALL on SALE:
For 800XL - $49.95 / For 65XE - $39.95
For the XE Game System - $39.95

XF35 Kit - 720K storage! Easy to install upgrade for XF551 Drives, for using the newer 3.5" disks! Fully compatible with; SpartaDOS, SpartaDOS X, and MyDOS. Also GREAT for HD Backups! SALE! - $24.95
Save! XF35 Kit, 3.5" drive & cage - $89.95

Happy Doubler - Includes FREE Utility Disk! Programs Happy 1050 to FULLY Emulate the U.S. Doubler, including skew format! Also programs drives D1: - D8:. SALE - $14.95

Immitator Controller - For Happy 1050, has 2 swirches to control Speed & Write Protect. Also has 2-color LED monitor. SALE - $34.95

IC1050 Controller - (For ALL 1050's) Same as above, but no speed switch. SALE! - $24.95

SIO Switch Box - Controll 1 computer with 2 drive setups, or share 1 drive setup with 2 computers! SALE! - $44.95

SIO Port Box - Has 4 SIO ports for solving the "dead end" problems. SALE! - $34.95

NOTE - We have even MORE products! For our latest Catalog (included FREE with orders), just send a S.A.S.E. (business size).

Atari ST/Mega Products

NEW! ARCIT & ARCIT SHELL (version 1.20) Commercial version with new features! Makes arcing and un-arcing "ARC" & "LZH" files, a snap! Includes; Printed Manual, FREE utilities, and more! Introductory Special - $9.95

Turbo BLITZ - The Unique backup/disk copier, that is Lightning Fast, on even commercial software! Uses two drives. Includes Custom Cable and FREE software. SALE! - $29.95

Xformer Cable - Now incudes FREE software! Run many of your Atari 8-bit software titles on your ST/Mega! And, directly from an 8-bit drive! Also allows 8-bit printer! Only - $19.95

ST/Mega RAM Upgrades - Installed Fast! We use only the BEST upgrade boards! NO future MMU problems! FREE utilities disk!

520ST: 1meg $125, 2.5 Meg $325, 4meg $500
1040ST: To 2.5meg $325 / To 4meg $500
Mega 2: To 4meg for only $300.!

NEW! Tick - Tock Clock - Internal clock for 520/1040, at a LOW price! Includes FREE utilties disk. Installed for only - $39.95

BLITTER Upgrade - For 520STFM/1040STF. (Call for details) Speeds up graphics! Have a "mini-Mega" for only - $75 (Installed!)

TOS 1.4 - We us only LEGAL ROMs! FREE Utilities Disk! Only - $125 (2 or 6-chip set)

Bomb Fix - Replace weak 74LS373 chips (2), with Superior 74AS373 chips. Fixes Random crashes on Accelerators, TOS 1.4, & MAC/IBM Emulators. Installed for only - $35

Note - ALL of the above internal mods INCLUDE installation and return S&H!
SAVE - Get two or more of the above mods, and save more! Others also available!
We also - Buy, Sell, Trade, and Repair Atari equipment. Please call for more information.

DISCOVER THE 4TH DIMENSION

Explore computer imaging and animation in time and space.

"PHASE-4"™ opens a universe in which you actually cut, copy and paste time itself. View your solid 3D objects in the past, present and future from any point in space/time simultaneously, cyclic polymorphic-transformation without point and face limitations.

"PHASE-4"™ a new modular Program Platform for the ST which totally eliminates the need for program control codes like those required for animation using such programs as Cyber Control™ from ANTIC™. "PHASE-4"™ is fully mouse and tablet driven programming system with keyboard support.

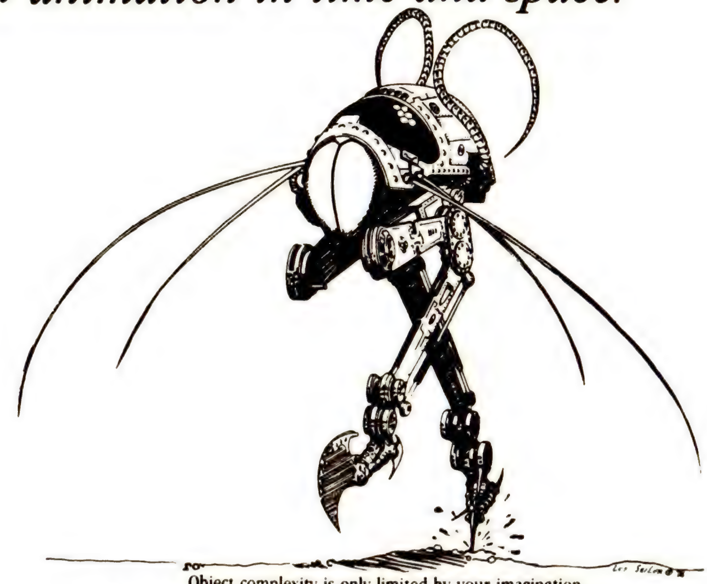
"PHASE-4"™ Modular system consists of 4 modular segments each independent yet, fully compatible with the others. Used independently, each module is a powerful package of programs, applications and accessories. When combined these modular segments form the most advanced and flexible Motion Control and solid object animation system available for the ATARI ST™.

"PHASE-4"™ ROSETTA-3D Translator/Viewer.

"PHASE-4"™ CHRONOS Keyframe Animation Studio.

"PHASE-4"™ PRISM Rendering Package.

"PHASE-4"™ KINETICS Player Package.



Object complexity is only limited by your imagination.

Can you create CAD objects like this one ? We do it all the time using **"PHASE-4"™**

ROSETTA-3D

Just as the original ROSETTA STONE allowed scholars to decipher the secrets of Egyptian hieroglyphics and translate them into other languages, ROSETTA-3D allows you to translate a wide variety of the most popular CAD, animation, and rendering formats. Files created by ROSETTA-3D can be transported to many different computer systems and modeling programs or may be sent to remote rendering services capable of creating photo realistic quality images for commercial use. You are no longer confined to the limits of one machine or your current animation software.

ROSETTA-3D

is much more than just a file translator, it is also a draft animation package. It allows you to quickly create and preview an object file you wish to animate in "PHASE-4's" CHRONOS motion control program, from any format that you select using the fastest wire frame and solid-polygon render available for the Atari ST™. ROSETTA-3D's simple point and click animation system features a unique three dimensional "object-marker" which enables you to design animation story boards for waiting clients in a matter of seconds. *Price $59.95*

ROSETTA-3D FEATURES: Eight Three-Dimensional Modeling/Rendering Formats Supported.

File Translation:

Direct translation from one format to another format. Translate objects which are too large to animate on your system. File size not limited by system memory size.

Import and/or Exports:

- AutoCAD Release 10 ASCII (DXF), Binary (DXB) for the IBM and Macintosh.
- CAD-3D Version 1.0 (3D) and Version 2.0 (3D2).
- PHASE-4 Animation Libraries (LIB).
- Sculpt-3D for the Macintosh and Amiga.
- Swivel-3D for the Macintosh.

... and output of P.I.X.A.R.'s Renderman RIB files!

Animation Capabilities:

- Fast Depth-Cue "Point Cloud" mode, for real-time playback of extremely large objects.
- High speed wire frame and depth-cue wire frame modes.
- Several solid-polygon modes.

Object limitations:

- Any combination of 65,000 vertices and faces per object.
- Total number and size of objects limited by memory size only.
- Animate objects with over 15,000 vertices and 30,000 faces on 1Meg systems.
- ROSETTA-3D expands ANTIC™'s original 3D universe in all directions to more than 400 times its original size.

DISK, FILE, and FOLDER Management Supported.

"PHASE-4's (ADEPT) Supported.

FUTURE FEATURES INCLUDED IN THE FORTHCOMING PROFESSIONAL PACKAGE.

- ATARI TT/68030 VERSION.
- PARSEC GRAPHICS 4768 SYSTEM (INCLUDING 8768 UPGRADE).
- SPECIAL 50MHz TI34010 version running at 6.25 MIP's with the standard 8MHz 68000 running in parallel.

PRISM-AGE

(Photo realistic Rendering Interpreter for Solid Modeling in Advanced Graphic Environments)

PRISM-AGE 1.0 is a powerful drawing program that runs in all ATARI resolutions plus 1024X768 4096 color mode. Not only will you find many of the features expected in a drawing program (such as boxes, circles, ellipses, area fills, cut, copy and paste, (with fine pixel editing), but also explores some rather unique areas of it's own! One of the more interesting areas of PRISM-AGE is that it uses PRISM-GTE (Graphics Tablet Environment) which supports the new Cal-Comp graphics tablet in four resolutions. Another feature of PRISM-AGE is that it uses all of the computer's memory to support multiple picture buffers. This can range from approximately eight buffers on a 520ST to over 110 buffers on the MEGA4 ST, which allows the creation of animations using the built-in slide-show features.

When used in combination with other PHASE-4™ programs PRISM-AGE takes full advantage of ADEPT* and the Image Systems ISAC High-Res color board. *Price $49.95.*

PRISM-GTE

(Graphics Tablet Environment)

PRISM-GTE is a fully functional graphics tablet environment designed to be used with all "PHASE-4"™ programs. This feature is embedded in all programs and available as a stand-alone program which can be used with most well-behaved ATARI programs. *Price $29.95 if ordered separately.*

ADEPT

**(Application Data Exchange ProTocol)*

Allows any "PHASE-4"™ program to utilize the features of another program while also sharing data and limited resources (such as memory and peripherals) in a multitasking or single application environment. (ADEPT imbedded in all "PHASE-4"™ programs.)

For more information write or call Lexicor Software Corp., 58 Redwood Rd., Fairfax, CA 94930. (415) 453-0271. Dealer inquiries welcome.

ATARI BULLETIN BOARD

by Bill & Pattie Rayl

News from Atari Corp.

With the recent announcement of Elie Kenan being brought in from Atari France to take over as head of Atari North America, Atari employees and users are hoping to see a revitalization of the US market.

Under Kenan's command, Atari headquarters may soon move from Sunnyvale. Places under consideration are rumored to be Boston or Toronto. Although no official decision to move has been announced, sources at Atari have indicated that it is definitely within Elie Kenan's power to move Atari HQ if he so decides.

A meeting in Sunnyvale of the heads of the international Atari divisions was concluded in mid-July, following closely on Elie Kenan's "fact finding" mission at Atari US and Canada facilities. Discussions reportedly included reorganizational plans for various divisions, including Atari US.

The STe is now available at local Atari dealers across the US. The machines were shipped without TOS 1.62 that supposedly fixed a TOS 1.6 problem with booting in medium resolution. Worse, there have been reports appearing from England, Canada and now the US that some STe machines are "trashing" hard drives. It seems a fair number of the computers have some sort of DMA problem that is causing bad data to be written to hard drives. The problem has not been resolved as of this writing.

Reports that the TT will be shipped as a 32 MHz machine rather than 16 MHz have been released by a number of sources, including Atari Switzerland and Atari Norway. Direct conversations with dealers in Canada indicate they expect a 32 MHz version of the TT as well.

Bob Brodie from Atari posted a message "direct from Sam Tramiel" that the TT will be a 16 MHz machine. Since the TT is expected to be available in Canadian stores by fall and shortly thereafter in the US, we shouldn't have to wait long to find out.

Charles Cherry has resigned from his position of ST-TT Applications Manager. According to Antonio Salerno, "Charles has left to pursue an opportunity to be a consultant, and Atari Corp. wishes him our very best for continued success in his career." Charles came to Atari in fall of last year after leaving his position as head of Antic Software.

WOA Fax Scandal

A phony fax supposedly from Bob Brodie was recently sent to various Atari developers asking them to boycott the upcoming San Jose World of Atari Show.

The fax, which reportedly has a number of un-Brodie-like typos and misspellings, seems to have been sent to accomplish three things:

1) To get Bob Brodie in trouble
2) To make developers sign up for the WOA show, which seems to be lacking the strong support other WOA shows have had from developers and Atari
3) To determine if Dave Small ceased writing for ST World. It seems Dave has not had an article in recent issues. The fax message brags that Dave Small is no longer writing for ST World. Dave has stated online that he had no intention to stop writing for the magazine, just that he had been extremely busy lately.

Developer News

CodeHead Software has released two new programs, LookIt! and PopIt! Billed as "The ultimate ST file viewer/binary editor," LookIt! features the ability to edit up to 32 files in memory simultaneously and an "innovative Mac-like user interface." PopIt! lets you assign "hot keys" to desk accessories so you can call up any DA with the touch of a key...sort of HotWire for your accessories! The package includes both programs and retails for $39.95. CodeHead Software, PO Box 74090, Los Angeles, CA 90004 (213) 386-5735.

Gribnif has announced a major upgrade to their popular NeoDesk. NeoDesk 3.0 can display icons and text simultaneously in different windows, has a new full-featured icon editor, supports low resolution color and lots more.

From the list of features and look of the program, going from NeoDesk 2.0 to 3.0 is going to be as much of an improvement as it was to go from the plain ST desktop to NeoDesk! This upgrade should be shipping soon, and a newsletter will be sent to registered owners of earlier versions. Gribnif Software, PO Box 350, Hadley, MA 01035 (413) 584-7887.

Branch Always has moved from Canada to the US and has recently released Quick Tools, a set of utilities for ST owners. The package includes an environment manager, CLI, a label printing program and much more. Also included is Quick Manager, a memory-efficient toolbox for storing the Quick Tools. The package retails for $19.95. Branch Always Software, 14150 NE 20th St., Suite 302, Bellevue, WA 98007.

Michtron, one of the first and largest companies to support the ST, is reportedly up for sale. At this time, there are bidders for the company, but no names have been announced.

If you're into weather forecasting, Forecaster III has been released for the ST. The program will "predict the weather, analyze current atmospheric conditions and display a weather almanac for the day." The program displays weather graphics from CompuServe and can create weather maps like those on local news from digitized radar data from WeatherBank and other services. Forecaster works on any color or mono system and costs $25. Randall Kopchak, 2233 Keeven Lane, Florissant, MO 63031 (314) 831-9482 (before 10 pm EST).

Online News

Support for Supercharger and Omniswitch has recently been added to CompuServe's AtariVendors Forum. Talon Technology is now online to answer your questions. Double-Click should also be officially online in AtariVen as well by the time you read this. Both Talon and DC recently opened their own Categories on GEnie.

Atarians who frequent GEnie should check out GEnie Lamp, an online newsletter for and about Atari users and the Atari Roundtable. The newsletter points out hot topics in the message bases, downloads of interest and lots more.

Atari Shows

Clubs in southern California will be hosting the Southern California Atari Computer Faire on September 15-16 at the Glendale Civic Auditorium. Show hours are 10-6 on Saturday and 10-5 on Sunday. Admission is $5. The Glendale show is considered to be one of the two premiere user group sponsored AtariFests in the country. Contact John King Tarpinian, 249 N. Brand Blvd. #321, Glendale, CA 91203 (818) 246-7286.

On the east coast, WAACE AtariFest '90 has been scheduled for October 6-7 at the Sheraton Reston Hotel in Reston, VA. Show hours are 10-7 both days and tickets are $5 for one day or $7 for both days. Children under 12 admitted free and user group discounts are available. The WAACE show is the other premiere US user group sponsored show! Contact Russ Brown at (703) 680-2698 or Charles Smeton at (301) 465-8628.

The Boston Computer Society/Atari is hosting a regional one-day show on October 27 from 9-4 at the University of Massachusetts Boston Harbor campus. Admission is $5. Twenty booths have been set aside for area Atari user groups. Bob Brodie from Atari Corp. will be there, and east coast developers Fast Technology, Gribnif, TidBit Software and others will be onhand. Call the AtariFest Hotline at (617) 527-4952 or Jerry Feldman at (617) 244-3025.

Shows Next Year

For those of you ready to begin filling in next year's show calendar, the Windsor/Detroit International AtariFest has been scheduled for May 4-5 at the St. Clair College of Arts and Sciences just off the Ambassador Bridge in Windsor, Ontario, Canada. Tentative show times are 10-6 on Saturday and 10-5 on Sunday. Ticket prices have not been finalized, but $2.50 per day has been mentioned.

This show is jointly hosted by the Windsor Atari User Group of Windsor and the Washtenaw Atari User Group of Ann Arbor, MI (an AIM participating club). Contact Brian Cassidy at (519) 966-0305 or Craig Harvey at (313) 994-5619.

SOME LIKE IT... HOT!

The CodeHeads announce:

HOT WIRE + MAXI FILE

- "When the START editorial staff first saw HotWire, our collective reaction was 'Wow!'"
- By far the **fastest, easiest way to run programs** on the Atari ST...from a floppy disk **or** from a hard drive!
- Build menus for all your most commonly-used programs. Load new menus with a single keypress or mouse click!
- New **Ledger** function records time spent in programs of your choice.
- **Passwords** may be used to restrict unauthorized access to certain programs.
- New **on-screen clock**, appears in the programs that you choose.
- Unlike other shells, HotWire works correctly with all programs, just like the GEM desktop.
- A **seamless interface** offers direct access to MultiDesk and MaxiFile.

- Full-featured file-handling utility lets you **move/copy/delete/rename/touch/lock/hide** any combination of files and/or folders.
- Runs as a desk accessory **or as a program** in any resolution.
- Incorporates **every** file/disk feature of the GEM desktop plus much more.
- Intelligent **disk copying** routines.
- **Rename folders** - Print directory listings
- Store **comments** about any file/folder
- Unique and intuitive user interface designed for easy, speedy operation
- **Customizable** for your style of use
- **Keyboard equivalents** for all operations
- Quickly select from up to 20 of your most-used paths.
- Even runs programs and loads documents.

Here's what our users are saying about HotWire and MaxiFile:

"The HotWire/MaxiFile combo has **changed the way I use my ST**."
"I haven't used the standard GEM desktop in weeks."
"Without HotWire and MaxiFile I'd be totally lost on the ST."
"...a tribute to **assembly excellence**." - "MaxiFile is **a wonder**!"
"HotWire and MaxiFile really 'beat up on the competition'!!"
"...you'll need to package it in asbestos because it is too **hot**."
"**AWESOME!**" - "Super!" - "a veritable software gem!"

HotWire Plus (includes MaxiFile)	$49.95
MaxiFile	$24.95
HotWire	$39.95
G+Plus - a replacement for Atari GDOS	$34.95
MultiDesk - load unlimited desk accessories	$29.95
CodeHead Utilities - a collection of useful programs	$29.95
MIDIMax - a powerful MIDI tool for performers	$49.95

Phone: (213) 386-5735. Visa, Mastercard, AmEx accepted. Shipping charge: US $2, Canada $3, Europe $5. CA residents add 6.5% sales tax.

Los Angeles, CA 90004

Right On Target

David Plotkin

I am sitting here writing this on my brand-new *Stacy*, the Atari portable computer. I drove down to Atari in Sunnyvale a few days ago and picked it up; this is one of the advantages of being a developer. It is certainly convenient to be able to be on vacation and continue to write, as well as do all the other things you can get done on a 1-meg, monochrome ST system.

Pluses and Minuses

There are a lot of nice things about the Stacy. For one thing, the keyboard is excellent, as good if not better than the one on my Mega. The screen is also superb—big and bright, easy to read for long stretches, even under poor lighting conditions. There are brightness and contrast controls, although I have found the best way to use them is to turn them both up to maximum and leave them there.

The downside of all this is that the Stacy is really not a "portable" computer, instead it is "transportable." The difference is that a portable computer is relatively light and can run for awhile on batteries. The Stacy is quite heavy, even without the hard drive (I got the Stacy 1, which contains one meg of memory and no hard drive). And the battery life is not great. There seems to be a lot of variation in reported battery life but all that is academic, because the new Stacy design eliminates battery operation as an option.

The rationale for this? It goes like this: Right now, Atari sells almost all Stacys to musicians, who have no perceived need for battery operation. The key here is the words "right now." What about later, when students, journalists and others will consider buying the Stacy?

Short-sightedness?

Do I think eliminating the battery option is short-sighted? You bet I do! It is even more short-sighted in light of the fact that my Stacy (which still includes the battery option) can get about two hours of runtime on a set of NiCads, which recharge right in the battery compartment of the Stacy, using the AC adapter.

More memory will run the batteries down faster, but there still seems to be a reasonable amount of battery life available. Of course, using a hard drive will dramatically shorten the battery life, because the hard drive runs all the time. This is a design flaw in the Stacy. MS-DOS portables equipped with hard drives have a smart circuit that shuts the hard drive down after a certain period of time when there has been no access. The Stacy does not have this circuitry.

Battery Options

Atari seems to have created a niche for a third party to provide something they do not (something Atari seems to be inordinately good at doing). A company called MultiByte has stepped into this hole, and is providing two different battery options for the Stacy.

The first is internal and goes in the Stacys battery compartment. It is conservatively rated at 2.5 hours on a 4 meg Stacy with a hard drive, which means it should last something over four hours if there is no hard drive present.

ATARI
Stacy4

Also available is an external battery, which is a small brick that plugs into the power connection of the Stacy. It is rated at 4.5 hours with a hard drive. They also make a quick charger that can fully recharge the battery packs in about an hour.

The same company also makes a case (didn't Atari anticipate the need for one of those?). The case is available in three sizes, from one just big enough for the Stacy, power supply and some disks to a giant-size case in which you can put two external batteries, the Stacy and power supply.

Other Stacy Options

There are lots of other things that will be available soon for the Stacy. A memory upgrade board from JRI will let you plug in one meg SIMMs to have up to four megs of memory. Unfortunately, the one meg (or more) that your Stacy comes with is not reusable in this board, so if you are planning to make use of this product, buy a Stacy with the minimum amount of memory (one meg).

Of course, with Spectre GCR you can turn your Stacy into a portable Mac, and the giant-size case mentioned above is large enough to leave the Spectre cartridge plugged in even when transporting the machine.

There are some rumblings about an internal Spectre GCR for the Stacy, which, if combined with PC Speed or pcditto II, could lead to a portable computer that is three (count 'em) in one.

I don't *know* that this will work since I haven't tried it myself. I *do* know the Stacy works fine with Talon's Supercharger, although this puts a crimp in the portability, since the Supercharger needs a power supply and is a separate box.

However, I concocted a cable that will draw the Supercharger's power from the joystick port, so you can power the Supercharger from the Stacy itself, shortening the battery life some indeterminate amount in the process. Realize that the Supercharger is not designed as a low-power device, so it may draw significant amounts of power. But then, neither of the two internal boards are designed as low-power devices either.

Portable Hard Drive

Another interesting idea from JRI is a portable hard drive. As a journalist, I am happy using a simple word processor (such as WordWriter ST) on the Stacy. This setup can be run easily from the single double-sided disk drive in the Stacy, with plenty of room left over on the disk for data files, as long as you don't need the Thesaurus and Spell Checker (real men don't use Spell Checkers anyway!). I can later transfer these files to my Mega, clean them up and print them out.

But what about when you *do* need a hard drive? What would be nice would be a compact hard drive you can leave in the office or take with you on the road. Ideally, it would contain a power supply for the Stacy, so you only have to plug in one thing (the hard drive), then connect the Stacy to the hard drive. With a configuration like this, you can leave the Stacy's power supply behind. This would cut down on the weight and space requirements of the Stacy system.

JRI is working on just such a device, and I have seen the prototype. It is small and light, and it contains the aforementioned power supply. The current model contains an 85 meg Seagate hard drive, but John Russell is experimenting with 125 meg Quantum drives, for some pretty impressive storage capacity.

Of course, some of these upgrades may never see the market. A lot will depend on Atari's ability to sell Stacys to the general (as opposed to Music) public. It really makes no sense to develop expensive hardware modifications for a machine that sells only a few units.

Still, it is encouraging that the ideas and entrepreneurs are out there, ready to move if the Stacy takes off. Only time will tell, but I will pass along one thing to you. That is, once you have had a taste of taking your Atari along with you anywhere, you won't willingly give it up. It's a nice feeling to sit down and work whenever you feel like it.

Further, since the Stacy has a plug for an Atari monitor (monochrome or color), excellent keyboard, hard drive connection, external floppy port and everything else present on a "regular" ST, you should consider it as your primary machine. It really makes a lot of sense that way.

MEMORY UPGRADES

FOR ATARI ST & MEGA II

	4 MEG	2.5 MEG	2 MEG	1 MEG
MEGA II	255.00	*	*	*
1040 ST	465.00	255.00	*	*
520 ST^{FM}	465.00	255.00	*	95.00
520 ST	465.00	*	255.00	95.00

Prices include RAM chips, installation, 6 month warranty! 24 Hrs turn around for mail orders, or 'while you wait' for carry in.

Don't take chances with solderless RAM upgrades. We use soldering on all connections of our upgrades to insure long lasting quality of contacts.

Memory Upgrade prices are subject to change due to market fluctuations.

TRACKER/ST

Tim Holt (El Paso)

Ratings (1 to 10)
Manual........9
Ease of use...6
Power........10
Overall rating: Recommended for serious work only!

I have to keep track of who is what in the ST Club of El Paso. This is a pretty easy job, as long as I have a big, old list of when everyone paid their dues. Mind you, most of the members of our club readily pay the renewal dues to the club, but some of them have to be reminded. So, out comes the big, long list.

Now, Paul Stampfli has seen my office, and he will tell you that finding *anything* in my office is nothing short of a miracle. So, usually, by the time I have to check the monthly list, I have lost it. So, I print out *another* list. ARRGGHH! Thank goodness Step Ahead has come out with Tracker/ST.

LONG NOTES: N

Tracker/ST is a mailing list/ mail merge/tracking program all bundled into one nice little package. Tracker is a nice database that can be used by any club, church or organization to keep monthly track of your members.

Suppose your club now has 250 members. Well, how will you know who has to pay dues this month? How would you know which persons can volunteer for demos? Suppose you wanted to be able to tell which persons were experts in a particular field, such as databases or public domain. How would you do it?

Well, Tracker can help you in all these areas.

Entry Screen

The entry screen is the main area where you enter data. The entries can be by their own defaults or you can set the type of data any way you desire. You can enter all the data yourself or you can easily set the program to import ASCII files.

Like any other database, you can list the data by any field: First Name, Last Name, ZIP Code, etc. All of the fields can be sorted, and for each entry, you can add personal notes. Suppose I wanted to say that club member Joe Smith has bad breath. Well, I can put that in the "personal notes" area of his entry.

All the entries can be updated at any time, with just a keyclick or two, and Tracker/ST has built-in RAM disk support to help speed up your session. There is also a powerful "Source Update" that lets you change all the info in all entries.

Suppose all your members moved to Canada. Well, instead of going through each entry and changing the country, you can just tell the program to change all the entries in "Country" to Canada. Swift and nasty. I like that in a program.

Countdown is the feature I like best. It keep track of all your members' subscriptions or when their dues are due.

Power Station

The Power Station is the area where you can print out Tracker reports, mail merges, labels, and it also contains a section to remove a batch of names with a single command.

What type of reports are available in Tracker? Well, suppose you wanted to know how many of your members lived in the state of New Mexico. Well, all you would have to do is tell Tracker you wanted a report of that, and out pops a list of all your New Mexico members.

You can also print out by last name (i.e., members whose last

Left Margin: 1
Labels Across: 1

Printer: EPSON
Paper Width: 80
Page Length: 60

name begin with "N") or ZIP Code, or any type of field entry. Very convenient.

You may also group your data. Suppose you wanted to group all the members of your club that live out of state—the grouping menu in the Power Station area lets you do that.

The mail merge section of the Power Station area lets you create and edit templates, import templates from other text editors, select templates to merge, rename templates and set various printers for your mail merge printings.

You can create *any* type of label you wish with Tracker. Most printers are also supported, including laser printers.

Finally, the last major part of Tracker is the Quick Letter.

You know, sometimes getting people to pay their dues is like pulling teeth. Quick Letter allows you to send a single letter to any one particular user. Joe won't pay his dues? Send him a Quick Letter.

The letter you want can be previously written...type in his name, and the letter pops out, all personalized and ready to be sent. A nice feature is that you can edit the letter being sent out without disturbing the template the letter came from. Tracker will also import ASCII text files for mail merging.

You can import files from DataManager ST, Zoomracks II and basically any database that can Export ASCII. With a little work, you can directly use Superbase data files in Tracker/ST.

Summing Up

The manual for Tracker/ST is no easy pickings. Prepare to sit down and really spend a couple of hard hours learning the program. Fortunately, there is a nice tutorial to walk idiots like me through the program. Remember: Tracker/ST is a program written for people who are serious about keeping track of members, subscribers, etc.

Just as WordPerfect is for serious word processing, Tracker/ST is for serious data management and not for the faint of heart. But, if you are serious about this type of material, Tracker is for you.

TRACKER/ST
The Ultimate Mailing List/Mail Merge/Person Tracking Software

Tracker/ST is an exciting new application which combines traditional mailing list capabilities with a full built-in mail merge system, database style reporting, and much, much more.

"This is a GREAT program and it has cut my mail list time by over half. I just wish I would have had this program a couple of years back!!!"

✦Full mail merge system *built in*, with word processing functions like cut & paste, bold, italic and underline.
✦Computer aided entry saves you thousands of keystrokes (*and lots of time*)--up to 10,000 keystrokes saved per 250 names!
✦Label settings for single, 2 and 3 across labels, and laser printed labels. Edit these and add your own for custom label formats.
✦One-step "subscription aging" automatically tracks remaining time in a membership or subscription.
✦Unique *Quick Letter* option for those occasions when you need to send a single "almost form letter." Great for follow-up letters.
✦*Unlimited notes* for each person in your files.
✦Easy importing of names and addresses from all popular data management packages into Tracker/ST.

SLM & DeskJet Support!

Color or monochrome monitor. One megabyte of RAM and a double sided drive required. Hard drive recommended.

Step Ahead Software

Q: What's the Fastest Way to Print a Page?

A: Use the Presswork's Assistant!

Stop wasting time loading a wordprocessor or desktop publishing program just to print your files. The Presswork's Assistant loads quickly to give you access to the printing features you need. The intuative **GEM** interface allows for easy control of margins, headers, page numbers, and other features--all with simple mouse-clicks. You'll never have to touch the keyboard again! Ideal for ".DOC", ".TXT", and "README" files, or most any quick printing job. Best of all, online **HELP** is always just a mouse-click away.

The Presswork's Assistant is available now for just $10.00 (US).

Nightmare On Lawrence St, Part 2

'Invasion of the Monster Drive'

Gregg Anderson (RACE)

In Part 1 of Nightmare on Lawrence St., I related the joys of having a hard disk crash and the importance of having a current hard disk backup (which, needless to say, I didn't have).

I learned that lesson the hard way, but that wasn't the only lesson brought to my attention that day. I was also forced to admit that I needed a larger drive, that 40 megs just wasn't cutting it anymore. What, 40 meg not enough!?! If I'd heard myself saying that a year ago I'd have had myself committed! But it was true...with the DTP & Easy Draw work I do (not to mention the word processing), my data and graphics files were getting way out of hand.

What were my options? I could get one of Atari's new Megafile 60 drives, but I wanted something larger than that this time, at least 80 megs. How about an ICD FAST drive or a Supra? All outstanding units, but I was thinking of something else. Something to simplify doing backups as well as giving me more storage room.

The problem was the backups. Currently there are only four ways of backing up an ST hard disk—with floppies, DVT VCR backup system, ICD's streaming tape backup or the new removable cartridge drives.

Forget about floppy backups, nobody can afford the kind of time it takes to backup 80 megs of data to floppies. The VCR backup looked interesting, being affordable and far faster than the floppies. Sadly, this unit's received mixed reviews and restoring data from it is said to be somewhat slow.

ICD's tape backup looked *very* good, being both fast and efficient. In fact, it's probably the best overall backup system currently available for the ST. Only two things kept me from buying one—its cost (over $700) and the fact that it's strictly a backup device. Strictly a backup device? Isn't that what I wanted? Yes, but there's something new out now—the removable cartridge drive.

The Removable Hard Drive

The SyQuest SQ555 is a 44-megabyte RLL, removable cartridge drive that works with any hard disk-compatible computer system. It's fast, reasonably quiet (its sound is unique), and just about foolproof. Best of all, it can be used as a boot disk, data disk or backup disk. In short, it can do anything a fixed hard disk can do *and* handle high speed backups for long term data storage.

Another advantage to the SyQuest is that you can have cartridges dedicated to Mac, IBM or ST use. Plan on working with your Spectre GCR today? Just install your Spectre cartridge and don't worry about it. IBM? Plug in your MS-DOS formatted cartridge and go to town. Each can offer 44 meg of emulation-specific storage and eliminate the possibility of confusing your emulator partitions with your ST partitions (usually guaranteed to ruin them).

How is it as a backup device? How about a desktop "drag" copy of 22 megabytes from Drive H (Seagate) to Drive D (SyQuest) in just under nine minutes? With that type of speed who needs copy programs?

Are there drawbacks to the SQ 555? Yes, for one thing the drive is far from inexpensive, averaging from $650 to $850. Another is that the current cartridges store only 44 megabytes each and cost anywhere from $95 (mail order) to $140 (retail). In contrast, ICD's backup tapes are in the $35 range and store up to 155 megabytes. Worst of all is cartridge availability that varies according to the manufacture's whims, ranging from plentiful to scarcer than hen's teeth.

Need I bother to say I picked a SyQuest? Anyway, with that out of the way I started looking for the rest of my dream drive. I've tended to be partial to Segate drives in the past and saw no reason to change now.

Since I was starting from scratch, I picked an RLL drive (more storage and faster data transfers). I decided on an embedded SCSI drive to eliminate the need for a separate controller card and picked a Segate ST296N mechanism with 84.9 megabytes of storage (grand total for both is just shy of 130 megabytes of storage).

There are two basic enclosure designs—the monitor design that sits under the monitor like Atari's Megafile or ICD's FAST or the shoebox, an IBM design that sits beside the computer like the older Supra or Astra designs. I'd started out wanting a 'monitor' but settled on a 'shoebox' design for its easier access (to the internal components) and its longer DMA cable. Besides, they were out of 'monitor' enclosures when I ordered <grin>.

While my unit was ordered

from ABCO Computers in Florida, similar units are readily available from Carter Graphics, Toad Computers, Tech Specialities, ICD and a host of others. All offer similar performance, so pick your supplier on the basis of price (anywhere from $1200 to $1400), quality and support. I can't emphasize support enough; it can make the difference between success and disaster.

Making the New Drives Work

Hardware-wise there are a few things you'll want to check before using this type of drive. Due to delayed shipments, my unit wasn't preset by ABCO for 'out of the box' use (I knew about this in advance and ok'd it since I wanted to set them myself for this article). As a result, my unit arrived with the drive jumpers still factory configured rather than "ready to use." In other words, everything was messed up.

I opened the unit and went to work on the jumpers and connectors. The first things you need to check are the drive resistor packs (used to terminate the drive daisy chain). You'll need to remove the packs from all but the last drive in your daisy chain...leave the pack on the last drive though. For drive systems with multiple controller boards ignore everything I've said; you're on your own there.

Now look for the SCSI ID jumpers on your drives. These are 16 small wires set into 2 rows of 8. You'll get a small booklet with your drives that explains where to install the provided jumpers to tell the computer the ID number of the drive in the daisy chain. The main thing is to be sure the jumpers are in *exactly* the right positions, assigning that drive as #1, #2 or whatever in the daisy chain.

Remember, for the ST we want "No Parity" on the drives. Since most drives come from the factory with parity "On," you'll want to remove the jumper from the parity wires if it's present. With all jumpers correctly set, your formatting software should have no problem recognizing the installed drives. If it can't, you need to recheck the jumpers and resistor packs on the drives. Normally this isn't a problem, as most ST units are shipped pre-set for use. Read the booklet that comes with your drives when in doubt. If that doesn't help, it's time to pick up the phone and take advantage of the dealer support I mentioned earlier.

With any hard disk using an ICD Host Adapter, the software of choice has to be ICD's own. ICD's format software is impressive, automatically sensing the specific hard drives installed and providing the optimum format for them. It easily recognized the two drives installed in my system and allowed me to format, optimize and partition each one in turn (only 5-1/2 minutes for 44 megs). By the way, when selecting your disk partitions be sure to checkmark each partition. If you forget to do this the partition will be created but the ST won't recognize it it.

A word of warning here. ICD's default interleave is 1:1. While the SyQuest thrived on 1:1, the Seagate was strangled. Instead of being blindingly fast it bare-

Hard Disk Systems to Fit Every Budget

- All systems are complete and ready to use, included at *no extra cost* are clock/calendar and cooling blower(s)
- All ABCO Hard Disk Systems Are Fully Expandable (you are *not* limited to two drives only!) All cables and connectors installed
- Rugged Seagate Hard Disk Mechanisms!
- ICD Advantage+ Host Adapters!
- OMTI High Speed Controllers

ABCO Computer Electronics Inc.
P.O. Box 6672
Jacksonville, Florida 32236-6672
(800) 562-4037 or 904-783-3319
9AM – 8PM (EDT) Tues.-Sat.

ly qualified as a snail with a paltry 57 K/sec data transfer rate. Even worse, I learned that at this setting I was in danger of loosing data with every access.

At ABCO's suggestion, I reformatted it with a 2:1 ratio and the data transfer went up to around 500 K/sec. Basically you need to ignore what you've heard about the ST handling 1:1 interleaves and try interleave settings until you find the ratio that provides *you* with the best performance. This is where ICD's excellent RATEHD program is invaluable.

You'll have to select the drive you want to use as your boot drive. Select that drive as ID #0 and LUN (Logical Unit Number) #0 (ID/LUN 0,0). This is with an embeded SCSI drive or a system with a single controller board, units with secondary controller boards will require additional steps. I picked the SyQuest as ID/LUN 0,0. The Seagate was selected as ID/LUN 0,1 (i.e., second in the daisy chain). Needless to say, how you configure your system is up to you.

ICD's boot software is as impressive as their formatting package, offering a custom cashe to speed disk reading and writing. It even provides the option of write-verifying all disk writes, something no other program offers. Best of all is that it was written with removable cartridges in mind, automatically sensing a cartridge swap and re-reading the directory of the installed cartridge. All in all, I have to admit the current ICD software package is possibly the best I've seen to date. A pity it only works with ICD hardware.

And that's the story thus far. I had a lot of fun (and more than a little frustration) putting this monster together. But I have to report it's performed flawlessly and made me wish I'd made the upgrade years ago. If you're serious about your ST and need expanded storage combined with simplified backups, give this combination the once over. I think you'll come to the same conclusion I did—the SyQuest SQ555 and the standard hard drive of your choice make the perfect combination.

[Be sure to watch for the final sequel of this exciting trilogy, 'The Beast Reborn', coming soon to a theatre near you.... Would you believe a newsletter? How about scrawled on a local bathroom wall?

** ** **Introducing the GOOD Backup Utility** ** **

GOOD
Backup
Utility

Specially designed for keeping complete backups of your hard disk partitions. Backup disks are TOS compatible.

Intelligent Updates!

Update your backup every day! Only new & modified files are copied, and the old files are deleted to make room. As good as an image - but done in less time.

Great for use with Cartridge Disk Drives

All this for only:
$29.95
Suggested Retail Price,
(in massachusetts add sales tax)

Tid bit

Tidbit Software Engineering Company
25 Wood Lane, Maynard MA 01754
Telephone (508) 897-7429

Features of the GOOD Backup Utility:

- Copies data from a selected active disk partition to a pile of ordinary TOS readable backup disks.
- A backup can be interrupted before it is done, to be completed later.
- You can keep your backup saveset on floppy disks, removable cartridge drives, or keep a shadow partition on another hard disk unit.
- No folder limit on backup or restore.
- Any file that cannot be fit on a single saveset disk will be split up across as many as needed.
- Updates to the backup will only copy the files that have actually changed. If you update your backup frequently, the update goes very quickly.
- The GOOD Backup Utility can format floppy disks for you as additional disks are needed.
- Lost or damaged disks in the backup saveset can be replaced without replacing the entire backup saveset.
- Checksums are used to verify that the files on the active disk drive and on the backup disks are all intact.
- Write back disk cache technology is used to make all the copying go fast.
- Backup can be by partition, or select specific files by including or excluding a set of wildcard file specifications.
- Files can be restored as an entire partition, or by wildcard selection. When restoring an entire partition, only files that are actually missing need to be restored.
- A reference list can be produced for locating individual files within the backup saveset.

Pressing the HELP key will provide additional information at every step.

If your dealer doesn't have the GOOD Backup Utility, you can order it from the Computer Bug, 113 Russel St., Hadley, MA, 01035 (413) 584-7722

Screen Drawing Program
Part II

Ed Smith (SPACE)

In the first version of this program (see the May '90 issue of AIM), the right mouse button was used to exit the program. In this version, a box is created and labelled "Quit." Clicking on this box will cause the program to return to the desktop.

Let's talk in general about boxes. A typical box contains text that informs the user what can be achieved by pointing and clicking on the box. In this program, we have defined four boxes to Quit, Save a file, Load a file, and ClrS (clear the screen). Abbreviations have been used to keep the box size to four letters.

After clicking, the box is highlighted (inverse video) and this is set by an IF instruction that checks mouse xy coordinates against those of the box in question. Then the desired function is performed. This pointing and clicking ability is one of the niceties of GEM.

Each box is the same size (4 letters wide), therefore we can use only one string definition for all boxes. The box string is defined using the GFA Get instruction as follows:

`Get 0,0,w4%,h4%,x4$`

This is a box defined in the upper left corner at coordinates 0,0 with a width of w4% and a height of h4%, and this screen information is placed into string X4$. In addition, the string must be filled with binary ones to permit inverse video to occur when using the Put instruction.

These ones are accomplished by the following:

`Mid$(X4$,7)=String$(len(x4$),255)`

The student of binary numbers knows that 255 is binary 11111111. The Put instruction is then used to put this same string on any of the four boxes, since we made them all the same. A typical Put is:

`Put Xq,Yq,X4$,6`

The Xq and Yq are the upper left coordinates of the Quit box, X4$ is the string with all the ones and 6 means the Put action will "exclusive or" the data on the screen to produce inverse video.

The Save operation is done by executing a Binary Save on the portion of the screen below the color boxes. Remember, each color box represents one of sixteen color registers in low resolution mode.

The user clicks on the color box, and the plotted color is derived from that box. It is similar to an artist dipping his brush into the desired color on his palette. The Binary Save operation uses an offset of 4950 bytes into the 32000 available for screen RAM, to save only the picture material developed by the artist.

The Load option also uses a binary load into the lower portion of the screen RAM. The ClrS (Clear screen) option clears the entire screen and then replots the 16 color boxes and reestablishes the four functional boxes for Load, Save, Quit and ClrS.

[Ed Note: We've included the source code and runnable versions of DRAW2.PRG on the September AIM Disk of the Month.]

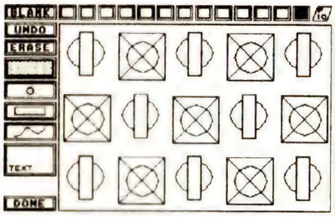
For your budding journalist or mathematician:

KIDPAINTER

a unique graphics design program with a focus on creative thinking skills!

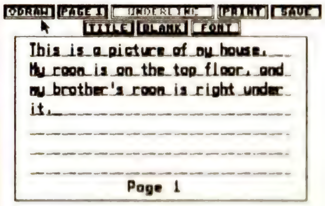
- ☆ experiment with patterns
- ☆ create and play onscreen puzzles
- ☆ blind drawing and other unusual and challenging activities
- ☆ print your own coloring book, portfolio, or poster
- ☆ block, mirroring, text: sophisticated functions--but easy to use!



KIDPUBLISHER *PROFESSIONAL*

a desktop publishing program for young writers

- ☆ publish your own illustrated stories, posters, etc.
- ☆ four built-in font styles, and parent or teacher can create a fifth
- ☆ extensive drawing program
- ☆ title page, LOAD options
- ☆ word wrap feature, underlining, and mouse control of cursor



This is a picture of my house. My room is on the top floor, and my brother's room is right under it.

Page 1

Both recommended for ages 5-11. $35 each.
Also available: Super Kidgrid for ages 3-11, $25.
Atari ST/STe/Mega with color monitor required.
Printer must accept an ST screen dump.

See us at WAACE AtariFest '90!

Your child will **love** these programs!

Quick ST II version 2.1

The fastest screen accelerator at any price!

No other software or hardware upgrade speeds up screen redraws as fast as Quick ST II or for less money. Not a blitter. Not a 16MHz upgrade. Not Turbo ST 1.8. Forget the high price alternatives. Choose Quick ST 2.1. Your ST will run faster as a result. For only $19.95.

- speeds up GEM text and graphics operations, and VT52 text output
- speeds up the desktop font, 6x6 font, and even GDOS fonts
- requires less than 25K of memory and runs on any ST or STe
- supports all screen resolutions, plus the Moniterm monitor
- supports custom desktop patterns, pictures, and fonts

Turbo ST is a trademark of SofTrek and sells for more than double the price!

The reviews are in and Quick ST II gets top marks!

"my ST has taken another step closer to being the perfect personal computer. ... makes using an ST a real joy. ... amazingly FAST" - Nick Berry, Puget Sound Atari News, 4/90

"Nice job, Darek" - Darren Meer, ST Informer, 5/90

"If, however, you do not have Turbo ST yet, then Quick ST from Branch Always Software seems to be a better choice, and not only because of the lower price. ... Buy it"
- A. J. Wrotniak, Current Notes, 6/90

Quick ST II was written by Darek Mihocka. 100% assembly language. Quick ST II costs only $19.95 at ST dealers all across America, and $22.95 in Canada. Or order directly. Add $3 for s/h. We accept VISA.

Now save $5 on Quick ST II version 2.1!!!

When ordering direct, clip this ad for a $5 discount towards the purchase of **Quick ST II** or our **Quick Tools** utility pack. Each is only $14.95 U.S. with this ad. Add $3 for s/h in the U.S., or $5 elsewhere.

Branch Always Software

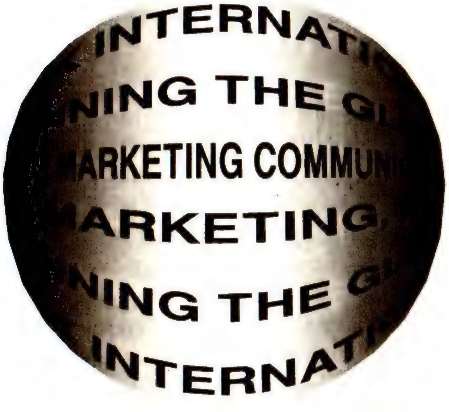
Box 2624, Station B, Kitchener, Ontario, Canada N2H 6N2

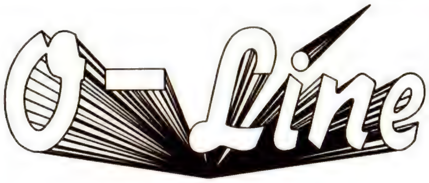
CALAMUS OUTLINE® ART

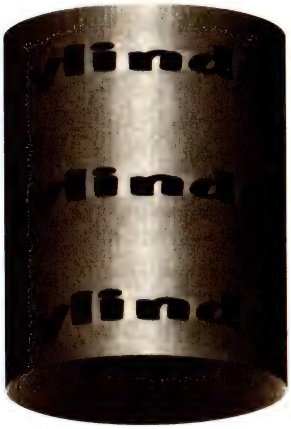
OUTLINE ART is a vector- oriented, graphic generation tool. Multiply your creativity through the many functions which you will find in this program.

OUTLINE ART supplements the CALAMUS DTP system with a great number of new functions and effects. A extract from the extensive list of functions include:

- A user interface, quite similar to that of CALAMUS.
- Complete Vector Graphics Editor for lines, Bezier curves, control paths etc..
- Capabilities to generate freely-definable raster areas.
- Creation of rayed objects, ie; from a font to a central point.
- Nearly unlimited possibilities for the manipulation of text, characters and text attributes such as:
  - rastered, transparent, outlined, rotated, stretched, compressed and cursive styles...
  - circular text and text along a freely-defined vector path...
  - projection of raster areas and text on vector outlines...
  - conversion of text into vector objects...
  - kerning functions...
  - Functions can be freely combined and applied to all CALAMUS fonts.







ISD MARKETING
ISD MARKETING ISD MARKETING ISD MARKETING
ISD MARKETING

- Integrated, fully programable calculator with a pre-defined and extendible library of transformations such as:
  - shift, rotate, mirror, enlarge/ shrink, project onto a sphere (globe, cylinder, cone), etc..
  - An intelligent clipboard and copy functions, allowing the automatic generation of transformation sequences.
  - loading and saving in .CVG format (CALAMUS Vector Graphic), making possible the integration into and optimal printing through CALAMUS on all supported output devices in all resolutions.

Now included!
Convert 2X,
our new Conversion program
CVG (Calamus Vector Graphic)
to EPS (Encapsulated Postscript)
or PS (Postscript) file format.

Note : DynaCADD, our complete 2D and true 3D Computer Aided Design and Drafting Package, allows the importation of Calamus Vector Graphic format, (CVG). Which can then be output through all output options supported by DynaCADD, ie: CAMM-1, Plotters etc,... An excellent solution for the Sign Making Industry.

Calamus Outline Art has a suggested retail price of US $289.95.

For more information or to place your order, contact your local Atari Dealer or contact us directly at: ISD Marketing, Inc., 2651 John Street, Unit #3, Markham, Ontario, Canada, L3R 2W5, Tel: (416) 479–1880, Fax: (416) 479–1882

Pirates—An Alternate Viewpoint

Billy Bob Ray

With an assist from Stormy Knight, working undercover from the Tall Timber BBS.

Opening Words from Tim Holt

The following article was received anonymously at an ST Club meeting. The author(s) dared us to place it in AIM, and we have submitted it. Whether it gets published is beyond our control.

I do know who goes under the handle "Billy Bob Ray" but I will not reveal this person's name. I do think however, that you should notice they do use their "handles" and not their real names, as if they do indeed realize they are breaking the law and don't want to be responsible for their actions.

They DO say that pirating hurts the ST community, and still they do it. Then, they go on to say they actually do good for the computer community by providing this service! I wonder if they go to the local car dealer and steal the cars before they buy them? Or do they eat a Big Mac BEFORE they pay for it? I think not.

But, I will let you be your own judge. Personally, I think the article says much more than the authors intended.

Words from the Author

Mr. Holt,

I address this to you 'cause you're the big cheese at the ST Club. This article was written to try to voice an alternate opinion to a lot of "high and mighty" folks who write a lot of drivel for these magazines. Now let's see if you're as brave as everyone says. It'll be interesting to see if this appears in AIM, or if it ends up in your trash can. Either way, we'll see.

Billy & Stormy

I'm a pirate. I make unauthorized copies of software. I use an Atari computer, but I also use MS-DOS/IBM through PC Ditto, and MAC with the help of our friends over at Gadgets. I pirate it all; without shame or remorse.

I guess I should start off with some definitions, first of all the term "pirate" has been around as long as I can remember. It has come to mean one who makes unauthorized copies of software, never pays for it, and worst case, gives it to as many people as he knows, or puts it up on a BBS for the whole world to have. These are the people that hurt computing by driving away software manufacturers. Pirate, large "P."

That's not what I do, exactly. I am the kind of pirate who makes unauthorized copies of software and tries it out. If it's useful and I use it, I go buy it. (Sounds a lot like "shareware," doesn't it?) This is brought about by the very small number of usable "demos," and the almost non-existance of software stores that will let you actually *test* a program before you buy it.

Most stores will be happy to show you a program, but don't want you on the machine long enough to get a feel for the software; or you buy it, take it home, and find out you have to expand or replace the memory, hard drive, monitor or what-have-you.

Now for a comment on demo versions of software...*keep it coming!!!* Some of these demos are excellent and really give the user a "feel" for how the software works.

On the other hand, some are so crippled you can't tell how they work. I'm not sure if the developers that make extremely crippled versions are afraid they're going to lose something or if they're afraid that, if the public sees how it really runs, they won't buy it. Complete versions that self destruct or de-activate after a set period of time (10-20 minutes) are my personal favorites.

As for those that don't make demos, well, you are either incredibly stupid or lazy. Either way, your business is probably self-limiting and won't clutter up the shelves for too much longer, anyway. This is what is happening, the shape of the market of today...and tomorrow.

Generally I buy mail-order. It's more impersonal and you run less risk of being "noticed" in your area for having a lot of software. Everyone who has a lot of software is tempted to be a Pirate and is generally accused of being a "Pirate." Many are pirates, some are Pirates.

Don't kid me, how many of you have been approached by others wanting a copy of...whatever? And how many of you have approached others for a copy of... whatever...because you just couldn't bring yourself to plunk down $129.95 or more without really knowing if and how the darned thing worked?

Now before I get a lot of you pompous "folks" out there having heart attacks, strokes, hangnails, hemorrhoids, mass hysteria and other terrible things, I want to try and explain my position.

I am not rich. I have a computer and it's a good one, but I'm not rich. I don't take unfair advantage, but I am cautious and conservative. That's why I'm a pirate. I never, ever buy a pair of shoes without trying them on, and I would never marry a woman without seeing if, and how, she can "cook." And I am sick and tired of pirates getting a bad name and being given a hard time.

Software manufacturers have a responsibility to the user. They "should" make a quality product that *works* and sell it for a *reasonable* profit. I recognize we all have to eat and live...but not at my expense, you don't.

How many programs do you have that collect dust in the corner? The boxes have wonderful color and graphics, the blurbs on the package still get you excited. But the damn thing doesn't work, might even crash when you try to use it. A lot of hype with no substance, and it cost you $30, $40, $50 or even more.

Let me give you a couple of "for instances": I "got" a game from a friend. It was supposed to be the neatest thing since the pop-top can. It was an absolute piece of junk. No matter how hard I tried, I just couldn't lose. I formatted the disk.

I "came across" a program the other day. It didn't look too exciting, but I got it on a whim. I made an unauthorized copy of it and tried it out. I ran it the first time and it was wonderful. I immediately put it away. (I get scared when I get excited about something...it usually costs me a bunch of money.) I tried it again the next day and it was even better. I bought it the next week when I had a chance to get down to the local dealer.

I told a friend of mine about it, gave him an unauthorized copy, and he bought it the next day. There isn't a chance in hell he would have ever noticed it, let alone bought it, if he hadn't heard about it from a friend and had a chance to try it out.

So let's examine what we have learned from this little drill. Company "A" failed to rip me off. I tell my friends it's a piece of junk. I don't know how much money my mouth is costing them, but I hope it's a lot. Company "B" sold two copies of its software. Not an earth-shaking event, but it's two more copies than would have been sold had it not been for the pirates. How many sales have been lost due to Pirates, I don't know, but I know two sales were made because of pirates. (Notice the "p's.")

So what am I trying to say? I know Piracy hurts the market—the smaller the market (like the ST), the bigger the hurt. But I also know that, used correctly, piracy helps the market. Maybe not as much as Piracy hurts, but it does help. Hey, I'm not saying it's right, it's just another viewpoint.

By the way, I'll send this to one of the local ST club officers, just to drive the whole crowd crazy. Should be interesting to see who they blame for this one...

Piracy in Pennsylvania

John Hileman (SPACE)

By now, I guess most of you have heard about the shame of Pittsburgh. For those of you who haven't, the recent Pittsburgh Atari Show sponsored by PACE was tainted by blatant piracy on the part of at least some attendees.

Allegations have centered around members of a rival Pittsburgh group called the Atari Elite (by the way, it's my understanding that this group is not registered with Atari).

Various reports have indicated that apparently this group is engaged in so-called software rental among the members. Well, in these days of the Blitz cable, copy protection is easily overcome. So in this writer's book, rental appears to equal stealing.

One of the sad parts of this is that at least one writer has reported the unfortunate events in Pittsburgh have cast an unwelcome shadow on other Atari Users Groups in Pennsylvania, including SPACE.

I don't agree. I have never heard a bad word about any of the other Atari Groups in this state including PACE, the Spectrum group from Erie or, ABE's Aces. I don't think any of those groups or SPACE has a stigma to overcome as a result of that show. To my knowledge, eight SPACE members attended the show and together spent over $1,600 on hardware and software.

A number of writers have mentioned someone returned some software to Michtron for a refund, reportedly because he could get it from a friend. Just in case there has been some misunderstanding, one of our members purchased a copy of Michtron's Canvas program for $40.00 and, after discovering from a fellow SPACE member that a competing vendor, Joppa, had the same program for $19.00 less, returned it to the Michtron booth for a refund.

Piracy is a problem that is not just in the Atari world. However, because of our relatively small user base, it's important that Atari owners throughout the world do their part by not "borrowing" software and by buying the programs we use, paying Shareware fees and, in general, being honest people.

It's my hope that I speak for all of our members in this: I'm proud of the statement published every month in or local newsletter, SPACE Probes: "Piracy will not be tolerated at any SPACE meeting or SPACE related activities."

Wordflair

Gary Klugman (SVACE)

I discovered the wonders of word processing in 1983 on my Atari 800XL. With the AtariWriter cartridge and my 1027 printer, I could proof my writing for content, spelling and punctuation.

I remember bringing my first "word processed" document into the office, because I was so amazed by the power of this new tool. The advent of the spelling checker made my life much easier and increased the life of my now well-worn dictionary.

Browsing over my software library now, I have at least 16 different word processors for the Atari 8-bit, or, but there always seemed to be a new operating system or new features I thought I needed.

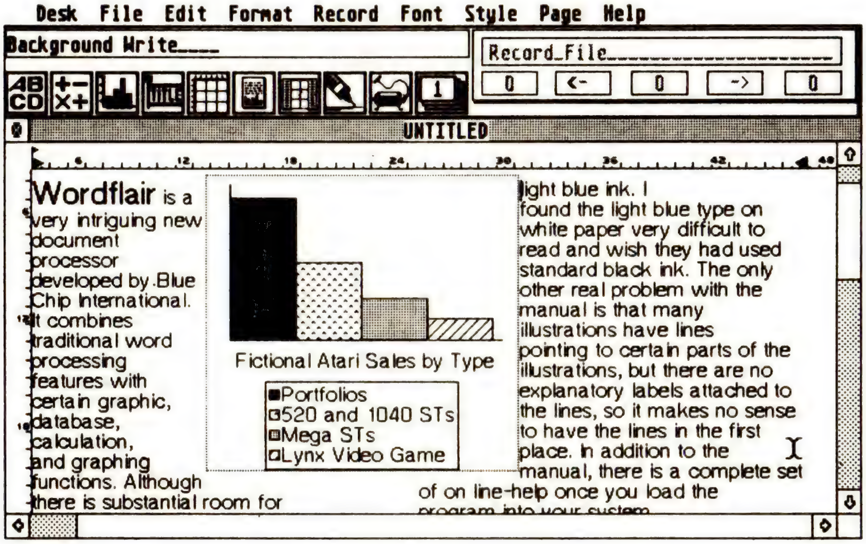
We've had word processors and desktop publishers for years, and now we have something inbetween...the document processor.

Actually this is a direction the high-end (expensive) word processors have been heading toward for some time. The document processor allows you to include graphics in your text. It doesn't have all the features of a desktop publishing package, but it has much more than the traditional word processor.

Wordflair's Features

Wordflair is just such a processor. It comes with a professional manual, Atari's GDOS documentation and 3 disks. One disk contains the Wordflair programs. The other two disks have Atari's GDOS, a modified version of CodeHead's G+Plus and printer drivers.

It seems the more features a program has, the longer it takes to master. Wordflair is full of features, and so it isn't unfair to say there is a long learning curve. Not that it can't be used simply as a plain word processor, but that would be like using your RV to commute to work. Your RV would do the job but would be overkill.



Wordflair is a very intriguing new document processor developed by Blue Chip International. It combines traditional word processing features with certain graphic, database, calculation, and graphing functions. Although there is substantial room for

light blue ink. I found the light blue type on white paper very difficult to read and wish they had used standard black ink. The only other real problem with the manual is that many illustrations have lines pointing to certain parts of the illustrations, but there are no explanatory labels attached to the lines, so it makes no sense to have the lines in the first place. In addition to the manual, there is a complete set of on line-help once you load the program into your system

The program uses the familiar GEM interface and also uses icons you can click on for special purposes. These icons give you access to special features like creating a specific kind of "region" (more about that later). You can also produce a grid on your screen so you can easily line things up. Particularly nice is the Preview icon so you can see what the document will look like, and a Vacuum icon that will remove an entire region.

Working with Text

The text processor works smoothly and has a lot of keyboard equivalents that will speed up things for the experienced user. Screen changes like reformating or previewing are fast. A drop-down help menu is on the right of the screen. The display is fine on a color monitor, but better on a monochrome. I saw Wordflair on a Moniterm monitor and it was outstanding.

Notably missing is a dictionary and thesaurus. The people at Goldleaf Publishing have heard this before and have a dictionary high on their update list. They plan on making their updates reasonably priced.

Final Products

It was nice to see the text appear on the screen the way it will be printed. If you want italics or underlining, you see them. You can see the different fonts and letter sizes. When you change some-

```

Bob Smith
1135 Landsdowm Lane
Yellow Rose, TX 92314

thing, everything reformats. Naturally, you can mix print styles and sizes.

As mentioned earlier, Wordflair allows you to create "regions" in your document. An example of a region is an area in which you want to place a graph. You can change the size of the region and the text will automatically reformat around it.

You can create a "Calc Region" that will perform calculations. As you change information within the Calc Region, the calculations are performed for you automatically like a spreadsheet. The results of the calculations are automatically displayed. You can also create "Graph Regions." These graph regions can be bar, line or pie graphs. The graph regions can also can display image files. The Calc Region can be linked to a Graph Region...as the calculations change, so does the graph.

The loose-leaf manual is well-written and contains three tutorials to help you learn the program. The basic tutorial teaches the user basic word processing tasks. The intermediate tutorial goes into more detail in the usage of regions, and the advanced tutorial demonstrates merging the database portion of Wordflair with the document portion. Each level shows more of the program's depth and, at least to some extent, expects that you understand and have completed the previous tutorial.

Printer drivers and fonts are supplied for the SMM804 printer, the NB 24-pin printers, and the FX-80 (Epson and 9-pin printers). If you have Atari's SLM804 laser printer, you should have the GDOS printer driver and fonts already. I was able to get it working with my old trusty Star SG-10.

Wordflair is unparalleled in the Atari world for its ability to perform calculations, create graphs and import graphics into your text. If you want to create forms, form letters, proposals, technical documents and/or newsletters, this program is what you are looking for. Relative to comparable Macintosh or MS-DOS programs, it is a bargain.

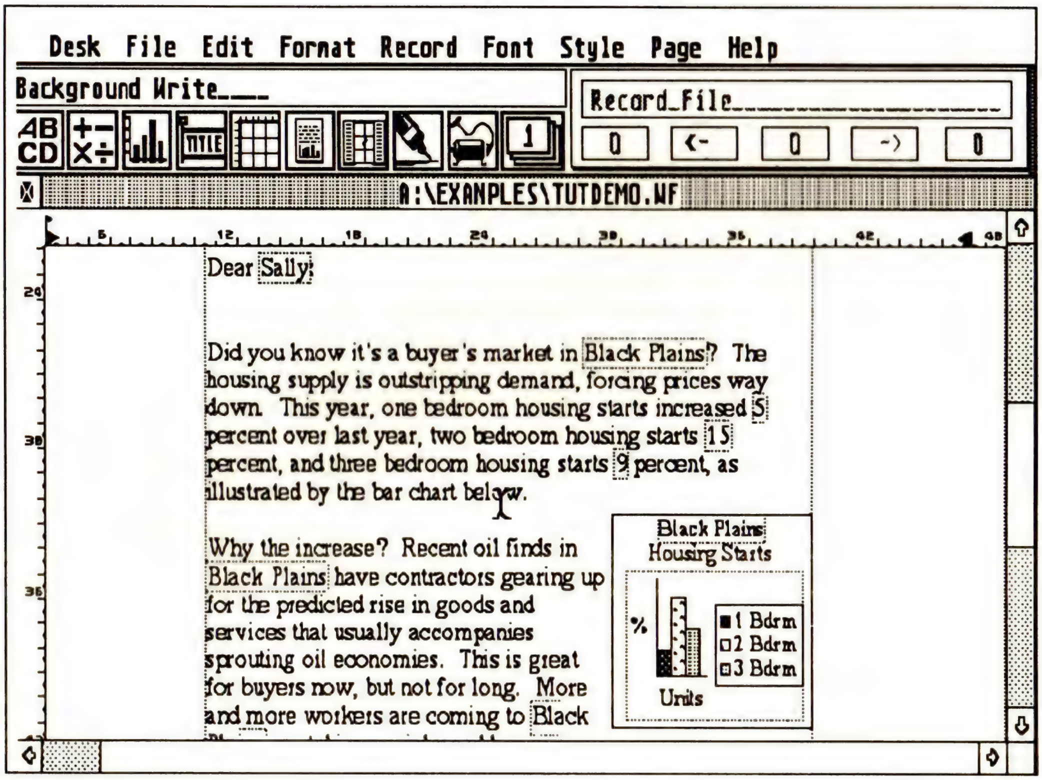
Wordflair!



Dear Sally:

Did you know it's a buyer's market in Black Plains? The housing supply is outstripping demand, forcing prices way down. This year, one bedroom housing starts increased 5 percent over last year, two bedroom housing starts 15 percent, and three bedroom housing starts 9 percent, as illustrated by the bar chart below.

Why the increase? Recent oil finds in Black Plains have contractors gearing up for the predicted rise in goods and services that usually accompanies sprouting oil economies. This is great for buyers now, but not for long. More and more workers are coming to Black

A new level of integration.

Wordflair is one package that combines word processing, calculations, graphics, dektop publishing and a simple database simultaneously on a single electronic page. Wordflair's integration lets you easily create and manipulate text, data and graphics without cutting and pasting from different applications.

Wordflair's ease of use and its ability to create presentation quality documents offer you incomparable value. Pair up Wordflair with your favorite Atari ST computer. Requires 1 Meg of RAM. GDOS and G+Flair included. Hard disk and monochrome monitor suggested. $99.95 SRP. To order, see your Atari dealer, or call us at 415/381-7717.

Fast. Simple. Elegant.

How A SysOp Retires

or 50 Ways Change Your Lifestyle

Doc (BACE)

I am the proud new owner of a BBS. The transfer of ownership, including tax, tag and title, was relatively painless. I got the whole thing, hard drive and all, from an estate liquidator. The salesman said something about the former owner no longer needing it, since he is not near a phone. That comment struck me as odd, but I bought it anyway.

Bringing the Baby Home

I got it home, set it up, and turned it on. The faint green glow from the screen gave an eerie light in the room, and for a moment I thought I saw someone else...a real skinny guy that looked like... Naaah...couldn't be.

Anyway, I knew I got a real deal. The whole thing was set up and ready to go. The hard drive whirred to life, loading in amazing speed overlays, menus, etc. and the modem clicked into auto-answer. I was ready to go!

Another Phone Line?

Hmmm... maybe I ought to get another line for the BBS. A call to the phone company revealed a $200 deposit, $40 hookup fee, about $30 per month for service, and a "small charge for installing a jack for the second line."

Fast addition showed me the cost would be hundreds of dollars per year, with hundreds up front. HA! Not me! I went to a local office supply shop and bought me an auto-switch.

"These gadgets will save you a lot of money," the salesman said. "What you do is hook it up to yer phone line, and when someone calls, they just press 1 for the fax or modem, otherwise, you'll get the call."

"How much?" I asked.

"One hundred nine dollars, plus tax," he replied.

"Sold!" I said, and took it home. I plugged it in. Hmm. The manual says it needs to be programmed. I wonder how long it would hold the programming if the power went out. I programmed it, then gave it the flick test. Wipe out. Hmm.

Continuous Power

Well, I guess I'll just get an Uninterruptible Power Supply (UPS). Flipping through the mags, I find one for $199. Calling the number, I order it overnight air, and give them my card number.

The next day, the delivery man puts it in my hand. Hands. I drop to my knees. This sucker is *heavy!* Must be all the batteries. I pull the packing list and see the overnight shipping for 54 pounds came to $68.50. *Ouch!*

Oh well, it was worth it. Plug it in, works great. No more crashes. Even if power fails, my BBS will be up and running. I am fully protected against visits by Dr. Strangevolts.

Now for a New Modem

I stare for a moment at my trusty 1200 baud modem, and decide to run down to the local dealer and purchase a 2400. $169 plus tax. I look at my ever-thinning wallet. I keep telling myself about the community service I will provide. Take it home, plug it in.

Now for the callers. I post my number all over town, in mags, other BBS systems, etc., giving instructions on how to access the system with my auto-switch. It doesn't take long for the calls to come in. The phone rings. I pick it up.

"Hello?"

Carrier tone.

"You didn't dial 1!" I yell. The carrier hangs up. The phone rings.

"Hello?"

Carrier tone.

"You need to dial 1 to get on the BBS!" I yell. The carrier hangs up.

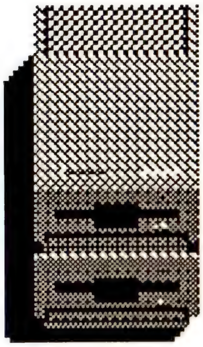
After six more calls, I decide not to answer the phone. But the calls continue. Every 30 seconds, the phone rings. All afternoon. Then all night. It finally stops. I really feel rattled. Didn't they read the instructions I posted?

The Ghost of Gomer Pyle

The calls continue, and eventually, over a few weeks, the users get better at getting on the system. There are still calls at 3 am, and I try to ignore them. I stare at the ceiling. 3:01 am. The phone rings again. I feel like someone is in the room, staring at me, grinning. He looks like...like...Gomer!

Next issue: Watch the BBS Grow or How to Find Out If Technical Support is an Oxymoron.

IN YOUR DRIVE #30



Good ol' Chet (ACC.D)

Here's hoping I get this done. For those of you who were wondering, I've been gone to Leadership School for the Air Force for a month and have been spending the time since getting caught up on the work which awaited me upon return.

It was sort of a nice vacation from the usual, but it left me tired and determined that I was making the right decision to resign the emperorship of ACC.D and the scribedom of the STIG. I've new duties at home, on the job, with this and other magazines and at the Church, so some things just have to go.

Either that, or the 48-hour day has to be invented and I should be genetically engineered to go without sleep.

During this time, some software accumulated. I tried to test drive them all before the Dreaded School hit, but time just ran out on me. Let's look under the accumulated stack and see what happened.

Stalking the Wild Telephone Lines

With the 800/XL/XE computers, we had a couple of nearly perfect terminal programs: Express and AModem 7.4. I've been looking for something as good for the ST for some time, and I may have finally found one which comes close.

STalker 2.0 includes most of the power and ease of use I need, has a manual which is darned serviceable and adds an extra feature called STeno which makes it a pretty package indeed.

First things first: Yes it does use GEM, and you have the choice of keyboard entries for anything you could use your mouse for. This is an option not all programs give attention to and is a feature which can more than double the number of users who will feel comfortable. *(Other programmers take note!)* Even though I prefer GEM, during a particularly long session I can remember keyboard combinations and will speedily use them.

All good AIM readers probably know what a modem is, and that you need a good program to make that modem work. The SX212 is a good modem in search of a good program; it has features many of the PD or shareware programs either ignore or make complicated.

STalker/STeno

When you first find the popup menu for STalker (click the left mouse button anywhere inside the terminal window), you'll see every feature I could imagine. From Autodialer to Shadow Access, from various upload and download methods, from Copy Window to Show Free Memory (I always need that last command) to Invoke STeno, STalker is so full of options you might feel there is no way to learn all the commands. Have patience. You'll hardly need *all* its power. But you certainly can see the usefulness of being able to pick and choose from a variety of options until you end up with a personalized program.

Let's walk through an average session with STalker. There are *two* ways you might start your session. You can just click on the program and run it...or you can put the STalker/STeno programs on your desktop as accessories.

Since STeno is, essentially, a word processor, you may begin to grasp the advantages of this. Either open your popup menu to click on Autodialer or press Alternate-A.

Whoops! If this is your first session, I really doubt you have the phone numbers you need in this Autodialer Menu. Well, that's easy to fix. Just click on the column you wish to add—whether "Name," "Number," "$$/HR" (a nice feature which will keep track of how much you're spending on a service such as GEnie which charges bucks per hour), "Limit" (where you can set a limit of how much your wife will let you spend per session, at which point STalker will sound a gong and tell your wife you blew it!), and terminal "Settings" for port, terminal, and logon parameters.

Selecting "Settings" will call up another series of boxes so you can set up prompts and responses for logging on (What? You expect *me* to remember my passwords?), modem configurations, or which port you're using.

Which port? Because STalker supports the multi-line DC Port, you can have multiple STalker sessions running at the same time. Call CompuServe in one window and a local BBS in another, simultaneously!

More features in Autodialer permit you to dial a series of numbers ("If Skyline is busy, dial Mycroft..."), deselect if the number is reached or redial and wait a certain amount of time for an answer.

Though only 10 numbers show

in the screen at the time, a slider bar will scan up and down for a total of 20 different numbers. If you need more numbers than that, you have a lot more spare time than I could imagine, or you do this sort of thing for a living...and you work overtime.

OK, we've logged on, and we immediately want to upload something. We could use the popup menu, but let's hurry and just press Alternate-U right now. We'll choose the 1K Xmodem procedure, since it's much quicker. What that means is it grabs a block of 1024 characters and sends it, then goes back to your disk for the next 1024 characters. However, if you have a weak phone connection or if you're calling long distance, you may want to use the smaller 128 character Xmodem. Each time a block is sent, STalker checks to make sure it was received. If not, it grabs that block again. When repeating, larger blocks can take longer.

Let's go over to one of the mail sections of this fictitious BBS we've reached. Hey, someone left a note to us! We can either type out a short reply, or we can call up STeno, that short word processor I spoke of earlier. If you've a decent sized text file, or if you want a *perfectly* formatted reply, a word processor can be handy.

Click open STeno from the top bar (you *did* install it as an accessory, didn't you?). This opens a *new* window with a *new* top bar within it. Type within this window, using most of the word processor options you're used to (and all you'll really need unless you're typing a book or somethin'!): cut, copy, paste, delete, find, change, tabs, word wrap, and different "save" commands.

Now if you're moving the text to the BBS you're still connected to (Keep the STalker window open so you might switch back and see if you're running out of time!), just mark the text and move it to STalker. (Look under the Options menu to do this.)

STeno can even be used as a very nice type-ahead buffer for STalker, a great feature if you're into online conferencing.

STalker now has a number of efficient macros available for it; these are downloadable from GEnie, CompuServe or the AIM BBS (see the indicia at the front of the magazine).

I don't really see how much easier STalker could get, but I'm willing to check it out. Unfortunately, I returned from school to find my desks moved to a room far from the phone jacks. If and when I get a phone jack installed in this cubbyhole, I'll get those macros and tell you about them. (And use STalker again. I'm relying upon my extensive notes from a month back for this review!)

Brevity is the watchword for these integrated programs. They perform quickly, simply, and efficiently. Therefore, I'll say no more or this review will insult STalker/STeno's hard working programmers (take a bow, STrata!) by implying a length and complexity which this fine program wisely avoids.

Space Paranoia

(And a tip o' the hat to anyone who remembers where *that* trivial title came from!)

One of the stranger utilities to arrive for the indestructable (How many times have we been told it's dead?) 8-bit Atari helps you out with most any game. There are more 8-bits out there than even Atari ever really figured out, and most of 'em really were bought for playing games. (Yes, they did miss the boat when they let Nintendo steal that market.) Whether you bought a 400, 800, 800XL, 130XE, 65XE or XEGS, you—like me—usually bought it for a specific game or two. (Mine was Star Raiders. What was yours?)

There are literally thousands upon thousands of games for our Original Atari Computers (OACs?), and most of 'em are arcade. Though I prefer an adventure to an arcade, most of my dislike of arcade games were due to the fact that I had to *start over* too quickly.

CHEAT!

Cheat! from Alpha Systems permits you to change any of 120 different arcade games for either unlimited or nearly-unlimited "lives" to prolong your play...or even *win* some of these. LAST V8 may even be playable now! I've seen unknown levels in Jumpman and Kareteka now, and I might finish Shamus II one of these days!

It works by changing the "lives routine" on your game disk, so it's obvious you should back up your game disk *just in case*. It also means it won't work with cartridges (though they suggest backing up your cartridge...probably with one of Alpha Systems' products) or tapes. Geeee, does anyone remember using tapes?

If you forgot to back up your disk, and you haven't crashed it somehow, you can always use the product's UnCheat! routine to restore your game to its originally unsolvable state. And the (scant!) documentation even gives hints ("Easter Eggs") for four more games that Cheat! itself won't "fix" for you.

Since Cheat! only permits you to cheat with 124 different arcade games, it's due for a sequel sometime soon. Anyone ready for Cheat II?

Did I Go Too Long Again??

And I still haven't talked about KidPainter, an extraordinarily simple but powerful paint program for ST kids; nor have I gotten into this marvelous SSI wargame for the XL/XE. Things do stack up. Wish me luck. If I can just last until the end of 1990, I'll be able to have a little more time once I'm not running ACC.D. Now, who am I gonna find who *will* run it?

Iron Lord

Bill Rayl

Regaining a kingdom isn't all fun and games in Iron Lord, a recent release from Electronic Arts and UBI Soft. In fact, it's fun and games, a bit of politics, skill in archery and battle and more!

The Story

Years ago, when you were still a small child, your father was murdered by his brother, Zolphar the Dark One. With an army of undead, Zolphar attacked and destroyed your ancestral castle. Luckily (or maybe not so luckily!) you were taken to safety by the Captain of the Guard.

Now, after years of training and preparing, it's up to you to go forth into the world, raise an army and defeat your evil uncle and his Army of Chaos. No problem...

It's a Graphic/Text Adventure...

You begin the quest in the ruins of your ancestral castle. Here, you can Load or Save a game or Go To War (more on that later). A "save game" feature is a necessity in Iron Lord...this is not a game you're going to finish in one sitting. I do find it a bit of a pain to return to the castle just to save the game; it would have been much nicer to be able to save from any village.

From the castle, your trusty steed takes you to various villages, a monastery, a wizard's keep, etc. In each place, you learn bits of information and try to recruit men to join your cause.

You start the game as a knight with no reputation, a fact the innkeeper in one of the towns seems to delight in telling you.

Fiefdom Politics

Recruiting men is no easy task. For example, there is a millner who informs you he may be able to raise some men for you if you can convince the innkeeper mentioned above to pay his debt to the millner. The innkeeper, however, is not very impressed by you.

Iron Lord is filled with these types of situations, giving a very realistic feel to the game. Some characters in the game seem willing, to some extent, to help you...if you will help them first. Others are totally uninterested in you or your quest.

In each village, there is at least one or two places of interest for you to visit. In the village closest to your ancestral castle, for example, there is an apothecary shop and an archery tournament is being held just outside the village. In another village, you will discover a gambling house where you can shoot dice for gold or get in on an arm-wrestling tournament.

Threats on Your Life

Each time you leave a village, there is a chance you will be met by an assassin. These guys aren't into conversation, shooting dice or much of anything besides sticking their swords through your chest.

Quick reflexes and a sharp eye are necessities if you're going to survive against an assassin's attack. UBI Soft has built into the game a simulation of "fighter's instinct" by means of flashing icons that point out the best times to attack and the direction from which your opponent will attack.

It's a Wargame...

Once you have gathered what you believe to be enough men to take on the Army of Chaos, you must return to your ancestral castle and "Go To War!" It's a good idea to save the game first, just in case you lose.

In this phase of the game, you're presented with an overview of the battlefield and the troop divisions are shown as small shield icons. Clicking on an individual shield will show statistics like division size and morale. You move your divisions while the computer moves the enemy. When two icons converge on the same location, those two divisions battle it out.

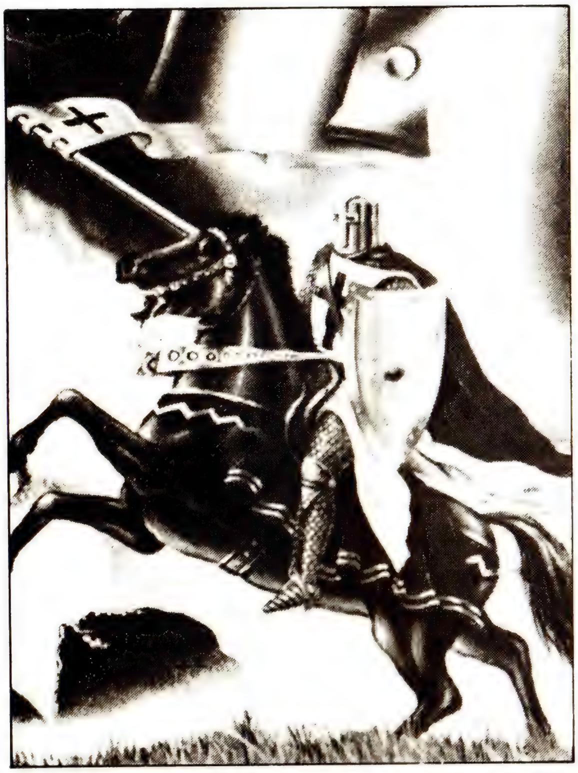
The war is a fight to the finish, with no side taking prisoners. No quarter asked and none given.

Whichever army has men left alive at the end is the winner. If you joined the battle with enough men and positioned them wisely, you should have no problems. If not...it's Grim Reaper time.

It's an Arcade Game...

After all that work, you've defeated the Army of Chaos and you're looking forward to a nice long vacation somewhere in the tropics. But, the life of a hero isn't an easy one, and your task is not yet complete. Forgot about your evil uncle, didn't you?

It seems your uncle has a labrynth filled with creepies and nasties. As the final phase of Iron Lord, you must find your way through this maze, killing your uncle's minions along the way. This phase is reminiscent of arcade games like Gauntlet or Gold of the Realm.



Only after you have successfully completed this task will you get to kick back and enjoy a few seconds of rest before beginning your (hopefully) long and happy rule of the kingdom.

It's a Hit!

Iron Lord is a thoroughly enjoyable game, mixing role-playing, wargaming and arcade action into one package that's sure to please. The game comes on three single-sided disks, is copy protected and makes one rather nasty sound when first booting. After that initial bit of noise, the copy protection scheme doesn't interfere with your gameplay. When booting with Disk 1 in the drive, a message appears on your screen informing you the disk is virus free. The game will run on a stock 520ST color system; joystick required.

The package also contains a nice poster for those of you who wallpaper your computer room with these things—this one will go very well with the Dungeon Master and Bloodwych posters already hanging in mine!

The manual is fairly well written, giving you some hints on how best to deal with the assassins, how the archery tournament is organized, etc. Each of the three phases of Iron Lord are also described. The manual, however, does not tell you how to gain a reputation as a knight, how to solve the problems of the people you meet or how to recruit men to your cause. That is left entirely up to you. The manual lays out the goal of the game; it's up to you to figure out how to achieve that goal.

This game has a little something for everyone, it's challenging without being impossible and frustrating, and the graphics and music are well done. (By the way, the song played in the background is "Gaudete," a traditional old English folksong.)

Iron Lord has personally gained a place on my list of great games...in fact, it's in my Top 10.

Don't Be A Solitary Atari.

The largest and longest standing group of Atari® users in the world shares its problems and solutions online every day in CompuServe's Atari Forums. And you can join them.

Find the latest software, like the new desktop publishing program for the ST. Learn how to run Macintosh® and MS-DOS® programs on your Atari. And pick up helpful game tips from experienced players.

Need technical help? Atari personnel and most third-party software and hardware vendors are online every day. You can even provide recommendations as they develop new programs and products. There's no better way to get more out of your Atari.

To join CompuServe, see your computer dealer. To order direct or for more information, call 800 848-8199. In Ohio and Canada, call 614 457-0802. If you're already a member, type GO ATARI at any ! prompt.

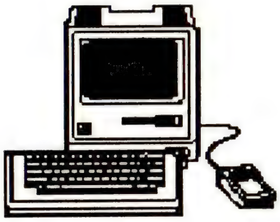
Big Mac Attack...



Tim Holt (El Paso)

Ahh, Spectre GCR, the Mac emulator for the ST. Runs smooth, runs fast and does what it promises. Recently, several members of the ST Club expressed a desire for STE-EP to start supporting Macintosh because of that little box, so I said I would look for some decent PD stuff to place up on STE-EP. Now, I know where to get IBM, ST, even Amiga PD. But where the heck does one get Mac PD when there doesn't seem to be any Mac BBSes in town?

I called my friend Alex, a Mac fanatic. "Alex, I need some Mac PD, what's a BBS I can call?" Alex thought a moment, then said "Call my friend Ken, he's president of the Mac user group in El Paso."

Ok, I called Ken. "Some friends of mine are running Mac stuff on the ST and need PD. Can I get some?" Ken said to me, "Tim, why don't you come down and show us how you run Macintosh on your Amiga." I reply, "Er, Ken, it's an Atari, and I would love to show you."

I then realized the Daniel-in-the-Lion's-Den situation I had put myself into and called Tom at Jenkins'. "Tom, wanna go with me to the Mac meeting and show off the GCR on the Stacy?"

"Sure," Tom said. "How do you install Mac stuff on a hard drive?"

"Beats me, but we have two days to figure it out." Well, to make a long story short, Tom figured out how to make the Stacy a Mac-in-top and off to the meeting we went.

Saturday morning, in the basement of St. Paul's Lutheran Church. Outside temperature: 85 degrees. Temperature in the basement: 120 degrees. The temperature was probably raised a few degrees by the 30 or so Macs running in the room—laptops, old tan ones, even one of those nifty $17,000 color IIxfrs or whatever they call them.

Tom warned me not to trumpet the ST, just to let the Stacy and my 1040 do the talking. We got the machines running and sat back.

A few people came by, I guess we looked out of place, but no one seemed interested in what we were showing. Then, the guy who sat across from us asked what we were doing there. "Showing off a Macintosh Emulator for the Atari ST computer." I think his answer was "hrrumph," but then he started asking questions.

"What does it do?"

"Well, it runs your Mac stuff faster than your Mac, the screen is bigger, and it costs a lot less." He answered with the classic computer comeback "No it doesn't," and he went back to playing his game.

We sat for about 15 more minutes and then Tom had a brilliant idea. He called back to the young Mac user. "We don't know anything about Macs," he lied, "could you come compare this stuff to yours?" The young guy came over and sat at the Stacy. "This is an Atari?" Yep.

And he sat, and he played, and a few people started to come over, and they called out to their friends, and soon everyone at the meeting had come and played Mac-ST. Here are some of the honest to goodness statements from the Mac users:

"Look at how fast the fonts scroll! I have never seen a Mac do that!"

"Excellent" and "Outstanding" were heard often around the Stacy.

Some people, of course, made fun of the Atari. One bimbo asked when Nintendo would come out with a Mac emulator. I smiled and said my machine was as much a Nintendo as hers was an abacus. She walked away.

The comment of the day came when the man who owned a Macintosh Laptop came over. He played with it for a while, and asked Tom questions that were way over my head.Then the bombshell hit. "Why should I buy one of these, when I can get a Mac?"

We replied with a question of our own. "How much does a stripped down, basic, low end, bottom of the barrel Mac laptop cost?"

"Oh, about $4500, how much does this thing cost?" he said, pointing at the Stacy. "Well," Tom said, a wicked grin coming to his lips; he had seen the enemy, and he was ours, "With 1 meg, a DS/DD disk drive, a 20 meg hard drive, *and* the Spectre with Mac ROMs, it will cost right at $2500."

Silence. Jaws dropped. They looked at the Stacy; they looked at Tom. "Well," Mr. Laptop said, "I wished I had known that about 3 months ago, *I would never have bought my laptop. I would have bought the Atari."*

We left, knowing we had at least planted a seed in the minds of the Mac users. I suggest that, if you have a Macintosh user group in your area, you should make plans to show them an alternative to buying a second Mac.

By the way, I never did get the PD disks.

Diverting Screen Directed Text

Robert C. Arp, Jr.

Beginning programmers, especially those attending programming classes, are often required to produce printed program execution results as confirmation of algorithmic design correctness before they have learned to write the necessary printing algorithms.

If students are content with programming on site computers that have been set up by instructors and/or system operators, with that lack of knowledge in mind, then there is no conflict.

Many modern students, however, prefer to complete their assignments on newly acquired personal computers. These students must not only keep up with classroom material, but they must also, without assistance from instructors, find a way to force their personal computers to provide the required hardcopy.

Fortunately, although printer directed program output is introduced rather late in programming courses, the algorithms required for screen directed output are usually presented early.

A utility that simply redirects screen output to the printer resolves the conflict for those choosing to program their own computers. Of course, a utility redirecting screen output to other media can be valuable for other reasons.

For example, one occasionally runs across the odd program which, although powerful in utility, provides no discernible way to get printed output, even though the screen directed output be voluminous—flitting by non-stop.

Sometimes a user may want to view a program's output in a text editor or simply at a more leisurely pace from the desktop. At such times, it is convenient to redirect the output to a disk file.

Furthermore, once a program's textual output has been captured in a disk file, the results of one execution can be compared to that of another using an editor's Compare File function (Tempus II has such a function.); the entire file, or a portion of it, can be inserted into a document; and the file can be edited to produce various text effects.

I have designed an accessory, REDIRECT.ACC, that will permit you to redirect screen directed textual output to the Centronics interface (parallel printer) and/or to a disk file. Output to the screen can be enabled or disabled during redirection.

You can become acquainted with this redirection accessory by executing one of the three demo/tutorials supplied in the file REDIRECT.TOS on the September AIM Disk of the Month. Each is executable from the desktop. Two of the programs are monochrome monitor specific (640 by 400 pixels); the other has been designed for medium resolution color (640 by 200 pixels).

ICON_RED.PRG is one of the high resolution demo/tutorials. The primary difference between it and BUT_RED.PRG is the appearance of the icons. The media icons in ICON_RED are aesthetically pleasing images of a screen, a printer and a disk drive. Those in BUT_RED are memory efficient buttons. MED_RED, the medium resolution tutorial, uses button type icons also.

Each of the demo/tutorials begins with a couple of introductory screens. Exit from these by pressing the Return key. These programs respond quickly, so if you click or return more than once, you'll skip a screen.

Once you're past the introductory screens, you'll see the media redirecting screen. There are five icons on this screen. In addition, there are several blocks of informative text. Note that three of the icons reference media; these are the screen, printer and file icons. Screen directed text can be redirected to any combination of the three media.

Note the Screen icon is shown in reverse video. This indicates screen directed text output is indeed being directed to the screen. The appearance of the Printer and File icons indicates that screen directed text is not being diverted to those media.

If you click on the Printer icon, then the Done icon, another screen will appear. This is the exit screen. You can exit the demo/tutorial by pressing the 'Q' key or by clicking on the Quit button whenever this screen is presented.

If you continue from the exit screen, the media icons will reappear with the redirection status displayed at the top of the screen and by the appearance of the media icons. An icon in reverse video indicates screen directed text is being sent to that medium. The original icon screen can be recalled with a click on the Info icon, followed by a press of the Return key.

Select the File icon to call up file selecting instructions and the file selector. Remember to click on the Done icon after selecting a file to register the redirection choice. If you click on the file selector's Cancel button, you will see yet another screen.

When you come back from the exit screen, you will see the new redirection status at the top of the screen and a "File Open" image. Click on the File icon to close the file. A "Closing File" image will appear briefly to simulate file closure.

Just select the Done button whenever you want to recall the exit screen, from whence you may exit. That's all there is to it. Next month, I'll tell you how to put images (like those I used for the screen, printer and file icons) on the screen using only one system command.

You can order a disk which contains all versions of the demo/tutorials and all versions of the redirection utility from Machine Specific Software, 278-1 San Tomas Aquino Rd, Campbell, CA 95008. Phone number is (408) 370-9039. The price for the disk is $19.95, check or money order. Shipping charge is $2 for US, $3 for Canada and $5 for Europe and Japan. California residents must include 7.25% sales tax. Fully documented source code for all versions of the accessory is available for $50 plus shipping, taxes and your signature on a non-disclosure agreement.

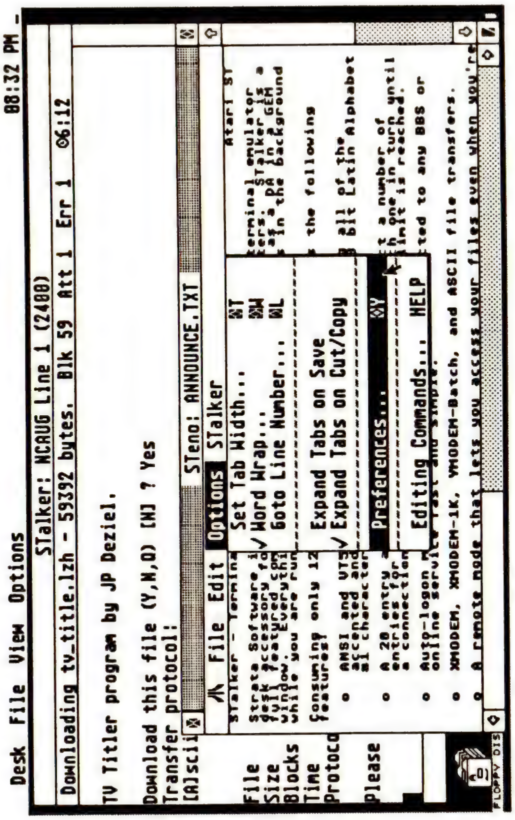
STalker and *STeno*

an unbeatable accessory combination at an unbelievable price: **$30 for both!**

STalker is a complete terminal emulator that does **everything** in the background. *STeno* is a text editor that uses as little as 90K of memory. Both programs utilize the GEM clipboard to exchange data, allowing you to cut and paste between them, and both programs are Moniterm compatible!

***STalker* features:** fast popup menu or convenient ALT-keys for command entry ♦ *background* file transfers ♦ *background* dialing of any group of numbers ♦ separate terminal / RS232 / auto-logon settings for each dialer entry ♦ scroll-back buffer of up to 2000 lines ♦ 20 programmable function keys ♦ VT100 & Atari VT52 emulation ♦ can optionally be used with Shadow™ ♦ capture directly to *STeno* ♦ **New** "Remote Access" (BBS) mode ♦ Easy to use - ideal for new users!

"A **GREAT**, Full Featured Terminal Program" - ST Report #112



```

Transfer protocol:
[A]scii
```

***STeno* features:** command entry via ALT-keys or the unique menu bar *inside the accessory window* ♦ configurable word-wrap ♦ search and replace ♦ *background* printing ♦ variable tabs ♦ choice of font sizes ♦ Mac-like cut/copy/paste and text block selection using the mouse ♦ hot-key to/from *STalker* ♦ fast paragraph reformatting ♦ can be used as a type-ahead buffer for *STalker*

STalker and *STeno* are available **now** at your local dealer, or from:
Strata Software 94 Rowe Drive, Kanata Ontario Canada, K2L 3Y9, (613) 591-1922

IS THERE A TACTICIAN IN YOU?

8-BIT TURBO

Tim Feenstra (GRASS)

I have covered just about all the wargames I plan to, except two that I will do next month. Right now I thought you might like to hear how 8-bit Atari programs that load different segments from disk at different times can be made to run a whole lot faster. This mod is not limited to wargames; it should work with any multi-load program provided the following conditions are met.

#1. You need to have a RAM disk. The 130XE version will work, but you might not be able to get all the files on it because of the limited space.

#2. The disk you wish to modify must have a standard directory on it, one you can list from DOS 2.5.

#3. Lastly, the program must load and run from the 'L' DOS option. That is Binary Load, if you didn't know.

Start by making a sector copy of the disk, even if the copy does not run. It is easier if the copy runs, but it is not absolutely required. Then, find a sector editor that has a search function. You will use this to modify the disk and to find out where to modify it. I like Disk Wizard II; it will do all the functions you need from the editor.

List out the directory (side two if that is the side the program runs from) and write down all the filenames. You will use this list to figure out which files need to be run from the RAM disk.

And now comes the fun part. Search the entire disk with the editor for the string 'D:'. Even machine language programs have filenames in them, and these are what you are looking for. If the filename following it is one you will be changing, make note of the filename and the sector number it is in.

Once the list of sectors is finished, it is time to make the changes. I do not recommend making any changes to your master disk. It would not take much for you to render it useless, and I don't think the software companies would be very sympathetic.

Load the first sector on the list into the editor. Locate the 'D:' and get the cursor on the ':'. This will show as a 3A in hex. Change this byte to an 8 which is 38 in hex, then change the first letter in the filename to the colon (3A). For example D:ORDERS.CMP would be changed to D8:RDERS.CMP. It is important you do not add characters to the name or shorten it.

Now that the program has been altered to look for its files on D8: instead of D1:, all that remains is to rename those files that have been altered. Boot up DOS 2.5 and rename those files to their new names, with the first letter missing.

Your modifications are now complete, but how do you run this you ask? Easy! Boot DOS 2.5 with the RAM disk. Use the Copy option to copy those files you altered to the RAM disk. Next, use the Binary Load function to run the AUTORUN.SYS file. Once the program gets to your modified files, it should start loading from the RAM disk (which is really memory) and there will be no more waiting for the disk drive light to go out.

Now, I don't want to sound negative here, but I bet your first effort crashes or gives you some sort of error. My first attempt took four tries to get it right, while the second needed only two. Almost all other programs ran right the first time.

There are a few things to look for if your program does not work right. Before you give up, double check that you did not miss any occurrence of the files on the RAM disk. If you missed one, the program will be looking for a file that does not exist anymore. All accesses of the modified files must be changed.

Also check that the files are actually on the RAM disk. If you turned the computer off after putting the files on the RAM disk, they will not be there. Once you start, don't turn your computer off.

The hardest part to understand is deciding which files need to be modified. This is a trial and error learning process, which will get a lot easier if you do several programs of the same type before you try something totally different from your first. This is made more difficult if you have the 130XE, and it seems the program needs almost all of the 707 sector disk side to run. All I can say is try to pick those files that get used the most, and leave some to run from the disk drive.

To give an idea how much this can speed up your programs, remember I talked about Kampfgruppe a few months ago? After modification, the only wait is for the computer doing its orders, perhaps 15-20 seconds per turn. Learning this technique takes time, but it is sure worth it if you are tired of that drive light.

AtariWriter+ Part XI

For Those Who Don't Want to Read the Book

Jimmy Boyce (CACE)

Well, this month the trees are getting green, the tulips are starting to fade and my lady is home for the summer from college (you remember, the one that had my book and notes).

To review a bit, the part that covers printing <pg 64> while using Mail Merge is short and sweet. Just press the letter "P" and it starts printing your file just as you set it up. It ignores all the printer formats and just keeps on printing until the file ends no matter what kind of printer you have.

Saving and loading files <pg 65> is equally simple and to the point. Hit the old [ESC] key for the menu and then hit the old (or new if you have a new Atari) "S" key for Save File and give your file a name like "PUBLIST." Then drop that little pinky on your right hand on top of the [RETURN] and jam it to the metal.

Editing Mail Merge Text

Enough review...let's suppose you need to update a publisher's address because the clown (they rejected you once) moved. Hit the [E] key for edit and the top of the screen will read PRESS [START] TO UPDATE RECORDS. By now this is no longer a challenge...just another way to thicken the callous material on your fingers, so you nonchalantly depress the [START] button and a new menu appears at the top of the screen.

Now you have three choices (I know...decisions, decisions)—you can look at the previous record, look at the next record or delete the record in front of you. To look back at the last record, push the [SELECT] key. For a peek at the next record, poke the [OPTION] key (get it...peek and poke).

To delete the record in front of you takes some manual dexterity. It requires two fingers doing different things simultaneously. First depress the [CONTROL] key and hold it down. Now take another finger and depress the [D] key. Sorry folks...I don't think you're stupid, but I have a tendency to get silly when I am tired.

To Procede

Anyhow, to get on with changing the address, just arrow down and make the necessary change. Then arrow down to the end and type "Y" when asked "DEFINITIONS COMPLETE." Failure to type that "Y" will cause you to lose the new address, and then you may get rejected by the post office as well for a bad address. Now hit [ESC] for the Main Menu and save the change in your file.

Remember back in AW+ when we merged some short files into a longer, larger file? Well you can do the same thing with Mail Merge <pg 66>.

Let's say you have separate files for all publishers in New York City, Chicago and San Francisco and you wish to do a mass mailing to all of them, stating your displeasure with their lack of literary intelligence for rejecting your great American novel.

First, load the file with all your New York publishers. After all, you must have a file in memory to append something to.

There are three steps in this process. They are:

1. Go to Main Menu and put the heavy finger on "A" for Append File.
2. Your Atari asks for the name of the file you wish to add to the New York file. That would be...let's see...Oh yes, "CHIPUB." You type in the name.
3. The disk drive starts up and the Chicago publishers are added to the New York publishers. To add in the San Francisco file go back to step one and start over.

Soon, all three cities are appended together as one file waiting for you to get busy with your mailing campaign.

And here is a set of three rules having dominion over the success or failure of appending files.

1. Each file must have the same number of fields and each field must be the same length. This means the format for NYPUB, CHIPUB and SFPUB must be the same or it cannot merge these files together.
2. Remember a file can only be 255 records long. If your three files add up to 256 or more, the third file cannot be merged and none of it will load.
3. Never try to merge an AW+ file with a Mail Merge file. I do not know why but I assume you will lose both files.

Well folks, Bunky says that's it until next month. He also says he wants to create his own record format. So that is what we will do next month—create a format better suited to our own needs.

Bye for now.

Atari Bashing: Computer Buyer's Guide

Tim Holt (El Paso)

An Open Letter to Douglas Moore, President, Computer Buyer's Guide

Dear Mr. Moore,

Three months ago, our club began receiving your publication quite unsolicited. I looked in the mailbox, and there it was, attached to a copy of the MEI catalog which I do receive quite often. Frankly, I had never heard of your magazine, until I received what I thought was a complimentary copy.

Since then, the ST Club has received three additional copies of Computer Buyer's Guide, and three bills for it. Please take us off your mailing list. We never asked for this magazine, and we do not want it. I could leave it at that, but let me give you several reasons why we do not wish to subscribe:

1) Your magazine relegates our computer to the level of "Classic Computers." As a matter of fact, if the ST is mentioned, it is in the classic computer section of your rag. Correct me if I am wrong, but isn't a classic computer one that is out of style, out of production or out of touch with the rest of the industry?

I can understand why a Coleco Adam is in this catagory. It was only made for a few months, and there were very few copies sold. It was out of date before it was on the market. But I cannot understand why you placed the Atari ST in this category. I will grant you that it isn't a "Big Star" like Mac or IBM, but there were 40,000 sold last year in the US. How many Coleco Adams were sold?

2) A "classic" is no longer supported. Funny, but I have magazines sitting in front of me this very minute that are full of new software and hardware reviews for the Atari ST. Funny, I don't see anything in your magazine for it.

Where is the support for the ST outside of your publication? Granted, it may not be under your nose, but if you look, it is there.

3) A "classic" never evolved. My ST runs most MS-DOS programs, and with the excellent Spectre GCR can outrun a Macintosh. I just played yesterday with the new STe computer, (4 megs on the motherboard for less than $1500), and was showing the Macintosh user group in El Paso how to get an ST laptop (the NEW Stacy ST laptop) to run Macintosh software (in other words, a Mac laptop clone) for less than $2500.

Not evolved? What about the new Atari TT? 32 MHz, 68030 CPU, etc., etc. I expect you to place that hot little number in the classic list as well.

As you can see, I doubt from your attitude toward the ST that many in my club would consider using your magazine.

For discount computer shopping, we will continue to use the classic ST magazines, the classic new STe, the classic new Stacy laptop and the classic Computer Shopper, which still sees fit to place the ST, although not prominently, in the role of a modern computer.

Until you can do the same, please do not bother sending my club your magazine.

Sincerely,
Timothy Holt, President
ST Club of El Paso

THE BASICS of BASIC

Rick Burton (RACE)

This month, let's move on from loops to strings before those of you who have followed BASICS think I altogether forgot my promise to look at strings. To make our look at strings more interesting, some info on the INPUT command and the IF/THEN command will be added free of charge! Why don't we jump right into a brief demo by typing:

```
10 DIM CODE$(4)
20 PRINT "}"
30 PRINT "ENTER ACCESS CODE"
40 INPUT CODE$
50 IF CODE$="HHHH" THEN GOTO 80
60 PRINT "INVALID CODE": PRINT
70 GOTO 30
80 PRINT "}"
90 PRINT "WELCOME TO DATA BASE"
100 END
```

First we'll explain each line...

Line 10: DIM is a dimensioning statement that saves enough space in memory for four characters. CODE$ will be the name for a "string variable" which can contain words or characters. The $ designates a name or label of a string variable as in NAME$, DAY$, etc. So now we have a string variable with enough room reserved in memory for four characters. A string variable must be dimensioned with the DIM command before any characters can be placed in it.

Line 20: Clears the screen. Pressing the ESC key, and then pressing the CLEAR key while holding the CONTROL key down will produce the arrow in quotes (which translates to a curly brace on the ST).

Line 30: Prints the instructions or "prompt" to the screen.

Line 40: INPUT allows the user to enter data into the CODE$ string. Notice a question mark appears on the screen awaiting your response as the program is run. (Characters can also be placed in a string variable by using a statement within the program such as: CODE$="HHHH")

Line 50: The IF/THEN statement sets up a decision for the computer to make! IF the user enters HHHH, THEN the computer will move on to line 80. When anything else is entered, the computer automatically proceeds to line 60.

Line 60: Prints prompt to the screen, plus one blank line.

Line 70: Loops back to line 30. (There's those loops again).

Line 80: Clears the screen (see the description of Line 20 on how to enter this command).

Line 90: Another prompt.

Line 100: The end.

Run the program and try a few bogus codes. Notice your Atari continues to ask for an access code. Now enter HHHH and WELCOME TO DATA BASE appears on the screen along with the familiar READY prompt.

Simply re-RUN the program to continue the experiment. Also observe that if you type HHHHQW, for example, this is accepted as a valid code because space for four characters has been dimensioned and any more are disregarded.

As you can see, we have entered the realm of strings this month.

DC DESKTOP

"The GEM Desktop just got better"

Enhance, don't replace!

- Place icons directly onto the desktop
- Display unique icons for all files and drives
- Store frequently used files and programs in our exclusive CABINET virtual disk drive
- Display NEOchrome, Degas, Spectrum and other pictures with no Install Application
- View files at the desktop with an enhanced SHOW routine (with mouse control!)
- Replace the desktop with a pattern or picture
- Recover files from the trash
- Printer spooler and icon (to drag files to)
- Works in all resolutions
- Drop down menu commands via keystrokes
- Load different desktops with a keystroke
- Comes with Quick ST 2.0 demo, a command line interface, bootup selector, icon editor
- Special hooks let RAM resident programs be called with one key from DC Desktop
- Completely modular and memory resident – only use what you want!
- Much more

AIM Disk of the Month
September 1990

All files on this disk are self-extracting LZH archives. To use these programs, simply copy the files on this disk to a disk with plenty of free space and double-click the files. The files will automatically unARC themselves into the runnable programs.

AKS.TOS—AKS is a German PD import with strategy similar to Chip's Challenge on the Lynx. Your task is to move crates around a warehouse. Sound easy? Think again, and again, and again! MONO only.

BANDWURM.TOS—Bandwurm is another excellent game from Germany. A worm is moved around the screen in order to "eat" little black squares. Each time he eats one, he grows larger. Challenging, frustrating, and fun. MONO only.

DEFSEL.TOS—The "Definitive File Selector" from the UK. Features include file sorting, file copy/delete and more. Shareware.

DHANDL30.TOS—Data Handler 3.0 is a simple to use but powerful database. Everything is done memory resident, so it's fast! A database of recent utility programs posted on GEnie is included. Shareware.

DRAW2.TOS—GFA 2.0 source and PRG accompanying Ed Smith's article "Screen Drawing Program #2."

FIREWORK.TOS—A nice, soothing fireworks display graphic demo. Great for winding down after a long day. Low rez COLOR only.

ICBD.TOS—UK demo of "Anarchy," a Defender clone. Excellent graphics and smooth horizontal scrolling on all STs. COLOR only.

KE23.TOS—Kepco Edit 2.3, a full-feature text editor. Features include multiple file editing, wildcard search/replace, unlimited UNDO, keyboard macros and more. Shareware.

KV_HOUSE.TOS—About the House, a children's adventure. A curious butterfly enters a house where each room holds a surprise and interesting friends wait outside. Shareware. Low Rez COLOR.

LP_DEMO.TOS—Demo versions of CodeHead's new LookIt! file viewer/editor and PopIt!, a program to allow calling up desk accessories with the touch of a key.

MONOEMU.TOS—Mono emulator for color monitors. Works with TOS 1.4.

PHOTON.TOS—UK demo of Photon Storm, a game similar to Asteroids. COLOR only.

REDIRECT.TOS—Robert Arp's demo/tutorials mentioned in his article "Diverting Screen Directed Text."

SIREN2.TOS—Police Siren 2, a desk accessory that will "drive you nuts!" Includes a program to set time interval between the car's appearances. MONO only.

STDCAT43.TOS—A great GEM-based disk cataloguer. Many sort, search and print options; file and disk comment fields; fast entry of multiple disks and more. A catalog of AIM Jan. '90 to Aug. '90 disks is included.

THINKPZL.TOS—In Creature Power, you must use your wits and power over other creatures to accomplish your goal. Can you recruit a creature that can avoid the sharks and retrieve a gem from the ocean floor? Find out in this game. Shareware. COLOR and MONO.

Readers of Atari Interface Magazine can purchase this disk by subscribing to the AIM Disk of the Month, contacting one of the AIM participating clubs, or by sending $6/DS or $7/SS disk to Unicorn Publications, 3487 Braeburn Circle, Ann Arbor, MI 48108. Please specify the September 1990 disk when ordering.

Introducing The New

Diamond Back

Now includes *Diamond Cache!!!*

Listen to what reviewers are saying:

"DIAMOND BACK is a very powerful, flexible program...excellent manual...highly recommended"

David Plotkin - STart

"The overall winner has got to be DIAMOND BACK...it creates GEM compatible disks at image backup speeds...this is the one I use and I use it a lot...It's Dependable!"

LeRoy Valley & Ron Robinson - ST Informer

"If you own a hard drive...then RUN, don't walk, to your nearest Atari dealer and ask him to order Diamond Back!"

Victor T. Albino - ST World

DIAMOND BACK provides a TRUE file backup at image backup speeds with more power and flexibility than all the rest combined! Here are just a few of the features packed into DIAMOND BACK: Easy to use 100% GEM user interface with online help * Backup/Restore ANY number of drive partitions, directory paths, single directories, or specific files in a single pass * Flexible creation of backup sets from different paths or partitions * Wildcard masks to include or exclude files * Incremental backups by date or archive bit (TOS 1.4) * Load/Save custom backup configurations * Automatic drive switching * Full or Partial restore * Flexible disk formatting options * File compression & encryption * Disk usage estimation * Backup to floppies or hard disk partitions * Image backup option * Backup Spectre(tm) partitions * and MUCH MUCH MORE!

DIAMOND BACK was fast, but now it is *FAST.* Introducing DIAMOND CACHE! The most powerful disk cacheing program available for the Atari ST. Diamond Cache is fully user configurable and even includes a flexible print spooler. Of course, all of Data Innovations Diamond products fully support TOS 1.4 extended partitions.

ALSO AVAILABLE FROM DATA INNOVATIONS

FULL COUNT BASEBALL * COURT SIDE COLLEGE BASKETBALL BASKETBALL, THE PRO GAME * 3 IN 1 COLLEGE & PRO FOOTBALL

If you are a sports lover, these are the games for you! Each game is a statistically based simulation using the actual statistics produced by past and present teams on the field and on the court. Each game comes complete with teams from the most recent season, plus great teams from the past and a stats compiler to keep track of your computer league. If your looking for statistically accurate game play in a sports simulation, these are the games for you!

MYSTERY MANSION

Explore a century-old Victorian Mansion. Find hidden rooms, lost treasure, or maybe the rightful heir to the treasure. Mystery Mansion is an entry level and expert level text adventure! The lower floors allow entry level adventurers to explore, but to leave the mansion you will need luck, and the skill learned on previous levels of the Mansion.

DIAMOND BACK & DIAMOND CACHE...$59.95
DIAMOND CACHE...$29.95
ALL SPORTS GAMES ARE...$39.99 EACH
MYSTERY MANSION...$24.95

The Atari Boosters League East (ABLE) meets monthly with enthusiasts and provides user support for all Atari computers except the Portfolio and PC line. The purpose of ABLE is to advance the knowledge of the membership through mutual education and the interchange of ideas.

General meetings are held in the Palm Magnolia Room at the Orlando Public Library, 101 East Central Blvd., on the last Sunday of each month from 1:30 to 4:30 P.M. ST SIG special interest meetings take place in Room 134 at the Bush Science Center on the Rollins College campus on the second Wednesday of each month from 7 to 9:30 P.M. Ad hoc meetings are scheduled as needed to present speakers, conduct special workshops, provide tutorial seminars and for parties. We assist members in service and software problems, as well as arrange group purchases and discounts.

Information is disseminated to members through our newsletter, the ABLE Atari Information Digest (ABLE AID). A package of twelve selected previous issues of ABLE AID higlighting the "super eight" computers is available for $10 ($5 for members). In 1990, ABLE began participating in the Atari Interface Magazine.

We have also established an ABLE Program Library of User Software (ABLE PLUS), consisting of several thousand files for the super eight and sweet sixteen computers. This library contains public domain programs contributed by ABLE members, as well as other computer clubs and users, to allow the sharing of user-written software. A computer specific listing is available to non-members for $3 and disks are available to non-members for $6 each.

ABLE accepts written correspondence at P.O. Box 1172, Winter Park, FL 32790, while membership inquiries are handled by Hadley Nelson, President, (407) 671-0317 or Milton Eager, Treasurer, (407) 834-0581. Annual dues are $12.

I Didn't Wanna go to a Meeting on 3 July Either

[First, take your ink pen and line through my phone number listed above. Thanks to some harassing and abusive phone calls, we've had to take a new number and make it unlisted. The sheriff's Department is looking into putting a tap on our line if this starts again, and has advised us to not give out this number for awhile. Sorry for any inconvenience this requires. Now on to our regularly scheduled club minutes.]

When the next day is a federal holiday and everyone ELSE is heading out to either visit relatives or to prepare picnics/cook-outs, would ANYONE in their right mind want to run out to a computer users' group meeting from 7 to 9 pm? Me neither, but 3 July was our scheduled date to get the conference room at the library and we'd known since February that our attendance would be small. "Just go and make the best of it," I told myself.

I was right. Only two other members showed up, and I didn't even bother to unpack the good ol' XE to demo anything. However, several NON-members showed up (two joined that moment), so we got to go through the old song and dance about WHY a users' group and What Good We Might Do. (How noble it all sounds!)

That, some sample copies of AIM, and some questions and answers made it short enough so we could all get out of there. But before everyone left, I managed one hugish announcement. With so few people present, I felt it was safe to announce that I would be avoiding the presidency/emperorship of the group next time, but would serve out my year even though I'm getting too old and tired for this.

The cheers and shouts of joy could be heard for miles.

---Chet

Starfleet Meeting Minutes by Thomas Oughton

July 13, 1990 Officers present: Guenther, Roubique, Oughton

The meeting started with new members attending, a total of 9 members were present. The people at Denny's found room for us to continue meeting there. So anyone who wants to attend our meeting, we meet at the Denny's at about 79th Avenue on north Wadsworth in Arvada.

We started with a demonstration of Dropzone. This game was quite challenging as we got killed several times.

Next we attached an MIO from ICD to the club XE-130. The one megabyte memory version that we used was configured as three RAM disks. One could hold 192K , the next would hold 256K, the last would hold 512K of data/programs. The last 64K was used for a printer buffer. This buffer could be changed to 32K or 0K. If it was reduced, the remaining memory can be used in one of the RAM disks. The hardware includes a parallel printer port, that uses the print spooler, a serial port, and a port for connecting a hard disk controller. As the Mio uses the cartridge port on the back of the computer, it also has two sockets for cartridges. This allows a Rtime-8 cartridge to be left in one socket. Any disk drive, including the RAM disks can be switched to be drive 1. This allows the use of any drive to boot the system, or the use of a RAM disk with programs that only access drive 1. Examples include Print Shop, ZORK, AE, and Gauntlet.

The shareware word processor Text Pro was the next item on the agenda. This program is better than most commercial word processors. The documentation, included on disk, is more than 1/2 inch thick when printed. It allows the use of single key macros. The only things missing are a spelling checker, and the ability to do two column documents without backing up the paper. This program is now part of the club's library.

Mike asked if we could change the way that club dues were collected. It takes too much time to send notices to the members when their dues are due. All dues will be due on June 1 each year. During the next year, when a member's dues expire a pro-rated fee will be charged to keep him/her active until next June.

The Meeting broke up at 10:30 after members accessed the library.

Atari Computer Club of Toledo club members receive, as part of their dues, Atari Interface Magazine and access to the 8-bit and ST public domain software libraries. Disks are $2/8-bit and $3/ST, non-members may purchase disks at a slightly higher cost.

A.C.C.T. meets on the second Monday of the month from 7-9 pm at Bassett's Health Foods, 3301 West Central Avenue (Westgate Shopping Center), Toledo, Ohio. 8-BIT SIG (yes, I said 8-bit) held monthly at the home of Jim Herzberg. Dates and times announced at meeting. ST SIG held monthly at the home of David & Brenda Micka. Dates and times announced at meeting.

A.C.C.T. may be contacted at 6107 Greenwycke Lane, Monroe, MI 48161, by calling Dave Micka at 313-241-1157 or Michael Justice at 419-242-7797 or via Fantasy Island BBS.

ACORN

Atari Computer Owners of Rochester New York

The Atari Computer Owners of Rochester, NY (ACORN) meets on the 2nd Wednesday of each month. For the months of August and September, the group will meet at Sunset Recreation, 1317 Chili Avenue, in the town of Chili. (For all you out-of-towners reading this, that is pronounced Chi-lie). A vote is being held to determine a permanent meeting place.

At the August 8th and September 12th meetings, we will have our normally scheduled STarter class for the ST which meets at 6:45 pm, and a Basically Speaking class for the 8-bit which starts at 7pm.

ACORN operates a BBS at (716)436-3078 with 40 megs of public domain downloads for the 8-bit and ST systems. Our mailing address is POB 23676, Rochester, NY 14692.

Dues are $18 per year which includes access to the club's PD libraries, enhanced access to our BBS, and subscriptions to our newsletter, the ACORN Kernel and to Atari Interface Magazine.

President	Don Allis	(716) 293-3415
Executive VP	Albert Yarusso	(716) 244-4487

Treasurer	Vinnie Indovina	(716) 594-9731
Basically Speaking	Jeff Summers	(716) 342-7632
STarter ST Class	Stu Woodard	(716) 352-4937
ACORN Editors	Candi & Bruce Nelson	(716) 334-5513
8-Bit Librarian	Nick Cup	(716) 266-1468
ST Librarian	Joe DePierro	(716) 223-7838
Exchange Newsletters	Helen Kiker	(716) 924-4809

August Hi-Lites

ACORN held elections for officers at the June meeting, and the new officers are listed above.

We held a flea market at the July meeting at Sunset Recreation. Although the number of members who attended was small due to vacations and generally good lawn-tending weather, good bargains were to be found.

We have recently upgraded the equipment on our BBS, and all Atari users are welcome to call. The number is (716) 436-3078 at 3/12/2400 bps.

ATARI FEDERATION

Regular meetings are held at the VAFB Federal Credit Union, Vandenberg Village, Califorina on the first Monday of every month at 7:00 P.M. Dues are $10 for individual or $15 for family membership. The Atari Federation maintains a PD software library for both 8-bit and ST computers.

President	Phil Rominger
Vice President	Bob Ribortone
Secretary	Matt Matias
Treasurer	Herb Kanner
Newsletter Editor	Jerry Sullivan
8-Bit Librarian	Chester Hadley
16-Bit Librarian	Charlene Rominger

Atari Federation Meeting July 2, 1990 Secretary's Report by Matt Matias

Phil opened the meeting and thanked the new officers for volunteering to fill the open positions. He also noted that we did not have a computer at the meeting for any demos this month. The idea of the club buying its own 520ST was brought up. This keyed a fairly long discussion, during which, one of our loyal 8-bit users suggested that it would only be fair if the club were to purchase an 8-bit system also. Motions were made and the vote was in favor of purchasing both a 520ST and 8-bit systems. The members also agreed that the systems could only be loaned out for emergency reasons only. To help the club get started with the acquisition of its own systems, two members offered the loan of an 800XL and an 8-bit disk drive.

Phil brought up the suggestion for a pizza night at the clubs expense, all members present voted in favor. Next, Phil finished off with some news from the Atari world: The Glendale Atari show is still on for Sept.; PC Ditto II has had several fixes and seems to be working pretty good now; Neo Desk version 3 has been released; Forcaster 3 has been released and is selling for $25; And the STe has finally been released in the U.S.

Bob Ribortone gave away a game that he had bought at the World of Atari. And Gus Mayo brought in the last of his software for club members to look over and buy. He had some pretty good deals.

To wrap things up, AIM fell through with getting us their disk of the month, so Phil came to the rescue and put together an excellent disk for July. Thanks Phil. That concluded the formal meeting.

Birmingham Atari Computer Enthusiasts

The Birmingham Atari Computer Enthusiasts of Birmingham, Alabama meets at the Vestavia Hills Library downstairs at 7:00 p.m. the second Monday of each month. Membership dues are $20 for a regular membership,and $35 for a professional level membership.

Mark Bodenhausen	President
James Gilreath	Vice President
Brenda Bodenhausen	Secretary
Steve Yates	Treasurer

For membership information, contact Steve Yates, 1005 Candy Mountain Road, Birmingham, Alabama 35216.

Our BBS is at (205) 833-5012. This is both a voice and data line. To access the BBS, press 1 after the first ring. For voice, press 2. After 6 rings, 2 is automatically selected.

In the meeting on June 14, a total of 14 members and guests were present. We elected two new officers, Public Relations and Librarian. Scheduling for the mid-year outing was finalized...it will be on Saturday, July 21, at East Lake Park from noon to ???. Admission to the outing will be free for members, $2.50 for non-members and will include food, drinks, games and a drawing for one of the following for first place prize:

Atari LYNX
Atari XEGS with 6 cartridges
AM/FM/Cassette Stereo system
Casio MIDI Keyboard

Second place prize is a choice of software, third place is a box of diskettes. The B.A.C.E. logos will be judged, with the prize being dinner for two at a local restauraunt.

Demonstations included the STacy 4 (Thanks, Peter!) and a keyboard adapter for the 8 bit that allows you to use a standard IBM keyboard. Also shgown was the FrankenSTein Memory upgrade by Canoe, a solderless 4 meg upgrade.

The next meetings will be on July 9 and August 13 at 7:00 at the Vestavia Hills Library, downstairs.

B.R.A.C.E.

Bluegrass Region Atari Computer Enthusiasts

President	Hal Nason	(606) 269-8989
Vice President	Greg Parsons	
Secretary	Chris Dotson	
Treasurer	Vacant	
Librarian	Chris Dotson	
BBS Sysop	Rick Bradfield	

B.R.A.C.E. (Bluegrass Region Atari Computer Enthusiasts) meets the third Sunday of each month from 1 - 4 PM. The site of the meeting is undetermined at this time. The officers will be in contact with you in the future to advise you of the meeting site. Current membership dues are $15 per year for an individual membership, $20 per year for a family membership and $10 per year for an associate membership. (An associate membership includes receiving the monthly newsletter, but excludes the use of the library.) Members of B.R.A.C.E. have extra downloading privileges on The Abyss BBS (606) 223-2782.

BRAG ST

Buffalo Region Atari Group for ST's

BRAG ST was founded in 1987 to serve Atari ST owners in the Western New York area. General Membership Meetings are held on the third Thursday of the month at Erie Community College North Campus, Room S-105 in the Student Center. Setup begins at 7:00 PM; Meeting starts 7:30 PM. The Board of Directors meet on the the first Tuesday of the month at the Your Host Restaurant, Harlem at Sheridan at 7:30 PM. All are welcome to attend. Piracy will not be tolerated at any BRAG ST function.

BRAG ST, PO Box 1035, Buffalo, New York, 14225

Public Relations	Harvel Hontz	(716) 689-8074

Buffalo Region Atari Group for ST's Club News Submitted by Mark Pierro

Our June 21st meeting began on time with an apology to those who were expecting to see and hear Don Missel and his grand MIDI demonstration and show. It seems the MIDI business is booming in Buffalo and Don was right in the middle of moving his equipment to a new storefront in the Century Mall on Sheridan Drive. Don sent his apologies and promised to visit us sometime in the fall.

We were surprised when one of our loyal members, Dane Stegman, brought in his cordless mouse from Practical Solutions for all of us to try. It was quite a sight to see the mouse pointer moving across the screen by Dr. Stringer sitting at the far end of the room!

Mark Pierro then demonstrated two KidPrograms from Dorothy Brumleve. First up was KidPainter, a "creative" graphics design program. Next was Super KidGrid, which offers patterning, shapes, and color fun for ages 3 to 11. Gerry Genson then demonstrated version III of Universal Item Selector, and then booted up the classic ST Star Raiders. During the break, members gave their opinons on the logo's Dick Kersting has been working on for our T-shirts and baseball caps. More on this in later issues. Also we raffled off three programs, and the winners were: Randolph McGhee; Bruce Andrew; and the Stringer family.

In future meetings, we plan to show off Chaos Strikes Back, Space Ace, LDW Power spreadsheet and with a little luck, pcditto II. We would also like to hold a swap meet at our September and October meetings. Have a great summer!

CACE

Cascades Atari Computer Enthusiasts

Cascades Atari Computer Enthusiasts is the Atari Club in and around Jackson, MI. The CACE BBS is run by the club and open to everyone. The number to call is (517) 764-4047. Current membership dues are $14.80. Any written communication with CACE should be sent to PO Box 6161, Jackson, MI 49204. Our meetings are held on the second Saturday of the month fro 1p.m. to approx. 4p.m. at the Boos Recreational Center. For more information, contact Brent Fisher at (517) 764-4599.

Central Connecticut Computer Club

Rehi all. I gotta start planning these things a little better, in my head I mean. I am in sort of a fog as to exactly when this will be published. But it'll sort itself out soon enough I guess. All I gotta do is keep up with the deadline and it'll all fall into place. I'll just launch right into what went down last month at the June meet (since I don't have a recording secretary....yet).

OK.....the Gribnif Demo was the main goodie of the meet and it was...awesome. We were told by Rick Flashman that the people attending the Central Connecticut Computer Club (CCCC) meeting that month were among the first in the nation to see what most likely be the finished NeoDesk 3.0 and let me tell you, you ain't seen nuttin' yet. There are SO many changes and new features Rick joked that they might change the name and muttered something about "UltraDesk" (ya heard it here first, heh...).

I will in no way be able to describe that demo and do it justice. I'm gonna hafta get "input" from some of the others and do it up later. But I will tell you this. To all you people waiting for Neo 3.0, if you are a prior registered NeoDesk user, you will receive the opportunity to upgrade BEFORE 3.0 is released to the "street". Yes you, you lucky devils you, will soon receive a letter, hand-delivered by a uniformed government employee notifying you of the upgrade. As of the meeting (June 20th) no set amount was agreed upon for the upgrade. As a matter of fact, the primary holdup now is the documentation but I was assured it would be completed soon, very soon.

Oh yeah, I should also mention that while the demo was producing a new cadre of Neo users, being alert and of twisted mind yours truly spied Trica Metcalf playing with an Atari LYNX!! Never saw one before and I was impressed with the lil' bugger. Hot Damn, now I know what to buy my sister's kids for Christmas this year. After the demo, guess what? Rick whips out a German-import type STacey! This was not a meeting to have missed.

As for the "surprise guests" for the July meeting, it's a scrub. Due to an illness in the family (of Christy McVie) Fleetwood Mac has postponed till sometime later all concert dates and thus, will not be in the area to give a Midi Demo. Who knows, maybe later. Ya can't say I don't try. Enough for now...see you at the meet July 18th...Later, Rich Scheidel

CDACC

CENTRAL DELAWARE ATARI COMPUTER CLUB

Central Delaware Computer Club meets on the second Thursday of each month. For more information, contact President Alan Beddow at (302) 678-1450 or write CDACC at PO Box 545, Camden-Wyoming, DE 19934.

CDACE

Capital District ATARI Computer Enthusiasts

Who We Are: Capital District Atari Computer Enthusiasts (CDACE) is located in Albany, NY and serves the tri-city capital region. Meetings are currently held on the third Tuesday for the XE group and the last Tuesday for the ST group at the Computer Cellar, Westgate Plaza, Albany, NY. Meetings begin at 7 PM with the libraries available starting at 6:30 PM. Dues are currently $20 per year for each family. This includes a subscription to AIM, our monthly newsletter and our BBS. Membership is not required to visit a meeting.

COAC

Central Oregon Atari Club

Dedicated to Central Oregon Atari Users and Enthusiasts Since 1986

President	Norman Moore	(503) 447-3598
ST-VP	Bob Kanski	(503) 548-8201
8-Bit VP	Marc Hitson	(503) 648-0513
Treasurer/Editor	Glenn Dulin	(503) 382-3956
Secretary	Nancy Kanski	(503) 548-8201

Address: Central Oregon Atari Club, PO Box 6824, Bend, OR 97708

Membership dues are $1/month and $1/year for each additional family member. We meet every second Saturday of the month at 5:00 PM at the Ann Rita Conference Center, which lies just in front of the St. Charles Hospital on Neff Road in Bend.

CUSTUG

Champaign-Urbana ST Users Group

The Champaign-Urbana ST Users Group (CUSTUG) meets at 7pm on the second Wednesday of each month in the Auditorium of the Urbana Free Library at the corner of Elm and Race in Urbana, IL. Membership dues include a subscription to AIM and GLITCH and use of the commercial lending library. New members are welcome. The group supports a local BBS, Blackhawk's Keep, operating 24 hours a day at 3/12/2400 baud (1/8/N): 217-892-5512.

Henry Murphy	President
Jimmie Myers	Vice President
Jim Linder	Secretary/Treasurer

Charlene Bird	Co-Librarian	(616)795-3593

Presidents Monthly:17 July 1990

Greetings again, another month has come and gone. With the 4th of July falling on our regular meeting, we postponed until the 11th. attendance was light, but the demos fit right in, as we covered the same topic as you will find in an article in this issue, running programs from ramdisk. Almost everyone who showed up had memory expansions, and the topic was readily received. We also saw a demo, given by Marvin Waide, on a program called SNAP, which will let those with extra memory load two programs at the same time, and switch between them with a single key press. This is going to be one of those fun new programs to tinker with.

As we get nearer to fall when we all have more time for our computers, we all need to watch for friends and neighbors who are not members, and bring them to our meeting. With many of our members moving to ST and IBM type machines, we must get as many 8-bit people as possible to keep the user groups strong. Information and products are still available, but if no one comes to get this service, it will soon become impossible to maintain it for just a few.

Come to the meetings, and bring a friend.

Tim

G.T.A.U.G.

The Newsletter of the Golden Triangle Atarian

President	Carl Neblett	(409)755-6535
Vice President	Bob Lisle	(409)832-5659
Treasurer	Charles (Butch) Foster	
Secretary	Joe Bryant	(409)839-8645
Ass Secretary	Carlton Trimble	
Asst Secretary	Lynn Simon	
Librarian	Ray St.Cyr	
Key Master	Terry Booth	
BBS Number		(409)722-6526

Congratulations to all the officers and thanks to last years group. May we all have a fine year in the GTAUG! The GTAUG has been 'around' since 1981 and supports both the 8-bit and 16-bit communities. Meetings are held the first Tuesday of each month at a location announced in the previous meeting.

At present our dues are $24 per year (Our year begins in September.) and is pro-rated at $2 per month for new members the first year. Since our nearest dealer is 90+ miles away, it is imperative that we support each other. It is for this very reason our group is a fairly close and diverse. We support all facets of Atari computing from 8-bit to Spectre/Mac to IBM and MIDI.

HACE

The Houston Atari Computer Enthusiasts meet on the fourth Wednesday of the month, 6:45pm at the Health Economics Corporation, 2400 West Loop South, in Houston, Texas. The club supports all Atari computers from the 400 to the Mega4.

Membership is $22 per year, and gives full access to our BBS (713) 458-9923, access to our disk, magazine and newsletter libraries, a subscription to AIM, and our local news journal UPDATE ATARI. There are also other benefits, such as store discounts, door prizes, workshops, telephone help when you have problems, and much more! For more information, please contact one of our officers or drop us a line!

Since it has been a while since we have submitted an article for AIM I thought a list of the topics of our meetings would give everyone somewhat of an idea of what HACE has been doing. Hopefully it will entice some of you absentees to come to our next meeting. So far this year we have had a lot of fun, given away over a dozen door prizes, and had a blast talking about the Houston Dealers, Atari, and the only Federated store in the USA. (It's in Houston.)

AUG; Back to school Programs.
SEP; Word processors.
OCT; Special Text Handling, Nominations for new Officers.
NOV; NO MEETING.
DEC; Annual SWAP MEET and Elections.

In June the club had a salvage sale and with the funds collected HACE updated our club equipment used for the BBS, 8 bit and ST Disk libraries. Til next time. BAK

JACS

Jersey Atari Computer Society, P.O. Box 710, Clementon, New Jersey 08021. JACS BBS: (609) 346-1224

President	Mike Hopkins	227-9058
ST Vice President	Maureen Kelly	428-9381
Treasurer	Forrest Blood	877-3579
Recording Sec'y	Gary Mickus	767-1933
Membership Chair	Al Guretse	596-7567

The Jersey Atari Computer Society (JACS) provides a forum through which members may further their understanding and enjoyment of all Atari computers, through the exchange of ideas and information with other users.

JACS holds two meetings per month at the Camden County Library, across from the Echelon Mall in Voorhees, New Jersey. The executive meeting, where all the planning for the club takes place, is held in the 2nd floor meeting room from 7-9 PM (meeting dates vary from month to month). The regular JACS meeting is usually held on the third Tuesday of each month, in the 3rd floor meeting room from 7-9 PM. The regular monthly meeting includes topics of interest for users of all Atari 8-bit (400/800 & XL/XE) and 16/32-bit (ST/Mega) computers.

Membership dues are calculated at $2.00 per month prorated through the coming July, when the entire club comes up for renewal. August, 1989 - July, 1990 dues are $25. Spouses and children may be included under one membership fee. Attendance at our monthly meeting is free for all members. Guests may attend up to 2 meetings at no charge.

As a JACS member, you'll receive a subscription to our newsletter and AIM, full access to our 24-hour bulletin board and access to our growing libraries of public domain software for the all Atari computers. Our disk libraries currently include over 200 disks, available for $3 each (member price). JACS ST library now includes the AIM Disk of the Month.

Layton ACE of Utah

The Layton Atari Computer Enthusiasts (L.A.C.E.) membership cost $20 per year. Privileges include the AIM Monthly Magazine, access to the 8-Bit and ST club libraries, monthly meetings, help and friendship. If you are presently not a LACE Club member and wish to join contact the one of following persons or write to LACE, c/o Irwin Brooks, 3897 So. 2275 W., Roy, UT 84067-3515.

Irwin Brooks,	President/ST Librarian	(801)731-1516
Richard Clark,	Vice President	(801)825-5823
Ken Karchner,	Secretary/Treasurer	(801)776-8015
Lonnie Allen,	8-Bit Librarian	(801)392-4450

The L.A.C.E. Club Meets in the basement of the Clearfield Library every second Wednesday of the month at 7:00 p.m.

Mark your calendars for the next three meetings: August 8, September 12, and October 10, 1990.

Atari BBSes and User Groups -- Connect and Join In

Being a lonely Atarian is one of the most discouraging positions to be in. You're surrounded by other computer users that try to pressure you to convert to their brand of computer. You expect to be boo-ed and hissed if you have the nerve to speakup and tell all about an alternative that is both easy to use and inexpensive. So you sit quietly using your computers behind closed doors with the lights out. All the while you're not wanting to admit that you made a mistake when you purchased your Atari computer.

How ironic it is. Sure the facts of computing have changed since the release of the Atari ST computer in 1985. The cost of the IBM compatibles has dropped dramatically. Now the Atari ST computer line is not the lowest priced computers available. Least we forget; if you go through the same logic that you did when you first purchased your ST computer you'll come to the same conclusion. Even though the Atari ST/Mega now has price competition, the ease of use between them still puts the ST line as the clear choice. Remember that others just don't have your clear vision. Instead, they perfer to type in all those commands and instructions, and they like to read novels on how to use the latest software, and remembering command abreviations is a good mental exercise. Still, how can you keep from jumping into their pool disillusionment, you ask? Connect up to an Atari BBS and join an Atari club.

Atari BBSs are one of the best sources of up-to-date information available. Message bases carry subject threads that carry a vast knowledge of personal experiences and information relevant to your subject of interest. Hardware and software products are discussed, argued, supported and discounted with enthusiasm.

Atari Clubs are your other means of mutual support. The monthly meetings and activities are meant to allow you, the user, to get together with other users with common interests for some computer conversation and hands-on. Atari clubs allow first hand experiences with hardware and software that's interesting and entertaining. And you can forget about that pesky salesperson that can't answer your fundamental questions anyway.

Atari user groups have always been the backbone of the Atari computer support. Without the user groups, the Atari computer line would have folded long ago. With Atari users and user groups, Atari can still make the come back we are all longing for.

July 11th Club Meeting Report: At the July meeting a request was brought up to have an "Atari 8-Bit Clinic" in the very near future. The idea is to get together with some Atari 8-bit computers going and ask/answer questions about hardware and software applications or problems. Pizza and drinks will also be shared (with contribution). Contact Lonnie Allen at below listed number for details.

LACE members were requested to print up some small single page flyers to post around town on some bulletin boards to advertise our club. They can be your design with your software but be sure to include meeting times, location and contacts. NOTE: Your membership expiration now appears on the mailing label of the Atari Interface magazine. It is your responsibility to make sure your dues are paid prior to your membership expiration to keep the magazines uninterrupted. Future demonstrations to include: Color Printers on the Atari ST, Atari 8-Bit with MIO Hard Drive, Multisyncs on the ST/Mega Computers, Word Flair for the ST, XF551 with 3.5" floppy

Irwin Brooks

LBACE

The Long Beach Atari Computer Enthusiasts meet on the second Sunday of the month at 6:00 pm. Meetings are held at Mercury Savings and Loan on the corner of Long Beach Blvd. and Carson in Long Beach. Address is PO Box 92812, Long Beach, CA 90809.

President	Richard Hull	(213) 422-1055
Vice-president	John Saunders	863-2582
Treasurer	Pat Connelly	
LBACE BBS		498-8824

Club dues are $20 annually. The club supports both the 8bit and ST. Members have access to the club's PD library and BBS and receive a year's subscription to Atari Interface Magazine.

M.A.C.E.

The Michigan Atari Computer Enthusiasts

Members of MACE receive, as part of their dues, Atari Interface Magazine. Members are also entitled to purchase disks from the 8-Bit and ST public domain software libraries. 8-Bit disks are $3 each, and ST disks are $4 each. As an added bonus, if you purchase three (3) disks from either library you will receive a fourth disk of your choice at absolutely no cost. Non-Members may purchase disks at a slightly higher rate. Mail order is also available.

For a catalog of current disks in our libraries, send $2 to:
MACE, P.O. Box 2785, Southfield, MI 48037

The June meeting of MACE got under way at 7:55PM. Bob Retelle started things of with the latest news from Atari, including the news that STes are now being shipped (Softhouse Computer recently received a few). Next, president Ed Hanson took the mike and asked for volenteers to demo some new software and hardware at future meetings. This month's meeting focused on Midi devices and software. Chris Gavela from Team Computers brought in a couple of professional keyboards and some assorted Midi programs, and discussed the ins and outs of Midi music.

The meeting officially ended at 10:04PM.

MID-OHIO ATARI USER GROUP

Mid-Ohio Atari User Group Post Office Box 134, Ontario, OH 44862

The Mid-Ohio Atari User Group supports all models of Atari computers. We meet at A&B Computers, located in the West Park Shopping Center on Park Avenue West in Mansfield. Meetings are held the third Saturday of each month from 7:00pm to 9:00pm. Demonstrations are welcomed and pirating is expressly forbidden.

MAUG is a participating club in the Atari Interface Magazine. As such, members receive an issue of A.I.M. each month for no extra charge. Club dues are $7.50 per year for residents of Ohio, and $10.00 per year for others. A monthly disk subscription is an additional $3.00 per year if you pick your disk up at the meeting. Disk subscriptions which must be mailed are an additional $24.00 per year.

The club maintains a disk library for both the 8-bit and ST computers. The library disks are made available at each meeting. There is also a message base on the DataQue Support BBS members to use. Anyone wishing to become a M.A.U.G member can contact Chuck Steinman at the club address or call the DataQue Support BBS at (419) 529-5197 and leave email to the SysOp.

Middle Georgia Atari Users Group

M.G.A.U.G.

The Middle GA Atari Users Group is the sole Atari Club in the Middle Georgia area. We are composed of 60 members of which approx. half are ST users. Club president Pete Miller can be reached by phone at 912-328-8758. The MGAUG address is 115 Feagin Mill Rd., Warner Robins, GA 31088. MGAUG meets the second Sunday of each month at 2 PM at the Warner Robins Library. Annual dues are $5 with the newsletter optional. Use of the club library is free to all paid members.

The July meeting took place at the regular time at the Warner Robins Library. Turn out was good with some new software and hardware demo's that were of interest. Some discussion was held on the new STe and whether we would ever see one in the Middle Ga. area in that it has been quite some time since we have had a new member. Speaking of new members it has been quite some time since I have seen some of our members, it may be time for me to drop them a line.

Also discussed at the meeting was whether to keep up with Z-Net in the Newsletter. The club decided to drop Z-Net because most members were downloading the ST REPORT and Z-NET files off of Genie. The club has also been quite satisfied with the AIM that they receive each month. I will still be publishing a short monthly newsletter myself for mailing to local businesses and some other organizations that we are dealing with. Currently this list includes SoftLogic, Current Notes, Bob Brodie, Warner Robins Public Library, Rovac Industries (Z-Net), The Atlanta ST users group, The Musician, The KnoxVille ST users group and AIM.

Planning for the show continues to surge ahead. If you are planning to support the group at the show then be sure to let me know. To recap for those that have not been following the preparations the Middle Ga. AUG will be having a show at the mall in Warner Robins Georgia on August 25th. The show will have both IBM and Atari computer users groups present, there will be no venders just User Group Members. The main theme for MGAUG will be computer awareness and the Atari ST as an alternative to the IBM for computer power and ease. The next meeting will be at 1PM at the Library on Aug. 12. I hope to see you there.

Nashville Atari User's Group

N.A.U.G.

Nashville Atari Users' Group P.O. Box 121752 Nashville, TN 37212

NAUG meets on the third Thursday of each month from 7PM to 10PM at the Cumberland Museum and Science Center. Membership dues are $24 per family for the entire year. With your membership you will receive our local newsletter, Atari News, a subscription to Atari Interface Magazine, access to the club's 8-bit & ST Public Domain/Shareware libraries, any group discounts on products, and entrance to all club related functions. We have an Associate Membership for $12 per year. With this membership, you will receive Atari News, AIM and access to our 8-bit & ST PD/Shareware libraries. People joining during or after the month of July pay 1/2 the yearly rate. Visitors are welcome to all meetings.

President & Editor	Walt Sullivan	(615) 228-7353
Treasurer	Michael Gardner	(615) 868-0843
8Bit Chair & Librarian	Jerome Seward	(615) 385-9366
ST Chair & Librarian	Lee Griggs	(615) 356-9071
Emerald City BBS		(615) 754-4351

The Nashville Exchange		(615) 383-0727
Troll's Cave		(615) 872-0757

O-ACEs

O-ACEs is a non-profit group interested in getting more out of Atari computers. We are NOT affiliated with Atari Corp. or any other commercial organization -- we are there for YOU! We cover BOTH 8-bit (including the 400/800, XL, XE, and XEGS series) AND 16-bit (ST series) Atari computers. We meet twice each month (except November and December) on the 2nd and LAST Wednesday each month. Doors open by 7:30 pm at La Vista Recreation Center, 8116 Parkview Blvd. (just off 84th Street, south of Food-4-Less and east of 84th at the light)

FIRST MEETING: (2nd Wednesday) Covers news, views, and decisions that ALL members might be interested in. FOCUS MEETING: (LAST Wednesday) Concentrated information on a single topic (such as word-processing, spreadsheets, music composition, desktop publishing, etc.)

Call 592-5427, for more info on O-ACEs!

PORTS ATARI P.A.C.E. COMPUTER ENTHUSIASTS

President	Tracy Hendershot	525-1058
Vice President.	Larry Nadeau	525-7430
Sec/Treasurer	John Zupansic	394-9326
STLibrarian	Don Henricksen	729-6309
8bit Librarian	Gary Armbrust	729-6906
ST Coordinator	Geoffrey Bennett	722-3354
8bit Coordinator	Aaron Potopinski	525-1058

Membership to PACE is $30.00 per year or $9.00 per quarter. General meetings are held at 6:30pm on the third Sunday of every month. In the event of a holiday, a new date will be chosen and will be posted within the pages of this newsletter and on local Bulletin Boards. Membership includes a monthly newsletter, monthly meeting, FREE Disk-of-the-Month, access to our BBS, FREE printer ribbon re-inking, and FREE copying priveleges to our VAST collection of 8/16 bit Public Domain programs. Ports A.C.E. is an alliance of families with a mutual interest in the Atari Computer and is an independent, non-profit organization. PACE hardware assets: 130XE, 1050 Drive, MacInker and a Supra 300 baud modem. Any written correspondence should be addressed directly to Ports A.C.E., Tracy Hendershot, 4835 Crosley Avenue, Duluth, MN 55804.

From the President...

It seems like it's been a long time since our last meeting! You're going to have to brace yourselves and "cold-turkey" it for another month; then we'll be back to the old routine again.

I read in AIM recently that there is some debate on whether or not to put out an 8-bit Disk of the Month. (Yes!) I have heard that there are a lot of new PD coming out for the 8-bit. It's been rumored that commercial software that was never released, (due mostly in part to the lack of software demand for the XL/XE) is being distributed freely as Public Domain. The 8-bit people should write to AIM and support this possible endeavor.

Speaking about AIM, it has really developed into a great Atari resource. The month on the issue is finally catching up with the month it's received. The Disk of the Month has enough variety for even the pickiest of software critics. Member groups are being added monthly. It's interesting reading about what other groups are doing nationally!

Since we haven't had a meeting since May, local news is quite thin. The Guitar Center in Roseville has stopped selling the ST because of price cutting by Mail Order houses. They still sell plenty of software (MIDI) for the ST though. We have purchased another batch of 3.5" DSDD diskettes. Price will now be 2/$1. See the ST Librarian if you need to purchase some. No one has yet seen the fabled 520ST's at either Sears or Kmart (and no one probably will!)

I've noticed that SWAG has joined AIM recently. Mike and Donna Calvin, whom I have spoken so frequently about, belong to this group. I've personally visited with them on several occasions in the last few years. Their dedication to music and Atari computers is second to none. Mike is a programmer and runs a BBS catering to music and MIDI. And Donna has amassed a huge collection of MIDI sequences, highly detailed in instrumental arrangements. They also love cats and dogs (about that another time!) Small world, right guys?

Mark your calendars, September 16th is the next meeting! Talk to you next month and keep your floppies warm!

PHAST - Phoenix Area ST

The PHAST monthly meetings are held on the second Saturday of each month at 8640 N. 19th Ave., Phoenix, Arizona from 10am to 12pm.

President	Robert Dytmire	(602)993-6463
Vice President	Lance Summers	(602)584-1183
Treasurer	John Steiner	(602)849-8949
Membership/Sgt. Arms	Mike Zachary	(602)273-1185
Recording Sec/ Editor	Jim Keho	(602)934-9181
Disk Librarian	Charles Cullinan II	(602)992-9040
Publications Librarian	Donald Thompson	(602)486-1593

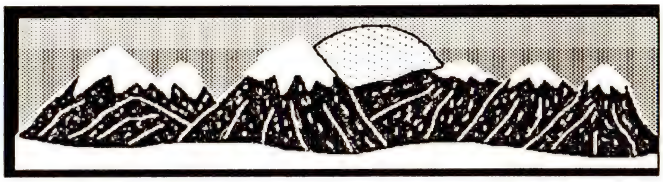
Club Minutes for Sat. July 14,1990 by Jim Keho

The meeting was called to order at 9am. This was the first meeting where the SIG's were started at 9 and the general meeting at about 10. There were only about 18 members and visitors in attendance.

It's gotta be the heat, huh?? Well come on at least it wasn't 120 degrees! So come on down!

SIGs -- Dave Thorson ran a SIG on MIDI w/his system and Roland sound module. Sounded great Dave! If your interested in running a SIG at a meeting just speak up, your needed!!

On with general business... Robert spoke about this upcoming October's meeting. For those that don't know Oct. is usually the annual swap meet. The swap meet is on for Oct. IF a guest speaker can't make it to the Oct. meeting otherwise there'll be no swap meet. There should be more news about this soon and we'll let everyone know! I for one hope there'll be a swap meet... We'll see...



P3Atari Computer Enthusiasts (P3ACE)

Serving the Colorado Springs, Colorado ATARI community since 1982. PO Box 17779, Colorado Springs, CO 80935

President:	Rick Reaser,	380-8082
VP ST:	Steve Leser	591-6062
VPXE:	John Sandgren,	599-5933
Treasurer:	Jerry Sundee,	574-0005
STLibrarian:	Rick Mount,	596-8631
XELibrarian:	Dave Koster,	550-1410
Editor:	Ed Fletcher,	596-1130

The Prez Sez by Rick Reaser

We are in the middle of our slow summer period. For example we have 77 on the membership roles and only 57 are paid up. Be sure to check your mailing label to if your membership has expired. Dues are only $15 per year per family. Bring you dues to the next SIG meeting or mail them to the P3ACE P.O. Box.

Remember to check into Steve Leser's LASER BBS which is run by our very own ST VP (591-4620). Both the ST and 8-bit library catalogs is on LASER BBS and you can request whatever files you want by phone now. The GEnie 8-bit library catalog is also on-line. If you haven't done so, be sure to check into the on-line games on LASER BBS. I just started Galactic Wars and am hooked on it.

There is no excuse for those who don't have a modems. The Club's Hayes 300 Baud Modem (with cables) is still available on a "loaner basis." Don't be bashful! Call President Rick for details.

Computer Express! seems to be having some business problems and the store is locked up with the 8-bit library inside as I write this. We should have it rescued by the time you read this. The ST library was at Steve's house getting an update when the store was closed down.

Don't forget that we have a large selection of other club newletters and other technical materials. Be sure to look into this at th next SIG meeting. We are also trying to find a suitable buyer for the Club's Tweety Board.

The topic of June ST SIG meeting was Word Processors. But what really stole the show was Tempus the amazing text editor by Creative Computer Design. Although technically not a Word Processor (Tempus can't use fancy formatting, and underlining because it uses straight ASCII) some of the other features it has more than makes up for this, so much so in fact that ST VP Steven Leser has thrown away his Word Writer to use Tempus exclusively.

The immediate thing that comes to mind when using Tempus is SPEED! With a capital S!!! It comes up quickly, and scrolling through on the scroll bar down even on a hundred page document is nearly instantaneous. It is quite obvious that Tempus was created with speed primarily in mind. Whatever you are writing, as long as it's straight text, Tempus will get it done faster for you than anything else. Also, Tempus can have four documents in memory at once.

Tempus did steal the show, but the rest of the meeting was spent looking at the programs on this month's AIM magazine, and on Steve's disk of the month. Steve Lesers disk of the month is a new idea here at P3ACE. Its highlight is the "top three picks" and the best new PD files in the Atari world fill the disk each month. Each month there are graphic demo's, games, and applications such as the financial manager of Junes DOM. The topic for the August ST SIG has not yet been decided. Give Steve a call if you are curious.

The July 8-bit SIG meeting was held at Rick Reaser's house. Not many showed up since it was the day before the 4th of July, but we had a ball. We actually had one out of town guest who looked up the club so he could attend. He was a die hard 8-bitter from Chicago. We mostly looked at various games. The Disk of the Month was super. It was a collection of fine PD games. We also had a fun time looking at the German club's disk of the month. The topic for the September 8-bit meeting is to be determined. Give Jon Sandgren a call if you are curious. We will be meeting back at the mall.

Hope to see you at the next SIG meeting.

RACC
ROCKFORD ATARI COMPUTER CLUB

WE'RE NOT JUST PLAYING GAMES ANYMORE!

We meet at Rock Valley College, the third Saturday of each month. Meeting time 9 to noon. We support the Super 8 and Sweet Sixteen Atari computers, the Atari company, and our fellow Atari owners. Support is also provided through BBS Camille 815-397-5327 @ 300, 1200, and 2400 baud. Our meetings include coffee and rolls, for refreshment; business events, and demonstrations of new and interesting equipment and programs.

President	Andy Learner	815-397-5316
8 Bit VP	H. Jake Olbrich	332-5303
16 Bit VP	Mark Kunkel	874-5546
Secretary	Roger Creedy	877-3769
Treasurer	Thom Lofthouse	654-1863

Rushmore Atari Computer Enthusiasts
(RACE)
3512 Lawrence Dr. Rapid City,
SD 57701 (605) 348-6331

The Rushmore Atari Computer Enthusiasts is a nonprofit organization of Atari computer owners not affiliated with Atari Corp. Meetings are held on the third Saturday of each month, 2pm, at the Westminster Presbyterian Church. Annual dues are $12 for basic membership and $15 for membership and newsletter. RACE offers the Black Hills Atari owner hardware and software support and the largest library of public domain Atari software in the state of South Dakota.

NO PIRACY WILL BE TOLERATED AT ANY RACE FUNCTION!

President	Rick Burton	(605)-642-5353
V. President	Gregg Anderson	(605)-348-6331
Secretary	Mike Douglass	
Treasurer	Mike Randall	
NL Editor	Mike Harbison	
ST Librarian	Mark Wolf	(605)-923-2841
XE Librarian	Ken Kayle	(605)-343-7289

President's Particulars

If you are reading this before the August meeting, REMEMBER the Great Modem Demo is at Mark Wolf's house Sat. the 18th! If you are reading this at the usual location while waiting for the guys to show, what can I tell ya? Drive on over to Mark's place. If you are reading this after the August meeting- it's too late! We ate all the chips. (Yes, folks, that was a pun.)

After pondering some info in the June/July issue of AIM, I would like to present some questions and food for thought. The $1.5 million net income for Atari in the first quarter of '90 was less than 2% of the reported $85.5 million in sales...why? Jack Tramiel holds about 44% of Atari's shares AND is chairman of the board. How will this affect Atari strategy? The board of directors holds a total of 51% of these shares (a majority vote). What does this do to Atari decision-making?

Did you notice the exciting news that 70,000 XEs sold in Poland? Long live the spirit of Solidarity!

Some RACE fliers are being posted in the Spearfish area. Let 'em know we're alive and kickin'! Encourage new membership!

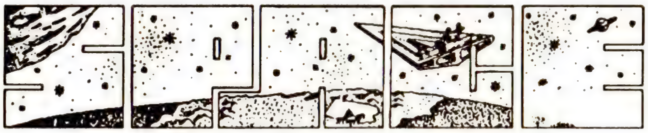
The September meeting will be Sat. the 15th. at the usual Soo San location. See all you RACE drivers there!

Rick Burton

SEVATC

South East Valley Atari Connection meets the third Saturday of each month at 10 AM at 3234 S. Fair Ln. (Eaton Business Park, just off of 48th Street and Southern), Tempe, Arizona. Yearly membership is $12.00. Membership includes reduced prices on PD ST and 8-bit libraries and monthly newsletter. Club officers are:

President	Tim Barr	(602)821-1200
Vice President	Marc Dyer	(602)897-0314
Treasurer	Lee Whiteside	(602)962-9415
Secretary	Blaine Nelson	(602)969-1949
Disk Librarian	Mike McKittrick	(602)982-9065
Publication Lib.	Walt Schultz	(602)897-7098



Meeting Notices July 16, 1990 (7:30 - 9:00 PM)

All meetings will be held at the Camp Hill Shopping Mall Community Room until further notice. Currently all dates are set for the 3rd Monday of the month.

SAGINAW/TRI-CITY ATARI USER GROUP
STAG

The Saginaw/Tri-City Atari User Group meets the last Saturday before the 18th of the month, at 9 am, at the Rudy Zauel Memorial Library, on the corner of Center and Shattuck in Saginaw Township. Upcoming meetings are August 11th, and September 15th, 1990.

President	Bryant LaFreniere	(517)835-2234
ST Librarian	LeRoy Valley	686-6796
Treas/Secretary	Marty Schmidt	792-6029
8Bit Librarian	Ted Beauchamp	686-8872

Club dues are still only $20, which provides support for both the 8Bit and ST, and full access to the club's Public Domain library, along with a year's subscription to the Atari Interface Magazine. Check your mailing label, if you need to renew, (or haven't joined us yet!). DO IT NOW!

WELL...

My name is Bryant LaFreniere. I am a member of the Saginaw/Tri-City Atari Group (STAG). I attended the meeting on July 14th wondering what our club was going to do because our president had resigned.

I told my wife that I might volunteer for president for the group so STAG could survive. She said in no uncertain terms that I WILL NOT BE PRESIDENT. She had good reasons to say that. I am currently holding offices in 3 other clubs, which includes president in two of those clubs. Still, I did not want STAG to fall apart because no one would assume the presidency. In this world that we live in, time for activities such as STAG appears to be very limited. BUT, if we want this group to survive, we must MAKE the TIME. I know that is easier said than done but we must try.

MEETING: I attended the meeting not knowing what was going to happen. Only a few members showed up and no one knew what was going to happen to our club. Well, I knew that no one was eager to be president, at the time, so I announced that I would volunteer to be president. IN 2.4 SECONDS, a motion was passed to elect me for president, seconded, and a vote was taken. I was elected president before I fully understood what really happen. WOW!!! I was inexperienced at using a modem to communicate the group notes to AIM but people were willing to help me. I hope that we can get more people interested in attending our meetings and volunteer for demos and bringing in their hardware for the demos. Please volunteer any ideas on possible demos, i.e. any software or hardware that you want to see for a possible purchase or just interested in looking at.

NEXT MEETING: LeRoy Valley will take a journey through our large Public Domain Library to tantalize the audience into buying some goodies on the PD disks.

FINAL NOTE: If you all are wondered what my wife said when I got home from the meeting, I didn't tell her. Unfortunately, a half an hour later, she asked me if I was president of STAG, I nodded humbly and she said "WHAT!!!". I guess these are the unbearable sacrifices a president has to make for his club.

EQUIPMENT VOLUNTEERS FOR August 11th:

LeRoy Valley will be bringing his Mega ST and hard drive and Bryant LaFreniere will be bringing his multisync monitor.

☆ NEWSLETTER
ST Atlanta Roundtable

STAR (ST Atlanta Roundtable) meets at the Reid H. Cofer Library, 4316 Church St, Tucker, GA at 7:30p.m on the Third Monday of each month. Membership dues are $15 per year. Each member will receive a copy of AIM and a new PD Disk is available each month. For membership info contact Ed Cadow, Claude Brewer Rd, Loganville, GA 30249 or (404) 466-0014.

The ST Atari North Coast Enthusiasts (STANCE) is an independent, not for profit Atari computer user group and is not affiliated with Atari Corporation, or any of its affiliates, in any way.

$12.00 per Year with a one time sign up fee of $13.00.

STANCE club meetings are held every third Monday of each and every month at B & G Electronics, (located at 15729 Madison Ave., Lakewood, Ohio 44107) starting at 7:15PM

ST CLUB EL PASO

The ST Club of El Paso is the only Atari ST and Mega user group in the El Paso area. The Club has proven to be a benefit not only to new users, but also to the "old hacks" of computing.

We now meet twice a month at the Richard Burges Library, 9300 Diana. The first meeting of the month is always the second Saturday of the month, at 12:30pm. Meetings feature demoes of the latest ST software, as well as help for the those that might be having problems with their computers.

Voting membership is $20 a year, Sponsored and Newsletter only memberships are $15 a year. To become a member of the ST Club of El Paso, call 915-821-2048, or write the ST Club of El Paso at 10953 Yogi Berra, El Paso, Texas 79934.

President	Tim Holt	915-821-2048
Vice Pres	Morris Miller	594-1906
Sec't/Tres	Joann Anderson	751-2710
Editor	Paul Stampfli	821-4861
Librarian	Norm Bates	593-6234

The club needs you! There are several items that need to be addressed this month, so I hope that some of you are paying attention. Seriously, we really NEED you for these things, so if you have some free time, please volunteer!

There are a few committees that needed to be formed LONG ago, but we never got around to doing so. So I hereby make a resolution to ask you all to help with these: (One is bound to be just right for you!)

NEW MEMBERS COMMITTEE: This committee will be in charge of making new members feel welcome. Ideas include making sure the new member gets a "Welcome Package" with club information such as a "How to use STE-EP" manual, a library listing package, the latest AIM, etc.

PUBLIC RELATIONS COMMITTEE: Working with Bill McKinnon and Bill Marquis in spreading word about the club to the various news media around town.

DEMO COMMITTEE: Members of this committee will get together and decide who/what/ when/ whatever about each monthly club demonstration. Responsible for setting up and tearing down the demoes, as well as arranging speakers, etc. This will probably be the most highly visible committee.

LIBRARY COMMITTEE: Work to help the librarian maintain and keep up to date the club library. Help send out orders, and put requested disks online.

EXECUTIVE COMMITTEE: This committee will be responsible for the oversight of the ST Club while the club is not in session. Comprised of the heads of the other committees, this group will draft and adopt a club constitution, and decide about club spending of funds if the need arises before a regular club meeting. ANY other member of the club may also sit on the committee at anytime during his/her membership.

So think about the above areas. I hope all of you will participate. Drop me a line, or call STE-EP and leave a message.

One final item #1: The club will be updating and expanding it's library in the next few months. Norm Bates did a great job with the club library, but has expressed the desire to move on. Dave Davis will be taking over the library, and we need about 300 blank disks to copy Norm's collection. I am asking all ST Club members to send us at least 10 blank disks. In exchange for this, we will now offer the pd library FREE of CHARGE to all members. We will have the ENTIRE library, with catalog, at each and every meeting. If we do not get the 300 disks needed, we may be forced to charge a little more for each disk that you get. So, make a short term investment for a large return.

One final item #2:The ST Club now has a new address. Please note the change: ST Club of EL Paso P.O. Box 9654 EL Paso, Texas 79986

That is our new mailing address. Also, please welcome the following new members into our club: Jerry Lovik, Mario Diaz-Mercado, Jason Reader, and Vern Bolton. Also, Doris and Greg Drow renewed for the next year. welcome all!

Until next month, keep calling STE-EP 915-821-9220

Tim

SWAG
Southwest Washington Atari Group

President	Gary Klugman	758-4894
Vice-President	Dale Meisenheimer	449-7750
Secretary/Tresurer	Charles White	449-8986

Meetings 7:30 P.M., the first Tuesday of the month at the Salinas Community Center.

News From SVACE Gary Klugman

A little while ago I stopped by our local Atari store. Only 50 miles away from home! I was with my 2 boys ages one and two. Needless to say this wasn't going to be a long visit. So I grabbed a couple of things, and while I was there I bought the July issue of ST World. I was skimming through it for the latest Atari news.

Atari announces special Summer sale bundles. I heard that they were going to do that. Seems Atari opened two Federated Stores. Gee, I thought they closed them all down. Guess they still have some merchandise they have to liquidate.

There is an article about EZRAM II. I thought Terrific Corp. went out of business. Guess I was wrong. Another article about ST-Talk Professional. I heard QMI went out of business. Must be one of the original people are marketing the program themselves.

There was an editorial about how Atari is missing the marketing boat in the US. Nothing new there.

There is a contest in the issue, deadline August 10, 1988. 1988! Wait a minute, I've been reading a two-year-old magazine and thinking it was current. Check it out here. Yup, it is a 1988 issue. It doesn't say it on the front cover, but a little investigation proves this is the case. I do pride myself on keeping up on things Atari. The magazine editorial was even talking about selling Ataris in Eastern Europe.

If a person can read two-year-old news and think it was current, then not much has happened. Oh well, SVACE is still happening. See you at meeting the first Tuesday of the month, 7:30p.m.

Salinas Valley Atari Computer Enthusiasts

The Southwest Washington Atari Group was formally created in April, 1985; prior to that, local Atari enthusiasts met on an irregular basis. The group has been holding its meetings at 6:30 p.m. on the last Sunday of the month (save July) at Clark County Fire District #5, Station 3 on 213 NE 120th, Vancouver, WA. SWAG started out with a large following of 8bit owners and as more and more members upgraded to the Atari ST, the membership has become mainly ST owners, but 8bit is still supported. Annual dues are $12 and SWAG can be contacted at PO Box 1515, Vancouver, WA 98668.

Secretary/Treasurer Report for July, 1990

We had our officer elections today and had a LOT of politicing (speeling?) about the location of our BBS (which was finally decided to be on a sub-board of Mr <Z>'s board at 732-9995. Call there for our BBS and to get into contact with us (if you can't mail it to me or call one of the officers). My ZIP code is 73110, not 72110 as previously reported in the heading. The officers should be listed up there correctly, but I will tell you all next tiem in case it isn't.

Got my new STe, should have been there to see it. It was great. Played TV Sports Football. I will write a short review of the hardware next time, no time right now.

A personal note:

I would like to congratulate Chuck Leazotte on his third try at a wedding and wish him a happy wedding.

UNYACE
Upper NY Atari Computer Enthusiasts

The Upstate New York Atari Computer Enthusiasts (U.N.Y.A.C.E.) meet monthly at the New York State Electric and Gas building, on Old Vestal Road in Vestal, New York. Meetings are from 7 to 9 PM in the Auditorium. The next meeting date is March 12th.

U.N.Y.A.C.E. had optional dues of $8 per year. Monthly meetings are informal and open to all who are interested in Atari microcomputers.

Contact C. Todd Krissel, President, at (607) 729-4303 or call the Cygnus BBS at (607) 729-5506 (9600 baud, 24 hrs/day) for more information.

RAM

Ventura-RAM, a charter member of ACE-NET, meets the third Wednesday of the month at the Mercury Savings Bank at 1656 Arneill Rd, Camarillo at 7:30p.m. in the Mercury Room. Membership dues are $24 for a full year, pro-rated monthly. Renewals are only $20 a year. Newsletter membership only is $15 a year, pro-rated. For more information on Ventura-RAM, contact PO Box 1513, Camarillo, CA 93011.

8bit Librarian	John Lindquist

WACO

WESTMORELAND ATARI COMPUTER ORGANIZATION

Westmoreland Atari Computer Organization meets the second Tuesday of each month in the North Huntingdon Township Town House, Center Highway and Brownstown Road (just off Route 30 near the Hamilton car dealerships, Irwin, PA) at 7:30 P.M.

Founded in December, 1983, WACO boasts huge ST and 8bit PD libraries. Double-sided disks are only $3 for members, $4 for non-members. Disk catalogs on disk are only $2. The $20 annual membership ($24 for family) now includes a subscription to AIM.

as well as the vocal, consumer-oriented WACO Printout newsletter which features Z*NET. Memberships by mail are welcome.

WACO also operates the WACO Ward BBS, 300/1200 baud. The club was founded to help Atarians support each other. One of the regular features of each meeting is called "Upload" when members share new information or ask for assistance in solving questions. Both 8bit and ST disks-of-the month are demoed as well as new hardware and software.

Since the first Taricon back in 1984, WACO has been represented at most of the northeastern Atari shows from Washington to Toronto as well as having a booth at all Pittsburgh shows.

WAUG!

The Washtenaw Atari Users Group meetings are held every second Tuesday of the month at 7:30 pm in the Michigan Union building on the campus of the University of Michigan on State St. at the corner of S. University in Ann Arbor.

Club dues are $15 per year and provide access to the PD library and subscription to AIM. Meetings feature demos of both 8bit and ST software and hardware. Nonmembers and questions are welcome. Officers can be contacted by calling Craig Harvey at (313) 994-5619 or by BBS at Molin's Den at (313) 420-0407.

The July meeting was called to order at 7:30pm and again at 7:45pm (I think Craig rebooted...) by President Craig Harvey. First topic of discussion centered upon plans for the "first international Atarifest" and a promise from our fearless leader that he would be seeking volunteers/draftees to take on some of the duties and responsibilities of this endeavor. Craig also solicited submissions for a show logo and announced the next show meeting date (7/28; 12:00 noon.) Additional discussion on the subject centered on funding logistics.

8-Bit Librarian Mike Millage demonstrated Miniature Golf by David Plotkin and seemed to be having a great deal of fun showing us how NOT to play the game. Mike announced a new catalog disk will be available at the August meeting, along with copies of Daisy Dot III.

Vice-Pres David Brzezinski will demonstrate the Antic Music Processor at the August meeting, which is good since the feature topic is Music... :)

Craig gave an in-depth demonstration of his Diary/EdHak text editor which has given him more than moderate fame in the ST world. Craig's software now not only edits text, but can also edit disks AND directly edit RAM memory. Craig offered his software at discount prices to his home club, promising to be available at the regular monthly meetings to answer questions and offer support. (Not to mention acting as club president!)

ST Librarian Bill Rayl demonstrated many of the titles on the latest AIM disk which included some games, a DOS-style command line processor and color screen emulator for monochrome systems.

The next meeting will be held on 8/14.

WNY UG

WNYAUG meets at 7:30 pm on the first Thursday of each month in room 116E, Bacon Hall at the State University College of Buffalo Campus, 1300 Elmwood Ave.

Dues are $15 for new members and $12 for renewing members. Send checks and correspondance to WNYAUG, PO Box 59, Buffalo, NY 14216.

President	Mike Husband	(716) 825-8486
Vice President	Kevin Packard	773-9325
Secretary/Treas.	Martin Schlund	689-7873
SysOp	Don Koepf	681-0564
8bit Librarian	Norm & Betty Knab	937-6974
The Wizard's Attic BBS		681-1654

Minutes of July 5th Meeting

The regular monthly meeting, held in Room 116 East in Bacon Hall at State University College at Buffalo, was called to order by the president, Mike Husband, at 7:30. There were eight people present. Officers present were: Mike Husband and Marty Schlund. Absent were: Kevin Packard, Don Koepf, Bruce Andrew and John Tally.

Mike opened the program with demonstrations of BobTemr 1.21, Le Break Plus version 2, Program-text Editor version 1.0 from Atari and MyDOS 4.5. He ended with a demonstration of our Disk of the Month, Magic Player Piano (AMS).

Old Business: None brought up. New Business: Marty gave a Treasurer's report, showing a balance of $954.22 as of the beginning of this meeting and he announced that we gained two new members; Dwight King and John Kasupski. After Disk sales, the meeting was adjourned at 9:05 pm. After the meeting, an informal get together continued both inside and outside the building.

The next board meeting will be held on July 12th at 7:30 pm and the next regular meeting will be here in Bacon Hall on Thursday, August 2.

Nobody asked me but... the Mailman brought my copy of the June/July issue of AIM , the June/July issue of Antic and Waldenbooks brought forth the Spring 1990 issue of Atari Explorer. It appeas that AIM had more pages than Antic and Explorer had together. From where I sit, AIM and John Tally are our best recruiters, and, as usual, Atari Corp. is our worst.

Mega Click™

For the Atari Mega 2 and Mega 4* Computers

BEST ELECTRONICS

New Product Announcement

Have you ever felt that something is missing from your Mega* computer? Those who have used other brand computers for work or school agree something is missing! When asked, any touch typist who owns a Mega computer will tell you right away! It's the Click in the keyboard key they miss!

Best Electronics is happy to announce their new product for the Mega 2 and Mega 4 keyboards called "Mega Click." By the name you can tell what this product does. After searching the world for half a year, we've found a replacement keyboard switch that gives the Mega owner that positive tactile "click" response like most real-world keyboards!

Our test sampling of Mega owners, who have tried our test Mega keyboards with Mega Click installed, all say the same thing, "I want the product now!"

The installation of Mega Click keyboard switches requires the ability to unsolder and solder in components in your Mega keyboard. We strongly recommend that installation be done by an Atari computer service center!

Mega Click keyboard switches are packaged in a **30 Switch Starter Kit** and a **10 Switch Add-on Kit**. Suggested retail for the 30 Kit is **$64.95**, and for the 10 Kit is **$21.95**

Mega Click Products became available December 26th. Place your order now!

For the XE Game System - $39.95

XF35 Kit - 720K storage! Easy to install upgrade for XF551 Drives, for using the newer 3.5" disks! Fully compatible with; SpartaDOS, SpartaDOS X, and MyDOS. Also GREAT for HD Backups! SALE! - $24.95
Save! XF35 Kit, 3.5" drive & cage - $89.95

Happy Doubler - Includes FREE Utility Disk! Programs Happy 1050 to FULLY Emulate the U.S. Doubler, including skew format! Also programs drives D1: - D8:. SALE - $14.95

Immitator Controller - For Happy 1050, has 2 swirches to control Speed & Write Protect. Also has 2-color LED monitor. SALE - $34.95

IC1050 Controller - (For ALL 1050's) Same as above, but no speed switch. SALE! - $24.95

SIO Switch Box - Controll 1 computer with 2 drive setups, or share 1 drive setup with 2 computers! SALE! - $44.95

SIO Port Box - Has 4 SIO ports for solving the "dead end" problems. SALE! - $34.95

NOTE - We have even MORE products! For our latest Catalog (included FREE with orders), just send a S.A.S.E. (business size).

Atari ST/Mega Products

NEW! ARCIT & ARCIT SHELL (version 1.20) Commercial version with new features! Makes arcing and un-arcing "ARC" & "LZH" files, a snap! Includes; Printed Manual, FREE utilities, and more! Introductory Special - $9.95

Turbo BLITZ - The Unique backup/disk copier, that is Lightning Fast, on even commercial software! Uses two drives. Includes Custom Cable and FREE software. SALE! - $29.95

Xformer Cable - Now incudes FREE software! Run many of your Atari 8-bit software titles on your ST/Mega! And, directly from an 8-bit drive! Also allows 8-bit printer! Only - $19.95

ST/Mega RAM Upgrades - Installed Fast! We use only the BEST upgrade boards! NO future MMU problems! FREE utilities disk!

520ST: 1meg $125, 2.5 Meg $325, 4meg $500
1040ST: To 2.5meg $325 / To 4meg $500
Mega 2: To 4meg for only $300.!

NEW! Tick - Tock Clock - Internal clock for 520/1040, at a LOW price! Includes FREE utilties disk. Installed for only - $39.95

BLITTER Upgrade - For 520STFM/1040STF. (Call for details) Speeds up graphics! Have a "mini-Mega" for only - $75 (Installed!)

TOS 1.4 - We us only LEGAL ROMs! FREE Utilities Disk! Only - $125 (2 or 6-chip set)

Bomb Fix - Replace weak 74LS373 chips (2), with Superior 74AS373 chips. Fixes Random crashes on Accelerators, TOS 1.4, & MAC/IBM Emulators. Installed for only - $35

Note - ALL of the above internal mods INCLUDE installation and return S&H!
SAVE - Get two or more of the above mods, and save more! Others also available!
We also - Buy, Sell, Trade, and Repair Atari equipment. Please call for more information.

Ordering Information - S&H add (US Funds); USA/APO/FPO - $4. COD: $3.50 (USA only) Canada/Mexico: $7. All other countries: $10.

Dealer, Distributor, & User Group Inquiries Welcome!

DISCOVER THE 4TH DIMENSION

Explore computer imaging and animation in time and space.

"PHASE-4"™ opens a universe in which you actually cut, copy and paste time itself. View your solid 3D objects in the past, present and future from any point in space/time simultaneously, cyclic polymorphic-transformation without point and face limitations.

"PHASE-4"™ a new modular Program Platform for the ST which totally eliminates the need for program control codes like those required for animation using such programs as Cyber Control™ from ANTIC™. "PHASE-4"™ is fully mouse and tablet driven programming system with keyboard support.

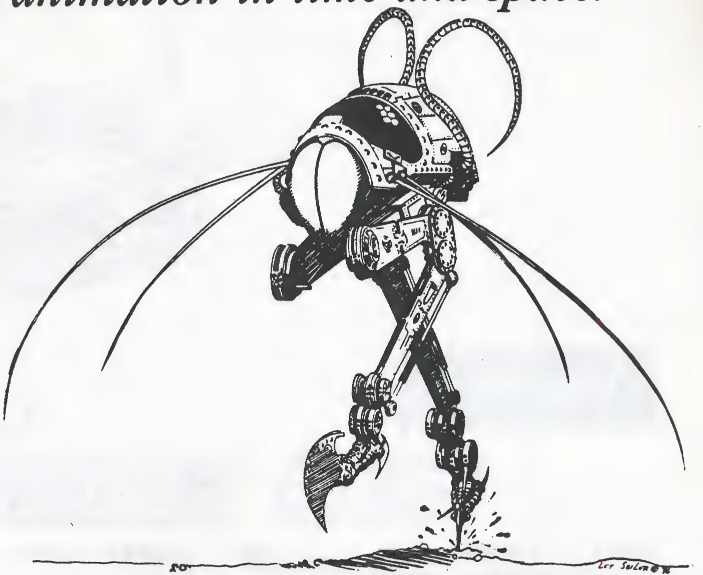
"PHASE-4"™ Modular system consists of 4 modular segments each independent yet, fully compatible with the others. Used independently, each module is a powerful package of programs, applications and accessories. When combined these modular segments form the most advanced and flexible Motion Control and solid object animation system available for the ATARI ST™.

"PHASE-4"™ ROSETTA-3D Translator/Viewer.

"PHASE-4"™ CHRONOS Keyframe Animation Studio.

"PHASE-4"™ PRISM Rendering Package.

"PHASE-4"™ KINETICS Player Package.



Object complexity is only limited by your imagination.

Can you create CAD objects like this one? We do it all the time using **"PHASE-4"™**

ROSETTA-3D

Just as the original ROSETTA STONE allowed scholars to decipher the secrets of Egyptian hieroglyphics and translate them into other languages, ROSETTA-3D allows you to translate a wide variety of the most popular CAD, animation, and rendering formats. Files created by ROSETTA-3D can be transported to many different computer systems and modeling programs or may be sent to remote rendering services capable of creating photo realistic quality images for commercial use. You are no longer confined to the limits of one machine or your current animation software.

ROSETTA-3D

is much more than just a file translator, it is also a draft animation package. It allows you to quickly create and preview an object file you wish to animate in "PHASE-4's" CHRONOS motion control program, from any format that you select using the fastest wire frame and solid-polygon render available for the Atari ST™. ROSETTA-3D's simple point and click animation system features a unique three dimensional "object-marker" which enables you to design animation story boards for waiting clients in a matter of seconds. *Price $59.95*

ROSETTA-3D FEATURES:

Eight Three-Dimensional Modeling/Rendering Formats Supported.

File Translation:

Direct translation from one format to another format. Translate objects which are too large to animate on your system. File size not limited by system memory size.

Import and/or Exports:

- AutoCAD Release 10 ASCII (DXF), Binary (DXB) for the IBM and Macintosh.
- CAD-3D Version 1.0 (3D) and Version 2.0 (3D2).
- PHASE-4 Animation Libraries (LIB).
- Sculpt-3D for the Macintosh and Amiga.
- Swivel-3D for the Macintosh.
  ... and output of P.I.X.A.R.'s Renderman RIB files!

Animation Capabilities:

- Fast Depth-Cue "Point Cloud" mode, for real-time playback of extremely large objects.
- High speed wire frame and depth-cue wire frame modes.
- Several solid-polygon modes.

Object limitations:

- Any combination of 65,000 vertices and faces per object.
- Total number and size of objects limited by memory size only.
- Animate objects with over 15,000 vertices and 30.000 faces on 1Meg systems.
- ROSETTA-3D expands ANTIC™'s original 3D universe in all directions to more than 400 times its original size.

DISK, FILE, and FOLDER Management Supported.

"PHASE-4's (ADEPT) Supported.

FUTURE FEATURES INCLUDED IN THE FORTHCOMING PROFESSIONAL PACKAGE.

- ATARI TT/68030 VERSION.
- PARSEC GRAPHICS 4768 SYSTEM (INCLUDING 8768 UPGRADE).
- SPECIAL 50MHz TI34010 version running at 6.25 MIP's with the standard 8MHz 68000 running in parallel.

PRISM-AGE

(Photo realistic Rendering Interpreter for Solid Modeling in Advanced Graphic Environments)

PRISM-AGE 1.0 is a powerful drawing program that runs in all ATARI resolutions plus 1024X768 4096 color mode. Not only will you find many of the features expected in a drawing program (such as boxes, circles, ellipses, area fills, cut, copy and paste, (with fine pixel editing), but also explores some rather unique areas of it's own! One of the more interesting areas of PRISM-AGE is that it uses PRISM-GTE (Graphics Tablet Environment) which supports the new Cal-Comp graphics tablet in four resolutions. Another feature of PRISM-AGE is that it uses all of the computer's memory to support multiple picture buffers. This can range from approximately eight buffers on a 520ST to over 110 buffers on the MEGA4 ST, which allows the creation of animations using the built-in slide-show features.

When used in combination with other PHASE-4™ programs PRISM-AGE takes full advantage of ADEPT* and the Image Systems ISAC High-Res color board. *Price $49.95.*

PRISM-GTE

(Graphics Tablet Environment)

PRISM-GTE is a fully functional graphics tablet environment designed to be used with all "PHASE-4"™ programs. This feature is embedded in all programs and available as a stand-alone program which can be used with most well-behaved ATARI programs. *Price $29.95 if ordered separately.*

ADEPT

**(Application Data Exchange ProTocol)*

Allows any "PHASE-4"™ program to utilize the features of another program while also sharing data and limited resources (such as memory and peripherals) in a multitasking or single application environment. (ADEPT imbedded in all "PHASE-4"™ programs.)

For more information write or call Lexicor Software Corp., 58 Redwood Rd., Fairfax, CA 94930. (415) 453-0271. Dealer inquiries welcome.

Atari News

The decision on whether or not to move Atari headquarters from Sunnyvale, California will reportedly be made sometime in the next six weeks. Elie Kenan, previous head of Atari France now in charge of Atari US and Canada, is reportedly still "fact finding" and will make his decision on the move soon. There has been no indication from sources at Atari as to where Atari might move.

The new color monitor to be packaged with the 68030 TT has passed FCC with a Class A (commercial use only) rating. The remainder of the system is reportedly still in the process of being certified.

Bob Brodie, Atari's user group coordinator, recently returned from a "very enjoyable" trip to the Seattle, Washington area to visit area user groups on August 18-19. Bob said he's scheduled to be in Houston, TX to meet with clubs there at the end of August.

With a number of show appearances scheduled for September and October, including Glendale, Boston and Washington, DC, Bob Brodie continues to "make the rounds" on the Atari user group circuit.

Developer News

Clayton Walnum's C-manship articles that originally appeared in the now defunct ST-Log magazine have been compiled into a book called C-manship Complete. According to Walnum, the book contains "everything you need to know to program your Atari ST in C." The 400-page C tutorial book retails for only $19.95. For $29.95, you can purchase the book and two accompanying disks of C code. Add $2 for shipping/handling and Connecticut residents must add 8% sales tax. Taylor Ridge Books, PO Box 48, Manchester, CT 06040, (203) 643-9673.

A version of the PILOT authoring language has been released for the ST by eSTeem, Inc. PILOT is a "simple, powerful and widely used language for creating tutorials, simulations, interactive laser videodisc programs and device control systems." The eSTeem PILOT version is GEM based and follows the proposed 1990 IEEE standard for PILOT. Computers Etc., 4647-B Highway 280, Birmingham, AL 35242, (205) 980-9146.

Atari 8-bit owners looking for quality PD/Shareware at low prices should contact KCTronics, a PD "warehouse" that creates fully configured and documented disks of software that are guaranteed to run. Their current catalog features such recent releases as BobTerm 1.2, TextPro 2.5r, new font disks for Daisy Dot II/III and lots more. Contact KCTronics, 457 June St., Fall River, MA 02720 for a catalog or more info.

ReadySoft, makers of Dragon's Lair and Space Ace, has annouced release of Wrath of the Demon. The game "combines state-of-the-art multi-level parallax scrolling with spectacular graphics, animation and playability." Wrath of the Demon retails for $49.95. ReadySoft Inc., 30 Wertheim Court, Unit 2, Richmond Hill, Ontario, Canada L4B 1B9, (416) 731-4175.

JMG Software International has stated they will release HyperLINK for the ST by November of this year.

HyperLINK's features include full DBASE III/IV compatible database manager, big screen monitor and CDAR-504 CDROM drive support, and the ability to "network" two STs together to share data.

The package is planned to contain a handful of HyperLINK applications such as a phone book, address book, calendar, phone message center, and graphic/text CDROM database. JMG Software International, 801 Mohawk Road West, Hamilton, Ontario, Canada L9C 6C2 or 2201 Pine Ave., Niagra Falls, NY 14301 (416) 575-2867.

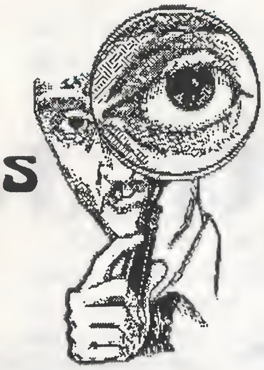
Show News

The Lake County Atari Computer Enthusiasts have announced the "Chicago Area AtariFest," a regional one-day show to be held Sunday, November 11 from 10 am to 4 pm at the American Legion post in Gurnee, Illinois. Tickets are $2 in advance or $3 at the door and children under six are admitted free with paid adult. LCACE, PO Box 8788, Waukegan, IL 60079.

Online News

Delphi announced drastic price reductions for use of its online service. Under Delphi's new 20/20 Advantage Plan, users access the system for a $20 flat fee for the first 20 hours. Extra usage is only $1.20 per hour. These rates make Delphi the lowest cost online service. To signup, use your modem to call (800) 365-4636. At Username:, type *Joindelphi* and at Password: type *Interface*. At the main menu, type *Using Advantage* to register.

From the Reader's Viewpoint



Dear Editors

I am writing to share my opinion as to why I haven't bought an ST, STe or Lynx. I recently bought a PC; it could have been an Atari, but since Atari hasn't tried to market computers in the US, that wasn't an option.

Let me say I bought several Atari systems, in fact the first system my family had was a 2600. We bought many a cartridge for it. Then Atari says here is the new advanced 5200, so I bought one and collected about 20 cartridges for it. Shortly after that the 5200 was cancelled.

I bought the 800XL, and then a 130XE. I bought several games for it on both disk and cartridge. Then Atari introduces the 7800, late, but you know how it is. Anyway, I bought one; I think I have 20 cartridges for it. The support has dropped to almost nothing, and if the Lynx does well, I think the support will die for the 7800.

This brings me to the XEGS, fine product, and from the early reports, it sold well. I didn't see a need for it, for myself, but I bought several cartridges, and then presto, no more support. I was able to buy an XEGS for $56 on clearance.

Now to get to why I'm not in a hurry to buy any more Atari systems. I almost bought an ST, but I thought let's wait and see if it takes off, as predicted. Since that time, the Atari Corp. ST support in the US is almost nonexistant, and I'm in no hurry to buy one now.

The same with the Lynx. Sure it sounds good, but it's gonna get the same treatment Atari has given all its other products.

Poor Atari. They get a good product, sell a few quickly, and then it's in the clearance section. That is what I see for the Lynx, ST, STe and TT (if they are released). Even so, I'll never see one in Terre Haute, IN., save for the Lynx -- maybe.

I'll consider buying an ST if there is a dealer in my town and he's got big lines waiting to buy, and there are reports saying the same thing across the country, and the software companies are rushing ou a large list of new products. The same goes for the Lynx. If I see hundreds of them, I'll consider buying them.

Coming back to the PC, there are millions out there, and Atari could have a big share of the market. Even if they sold 2 percent of all the PCs sold in the US, they would sell more of them than any other product they sell.

What it comes down to, is, I'm sick of buying orphan systems, and I think Atari is stupid to try and make a market for something that isn't even selling.

Thomas W. Bannon

Fellow Atari Users

I took advantage of Sprokits Computer Products offer of free ST X-press back issues and now have two boxes of the November, 1987 issue. The disk mates have been removed by them, but I do have that disk in my files.

As I do not need 100 copies of the same magazine, I would like to trade two copies (or more) of Nov. 87 ST X-press for one (or more) copies of any other ST or Atari related magazine or better newsletters (Current Notes, PSAN, etc.). WIth the extra copy, you could trade for other back issues. I will send copies of this issue of ST X-press to any one (single copies) that would be willing to pay the postage. I cannot afford to send single copies without postage since I have over $32 in shipping so far, and it will cost about $1 per issue to mail them out. I will pay postage on the trades.

This offer is open to any individual or user group. If you are interested, please drop me a line and tell me how many issues you want and what trade you want to make, or send me your unwanted magazines and I will send you an extra magazine or two as long as they last.

I would also like to buy back issues of Atari magazines if they are reasonably priced. (Newsletters also.)

Happy Trading

Steve Filler, Box 429, Columbia Falls, MT 59912

Dear Editors

I just read The Impossible Just Takes a Little Longer [June/July '90 issue], stopped, switched on my 1050 disk drive; loaded First Xlent WP disk, booted it into the 1200XL, then printed this with an XDM121 printer in order to say Thank you for printing the article by Jake Olbrich (RACC) which was well written and held my attention throughout.

While fascinated for many years by my Atari system (Basic language), I am not a programmer per se, thus unable to understand the technics described. However, as a writer of sorts, I did appreciate Mr. Olbrich's language and style. His byline will be a beacon for me in future issues of AIM.

Friendly yours,

Joseph Hicwsa (JACS)

Right On Target

David Plotkin

It's hot here today—106 degrees, which is pretty outrageous for Northern California, even in August. In fact, it's been hot for the last several days, and my house doesn't have air conditioning so it's 92 even indoors.

Still, I've got to get this article out, because if I think its hot *now*, this is nothing compared to how hot it will be for me if I miss my deadline. That Pattie (esteemed editor); she's a terror!

Why Do I Like Atari?

I've been playing with and writing about Atari computers since 1981 when I discovered Atari and personal computers quite by accident. I sometimes wonder why I've kept at it for so long, when so many others have dropped by the wayside or moved on to other machines (and greener pastures).

I don't make my living this way. My real job (the one that pays the mortgage and enables me to write articles for free) is as a data analyst for Chevron Corporation. And though the machines are pretty neat, there aren't nearly enough "new" developments to keep someone busy and interested for so long.

Even such amazements as PC/Mac emulators and desktop publishing begin to pale after awhile. I mean, how many times can you get excited about the new whizzywig they built into the latest update of Calamus (Sorry Nathan!).

I've come to the conclusion that it's the people in the Atari world who keep me coming back. They are more fascinating, friendly and sometimes stranger than the folks who inhabit the worlds of Mac and PC and Commodore.

Getting to Know You

I go to the shows I can afford to not because I want to see the new toys that Atari might or might not bring to market and certainly won't bring to market anytime soon. No, I go to schmooze with the folks I've met online, talked with over the phone and to renew old acquaintances with "good friends" I haven't seen in a year or two.

For example, it was at a show that I first met the legendary Dave Small (and the even more amazing Sandy, who, despite a passel of kids, manages to run Gadgets at a profit and even put up with Dave and Doug). I first ran into Jim Allen, of T-16 Accelerator fame, at a show, demonstrating his prototype T-16. He was proclaiming bravely that it would run with pcditto II, which Bill and Ginny Teale were showing off across the aisle.

I've met interesting Atari people at places beside shows. We all seem to take an instinctive liking to one another (with a few exceptions, but I won't dwell on that). Perhaps this is because we are outcasts of the computer world and need friends more than most people! The point is it is the people who make up the world of Atari that make it so interesting, and I go out of my way to cultivate those relationships. Let me tell you about a few of them.

Probably my favorite single programmer is Dave Small. I've watched as Dave first came out with Magic Sac and Translator One, then built his new company on the ashes that were Data Pacific (the new product is called Spectre—rising from the ashes). It's a family business, with Sandy as President—Dave calls himself "chief programmer and bottlewasher" as I recall.

I need say nothing about the products they produce—you know about them unless you're incredibly new or have been on a far moon of Jupiter for a long while. But there is Dave and Sandy and the rest of the Gadgets team at just about every show, the ultimate salespeople, answering questions and doing amazing things with their latest gadgets.

If you want to talk to Dave, you'd better fight your way through the crowds early, because two hours in Dave has usually lost his voice and "talks" with gestures and grimaces. And let's not forget that each show brings a more outrageous T-shirt.

The CodeHeads

Then there are the CodeHeads. You know the CodeHeads—Hotwire and Multidesk and Little Green File Selector and...well, you get the picture. These guys are amazing. They seem to have the knack to bring out a product that nobody realizes they need until it arrives. Then, an awful lot of people (myself included) find they can't do without them.

But even more interesting than the products are the CodeHeads themselves. They couldn't be more different. Charles Johnson is a big man with flowing long hair (which I envy, since I'm fighting a losing battle with baldness at the ripe old age of 35). John Eidsvoog (say that three times fast) is slender and sports a crew cut. Well, maybe they're not so different. Both are friendly and will stop to explain things to any confused user.

They are the kings of the "lightning demo"—they know their products so well they rip through the demonstration session with awesome speed. Unfortunately, I'm quite sure some people are so bemused by the quickness they walk away mumbling something about NeoDesk <grin>.

Piracy is an incredible sore point with Charles (as it should be with everyone) which was inflamed after a thief named Fred posted the latest revisions to the CodeHeads' products on a local bulletin board and even had the gall to leave his name! (Personal note—hope they nail the bastard.)

CodeHead Wives

We can't leave out the two ladies who go along with Charles and John—John calls them the "CodeHead wives." Pattie Johnson and Julie Eidsvoog are an integral part of the team, demoing software (usually a lot slower than Charles or John does) and handing out flyers. At the Anaheim show I remember this incredible weirdo (now there's a term you haven't heard in a while) came up and started hassling Julie, and she was just as polite and nice as could be. Me, I'd have punched him out, but he went away happy and remained a potential customer of CodeHead Software.

There are lots more. Gordon Monnier is President of Michtron, and has really tried to make a go of the ST market. Its tough to make a living, and I'm sorry to say Gordon may be gone by the time you read this. It was Michtron that first brought GFA to this country and provided support for their products that ranked among the best for any computer. George Miller came to Michtron from Compute! magazine (you remember them—they used to talk about Atari once in a while, but not any more) and wrote books, provided tech support, cleaned up products and seemed to live in the office. Haven't seen George for some time, I wonder where he ended up? [Editors' Note: George has accepted a position at ABACUS in Grand Rapids, MI.]

A Mom 'N' Pop Big Business

A family operation I'm really fond of is the Mitchells of MiGraph. The company started out with Easy Draw and also provided the first viable hand scanner for the ST.

They have branched out to the PC market now to survive, and I think they will because they are smart and savvy. Kevin Mitchell still shows up at shows sometimes, demonstrating Touch-Up, one of MiGraph's more impressive products.

Liz Mitchell (Kevin's wife) is the Vice President of Marketing, and I've never met anyone who could make a dollar of advertising and review product count as much as Liz. I helped her out with the loan of a word processor at a show once, and felt real good about it for quite a while afterwards. And, of course, let's not forget Paul Mazurek (Liz's brother, by the way), chief programmer and tech support. A really nice guy and very talented as well.

The Atari Mob

Then there are the "Boys from Atari." The best known is Bob Brodie, User Group Coordinator. He has risen to fame in a very short time, though I met him a year ago at a show before he joined Atari.

Bob is a big friendly bear of a man with a jolly laugh and sympathy for the plight of the user I've not run into anywhere else. He's got a desk in the middle of a huge room at Atari, and you can call him on the phone—but if it's not busy, it's because he's not there. Leave a voice message if you want—he swears that he returns calls.

John Townsend (another crew-cut) and Ken Badertsher (hmm...hope I got that right) are two engineers who circulate at shows, picking up juicy software and answering what questions they can about "when is the TT gonna be ready?" Personally, I would rather talk to these guys than to any Tramiel.

Tom Byron, Editor of STart magazine has a become a good friend over the two years I've worked with him. He's quickly turning STart back into a powerhouse and is both a capable editor and knowledgable about the ST as well. He is also, unfortunately for him, the person who gets complained to when Antic doesn't pay their authors, and he really agonizes over such things.

By the way, that was his son who graced the cover of the February issue of STart (playing with a TT). What a ribbing Tom took about that, especially since, in an editorial later on, he made a comment that "wasn't he the cutest baby?". Turns out the assistant editors slipped that line in as a joke. Well, I thought it was pretty funny, but I'm not sure Tom did. He takes this stuff pretty seriously. Of course, we all benefit from that sense of dedication.

There are lots more great people out there, and of course, I know only a few of them and can't mention everyone I do know. Perhaps in a future column, we'll talk about some more of the folk heroes inhabiting the Atari world. Til next month—remember, if your AIM is good, you'll be Right on Target.

COMPUTER LAB

Our team has been selected to find an inexpensive substitute for accuracy."

San Jose World of Atari Show

Gary Klugman (SVACE)

The World of Atari Show in San Jose opened at 10 a.m. on Saturday, August 4. There wasn't the long line of people I expected waiting for the show to open.

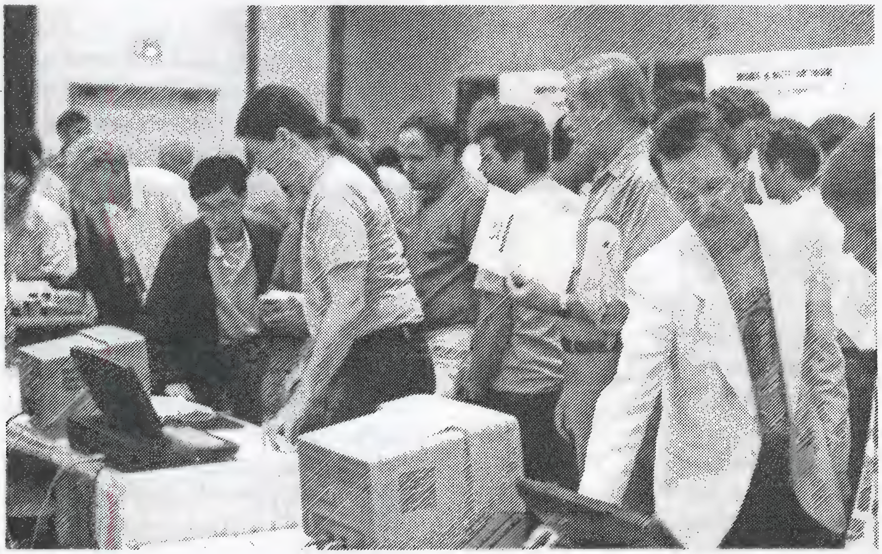
Once it opened, the people kept coming, and the isles were crowded with Atari computer users. By the first hour, over 1,100 people had reportedly paid admission. People came and went, but it was hard to get through the crowd to see what was in a booth until late afternoon.

Rich Tsukiji is the promoter of the World of Atari shows. I found him to be very personable and a professional at what he was doing.

A Negative Start

There was some negativity expressed about this show on some of the online services because of the show's proximity to other Atari shows. Rich didn't seem concerned about any controversy. In fact he hadn't read it, let alone responded to it. Nor was he overly concerned that Atari could not have a booth in the show.

He said Atari had asked him to move the show date a couple of weeks so they could attend. He couldn't change the dates, and they had their new things committed to be elsewhere. He said it would be nice to have Atari at the show, but it wasn't necessary. Atari did supply hardware to the developers that requested it.



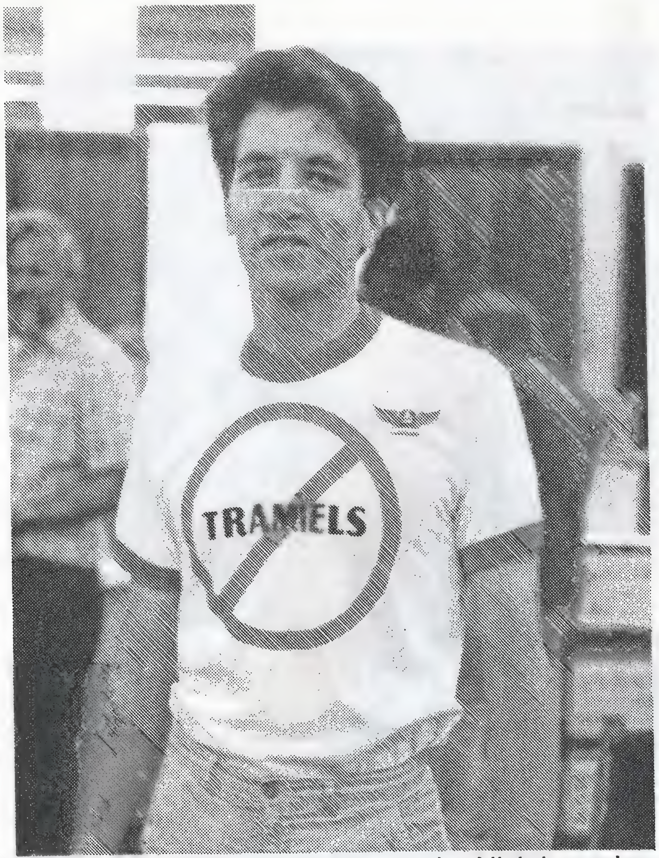
Charles F. Johnson and John Eidsvoog of CodeHead Software

The Show Itself

I counted 17 exhibitors present at the show. Some had large booths, so the show didn't seem as small as it was. Rich wasn't concerned about the number of exhibitors. He felt there should be an Atari show somewhere every month, regardless of the exhibitors that can come.

Rich said many of the vendors are small businesses that can't afford to travel long distances. If there was a show in their area, they would attend. So a show, for instance, in Texas would attract different vendors than did the one in San Jose. Above all, the shows are good for the users.

Rich not only kept track of the number of people attending, but also of how much they were



Popular Sentiment T-Shirt worn by Nick Langdon

spending. He said the people in San Jose were spending considerably more per person than in Anaheim. Of course there were fewer people at the San Jose show.

Atari Dignitaries

Sam, Leonard and Garry Tramiel all were there on Saturday. Bob Brodie and other Atari executives, including Elie Kenan, were also there. Their appearance was certainly symbolic. They wanted to show support for an Atari show in their backyard. They were not there to make a big splash. They kept a low profile, looking around at the booths. They wouldn't pose for pictures and the crowd didn't swamp them.

One fellow was wearing a T-shirt that had "Tramiels" on the front circled in red with a line through it. On the back of the shirt was "Just say no!" The fellow said he was mad at the Tramiels for not getting the Stacy out sooner. Let no one say Sam Tramiel doesn't have a sense of humor. When he saw the shirt, he walked up to the fellow and said, "Hey I like that shirt, where can I buy one?" Sam made a point of buying things at a number of the booths.

Talon Technology was there showing Supercharger. First introduced at the Anaheim World of Atari, this German import is a completely external unit that allows the ST to run MS-DOS software.

It plugs into the DMA port and allows daisy chaining of other DMA devices. By using a NEC V30 chip, it runs XT software at AT speeds. It comes with 1 meg of memory and MS-DOS 4.1, and a program to use the Supercharger's memory as a RAMdisk from ST mode. Supercharger retails for $450. Talon is planning on introducing a VGA card that will occupy one of Supercharger's internal slots. Another card they are going to introduce is an Ethernet card. This would allow an ST to be used on an IBM network. They are also planning on introducing software allowing the user to run IBM emulation as a desk accessory. Also planned are a FAX card and an accelerator.

Changes at Antic Publications

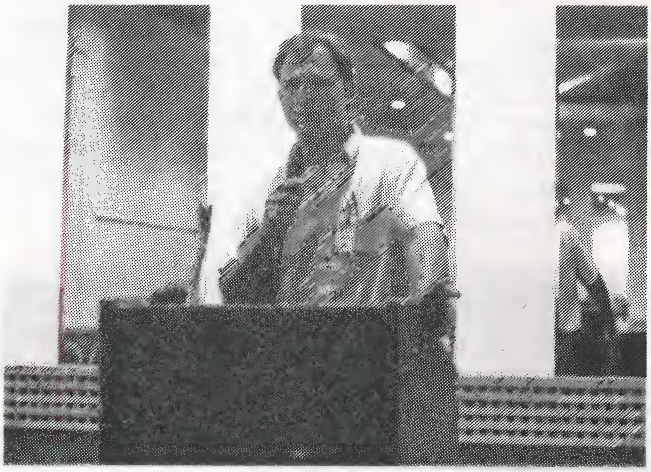
Antic Publications had a startling announcement. They will not publish a September issue of START. The October issue will combine ANTIC Magazine and START and be a larger magazine.

They are also planning to pick up the subscriptions for ST-Log and Analog. Tom Byron, START's new editor, has hired Jim Burton as technical editor. They also have a new art director, Rick Braden, to improve the new magazine's appearance. Denny Riley, ANTIC publication's director of advertising sales, assured me this is not a sign of weakness for the magazine.

Atari's Sam Tramiel

I brought up the point that ST-Log and Analog did a similar thing before going under. Despite the similarity, Denny says START is ANTIC Publication's biggest money maker. They just need the time to make all the changes.

Zubair Interfaces was at the show with their memory upgrades. They also had SIMM modules to upgrade the memory of the STes that were for sale at the show. Abu Zubair also introduced his newest hardware upgrade, ZKeys. ZKeys is a solderless internal upgrade that allows ST users to use an IBM keyboard. When the IBM keyboard is plugged in, either the ST keyboard or the IBM keyboard can be used. The IBM keyboard can be easily unplugged. With the keyboard plugged in, the function keys are supported during IBM emulation. The IBM keyboard is compatible with

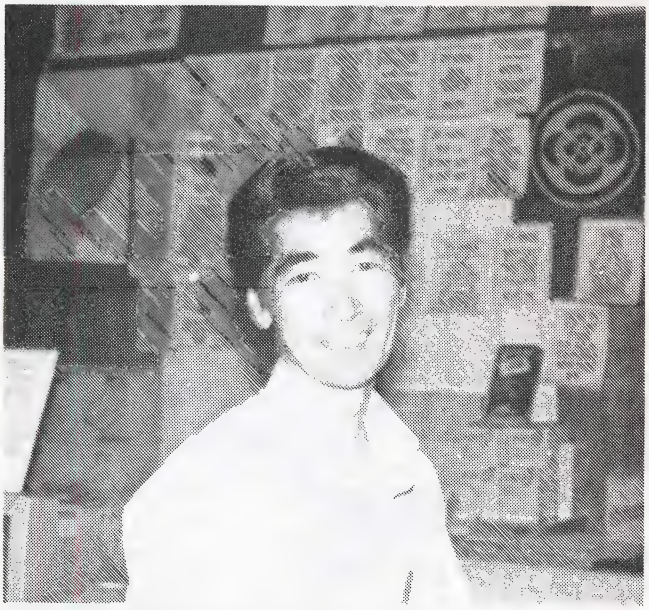


Rich Betson of Talon Technology

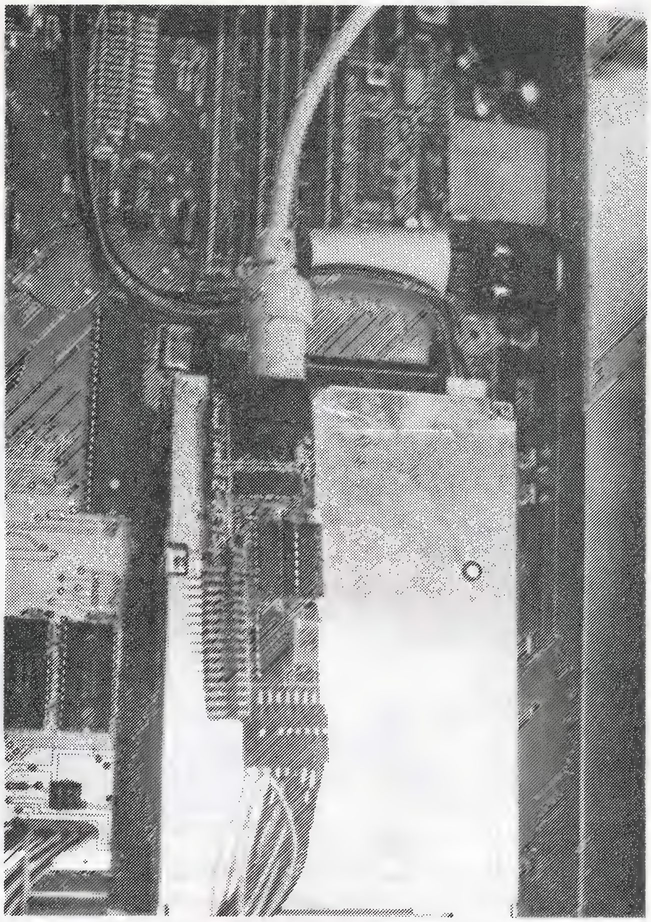
the ST mouse and Spectre GCR. In the future, Zubair Interfaces plans on creating a software driver to allow the F11 and F12 keys of the IBM keyboard to become the Help and Undo keys on the ST keyboard. They are also planning a macro keyboard driver for the IBM keyboard that will allow the user to define his own macros. ZKeys is for STs with a built in keyboard. Retail price is $99.95. A version will be out for the Mega STs.

Best News

Brad Koda of Best Electronics is an interesting entrepreneur. Starting out as an Atari computer repair and parts person, he finds a need and fills it. When he can't get repair parts, he goes to Taiwan and has his own made. When he thinks he can do something better, he has that made too. Witness the birth of the Best Mouse and the Mega Click replacement keyboard switches. Now he is introducing the Best Joystick, the Best Power Supply, and a number of repair parts for ST monitors. He says he is now the only supplier of ink rollers for the 1027 printer. He makes them up himself out of Taiwanese parts.



Rich Tsukiji WOA Show Promoter



Z-Keys internal Hardware interface

The Best Power Supply replaces the 520fm, 1040, Mega, and Megafile power supplies. Brad has seen an increase in the failure rate of the power supplies from Atari, and the replacement ones from Atari aren't any better. So he made his own. The Best Joystick has heavy duty construction and an autofire switch. It works with all Atari computers except the 5200. The power supply retails for $85, and the Best Joystick retails for $15.95.

News from the CodeHeads

The CodeHeads were showing their excellent software products and introducing LookIt and PopIt. These software utilities come on the same disk.

LookIt is a file viewer and binary editor that offers fast text display, the ability to use the mouse or keyboard to scroll and powerful searching options. It also allows setting up "bookmarks" in each file for easy return to that spot, and it has powerful print features.

PopIt lets you assign hot keys to your desk accessories. Pressing a single key or set of keys gives you instant access to your accessory. Key assignments can be saved, loaded and disabled at any time.

Branch Alway's Darek Mihocka

During the show, Darek Mihocka of Branch Always Software gave a talk on Quick ST II, and Rich Betson from Talon spoke Saturday and Sunday on PC emulation.

There were bargains to be had on almost everything. Some of the dated software was being sold at fire-sale prices. I didn't see much action on 8-bit items either being displayed by the dealers or being bought by the attendees. The vendors I spoke to that had something new to sell, or had good buys, were pleased with the business they did at the show. They knew there wouldn't be a lot of vendors, but the crowd was there anyway.

The Silicon Valley has many Atari computer users, and it had been three years since they had a show. They were hungry for an Atari show, and during the two days I was there, they seemed happy with the one they got.

San Jose World of Atari—A Second Look

John Pilge

The World of Atari extravaganza in San Jose, California was held at the San Jose Hyatt August 4-5. In essence, it was your typical computer fair.

You pay to get into the dealer's room where you can find Atari products for XL/XE, Portfolio, Lynx, ST and even the 2600. There were hundreds of products at decent prices and a few bargains. But there were only 17 exhibitors. Some were there to demonstrate their products, STart magazine was selling back issues and San Jose Computers had hundreds of items for sale.

That was it. There were door prizes, promotional fliers and a few freebies, but it was a small show.

Atari was not there officially. Sam Tramiel was there and declined to be interviewed, as was Leonard and Garry Tramiel. Sam did answer questions from anyone who came up and recognized him. A few other Atari employees were seen.

If Atari had had a booth, they would have probably been besieged with questions by over-anxious Atari users. I saw one user sporting a T-shirt that had the internation "NO" symbol over the name "TRAMIEL" with the caption "JUST SAY NO."

Steady Attendance

The show was well attended. The later you stayed, the more crowded the sales floor became. If your purpose for coming was to buy Atari items, there was a lot to choose from, but not so much that you needed two days to see everything. When I left, I had time to visit two other stores before going home to Santa Cruz.

More was expected. People were hoping for more dealers, conferences and a greater presence from Atari Corporation. People were hoping for a bigger show, with more advertising. What they got was a two-day computer fair with Atari products.

Summing It All Up

That was enough for some. But fans of Atari shows remember bigger shows, more dealers and conferences of the past. Of course, in the past there were more Atari magazines, more Atari dealers and more Atari users. This was the first World of Atari Show in Santa Clara County in two years.

CALAMUS OUTLINE® ART

OUTLINE ART is a vector- oriented, graphic generation tool. Multiply your creativity through the many functions which you will find in this program.

OUTLINE ART supplements the CALAMUS DTP system with a great number of new functions and effects. A extract from the extensive list of functions include:

- A user interface, quite similar to that of CALAMUS.
- Complete Vector Graphics Editor for lines, Bezier curves, control paths etc..
- Capabilities to generate freely-definable raster areas.
- Creation of rayed objects, ie; from a font to a central point.
- Nearly unlimited possibilities for the manipulation of text, characters and text attributes such as:
    - rastered, transparent, outlined, rotated, stretched, compressed and cursive styles...
    - circular text and text along a freely-defined vector path...
    - projection of raster areas and text on vector outlines...
    - conversion of text into vector objects...
    - kerning functions...
    - Functions can be freely combined and applied to all CALAMUS fonts.
- Integrated, fully programable calculator with a pre-defined and extendible library of transformations such as:
    - shift, rotate, mirror, enlarge/ shrink, project onto a sphere (globe, cylinder, cone), etc..
    - An intelligent clipboard and copy functions, allowing the automatic generation of transformation sequences.
    - loading and saving in .CVG format (CALAMUS Vector Graphic), making possible the integration into and optimal printing through CALAMUS on all supported output devices in all resolutions.

Now included!
Convert 2X,
our new Conversion program CVG (Calamus Vector Graphic) to EPS (Encapsulated Postscript) or PS (Postscript) file format.

Note : DynaCADD, our complete 2D and true 3D Computer Aided Design and Drafting Package, allows the importation of Calamus Vector Graphic format, (CVG). Which can then be output through all output options supported by DynaCADD, ie: CAMM-1, Plotters etc,... An excellent solution for the Sign Making Industry.

Calamus Outline Art has a suggested retail price of US $289.95.

For more information or to place your order, contact your local Atari Dealer or contact us directly at: ISD Marketing, Inc., 2651 John Street, Unit #3, Markham, Ontario, Canada, L3R 2W5, Tel: (416) 479–1880, Fax: (416) 479–1882

The Fuji Zone

Joe Mirando (CCCC)

You're traveling through another dimension, a dimension not only of bits and bytes but of mind; a journey into a wonderous land whose boundaries are that of imagination. That's the signpost up ahead. Your next stop...The Fuji Zone.

Submitted for your approval: the theory that time is but one track running parallel to many others that, under most circumstances, cannot meet one another or exchange events.

Enter one Harrison Dearson. A young man intent on making his mark on the computer industry. Since Harry has no talent in either programming or systems design, he has decided to make his entree' by becoming indispensable to the upper echelon of one of the larger computer companies.

In our current time-line, Mr. Dearson has just gotten a job with Atari Corporation. By not rocking the boat and telling his bosses only what they want to hear, our young traveler has indeed ensured his continued employment. He has also, however, ensured that Atari Corporation will remain in very low popularity by the very lack of support of and aggressive marketing in the US that has made him a successful "Corporate Warrior."

In our proposed alternate time-line, however, Mr. Dearson's taxi encounters a rather disagreeable telephone pole on its way to Atari Headquarters which makes the traveler an hour late for his interview. This does not sit well with his prospective employer. Harrison Dearson is forced to seek other employment.

The young man who does get the job in this new time-line is concerned only with expanding the product line and the well-being of the company. Because of this, Atari becomes the premier computer manufacturer and out-distances all other computer companies.

A sampling of the events of this time-line bear out this conclusion:

July 1989: Atari introduces their Stacy portable computer. The music industry quickly embraces it as the best MIDI computer around. The Stacy also becomes quite popular with businessmen on the go who are tired of all the "command-line nonsense." Atari's careful attention to detail permits the Stacy to pass FCC testing quickly while the company's renewed commitment to advertising and support in the American market provides US users with enough machines to cover the huge demand.

January 1990: The introduction of the STe continues the rise of Atari in the home computer market. Although the machine can still show a maximum of sixteen colors at a time, the new pallet (with a choice of 4,096 colors) and stereo capabilities make the machine a favorite. Dealers now have machines in stock and do a brisk business in Atari computers and peripherals.

May 1990: Atari's new TT computer system based on the Motorola 68030 microprocessor running at 32 megahertz takes the small work-station industry by storm. With improved speed and graphics capabilities, the TT becomes a favorite for desktop publishing, desktop video, and all other multimedia applications. With a price well below those of comparable machines, an Atari becomes the computer of choice in this area also.

January 1991: Atari strikes a deal with Paramount Pictures, Inc. to supply computers to be used in production and post-production sound and graphics work. The computers include the STe, the TT and the ATW, as well as portfolios for the production staff and executives (The executives use it only for the pong game included with the machine.).

December 1991: Paramount Pictures releases Star Trek VI after the shortest post-production schedule since computers entered the movie industry. The success of the movie, which relieves executives and saves the contracts of the actors, is credited to the abilities of the new computers purchased from Atari.

Rambo VI, which is released by another studio at the same time, is not well received by the public or the critics. As a shining example of the effects problems, one post-production worker says "The reason that this movie is titled 'Rambo VI' instead of 'Rambo V' is the titling software on our computers was so difficult to use that we didn't even notice that it was titled wrong until the premier, Damn! I wish we had used an Atari!"

And what of our young traveler you may ask? Mr. Harrison Dearson, upon the unsuccessful completion of his interview in Sunnyvale, promptly secures a job with IBM (which, by virtue of Harry's tactics, ceases the manufacture of personal computers ten months later).

Piracy in El Paso

Tim Holt (El Paso)

In the old days, the axiom was that silence was golden. A good child was to be seen and not heard. Nowadays this old saying has been perverted to read "keep your mouth shut or you will get sued." Same effect, just a different message to achieve the end.

Well, something happened to me on the STE-EP BBS that really has me biting at my chomps. I am torn whether to speak, keep my mouth shut, or some happy inbetween. I decided to speak, and perhaps in the course of the article, you will agree. As president of the local user group, I suppose it is my duty to talk about these things:

On Sunday, July 29, 1990, a person logged onto the ST Club's BBS under the name "Joe Pirate." This person logged on as a visitor, and all information they left about themselves was, of course, incorrect. This person left one message to me, saying "I left a file in the Utilities area for you. Use at your discretion."

I went to the utilities area, and there was a file called "Pirate.lzh." At first I was leary, because in the past I have taken a very anti-pirate stand on the STE-EP BBS. Was it a virus plagued plant that will kill my system? (As a matter of fact, most screens you come upon on STE-EP have anti-pirate messages on them.) Anyway, I got the file, un-lzh'ed it, and started to read. The contents knocked me on the floor.

There before me was a listing of files available on a local "reputable" ST BBS. As a matter of fact, the Sysop is a former member of the ST Club!

Piracy Unearthed

PageStream, Space Ace, Dragon's Lair, Hotwire, War Head and on and on it went. (We later calculated at Jenkins' that this BBS had at least $4000 worth of games *alone* at the retail price.) His BBS had a better selection than Jenkins' Computer Store!

Games from Europe, word processors from Germany, and on it went. I printed out the listing, and it was 10 pages of just two file areas! (The BBS has at least 7 file areas, with even a "Classic by Request" area for programs that are no longer published. I hope you get the picture, we are talking *big time!*)

So, I was faced with another mystery: was this a real file or was this a fake "plant" intended to embarrass me and the club? Well, if you see a house burning down, you don't check first to see if the owner wants it burned, you call the fire department, and that's what I did.

I went to Jenkins' Computers and asked them who they would call. They gave me a few names, and even called a few places themselves. (Software Publishers Association was supposed to have a toll free number to report pirate boards. No such listing.) Called a few software distributors, a few dealers, a few developers. No one knew who to call. We finally called Ralph Mariano at ST Report. He said he would help.

Anyway, the turning-in of the person responsible for this is not the point of this article. I am writing this to examine the effect of this one BBS on *you*, the average user. You don't think you are effected because you never heard of this BBS? Think again, Bubba.

Whether or not this is a true pirate BBS is not the point. (There are actually several pirate BBSes in El Paso, even though one was shut down by the police several years ago.) So anything I mention about this particular BBS, simply multiply it by the number of pirate boards here, or in your town.

A Little Background

El Paso, Texas is a city on the extreme edge of west Texas. Population 500,000+. Include Juarez, Mexico, and the smaller communities of Southern New Mexico, the population of the area is well in excess of 1.5 million people. There is one store in this entire area that sells Atari programs: Jenkins' Computer Store. The next nearest store that sells Atari programs is in Albuquerque, New Mexico, over 300 miles away. So, if you can't get a program at Jenkins', and you need it quick, well, you got a five hour drive up to the nearest Atari store. And that store doesn't even service Atari computers, it just sells software.

So you see, we are pretty Atari isolated out here in El Paso. In talking to Jim and Tom at Jenkins', Jim once told me there are approximately 1000 Atari STs in the El Paso area.

In July, 1990, Jenkins' Computer Store sold 10 Atari programs. *Ten!* The number after nine! For the entire month! Ten programs to an installed base of 1000 computers! That was the month Dragon's Lair came out. Script came to Jenkins' that month. *And*, for the past six months, Jenkins' has run a special that if you buy two programs, you get one free. So essentially, they are giving a 33% discount.

And still, they could only sell 10 Atari ST programs. They are not overpriced, as all programs they sell are sold at the retail value. Now I realize that retail is more than mail order, but after taking into account the discount, and no shipping, we are talking essentially the same prices. Get the picture? Okay.

Buying Drought
